**British Broadcasting Corporation** is a public corporation, acting as trustee for the nation, under Government control and responsible to Parliament. Its object is to disseminate information, to educate and entertain the fourteen million persons holding licences for sound and television broadcasting. The Home Service, organised on a regional basis, broadcasts on 330 metres (London), the alternative Light Programme on 1,500 and 247 metres, and the Third Programme, introduced in 1946, on 464 and 194 metres. The European Services broadcast news bulletins and programmes in foreign languages to continental audiences, and the Overseas Services cater for listeners in all parts of the world. The present charter came into force in 1952 and expires in 1962. Nine governors are responsible for policy; Sir Alexander Cadogan is Chairman, and Sir Ian Jacob Director-General.

**British Council**, The, founded in 1934 and granted a Royal Charter in 1940, exists to promote a wider knowledge overseas of the United Kingdom and the English language and to develop closer cultural relations with other countries. Its funds are voted by Parliament. It has staff in many Commonwealth and foreign countries. In the U.K. it arranges study programmes for visitors from overseas and services for overseas students, particularly those from the Colonies. Headquarters: 65 Davies Street, London, W.1.

**British Legion**, founded by Earl Haig in 1921, is an organisation to serve the interests of ex-Service men. There are 3,564 branches in Great Britain, also many overseas branches and many local benevolent committees. The funds are mainly obtained from the sale of poppies on "Poppy Day." There is also a women's section of the B.L. H.Q., Pall Mall, S.W.1.

**British Museum**, was created by an Act of Parliament in 1753, when the Sir Hans Sloane collection, which the British Government had acquired for £20,000, was added to the Cottonian Library and the Harleian Manuscripts. It was opened to the public in 1759 at Montagu House, Bloomsbury. The acquisition of the library of George III (now known as the King's Library) in 1823 made larger premises necessary, and the present building in Great Russell Street was completed in 1847 from designs by Sir Robert

**Smirke.** The great domed reading-room was opened in 1857, and the Natural History Department was transferred to South Kensington in the eighties. As a museum it is perhaps the most famous in the world, since, apart from its colossal library of books and manuscripts, it has many priceless collections of sculptures, antiquities, prints and drawings, coins and medals. Under the Copyright Acts the British Museum has the right to receive *gratis* a copy of every book published in the United Kingdom. Admission to the reading-room is free, by ticket. (See also Libraries, "A Citizen's Guide.")

**British Railways.** The name under which the railways of Britain were unified on January 1, 1948. Instead of the former four main railway systems six regions were formed: London Midland region (former L.M.S.R.), Western (former G.W.R.), Southern (former S.R.), Eastern (southern area of former L.N.E.R.), N.E. region (N.E. of former L.N.E.R.), Scottish region (Scottish system of the former L.M.S.R. and L.N.E.R.).

**Brocken-spectre.** (See Glory.)

**Bronze** is primarily an alloy of copper and tin, and was one of the earliest alloys known, the Bronze Age in the evolution of tool-using man coming between the Stone Age and the Iron Age. Some modern bronzes contain zinc or lead also, and a trace of phosphorus is present in "phosphor-bronze."

**Bucephalus,** Alexander the Great's celebrated war-horse, whose memory his owner perpetuated by building the town Bucephala.

**Buckingham Palace,** London residence of British sovereigns since 1837. Originally built for the Duke of Buckingham (1703); bought by George III. in 1762 and remodelled by Nash, 1825-36. Considerable extensions have since been made.

**Buddhism,** one of the great Oriental religions which arose in India in the 6th and 5th centuries B.C. as a development of, and also as a protest against, the prevailing Hindu religion. Buddha (Sanskrit=enlightened one) was the name given to Siddharta Gautama (b. c. 560 B.C.), whose people were rulers of a territory in N.E. India. Buddhism lost its hold in India but spread to other parts of Asia—to Ceylon, Nepal, Tibet, Mongolia, Indo-China, Siam, China, Korea, and Japan. The teaching of Buddha accepts unhappiness as the lot of man. Only by renunciation of all desire can tension be released and suffering ended. *Nirvana*—the aspiration of all Buddhists—is the state of mind reached when the self ceases to matter and becomes absorbed in the Great Self (left undefined by Buddha); a state which has been described as "bliss unspeakable." The goal is reached by way of meditation and self-discipline. This teaching is known as the Four Noble Truths. There is no caste in Buddhism. Researches of recent years have brought to light much that has been obscure and, in its more modern phases, Buddhism has been freed of much of its superstitions, its idolatrous practices and its Vedic gods. It remains in its purity a gentle creed in which renunciation and kindness are leading elements. Today Buddhism is showing itself as a great unifying force between peoples of different races and cultures.

**Buffalo,** a species of wild ox, of stronger build than the domestic variety, and still existing in large numbers in the wilds of Africa.

**Buntings,** name of a group of finches, seed-eating birds, usually found in open country. The Yellowhammer, Reed Bunting, Corn Bunting, and Chir Bunting are resident in Britain; the Snow Bunting and Lapland Bunting are regular winter visitors, and the Oortolan is among the rare visitors.

**Busby,** a military head-dress of fur. In Great Britain busbies are of two kinds: the fur *busby* worn by the Hussars and the *bearskin* busby, introduced in 1832 and properly called "bearskin", worn by the Guards. The fur of the bearskin comes from the belly of the bear, formerly Russian, now Canadian.

## C

**Caaba.** (See Kaaba.)

**Cabal,** the name given to the unpopular Ministry

of Charles II.'s time. The initials of the ministers—Clifford, Ashley, Buckingham, Arlington, and Lauderdale—composed the word.

**Cabinet.** See pp. 127 and 150.

**Cable** is the rope or chain that is attached to a ship's anchor. Chain cables are now in general use except for very deep waters. A cable's length is 100 fathoms (200 yards). Submarine telegraph cables are composed of copper wires.

**Cacao** is an evergreen tree, from 15 to 20 ft. high, growing abundantly in tropical America, West Africa, the West Indies, Ceylon, etc., yielding seeds, called cocoa beans, from which cocoa and chocolate are manufactured. The specific name of the cacao tree of commerce is *Theobroma Cacao*, whose original home was tropical America. The fruit is 7-10 in. long, hard and ridged; inside are the beans, which are covered with a reddish-brown skin. The trees mature at five to eight years and produce two crops a year.

**Cachalot,** or sperm-whale, is a cetacean which lives in warmer waters, migrating to colder regions in the summer months. Can reach length of 60 ft., female is only half the size of male. Usually found in schools, often several hundred strong.

**Cachet,** *Lettre de*, was a private letter of State, signed by the King, much in use in France up to the time of the Revolution, for consigning obnoxious or troublesome people to prison without trial.

**Cactus,** a family of flowering plants numbering about a thousand species adapted to living in very dry situations. The stem is usually fleshy, being composed of succulent tissue, remarkably retentive of water; commonly equipped with sharp thorns which deter animals from eating them. The roots are generally very long, tapping soil water over large area; a "prickly pear" cactus may have roots covering a circular area 25 ft. or more in diameter. Very often the leaves fall off very early in life, and then the stem takes over the photosynthetic leaf function and becomes accordingly flattened to expose greater area to sunlight and air. In some kinds of cactus (e.g., *Echinocactus*) the stem is shaped almost like a sea-urchin. Gardeners propagate cacti largely by cuttings.

**Cadenza,** originally a passage in which the singer or solo instrumentalist was free to display his virtuosity as he thought fit. This led to such abuse that composers began writing their own cadenzas, thus ensuring continuity and coherence while still permitting the soloist to exhibit his skill.

**Caffeine,** a highly stimulative alkaloid found in coffee (1½ per cent.) and tea (3 per cent.). Pure caffeine crystallises in yellow silky crystals; can be prepared by extracting tea dust, or synthesized from uric acid.

**Cainozoic,** a geological term used to indicate all the strata which lie above the Cretaceous ("The Chalk"). It comprises the most recent strata, and includes gravel beds and London Clay. Its two main divisions are: Neogene and Palaeogene. The former is sub-divided into: Holocene, Pleistocene, Pliocene, Miocene. The latter comprises Oligocene and Eocene.

**Caique,** a long narrow boat peculiar to the Bosporus, and usually propelled by oars (from two to sixteen in number), and sometimes with sail.

**Cairngorm,** an hexagonal crystal of yellow-brown hue found on the Cairngorms in Scotland and elsewhere, and used in jewellery ornamentation. It is a form of quartz.

**Calcium,** a silvery-white metallic element. It melts at 810° C. and is very reactive. It was discovered by Sir Humphry Davy in 1808, but not until 1898 was it obtained pure, by Moissan. Does not occur as metal in nature, but calcium compounds make up a large part of earth's crust. Most important calcium minerals are marble, limestone, chalk (all three are, chemically, calcium carbonate); dolomite, which is the double carbonate of calcium and magnesium; gypsum, a hydrated calcium sulphate; calcium phosphate and calcium fluoride. Igneous rocks contain much calcium silicate.

**Calculating Machines** are inventions to relieve men and women of the tedium of long routine or involved computations. The calculating machine

seems to date from 1642, when Pascal constructed one which could be used for addition and subtraction. General interest was lacking, however, and almost two hundred and fifty years elapsed before Ohdner in Sweden produced the first numerical arithmetical machines of the type now in general use. Before very long the electric motor replaced the hand in providing the motive power, and so the electric calculating machine was invented. But at all stages of any calculation on hand-operated or electric machines human operators have to supply them with numbers. The principal feature of the more modern machines is that they are automatic; that is, once a sequence of an arithmetical operation has been decided, and instructions given to the machine in suitable form, such as holes punched into cards or tape, or in some other way, the machine carries out its work without further human intervention. In some calculations these machines frequently give the impression that they are "thinking," or "choosing" a way to carry out the calculations as quickly as possible. But even in such cases the criteria for judgment are actually contained in the initial instructions. The idea of automatic computation by machinery is due to the English mathematician Charles Babbage (1792-1871). He made a small machine of this type, based on the idea of the Jacquard loom for lace-making. He next planned, but never completed, two separate automatic machines, a "difference engine" to help in making mathematical tables, and an "analytical engine," which was to be a general-purpose, programme-controlled, machine possessing all the features of modern calculating machines. But Babbage's inventions were designed to be operated mechanically; it was left to the electronic engineers of the 20th century to bring Babbage's ideas to full fruition. The next important step was taken in 1937, when Aiken of Harvard started to construct, and subsequently completed, the first of the electronic machines. In these electricity is conducted either through an evacuated space, or a gas, or a semi-conductor. All calculating machines are of the "Analogue" or "Digital" types. In the analogue type, numbers are represented by physical quantities, for example, electric currents, of which the numbers themselves are the measures. The most important of this class is the Differential Analyser invented by Vannevar Bush of America. In the digital machines the numbers are stored in it, and are represented by discrete objects, such as the teeth of a gear-wheel. Most of the important modern machines are of the digital variety. Almost all the ideas underlying the more advanced of these machines can be found in a remarkable mathematical paper published in 1936 by Turing of Manchester. Scientists, engineers, businessmen, administrators, and the fighting services need, and are making considerable use of, these machines. Problems hitherto considered intractable are starting to receive renewed consideration in view of the possibility of using machines for the numerical calculations which are required. The electronic computer marks a great advance, and the world is, perhaps, at the threshold of a new era of science, in connection with which the invention of the modern calculating machine may be as important to the world as was that of the Hindu-Arabic numerals to the Middle Ages.

**Calendar**, a collection of tables showing the days and months of the year, its astronomical occurrences, chronological references, etc. The Julian Calendar, with its leap year, introduced by Julius Caesar, fixed the average length of the year at 365½ days, which was about 11 minutes too long (the earth completes its orbit in 365 days 5 hours 48 minutes 46 seconds of mean solar time). The cumulative error was rectified by the Gregorian Calendar, introduced in Italy in 1582, whereby century years do not count as leap years unless divisible by 400. This is the rule we now follow. England did not adopt the reformed calendar until 1752, when she found herself 11 days behind the Continent. In the world calendar, advocated by the World Calendar Association, the year is divided into four equal quarters of 91 days, leaving one day over in normal years and two

days in leap years. Each quarter is divided into three months of 31, 30, and 30 days respectively and therefore contains exactly 13 weeks, beginning with a Sunday and ending with a Saturday. The days left over are extra-calendar days. For instance, the extra day at the end of each year would be known as World-day and the extra day in leap years, coming between the first and second halves of the year, would be known as Leapyear Day. Both these extra days would be world holidays.

**Calendering**, a mechanical process by which materials (e.g., textiles, rubber, plastics) are rolled and pressed to a smooth and even surface.

**Calends**, the first day of the month in the Roman calendar, when interest fell due, and proclamations as to the order of days were made.

**Calorie**. Unit of quantity of heat. The "small" or fundamental calorie is the amount of heat required to raise the temperature of 1 gram of water from 15° to 16° C. This is the gram-calorie used in physics and chemistry. The large Calorie (written with a capital C), commonly used in nutritional connotations, is equal to 1000 small calories and is defined as  $\frac{1}{860}$  of the heat required to raise the temperature of one pound of water from 32° to 212° F. The daily energy output of an active man is said to be equivalent to about 3000 Calories. See pp. 168 and 783.

**Calotype**, a wet-plate photographic process invented by H. Fox Talbot about 1840.

**Calumet**, a sacred decorated reed tobacco pipe used as a symbol of peace or war by the Indians of North America, the bowl being composed of soap stone, and the tube, which is long, being decked with feathers. To accept the calumet when offered is to be friendly, to reject it is to proclaim enmity. There is also a distinctive calumet of war used only on a declaration of war between tribes.

**Calypso**, West Indian song in the form of a doggerel lampoon composed spontaneously and sung to a guitar.

**Cambrian Group of strata** belongs to the Silurian series, and was so named by Professor Sedgwick because of its abundant development in Wales. It is the lowest and oldest division of the fossil-bearing rocks; fossils in them include brachiopods and trilobites.

**Cambridge University** had a sufficiently good teaching reputation to attract Oxford students in 1209, when lectures at their own university were suspended. In 1226 it had a Chancellor who was recognised by King and Pope. The first college to be founded was Peterhouse in 1284. The university was reorganised and granted a Charter of Incorporation by an act of Elizabeth in 1571. Other colleges with their dates of foundation are Christ's (1505), Clare (1326), Corpus Christi (1352), Downing (1800), Emmanuel (1584), Gonville and Caius (1548), Jesus (1496), King's (1441), Magdalene (1542), Pembroke (1347), Queens' (1448), St. Catherine's (1473), St. John's (1511), Sidney Sussex (1596), Trinity (1546), Trinity Hall (1850), Selwyn College (1882), Fitzwilliam House (non-collegiated students) (1869) and three women's colleges. Girton (1869), Newnham (1875), New Hall (1954).

**Camel**, a large ruminant quadruped, inhabiting Asia and Africa, where it is largely used as a beast of burden. There are two species—the Arabian camel or dromedary, with only one hump; and the Bactrian, or double-humped camel. There are no wild dromedaries, and the only wild bactrians occur in the Gobi Desert. The camel is able to go for long periods without water, not, as was formerly believed, because it stored water in its hump, but because of the unique mechanism of its physiology which enables it to conserve water at the expense of not sweating until 104° F. is reached.

**Camisards**, a French Protestant party of the early 18th century which originated in the Cevennes and resorted to arms in support of its faith.

**Camomile** (*Chamomile*), a small composite plant, cultivated for its flowers, which are white with a yellow centre. Its specific name is *Anthemis nobilis*. Camomile flowers are of an exceedingly bitter taste, but an infusion of them is valued as a remedy for biliousness and as a tonic.

**Campaniles**, or bell-towers are usually detached from their parent church, but not always. The most famous are in Italy, and are lofty and elab-

orate structures. Giotto's tower at Florence, adjoining the cathedral of Santa Maria del Fiore, is architecturally the finest in the world. Other famous campaniles of Italy are those of Cremona (395 ft. high) and Pisa (the Leaning Tower). The magnificent pointed campanile of St. Mark's, Venice, which collapsed in 1902 and has since been rebuilt in its original form, was begun in 902. Campaniles as separate structures are seldom found in Great Britain: the finest is that of the Westminster Roman Catholic Cathedral. The bell-turrets of St. Paul's in London and St. Peter's at Rome are only a form of campanile.

**Campus Martius** was a large plain used by the ancient Romans as a military camping ground. It was situated between the Quirinal and Capitoline hills, and is to-day entirely built over and forms the heart of modern Rome.

**Canal**, an artificial watercourse used for navigation which changes its level by means of locks. Some 2,400 m. are in use in Gt. Britain, the English network being based on the four great estuaries Mersey, Humber, Severn, and Thames.

**Canary**, a light, sweet wine from the Canaries and chief export until the grape blight of 1853. Much consumed in Britain from Tudor to Georgian times.

**Candela**, unit of luminous intensity, replacing the former *international candle* as standard. So defined that the brightness of a total radiator, or black body, at the temperature of solidification of molten platinum is 60 candles per sq. cm.

**Candlemas**, an English and Roman Church festival in celebration of the Purification of the Virgin when she presented the infant Jesus in the Temple, and deriving its name from the great show of candles made on the day (February 2) in the Roman celebrations.

**Canon**, a term applied to signify a recognised rule for the guide of conduct in matters legal, ecclesiastical, and artistic, or an authoritative ordinance; thus we have Canonical Scriptures, Canon Law, etc. A Canon is also a dignitary of the Church, usually a member of a cathedral chapter in the Anglican communion, or in the Roman Church a member of an order standing between regular monks and secular clergy.

**Canonical Hours** were seven in number in the Western Church; Matins and Lauds, before dawn; Prime, early morning service; Terce, 9 a.m.; Sext, noon; Nones, 3 p.m.; Vespers, 4 p.m.; Compline, bed-time.

**Canonisation**, the entering of a person who has been dead over fifty years on the list of saints of the Roman Catholic Church, after proof of purity and distinction of life has been accepted. This having been done, a day is named for the future keeping of the anniversary of the saint's death, and thenceforward appears in the Church Calendar.

**Cantata**, originally a long piece for solo voice, i.e., the vocal counterpart of a sonata. The term is now used to cover a small oratorio.

**Canticles**, the name given to the scriptural passages from the Bible sung by the congregation in the various Christian liturgies. They are the *Benedicite*, *Benedictus*, *Magnificat*, *Nunc Dimittis*.

**Cap**, literally any head-covering article of dress. The "Cap of Maintenance" is carried before the Sovereign at the Coronation, and is used symbolically in heraldry.

**Capercaillie**, the largest and most handsome of the grouse family, found in the Scottish highlands and the pine forests and mountainous regions of Northern and Central Europe and Asia.

**Capet**, the family name of a race of French kings, founded by Hugh Capet in 987 with its collateral branches. Reigned until 1848, except for the period of the French Revolution and Napoleon.

**Capitol**, a term that was first applied to the Temple of Jupiter on the Capitoline Hill, Rome, completed in 507 B.C. It was several times destroyed by fire and rebuilt. The existing Capitol, a large portion of which serves the purpose of a museum, was erected from designs by Michelangelo. In all the chief cities of the ancient Roman Empire there was a capitol or town-hall. In the United States the building occupied by Congress at Washington bears the name of the Capitol, and the halls of the legislative assemblies of the different States are so named.

**Capricorn**, a zodiacal constellation between Sagittarius and Aquarius, figured out in ancient times as having the head of the goat and the hind part shaped like a fish.

**Capuchins** are members of a mendicant order of Franciscans, founded in the 16th century with the aim of restoring the primitive and stricter observance of the rule of St. Francis, so called from the capuce or pointed cowl worn by them.

**Caravan**, a band of travellers or traders journeying together for safety across the Eastern deserts, sometimes numbering many hundreds. There are several allusions to caravans in the Old Testament. The great caravan routes of this period from Egypt to Babylon and from Palestine to Yemen linked up with the Syrian ports and so with western sea commerce. Many wars have been fought in the past over their control.

**Carbohydrates**, the name of a group of organic compounds containing carbon, hydrogen, and oxygen; the atoms of the latter are present in the ratio of 2:1, the same ratio as in water. Starch, cane sugar, glucose, cellulose are examples of carbohydrates.

**Carbolic Acid** or **Phenol** is obtained commercially by distillation of coal-tar, and is also made synthetically.

**Carbon**, a non-metallic chemical element which occurs in crystalline form as diamonds and graphite; amorphous forms of carbon include charcoal and soot, while coke consists mainly of elementary carbon. The biochemistry of plants and animals largely hinges upon carbon compounds. The study of carbon compounds is called "Organic Chemistry," as opposed to "Inorganic Chemistry."

**Carbonari**, members of a secret political society originated in Naples, and at one time very numerous. Their chief aim was to free Italy from foreign rule, and they exerted considerable influence in the various revolutionary movements in the first half of the 19th century. Their name was adopted from the charcoal-burners (*carbonari*), and their passwords, signs, etc., were all in the phraseology of the fraternity.

**Carbon dioxide**. Commonest of the five oxides of carbon. It is formed when carbon and its compounds are burnt with abundant supply of air, and when carbon compounds are oxidised in the respiration process of animals. The atmosphere contains carbon dioxide to the extent of about three parts in 10,000; this figure remains more or less constant because, while carbon dioxide is always being added by animal respiration and the burning of fuels, such as coal and oil, by man, plants are constantly removing it in the process known as photosynthesis or carbon assimilation. A heavy gas and obviously not one capable of supporting respiration, it can accumulate in caves, etc., and cause asphyxiation; for instance, in the Grotto del Cane, near Naples, a dog entering the cave is suffocated, whereas a man whose head is above the carbon dioxide level can walk through it unharmed. Solid carbon dioxide is called "dry ice." The gas in aerated drinks and soda water is carbon dioxide.

**Carbon monoxide** is a colourless gas with no taste or smell. It is formed when coal and coke are burnt with a restricted supply of air; the blue flame to be seen in a coke brazier, for instance, is the flame of carbon monoxide. This gas is very poisonous, forming with the hæmoglobin of the blood a compound which is useless for respiration and cherry red in colour, which gives a visible symptom of poisoning by carbon monoxide. With nickel it forms a volatile compound, called nickel carbonyl, and this reaction is the basis of the Mond process for extracting nickel.

**Carboniferous System**, in geology, is the term used to designate the strata from which coal is obtained. The system lies between the Permian and the Devonian, the latter being the oldest of the three sets of strata. In Britain the Carboniferous Limestone, Millstone Grit, and Coal Measures constitute the Carboniferous strata.

**Carbuncle**, the name of a deep-red stone of the garnet order, the finest examples occurring in Brazil, Madagascar, S. Africa, India, and Ceylon.

**Cardamom**, the seeds of various zingiberaceous

plants, mainly indigenous to Malabar, aromatic and tonic and useful medicinally in purgative compounds and carminatives.

**Cardinal**, a Roman Catholic ecclesiastical dignitary of the highest rank. Cardinals are divided into three classes, consisting of 6 cardinal bishops, 50 cardinal priests, and 14 cardinal deacons—70 in all. They are appointed by the Pope, and are associated with him in the government of the Church. A cardinal's dress consists of red cassock, a rochet, a short purple mantle, and a low-crowned red hat with cords and tassels.

**Cardinal Virtues**, according to Plato these were justice, prudence, temperance, fortitude—natural virtues as distinct from the theological virtues of the Roman Catholic Church, faith, hope, charity. The phrase "seven cardinal virtues," combining the two, figures in medieval literature. (See Sins, Seven Deadly.)

**Caricature** has for its object the exaggeration of the defects or peculiarities of persons or things so as to render them ridiculous. It is an art that was practised by the ancients, but did not attain real power and force until after the invention of printing. The development of caricature since the end of the Middle Ages has been greatly influenced by the political history of Europe. *Punch* has been the chief medium of English political and social caricatures since 1842. Among famous caricaturists have been Hieronymus Bosch (c. 1450-1516), Pieter Brueghel (c. 1525-69), Hogarth, Gillray, Rowlandson, Honoré Daumier, Tenniel, Keane, du Maurier, Phil May, Sir B. Partridge, F. H. Shepard, Sir F. Carruthers Gould, Sir Max Beerbohm, and David Low.

**Carlists**, a Spanish political party espousing the claim of the descendants of Don Carlos, brother of Ferdinand VII., to the throne of Spain. On the death of the latter in 1833, Isabella, his three-year old daughter, was proclaimed Queen owing to the abolition of the Salic law. There were several Carlist insurrections until the party was finally crushed in 1876.

**Carlovingians**, the second dynasty of the French kings (established 751), included such notable rulers as Charles Martel and Charlemagne. In 987 the Capet dynasty succeeded.

**Carmelites**, a body of mendicant friars taking their name from Mount Carmel, where the order was first established in the 12th century. The original rule of the order required absolute poverty, abstinence from meat and a hermit life. The rigidity of the rule of the order was mitigated by Innocent IV. The habit of the order was changed from the original stripe to brown with a white cloak and scapular, which gave the name of White Friars to its members. Carmelite nuns were instituted in the 15th century.

**Carnallite**. An important potash mineral; chemically it is the hydrated chloride of potassium and magnesium.

**Carnival**, the great festival which takes place in Roman Catholic countries on the last three days before Lent, when people give themselves up to the wildest revelry, buffoonery, and masquerading. It is only in the chief cities of Italy, however, that the custom is kept up with anything of the old spirit. At Nice a modernised form of it is given, of which the "battle of flowers" is a feature.

**Carnivora**, a large group of animals forming an order of the Mammalia, including cats, dogs, wolves, foxes, civets, bears, otters, seals, sea-lions, walrus, and others.

**Carob**, a wild plant growing abundantly on the Mediterranean coast and yielding a bean or pod that forms nutritious food for cattle and horses.

**Carolite**, an English gold coin of the Stuart period at first of the value of 20 shillings, and subsequently worth 23 shillings.

**Carp**, a well-known fresh-water fish, found in plenty in most European and Asiatic still waters, reaches a length of about 2 ft., and under favourable conditions lives for about 40 years. Familiar British members of the family are the roach, rudd, dace, chub, gudgeon, tench, minnow, barbel, bream, and bleak. The Goldfish, popular in ornamental ponds, is the domesticated variety of a Far Eastern member of the carp family.

**Carpets** are thick fabrics used for covering floors,

and were first made in Eastern countries—Egypt, Persia, India—finding their way to Europe in the Middle Ages. A carpet factory was established in France in the time of Henry IV., and one was set up at Mortlake, in England, in the reign of James I. The carpets of 16th-century Persia are celebrated for their artistic workmanship, examples having been preserved in the great museums of Europe. The best-known English carpets are the Axminster, Kidderminster, and Wilton. In modern times the production of carpets has been greatly improved and extended by the aid of steam-power and ingenious machinery.

**Carronade**, a short piece of ordnance of large calibre, with a powder-chamber similar to that of a mortar. It was first made at the Carron Ironworks, Scotland, hence its name. Much used in the Navy from 1779, but now superseded by improved guns.

**Carthusians**, an order of monks founded in 1084 by St. Bruno at the Grande Chartreuse, near Grenoble and introduced into England about a century later. They built the Charterhouse (corruption of Chartreuse) in London in 1371. The chief characteristics of the order are a separate dwelling-house in the precincts of the charterhouse for each monk, and the general assembly in the Church twice in the day and once at night. They wear a white habit, with white scapular and hood. The liqueur *Chartreuse* was invented by the order and is still their secret. For many years they have derived large revenues from its sale.

**Cartoons** are properly designs of the actual size of an art work as it is intended to be completed, and made for frescoes, tapestries, or mosaics. The most celebrated cartoons are the seven painted by Raphael, now at the South Kensington Museum. The artist executed 25 in all, but only these seven, which Rubens obtained for Charles I., remain. A political pictorial caricature or symbolic design is also styled "cartoon." The strip-cartoon carried by most popular newspapers and the American strip-cartoon-novel are features of the present age.

**Casein**, the chief protein in milk and cheese. It is coagulated by the action of rennet or acid. An important class of plastics ("casein plastics") are produced from it, and these plastics are converted into buttons, knitting-needles, etc. 8000 gallons of milk yields about a ton of casein.

**Cassowary**, a large bird of the ostrich family, inhabiting the Molucca Islands, New Guinea, and North Australia. It is of black plumage, with three toes, and has a horny crest upon its head. In fleetness it can outstrip the horse.

**Castanets**. Two small pieces of hard wood which are held in the hand and clicked together. The instrument is of Spanish origin and is commonly used to mark the rhythm of certain Spanish dance tunes.

**Caste**, a term used to specify the different hereditary social sections into which Indian Hindu society is divided. The four leading castes which are of ancient origin and go on from generation to generation, though they no longer fix the occupations of the people, are: (1) Brahmins or priests; (2) Kshatriyas or soldiers; (3) Vaisyas or merchants; (4) Sudras or labourers and artisans. Pariahs are considered outcastes and are sometimes called "untouchable." Many other divisions and subdivisions of caste have been developed from these four and each has its own customs. Wealth has no relation to caste as such and a servant may be of high caste and his master of low caste. The caste system in modern India is being modified.

**Castor-oil Plant** (*Ricinus communis*), an African shrub now cultivated in most tropical countries. It has broad palmate leaves and bears a spiny fruit containing seeds which when pressed yield the well-known oil.

**Cat**, the general name for all quadrupeds of the *Digitigrade* section of the carnivorous order, from the lion down to the domestic cat. The latter is supposed to be descended from the Wild Cat once so common in Britain and other parts of Europe. Egypt is credited with having been the first country in which the cat was domesticated. Among the finest varieties are the

Persian and Siamese. (See Domestic Pets Section.)

**Catacombs** are subterranean or built-up places of interment. The most famous are those of Rome, constructed by the early Christians, where in times of persecution they concealed themselves. They are of great extent, consisting of a labyrinth of vaulted galleries, 4-5 ft. wide, at different levels. These Roman catacombs are said to have contained over 8,000,000 bodies and to have extended scores of miles in length, though not more than about six miles are now accessible. Catacombs have also been discovered in Naples, Cairo, Paris, etc. Attached to some modern cemeteries are catacombs of the built-up order, formed of chambers of stone or brick in the walls of churches or mausoleums.

**Catamaran**, a float or raft of three or more pieces of wood lashed together. Used mostly on the Coromandel coast.

**Catapult**, a military engine used in ancient times for throwing missiles of stones, spears, and arrows. The ballista of the Middle Ages was an adaptation of this.

**Cataracts** are gigantic waterfalls. The most famous are those of Niagara in North America, the Orinoco in South America, the Victoria Falls on the Zambesi in Africa, the Falls of the Rhine at Schaffhausen, and the Cascade of Gavarni in the Pyrenees. Cataract, surgically, signifies an affection of the sight.

**Catechism**, an elementary book of principles in any science or art, but more particularly in religion, in the form of questions and answers. There is a great variety of these, including the Lutheran, prepared by Luther in 1529, Calvin's Geneva (in 1536), and the Anglican, in the Book of Common Prayer.

**Catechumens**, a term applied in the primitive Church to children of Christian parents, who were admitted as neophytes, and occupied a place apart in the church.

**Caterpillar**, the larva of a butterfly or moth, worm-like in its segmented body, usually furnished with feet, often curiously marked and coloured, and frequently more or less hairy.

**Cathedral**, the chief church of a diocese, so called from its containing a Bishop's seat, or episcopal chair. The finest cathedral in the world is that of St. Peter's at Rome, founded in 1450. Other celebrated cathedrals are Notre Dame of Paris, the cathedrals of Cologne and Milan, St. Paul's in London, Canterbury Cathedral, York Minster, and the cathedrals of Durham, Bristol, Gloucester, Peterborough, Exeter, Liverpool and Coventry.

**Cat's-eye**, a kind of quartz, much valued as a gem, opalescent, and of various shades.

**Caucus**, an American term designating a private authoritative body of politicians whose duty it is to select candidates for office and deal generally with party business. It was first used in this country at Birmingham in connection with what was called the "Liberal Six Hundred." Lord Beaconsfield employed the term satirically. The word has since come into common use, although generally in an uncomplimentary way.

**Cavalier**, a name adopted during the troubles of the Civil War to designate the Royalist party; it is also used generally in reference to a knightly, gallant, or imperious personage.

**Cavalry** is the part of an army consisting of troops that serve on horseback, and now less used than in former times. The cavalry of the Greeks and Romans were generally members of noble families, and down to the Middle Ages something of this distinction was continued. After the invention of gunpowder, this branch of the military service underwent great changes; and in more recent times, with the development of heavy artillery, armour, and air power, has almost disappeared from the field of battle. British Cavalry will be remembered for the rôle it played in the Crimea and Boer Wars. In the first world war it carried out distinguished services in many theatres, but none more so than in the operations in Palestine under Field-Marshal—then General—Allenby. In the Regular British Army, cavalry has now been fully mechanised and forms part of the Royal Armoured Corps together with the Royal Tank Regiment. This Corps now consists of five

regiments of Dragoon Guards, two Dragoons, four Lancers, nine Hussars, and eight Royal Tank Regiments. The Royal Armoured Corps, which is the descendant of both the Royal Tank Corps of the first world war and of the Cavalry, played a leading part in all the operations of the second world war. The armoured fighting vehicles have ranged from armoured cars weighing 7 tons and mounting 37 mm. guns to heavy tanks weighing 35 tons and mounting 17 pounder and 105 mm. guns. The various rôles of the Corps are armoured car regiments, divisional regiments for close reconnaissance in Infantry Divisions—the equivalent of the old Divisional Cavalry Regiment—and armoured regiments in armoured divisions and armoured brigades. It also provides regiments of specialised armour using armoured flame-throwers and minefield clearing tanks. The two Household Cavalry Regiments have also been mechanised as armoured car regiments, but each retains a mounted squadron for state and ceremonial duties.

**Caves** are natural hollow places in the earth, largely met with in limestone or volcanic rocks. Fingal's Cave in Staffa is noted for its splendid range of basalt columns, and at Malham and Kirkdale in Yorkshire, and Kent's Hole near Torquay, are far-extending caves. The mammoth cave of Kentucky extends through many miles of labyrinthine windings.

**Caviare** is a Russian preparation made from the salted roe of certain fish, such as sturgeon, sterlet, and sevruga, and much appreciated by epicures.

**Cayenne Pepper** is made from the dried and baked pods of various kinds of tropical capsicum.

**Cedar**, a dark-leaved, cone-bearing, horizontal-branched evergreen tree that grows to a considerable height and girth, the best known species in this country being the Lebanon Cedar, which was introduced into England in the 17th century, and is now of frequent occurrence here. Cultivated in tropical countries.

**Cello**. (See Violoncello.)

**Celluloid**, one of the first synthetic thermoplastic materials, discovered by Alexander Parkes in 1865 when he was attempting to produce synthetic horn. It is made by treating cellulose nitrate with camphor and alcohol. The non-flam character of photographic film is conferred by the substitution of a cellulose acetate or other material as base, for the dangerously inflammable celluloid otherwise used.

**Cellulose**, a carbohydrate, and a constituent of nearly all plants. Cellulose occurs in an almost pure state in the fibres of linen and cotton.

**Celts**, an ancient race of Western Europe, originally settled in Gallia, and afterwards spread over other parts of Europe, including Britain. The two chief divisions of Celtic Britons were the Gaels of Ireland and the North of Scotland, and the Cymri of Wales. The descendants of these races still retain many of their ancient characteristics, and considerable interest is manifested in their language and literature.

**Cement** means, in general technical parlance, an adhesive. Building cements are calcium silicate-aluminate mixtures made by heating lime with clay; the most widely used kind is Portland cement, invented in 1824 by Joseph Aspdin of Leeds.

**Cenotaph** (Greek = empty tomb), a monument erected in Whitehall, London, to commemorate all those who gave their lives in the service of the British Empire during the first world war. The permanent structure was unveiled by George V. on Armistice Day, 1920.

**Censors** were Roman magistrates vested with the power of keeping a record of all citizens, and of controlling the manners, morals, and duties of the peoples. In more recent times in England censors have been appointed by the Government in connection with publications of the Press or for the stage. During the First and Second World Wars there was a very strict censorship of news.

**Census** was the title given in ancient Rome to a register of citizens, with full particulars as to their family, children, slaves, and so forth. The term is now used to denote the periodical survey of the number and condition of the people. In Great Britain it takes place every ten years.

The first official census in this country was that of 1801; the last was taken in 1951.

**Centre of Gravity** of a body is the fixed point through which the resultant force due to the Earth's attraction upon it always passes, irrespective of the position of the body.

**Ceorl**, the name given to an Anglo-Saxon freeman in bond-service to a landed proprietor.

**Cerium**, a scarce metallic element discovered by Berzelius in 1803. It is capable of precipitation to powder, and only exists in combination in the minerals cerite, allanite, and a few others. A mixture of cerium and thorium nitrates is used in the manufacture of gas mantles, which owe their incandescent property to the deposit of cerium and thorium oxide with which they are coated.

**Cestus**, the name given to a girdle worn by Greek and Roman women around their waists, and generally decorated. It was also the name of the loaded gauntlet worn by boxers in the Roman arena.

**Cetacea**, the order of mammals including the whales, dolphins, and porpoises, which, though strictly aquatic, breathe air, suckle their young, and are warm-blooded.

**Chain reaction**, the term introduced to describe the self-maintaining processes exhibited in the atomic bomb and the atomic pile. One of the products of uranium fission, the neutrons, assist in promoting the process of fission itself. By analogy, a fire is a self-propagating chain reaction; the heat generated by burning one portion of fuel is sufficient to start adjacent fuel burning, thereby releasing still more heat and igniting still more fuel. Thus a steadily burning fire that is always under control is like an atomic pile; the fire that is out of control resembles the expanding chain reaction of the atomic bomb.

**Chalcedony**, a fine quartz with a waxy lustre, and much used by jewellers for necklaces, bracelets, etc. Commonly it is white or creamy. Its bright orange-red variety is called carnelian; its brown variety, sard. Chrysoprase, plasma, bloodstone are varieties which are respectively pale apple-green, dark leek-green, green with red spots.

**Chalk**, a white limestone, calcium carbonate, found in the Upper Cretaceous deposits (formed from the shells of minute marine organisms). In southern England the chalk is a soft rock, but in Yorkshire, Scotland, and Ireland it is solid limestone. French chalk is hydrated magnesium silicate, a variety of talc.

**Chalybeate Waters** are waters impregnated with iron, or containing iron in solution. Chalybeate springs are numerous in England and other parts of the world, and are valuable in restoring strength after illnesses and improving the blood.

**Chama**, a genus of large bivalves of the mollusc family, found in tropic waters, especially amongst coral reefs. *Chama gigas* weigh sometimes as much as 300 lb., and one valve has been employed as the basin of baptismal fonts in various churches.

**Chamberlain**, Lord, the senior officer of The Royal Household who is responsible for all ceremonial within the palace (levees, courts, garden parties, entertainment of foreign royalties and heads of state) but not the coronation or state opening of parliament. He is also in charge of appointments to The Royal Household and is examiner and licenser of plays.

**Chamberlain, Lord Great**, one of the great officers of state whose duties are now mainly ceremonial. He attends the monarch at the state opening of parliament and at the coronation and is custodian of the Palace of Westminster (Houses of Parliament). The office is hereditary, dating from Norman times and is held for one reign in turn by the descendants of the De Veres, Earls of Oxford.

**Chamber Music**, strictly signifies music suitable for playing in a small room, but is used to cover music specially composed for small combinations of instruments; e.g., string quartets, etc.

**Chambertin**, a well-known brand of red Burgundy from the vineyards of the Côte d'Or, France.

**Chameleon**, a family of lizards of which there are numerous species. The common chameleon is a native of Africa, and is about 12 inches long, including tail. It is remarkable for its power of

changing colour to resemble its surroundings when surprised, a power that is due to the presence of pigment-bearing cells beneath the skin. It is slow in movement, and insectivorous.

**Chamois**, a species of antelope, and a native of Western Europe and Asia. It is not much larger than a goat, lives in mountainous regions, and possesses wonderful leaping power, so that it is very difficult to capture. Its flesh is much esteemed, and from its skin chamois leather is made. The mating season is Oct.-Nov., and the fawns are born in May or June. They can follow their dam when only a day old. Live to be 20-25 years old.

**Champagne**, the celebrated sparkling wine made from the grapes of the vineyards of the district of France, of which Rheims is the headquarters.

**Chancellor** was the title of a chief officer of the Roman Empire, but at the present day is used to designate in England the leading dignitary of the law and Parliament. In former times the Lord Chancellor of England was the King's most trusted adviser, and exerted immense influence. Before the Reformation he was generally an ecclesiastic. The Lord Chancellor is the Keeper of the Great Seal, a Privy Councillor, and Speaker of the House of Lords. His salary is £10,000 a year, and he receives a pension of half that sum. The term is also used of the Exchequer, Duchy of Lancaster, of Dioceses, Universities, and of the Garter.

**Channel Tunnel**, a scheme to bore a tunnel through 20-30 miles of chalk under the sea between Dover and Calais was proposed in the second half of the 19th century. The bill authorising the work was rejected in 1883. In 1980 the scheme was again proposed by many enthusiastic supporters. The tunnel would be the longest ever made and an engineering wonder of the world. It would consist of two tubes with frequent connections. Electric trains would run through, taking only 1 hour and reducing the journey between London and Paris by about 2 hours. The estimated cost, however, being more than 35 million pounds, the attendant military risks, and doubt as to feasibility of construction led the Government in June 1930 to reject the proposal. Tunnelling was actually begun some years ago on the British side and the project never fails to be a fascinating subject for discussion.

**Chantry**, a private church or chapel established and endowed for the maintenance of priests to perform daily Mass for the souls of certain specified persons. Chantries were numerous in England up to the Reformation, and some few still remain.

**Chapel Royal**, the church dedicated to the use of the Sovereign and Court, and at present situated in St. James's Palace.

**Charcoal**, a term applied to wood that has been subjected to a process of slow smothered combustion. More generally it refers to the carbonaceous remains of vegetable, animal, or combustible mineral substances submitted to a similar process. Charcoal from special woods (in particular buckthorn) is used in making gunpowder. Bone charcoal finds use in sugar refining, as it removes dark colouring matter present in the crude syrup.

**Charterhouse**, a famous school that was in Aldersgate Street, London, but removed to Godalming. In connection with the school is an almshouse on the old London site, endowed by Thomas Sutton in 1611. Thackeray, as well as Addison, Grote, and other eminent men, were Charterhouse scholars.

**Chartism**, the principles or practices of a body of political reformers who (1837-48) conducted a movement for amelioration of social and industrial conditions of the working classes. Their platform was stated in the National or People's Charter, drafted by Francis Place in the form of a charter or act of Parliament, and published May 8, 1838. Reform was demanded under six heads: universal adult male suffrage, vote by ballot, annual parliaments, payment of members, equal electoral districts, and abolition of the property qualification.

**Chasuble**, a sleeveless vestment worn by ecclesiastics over the alb during the celebration of Mass. It is supposed to symbolise the seamless

coat of Christ. Its use in English churches was prohibited in 1552, but again permitted after 1559. It gradually fell into disrepute, however, but some fifty years ago was resumed in the High Church services.

**Chauvinism** is a term applied to any exaggerated devotion to a cause, more particularly to excess of public or military enthusiasm. The word springs from Nicholas Chauvin, whose extravagant devotion to Napoleon I. made him a laughing-stock.

**Cheese**, an article of food made from the curd of milk, which is separated from the whey and pressed in moulds and gradually dried. There are about 500 varieties differing with method of preparation and quality of milk. They used to be made in the regions after which they are named but nowadays many of them are mass-produced, e.g., Cheddar is made not only in all parts of Britain but in Canada, New Zealand, Australia, Holland, and the U.S.A. Cheeses may be divided into 3 main classes: (1) soft, e.g., Camembert, Cambridge, Port l'Eveque; (2) blue-veined, e.g., Stilton, Gorgonzola, Wensleydale, Roquefort; (3) hard-pressed, e.g., Cheddar, Cheshire, Gruyere, Parmesan, Gouda.

**Cheetah**, the large spotted cat of Africa and Southern Asia, often called the "hunting leopard" because of its employment in the chase.

**Chemistry** is the science which analyses and describes the properties and composition of various natural substances. It had its rise in alchemy and has gradually developed into a science of vast magnitude and importance.

**Chenille**, a soft cord material of silk or worsted used in embroidery and lace-making.

**Cherokees**, a North American tribe of Indians, once a powerful and warlike nation occupying a large portion of the Allegheny range, but now residing within the Indian Territory under civilised rule of law and very prosperous.

**Chestnut**, the fruit of the chestnut tree; those of the Spanish chestnut, *Castanea vesca*, furnish a favourite esculent. The wood is used in carpentry; while the horse-chestnut (*Æsculus hippocastanum*) is much employed in brush-mounting and in cabinet work.

**Chiaroscuro**, a term used in painting to denote the arrangement of light and shade in a picture. On the proper handling of chiaroscuro depends the fidelity of depiction of objects and distances.

**Chicory**, a plant largely used for mixing with coffee and not regarded altogether as an adulterant, being credited with certain dietetic virtues. In England, however, where chicory is added, the fact must be stated on the package sold to the public. The dried roots of the plant only are used, being ground into powder before mixing.

**Chief of Imperial General Staff**, the present title of the Supreme Commander of the British Army.

**Chiltern Hundreds**, three hundreds—Stoke, Burnham, and Desborough—the stewardship of which is now a nominal office under the Chancellor of the Exchequer. Since about 1751 the nomination to it has been used as a method of enabling a member of Parliament to resign his seat on the plea that he holds an office of honour and profit under the crown. (This has been a disqualification for Parliament since 1707.) (See "A Citizen's Guide.")

**Chimpanzee**, a large anthropoid ape, a native of tropical West Africa, of a dark brown colour, with arms reaching to the knee, large ears, and a general organisation resembling that of man. It possesses considerable intelligence, can walk erect with ease, and when full grown is about four feet high.

**Chinchilla**, a South American rodent. Grey in colour, and black and white underneath. It is greatly esteemed for its beautiful fur.

**Chintz**, a cotton cloth, generally glazed and covered with floral or other designs. It is largely used for furniture coverings.

**Chipmunk**, a squirrel-like animal of the *Tamias* genus, common in the United States.

**Chippendale Furniture** was introduced in the reign of George I. by Thomas Chippendale, a Worcestershire cabinet-maker who migrated to London and set up for himself in St. Martin's Lane, Charing Cross. He was fonder of inventing designs for furniture than of making it, and in

1752 published a book of patterns; the London furniture-makers of the day soon began to model their work upon it.

**Chirograph**, an indenture drawn in evidence of title to property, landed or otherwise, and prepared (usually on parchment) in a special manner of engrossing.

**Chromancy** is the old name for palmistry of divination by the hand. It was greatly practised in olden times.

**Chiropody**, the treatment of the hands and feet for the cure or prevention of disease, especially applied to the removal of corns, warts, etc.

**Chlamys**, a loose military cloak or mantle, worn formerly chiefly by horsemen, and permitting the free use of the arms.

**Chloral**, a colourless mobile compound discovered by Liebig, and obtained from chlorine and alcohol, or chlorine and starch.

**Chlorine**, a gaseous element of the halogen family, first isolated in 1774 by Scheele by the action of manganese dioxide on hydrochloric acid. It unites easily with many other elements, the compounds resulting being termed chlorides. The gaseous element is greenish-yellow, with a pungent odour. It is a suffocating gas, injuring the lungs at a concentration as low as 1 part in 50,000. Was used during World War I as a poison gas. Has a powerful bleaching action, usually being used in form of bleaching powder, made by combining lime and chlorine. Also a valuable disinfectant; used, for instance, in rendering water of swimming baths sterile.

**Chlorites**, green mica-like minerals. They arise by metamorphosis of such minerals as biotite, pyroxene, etc.

**Chlorodyne**, an anodyne remedy containing morphine, chloroform, prussic acid, and extract of Indian hemp, flavoured with sugar and peppermint. It is often administered to children to induce sleep, and, when unskillfully given, sometimes leads to unfortunate results.

**Chloroform**, a volatile colourless liquid, is prepared for commercial purposes by distilling a mixture of chloride of lime, alcohol (or acetone), and water; but for medical use it is made from chloral hydrate, which yields a purer distillate. When the vapour is inhaled it produces unconsciousness and insensibility to pain. It owes its discovery to Liebig, and its first application for medical purposes to Sir James Young Simpson.

**Chlorophyll**, the green pigment contained in the leaves of plants, first discovered by Pelletier and Caventou in 1818. Enables the plant to absorb sunlight and so to build up sugar. (See Photosynthesis and pp. 171-2.)

**Chocolate**, a paste made from the kernels of the cacao tree, flavoured with sugar, vanilla, or other substance, and used as a beverage or sweet. It was consumed by the Mexicans as far back as the time of Montezuma.

**Chorale**. Originally a Lutheran hymn-tune, but used, especially by J. S. Bach, as a basis for instrumental or choral pieces, e.g., Chorales and Choral Preludes.

**Chord**. A number of notes played simultaneously. **Chouans**, the name given to the bands of peasants, mainly smugglers and dealers in contraband salt, who rose in revolt in the west of France in 1793 and joined the royalists of La Vendée. Balzac gives a picture of the people and the country in which they operated in his novel *Les Chouans*.

**Chough**, a member of the crow family, of glossy blue-green-black plumage, whose long curved bill and legs are coral red. It used to be abundant on the cliffs of Cornwall, but its haunts are now restricted to the rocky outcrops of the western coasts and in the mountains near by. It nests in cleft rocks and caves. The Alpine chough has a yellow bill and is found in the mountains. (See p. 1004.)

**Chrim**, the sacred ointment consecrated by a Bishop, and used in the rites of baptism, confirmation, ordination, etc. It is now only employed sacerdotally in Roman Catholic and Greek churches.

**Christadelphians**, members of a religious sect, founded in the 1840's by John Thomas, an Englishman who settled in America, who held that immortality can be obtained by believers only.

**Christianity**, the religion proclaimed by Jesus Christ. Its principles are set forth in the New Testament, and its churches abound all over the world. Although Christianity has had a great influence on Western civilization, the West is finding it increasingly difficult to live up to her own Christian principles.

**Christian Science**, the religion, or interpretation of the Christian religion, discovered and founded by Mary Baker Eddy. It is defined by Mrs. Eddy as "The law of God, the law of good, interpreting and demonstrating the divine principle and rule of universal harmony." The prevention and cure of disease is within the mission of Christian Science for the same reasons that it was within the mission of original Christianity.

**Christmas** means "mass of Christ" from the old English *Crīstes mæsse*, which is celebrated by the western church on December 25. The actual day on which Christ was born has never been decided and there is some uncertainty about the year. December 25 as the day of Nativity was not generally observed until the 5th century, A.D., though, as the winter solstice, it had long been observed as a pagan festival of *sol invictus* (unconquered sun). The first Christmas card dates from about 1843 and the Christmas tree, of pagan origin, was introduced into England from Germany under the influence of Prince Albert. Santa Claus is a corruption of Saint Nicolas, patron saint of children, whose feast day properly falls on December 6.

**Christ's Hospital** (sometimes called the Blue Coat School), founded by Edward VI. in 1552 on the site of an old Greyfriars monastery in Newgate Street, London. Removed in 1902 to West Horsham, when the site was divided between St. Bartholomew's Hospital and the General Post Office. Charles Lamb and Samuel Coleridge were educated at this school. The Girls' School is at Hertford.

**Chromatics**, the science which investigates and explains the properties of the colours of light, and of natural bodies, forming a chief branch of optics.

**Chromatic Scale**, a scale proceeding in intervals of one semitone. *E.g.*, chromatic scale in C C-D♭-D-E♭-E-F-G♭-G-A♭-A-B♭-B-C.

**Chromium**, a very hard, bluish-white metal, melting at a very high temperature (above 1900° C.). Its chief ore is chromite or chrome iron-ore (ferrous chromite). "Ferro-chrome" is produced by heating chromite and anthracite in an electric furnace, and chrome steels are prepared by adding the pre-calculated amount of ferro-chrome to melted steel. Best known chrome steel is stainless steel first made by Brearley in 1912 and since then developed greatly at Sheffield. A typical formula is 18 per cent. chromium, 8 per cent. nickel, 74 per cent. iron. Equally important are Stellite alloys, containing chromium, cobalt, tungsten (or molybdenum), which have made possible modern high-speed cutting tools. Dies used in manufacture of plastics are commonly of chrome steel. The elementary metal finds little use alone except in chromium plating for motor cars, etc.

**Chromosomes**, the bodies contained within the nucleus of every animal or plant cell, each containing several hundreds of the hereditary factors called *genes*. When the cell divides, each chromosome splits, so that every cell contains an identical complement of genes.

**Church Army**. The Church Army is essentially a working people's Mission to working people. This Society carries on Training Colleges for evangelists, social workers, sisters, etc., of whom hundreds are at work at home and overseas. There are Mission Vans, Marching Crusaders, News Teams, and many forms of mission work in prisons, etc. The Society has many classified Hostels, Homes, Clubs, and Shelters for men, lads, women, girls, and children. Address: 55, Bryanston St., London, W.1.

**Church Commissioners**. The Church Commissioners were established in 1948 by the amalgamation of Queen Anne's Bounty (established 1704) and the Ecclesiastical Commissioners (established 1836) to administer Church revenues and to manage Church property generally. The Commissioners own in investments and real

estate a total of over £200 million. The gross income from the general fund in 1958-59 was £8,537,000, over £7 million of which went in payments towards the stipends of clergy, incumbents, and assistant curates.

**Church of England** ante-dates the Norman conquest of England by centuries. There is some evidence of possible continuity with the Christianity of Roman Britain, but in the main the Church derives from the fusion of the ancient Celtic Church with the missionary Church of St. Augustine, who founded the See of Canterbury in A.D. 597. To Archbishop Theodore in 673 is ascribed its organisation in dioceses with settled boundaries, and in parishes. St. Augustine's Church was in communion with Rome from the first, but the Church of England was not brought within Papal jurisdiction until after the Norman conquest, and was at no time under the complete domination of Rome. It remains the Catholic Church of England without break of continuity, but during the Reformation the Royal supremacy was accepted and that of the Pope repudiated. It is the Established Church (i.e., the official Church of the realm), crowns the Sovereign, and its Archbishops and Bishops in the House of Lords can act as a kind of "conscience of the state" at every stage of legislation. The policy of religious toleration has been accepted since the 16th century. Two-thirds of the children born in England are baptised in the Church of England. The Church is organised in two Provinces and 43 dioceses. The Archbishop of Canterbury is Primate of All England. The Archbishop of York is Primate of England. Each Province has its ancient Convocation comprising an Upper House (of Bishops) and a Lower House (of Clergy), dealing especially with doctrinal matters; and there is a Church Assembly (with Houses of Bishops, Clergy, and Laity), whose Measures if approved by Parliament, which cannot alter them, go to the Queen for Royal Assent and are then law as if they had been Acts of Parliament.

**Church of Scotland** was constituted at the Reformation. The union of the C. of S. with the United Free Church was effected in October 1929, after 86 years of separation. The chief official is the Moderator, chosen annually, who ranks next after the Lord Chancellor in Scotland; the Sovereign herself is represented by a Lord High Commissioner. The Church is governed by Kirk Sessions, Presbyteries, Synods, and the General Assembly.

**Cid**, The, a famous Spanish hero of the 11th century. Don Rodrigo Diaz de Vivar, who, before he was twenty, led a Spanish force against the Moors, and drove them out of Spain. He is celebrated in poem, play, and romance.

**Cider**, a fermented liquor made from the juice of apples by crushing the fruit to pulp when ripe. The cider of Devonshire, Somersetshire, Worcestershire, and Herefordshire is the best.

**Cinchona**, the tree native to the Andes which is famous for its bark, source of the drug quinine. It was introduced into Ceylon, India, and Java, the latter becoming the main supplier of quinine.

**Cinnabar**, an ore which yields mercury by heating. **Cinnamon**, the dried bark of a tree common in the East Indies, and forms a valuable spice.

**Cinque Ports**, a number of seaport towns on the coast of Kent and Sussex, originally five: Hastings, Romney, Hythe, Dover, and Sandwich. Winchelsea and Rye were added later. These ports were required to furnish a certain number of ships, ready for service, and in return they were granted many privileges. The official residence of the Lord Warden is Walmer Castle. Mr. Winston Churchill is the present Lord Warden and Admiral of the Cinque Ports.

**Cistercians**, an order of monks and nuns taking their names from Cîteaux, near Dijon, where their first monastery was established in 1098. The order was noted for the severity of its rule. They were famous agriculturists. The habit is white, with a black cowl or hood. The order declined, and in the 17th century there was a reform movement instituted by the Trappists, who were later organised into a separate order.

**Citric Acid** is an organic acid present in lemon juice to the extent of 6-7 per cent. Used in confec-

tionery, beverages, medicine; some finds its way into the plastics industry. Main source used to be lemon juice; in Italy this was converted into citrates which were exported. After 1927, when Italy placed an embargo on export of citrates, production of citric acid by fermentation of sugar with moulds was developed in several countries, including Britain.

**Citron**, the fruit of a tree of the lemon order (*Citrus medica*) with thick rind, much used for candied peel.

**Civet**, a carnivorous quadruped from which civet perfume is obtained.

**Civil List** is the annual sum payable to the Sovereign to maintain the Royal Household and to uphold the dignity of the Crown. The amount is granted by Parliament upon the recommendation of a Select Committee and has to be settled afresh in the first six months of a new reign. The Civil List of Queen Victoria was £385,000; Edward VII and George V, £470,000; Edward VIII and George VI, £410,000; Elizabeth II, £475,000. The annuities payable to members of the Royal Family do not form part of the Civil List but are a charge on the Consolidated Fund; Queen Mother, £70,000; Duke of Edinburgh, £40,000; Duke of Gloucester £35,000; Princess Royal, £8,000; Princess Margaret and Princess Anne, £6,000 (£15,000 on marriage). Prince Charles has his own income from the Duchy of Cornwall.

**Clarinet**, a wood-wind instrument with a single reed which gives forth a rich, smooth tone. The reed is "tongued" and the note selected by operating keys which open or close holes in the wooden tube. A larger instrument of lower pitch is known as the bass clarinet.

**Clay**, a term used to designate certain plastic, earthy compounds composed of hydrated silicates of alumina. China clay, from which porcelain is made, is the purest clay, and is obtained by the natural crumbling of felspar, which is found in Devon and Cornwall in this country, and is well distributed in China, Japan, and the United States.

**Cleopatra's Needle** on the Thames Embankment is of the time of Tuthmosis III. (1500-1450 B.C.). Presented to the British Government by Mehmet Ali in 1819, but not brought to this country until 1878. Its weight is 180 tons and it is 68½ ft. in height.

**Climate** is a generalised representation of the day-to-day weather conditions throughout the year, the combination of all weathers thus determining the climate of a place. Averages and extremes of temperature, variation of humidity, duration of sunshine and cloud cover, amount of rainfall and frequency of snow, frost, gales, etc., are amongst the data normally investigated. The interiors of great land masses are characterised by large ranges of temperature and low rainfall (continental climate), while proximity to oceans has an ameliorating effect with increase in rainfall (oceanic climate). Presence of mountain ranges and lakes and configuration generally produce local modifications of climate, also apparent between the centre and the outlying suburbs of a city. There is evidence that vast changes of climate have occurred during geological time. In recent decades the winters in western Europe have shown a tendency to be less cold and the summers less warm, but the series of severe winters which commenced in 1940 and the hot summers of 1947 and 1949 suggest the possibility of yet another climatic change. Latitude introduces zones of climate, e.g., tropical rain, subtropical steppe and desert, temperate rain and polar.

**Cloaca Maxima**, the name of the great underground sewer of Rome, constructed in the reign of Tarquinius Priscus (circa 588 B.C.) and still extant in its chief structural features.

**Clock**, a device for measuring the passage of time, usually having a motive spring or weight, and geared train, with a pulsative device to govern the rate at which the mechanism shall move; also commonly having a figured dial and index hands. The shadow clock was used by the ancients, a primitive form of sun-dial, and when the sun and stars were invisible, the water clock, the clepsydra. The sand glass is not

mentioned before A.D. 1400, but it is known that a mechanical clock was put up at Westminster in 1288. The earliest surviving clock in England is the Dover Clock, which dates from 1348 and is at the Science Museum, and the one in Salisbury Cathedral dates from 1386. The first watches were made in Nuremberg shortly after 1500. The marine chronometer is a high-precision timepiece used at sea for giving Greenwich mean time. The quartz-crystal clocks at Greenwich are accurate to one thousandth of a second a day, and the atom clock, recently developed at the British National Physical Laboratory, is governed by the natural vibrations of the caesium atom, and is said to be an almost absolute measure of time. This standard is now being used to calibrate the quartz clocks to an accuracy greater than that given by astronomical time.

**Cloisonné**, a kind of fine pottery with enamelled surface, decorated with elaborate designs, the outlines of which are formed by small bands or fillets of metal. The Byzantines excelled in this work, but in the 20th century Japan and China led in Cloisonné-ware.

**Cloisters** are covered walks or vaulted arcades attached to monastic and ecclesiastical buildings, usually surrounding a quadrangle and serving for exercise and relaxation.

**Cloud chamber**, an apparatus invented by C. T. R. Wilson in which the tracks of electrical particles, including beta rays, electrons, alpha particles, protons, and X-rays can be made visible. Just as the vapour trails tell of the track of an invisible aircraft high up in the air, so the vapour trails of an unseeable electrically charged particle can tell of its behaviour. The rays under investigation pass through a chamber containing air, thoroughly cleansed of dust, supersaturated with water vapour. As the particle passes through it forms a track of tiny water droplets which can be photographed.

**Clouds** are formed by the ascent of moist air, the type depending on the way the air ascends and the height at which condensation occurs. There are three main classes: High cloud (above 20,000 ft.).—Cirrus (delicate and fibrous). Cirrostratus (thin white veil), and Cirrocumulus (delicately rippled) consisting of ice crystals. Medium cloud (above 7,000 ft.).—Altostratus (dense, greyish veil) and Altocumulus (broken flattened cloudlets)—chiefly water particles, often supercooled. Low cloud (from near ground to 7,000 ft.).—Cumulus (fair weather, broken, dome-topped), Cumulonimbus (heavy, towering to great heights). Stratocumulus (layer of globular masses or rolls), Stratus (like fog but off the ground), Nimbostratus (low, rainy cloud).

**Clover**, plants of the *Trifolium* genus, of which there are about 300 species. The best known kinds are *White Clover*, a common pasture product in nearly all parts of the world; and *Red Clover*, the most widely cultivated of all, much esteemed as fodder for cattle. The nectar of white clover is an important source of honey; the tongue of the hive bee is too short to tap nectar from the red clover, which is pollinated instead by bumble bees. *The Subterranean Clover* has two kinds of inflorescence; one is normal but the other buries itself underground, where the fruits ripen, a habit reminiscent of the ground- or monkey-nut.

**Cloves** are the dried flower-buds of a species of myrtle (*Eugenia aromatica*) grown principally in the East Indies.

**Club Mosses** or *Lycopods*, also called "ground pines." These relatively primitive land plants (in the evolutionary scale they are placed below the ferns) are usually found in dry open spaces in temperate countries. These plants have long creeping stems covered with numerous small pointed leaves. Five species occur in Britain. Huge lycopods existed in the Carboniferous period, and their bodies have decomposed to produce a large fraction of our coal seams.

**Coal** is a carbonaceous mineral substance, commonly black and easily breakable, and may be either dull or shiny. It is very inflammable, and has formed for a long period the most important substance for fuel in employment in most civilised lands. It is composed of

chemically altered vegetable matter, chiefly the timber of long extinct lycopodiaceous trees (see Club Mosses) and is found as a sort of stratified rock in the coal measures. Anthracite coal has lost nearly all its hydrocarbon by change or by pressure, and this and the more highly bituminous coals are greatly employed in manufacturing industries the world over, while those less so are used for household purposes. A ton of coal will yield by high temperature carbonisation from 10,000 to 15,000 cu. ft. of gas, 8 to 12 galls. of tar, 13½ cwt. of coke and about 20 galls. of ammoniacal liquor, varying according to the class of coal used. It is calculated that in seams of one foot thickness or more to a depth of 4,000 ft., the proved resources of coal in Great Britain amount to 120,000,000,000 tons and the probable total resources to 170,000,000,000 tons. Production in Great Britain is over 200 million tons a year and most of it is for home use. In 1947 the British coal industry was transferred to the National Coal Board.

**Coal Tar.** (See Aniline.)

**Coat of Arms, in heraldry,** is a device containing a family's armorial bearings. In mediæval times it was an actual coat upon which such device was embroidered, and knights wore it over their armour.

**Cobalt,** a white metal melting at 1490° C. Two main ores are *cobalt glance* (in which the element is combined with arsenic and sulphur) and *smaltite* (cobalt arsenide). The principal sources are Ontario and the Belgian Congo. Various cobalt alloys are important, e.g., Stellite, Ferro-cobalt, and Carboloy. Its monoxide is an important colouring medium, and is used for colouring glass and porcelain.

**Cobra,** hooded and very venomous snakes. The best known species are the Indian Cobra, the Egyptian Cobra and the Black-necked Cobra. Their food consists chiefly of small rodents. The King Cobra is almost exclusively a snake-eater. "Spitting" Cobras (or Ringhals) of S. Africa are a related genus, capable of spitting their venom several yards.

**Coca,** a South American shrub, *Erythroxylon coca*, which yields three crops a year of leaves and flowers. The leaves are chewed by the natives and act as a strong stimulant, enabling them to withstand hunger and fatigue to an astonishing degree. It is used in medicine as a tonic, and yields the alkaloid cocaine. Over 50,000,000 pounds of coca leaves are gathered yearly.

**Cochineal or Carmine,** a dyestuff consisting of the dried bodies of the female scale insect (*Coccus Cacti*). The dye is of ancient origin, was well known to the Aztecs, and was used widely in the Middle Ages. The famous scarlet tunics worn by the English during the Napoleonic wars owed their colour to carmine. The German microscopist Ehrenberg is credited with being the first to apply carmine as a biological stain in 1838.

**Cock-a-Bendy,** a contrivance for twisting ropes, consisting of a hollow piece of wood through which a pin runs. By reason of the rotation of this pin when the cock-a-bendy is held in the hand, twist is imparted to the rope.

**Cockatoo,** a member of the parrot family, bearing a crest of feathers on the head, native to Australia and adjacent regions. Predominant colour is white tinged with yellow or scarlet while some species have dark plumage. The great black cockatoo of New Guinea is slaty black with pale red cheeks and can crack Canary nuts which usually require a hammer to break them open. (See p. 1002.)

**Cockatrice,** a basilisk or fabulous serpent supposed by an exploded tradition to have been hatched from a supposititious egg of a cockatrice by a serpent. Its glance or breath was, according to legend, fatal.

**Cockchafer** (*Melolontha*), one of the most destructive of beetles, the larvæ feeding on roots. It is about 1 inch in length, of a brownish colour, and emits a loud whirling sound when flying.

**Cockle,** the popular name of the shell-fish of the genus *Cardium*, found plentifully in sandy bays near low-water line; there are numerous British species.

**Cockroach,** popularly called the black-beetle, though it is neither black nor beetle. A great pest of bakeries, kitchens, etc. In Britain there are two species commonly found: the *Common*

or *Oriental Cockroach* (*Blatta orientalis*) and the *German Cockroach* (*Blattella germanica*). The former is twice as large as the latter, and dark brown as against light brown or dark yellow; it used to be our commonest species, but is now outnumbered by the German Cockroach. Both are natives of Africa; Common Cockroach reached England about Queen Elizabeth's time; German Cockroach was a later arrival.

**Cocktail,** an iced drink, much in fashion since the first world war as an aperitif, is prepared by mixing spirits with bitters, sugar, and some flavouring. The varieties are innumerable.

**Cocoa.** (See Cacao.)

**Coconut Palm** (*cocos nucifera*), a tropical tree which grows to a height of from 60 to 100 ft., and has its tops surmounted by feather-like curving leaves. The fruit of this tree is the ordinary coconut, which is one of the most important sources of food and raw material for people living in tropical regions. The fibre of the husk is used for a variety of purposes, such as making drinking-cups, spoons, brushes, matting, and cordage. Copra, the dried kernel of the coconut, yields oil used in the manufacture of soap, margarine, cosmetics, and chocolate. The cake provides animal feeding-stuffs. Main producing areas: Indonesia, Philippines, Malay, Ceylon.

**Cod** are well-known food-fish, found in abundance upon the British coasts and upon the banks lying off Newfoundland, their capture and preparation for market, and the extraction of the oil they yield, forming important industries.

**Codes,** a term used to designate a system of laws properly classified. The Code of Hammurabi, king of Babylon, c. 1700 B.C., had extensive influence over a long period. The Romans formulated several codes of historic importance including the Theodosian Code which summarised the Roman laws from the time of Constantine to 438 A.D. The final codification was made under order of the Emperor Justinian by his chief minister Tribonian and published in 529 with a new edition in 534. The most important of modern codes is the *Code Napoleon*, compiled between 1803 and 1810 and still in force. It has been used as an example for the codification of the laws of a number of countries from America to Japan. Under Frederick the Great the law of Prussia was codified. English law has never been codified, although the law on certain subjects has been gathered up into a single statute, which practically amounts to its codification.

**Codex,** a name referring to the manuscripts of Scripture, and comprising the Sinaitic codex of the 4th century, the Vatican codex of the same period, the Alexandrin codex of the 5th century, and others. The British Museum, in 1933, purchased the "Codex Sinaiticus" from the Soviet Government for £100,000.

**Cœlacanth** (= "hollow spine", pronounced seelacanth), is the name of one of the oldest fishes, a sub-order of the Order Crossopterygii, with large armoured head, which lived some 300 million years ago (Middle Devonian). It was first freshwater in habit, but later became marine. Fossil records ceased 60 million years ago (Cretaceous), and it was believed to have become extinct. In 1938, however, a living cœlacanth was caught off the coast of S. Africa, and another off Madagascar in December 1952 which stimulated world-wide interest.

**Coffee,** a shrub found originally in Arabia and Abyssinia, but now extensively grown in the West Indies, Brazil, India, and Central America. It yields a seed or berry which, after undergoing the necessary preparation, is ground and largely used in most countries as a popular breakfast beverage. The best coffee is the Mocha, an Arabian variety. The stimulating effect of coffee is due to the caffeine, which is also present in tea. The beverage was introduced into Europe in the 16th century, and the first London coffee shop was opened in 1632.

**Cognac.** (See Brandy.)

**Coke** is the solid residue remaining when coal is carbonised and nearly all the volatile constituents have been driven off. Used as fuel, and as an agent for reducing metallic oxides to metals.

**Cold War.** Hostility fanned between two coun-

tries nominally at peace by propaganda of various kinds.

**Colonel**, the title of a military officer, and ranking next above a lieutenant-colonel.

**Colonies**. The Phœnicians, Greeks and Romans, were all colonists. Colonisation in its more modern significance was the result of important geographical discoveries made in the Western World in the 14th century, and later by the Spaniards, Portuguese, Dutch, and French. From about the beginning of the 17th century Britain developed a colonising spirit, and her Colonial Empire grew as her sea power grew. The 13 American colonies were lost to England during the American War of Independence (1775-83). The oldest colony is Bermuda, settled by the Virginia Company in 1612; the youngest is Sarawak (1946), which had been a protectorate since 1888. The largest colony is Nigeria, and the smallest is Gibraltar, which was captured from the Spanish in 1704. The longest river in the Colonies is the Niger, and the highest mountain is Kilimanjaro in Tanganyika. Ceylon was the first British Colony with indigenous civilisation to achieve Dominion status (1948). The "colonies" of the British Commonwealth are not colonies in the strict sense (see *Outline of the British Commonwealth* in "A Citizen's Guide," and pp. 380-1).

**Colorado Beetle**, a leaf-eating beetle which is a serious pest of potato crops. The adults somewhat resemble a lady-bird, with alternate stripes of black and yellow. The grub is a reddish insect with two rows of small black spots on each side. The orange eggs are laid on potato leaves. The beetle is avoided by birds because it has a nasty taste.

**Colosseum**, the name of the Flavian amphitheatre at Rome, begun by Vespasian and finished by Titus A.D. 80. In general outline it still remains one of the most magnificent ruins in the world. It is 607 ft. long, 512 ft. broad, and 159 ft. high. On the ground storey there are 80 vaulted openings. In the arena of this great building the famous gladiatorial displays and mimic naval battles used to be given, and 87,000 spectators could be accommodated.

**Colossus** is the name which the ancients gave to any statue of gigantic size. The Colossus at Rhodes, which was a bronze statue of Apollo, was the most famous, and reckoned among the seven wonders of the world. It was 70 cubits high, and stood astride of the mouth of the harbour, so that ships could sail between its legs. It was destroyed by an earthquake in 224 B.C.

**Columbia University**, New York, was founded as King's College by a charter from George II. It now has about 27,000 students. The University celebrates the two hundredth anniversary of its founding in 1954.

**Columbium**, an uncommon metal found in columbite and tantalite. Discovered by Hatchett in 1801.

**Column**, in architecture, is an upright solid body serving as a support or decoration to a building. Columns consist of a pedestal, a shaft, and a capital, over which the supported entablature rises. They are named according to the styles of architecture of which they form part, being Doric, Tuscan, Ionic, Corinthian, or Composite as the case may be.

**Colza Oil** is obtained from crushed rape-seed, used as a lubricant and an illuminant.

**Comets** are celestial bodies which move about the solar system in elliptical or parabolic orbits. Usually these star-like bodies are accompanied by a long shining tail. The parabolic comets are seen once only, and do not reappear; the elliptical comets are periodic, and their recurrence can be calculated with accuracy. Comets are of enormous magnitude, sometimes covering millions of leagues, but their light is feeble in comparison with that of a star. Chief among the periodic comets is Edmund Halley's, the first to return as predicted in 1757. It reappears about every 76 years and is next due in 1985. The most spectacular comet of the 19th century was that found by Donati in 1858.

**Comitia** were gatherings of the Roman people for the purpose of voting on public affairs. They were of three kinds; the *comitia curiata*, composed of representatives of the patrician families; the *comitia centuriata*, which voted on

laws, capital crimes, and imperial affairs; and the *comitia tributa*, a plebeian assembly which elected the lower magistrates of the people and which was the usual organ for laws passed by the whole people.

**Comitium**, the place at the foot of the Capitol in ancient Rome, between the Rostra and the Senate House, where the comitia and the law courts were convened. Assemblies of the people also met there.

**Common Law**, in England, is the unwritten law established by custom, usage, and precedent, and not by statute. Both statute law and equity overrule common law when courts are called upon to decide between them. (See p. 129.)

**Commons** are unenclosed tracts of land sometimes dedicated to the use in common of the inhabitants of the township in which they lie. Many of these common lands were enclosed during the agrarian revolution in the Tudor period. The four chief rights of common are: (1) estovers—the right of taking wood for house building or firewood; (2) pasture, or right of grazing beasts; (3) turbary, or right of digging turf; (4) piscary, or the right to fish.

**Commons, House of**, the Lower House of the British Parliament. It is the symbol of democracy and is the Mother of Parliaments. Its 630 (1955) members are elected by the suffrage of men and women voting in constituencies. It is elected for a maximum duration of 5 years. (See also "A Citizen's Guide.")

**Commune**, smallest French administrative division, generally presided over by a mayor and municipal council.

**Commune of Paris** has twice played a dramatic part in the national history. In 1792 it was able, through its control of the administrative organisation of Paris, to override the National Assembly. In 1871, after the withdrawal of the Prussian troops, it tried to assert its authority. Public buildings were destroyed by members of the Commune and civil war raged during April and half May, but Government troops suppressed the rising.

**Communism** is an advanced form of socialism, having as its aim an internationally planned society where the exploitation of any section of the community no longer exists. Under communism the State belongs to the people, whose energies are directed towards shaping it for the common good. Ownership of property, apart from personal needs, is not allowed and the aim is to establish a classless society.

**Compass or Mariner's Compass** is an instrument by which the magnetic meridian is indicated, and comprises a horizontal bowl containing alcohol and water, a card upon which the thirty-two points of the compass are marked, and the steel needle which always points to the meridian. Although the discovery of the directive property of a magnet is credited to the Chinese, the first practical use of this property in a compass was made in western Europe in the 12th century. Aircraft and ships now largely employ gyrostatic compasses which are not affected by electrical and magnetic disturbances. Sperry, Brown, and Anschütz are three important types of gyroscopic compass.

**Compurgation** was a method of defence common in early English times. If a defendant could get a certain number of persons (compurgators) to support his denial on oath of the charge, he won his case. The number of compurgators gradually became fixed at twelve. It may have had some connection with the origin of the modern jury.

**Concerto**, a kind of hybrid between the Symphony and the Sonata. It may be regarded as a Symphony in which one instrument has a preponderance of solo passages or as a Sonata in which the solo instrument is accompanied by full orchestra.

**Conclave**, an assembly of Roman Catholic Cardinals met together to elect a Pope.

**Concordat**, an agreement or convention between the Pope and a secular government regarding ecclesiastical matters. The Concordat of Worms in 1122 between Calixtus II. and the Emperor Henry V. was famous as deciding a long struggle in regard to investiture. In 1801, Napoleon concluded a concordat with Pius VII. defining

the restored relations between the head of the Church and the French Roman Catholics.

**Concrete.** (*See Gardening Section, p. 889.*)

**Condor,** a large vulture of brilliant black plumage and having a circle of white feathers round its neck. It is a native of the Andes.

**Condottieri** were mercenary soldiers engaged in the wars of the Italian States in the Middle Ages.

**Confederation** is a free association of sovereign states united for some common purpose. It is to be distinguished from a Federation, which is a union of states with one central government, each state relinquishing its sovereignty, though retaining some independence in internal affairs.

**Conger-Eel,** a marine eel sometimes found of the length of 10 ft. and weighing 100 lb.

**Congregationalists or Independents,** the oldest sect of Nonconformists and hold that each Church should be independent of external ecclesiastical authority. They sprang from the Brownists, who arose in Elizabeth's days, but were compelled to take refuge in Holland. Under Cromwell they were able to extend their ministrations and became a powerful body. Charles II.'s Act of Uniformity drove them forth again, but they regained full liberty of worship under William III.

**Coniferae** are cone-bearing trees, including firs, pines, cedars, cypresses, junipers, yews, etc., and are widely distributed.

**Conscience Money** is money paid to the Chancellor of the Exchequer by persons who have previously omitted payment and are prompted to do so by their conscience.

**Conservatism** unites three component elements: a distrust of the unknown and an inclination we all share towards the familiar; a respect for authority; and a feeling for the greatness of the country which has been called imperialism. Conservatives thus stress the importance of adopting existing institutions, including property, and are opposed to Socialism and radical change. The name "Conservative" came into general use after 1834 in place of the older name of "Tory," although "Tory democracy" is now widely used to describe Conservative social reform policy. Conservative doctrine is based upon the teachings of Burke and Disraeli, and the Party has always been associated with agricultural interest and has also been supported, since the latter part of the 19th century, by commercial and financial interests. Defeated in 1945, the Party adopted two years later its "Industrial Charter" envisaging a system of free enterprise which is on terms with authority and which reconciles the need for central direction with the encouragement of individual effort. In 1948 the Party's Agricultural Charter advocated the continued encouragement of British agriculture and the retention of the marketing boards. The Party is committed to general planning, but there is a difference of view as to interpretation. The central policy of the Party was defined in the 1951 manifesto "Britain Strong and Free." The Party was returned to power in 1951.

**Conservative and Unionist Party** (called before 1832, the Tory Party and still popularly known as such) is based on independent voluntary associations in each Parliamentary constituency. It has no indirect group membership through affiliated organisations, but has the largest individual membership (2½ millions) of any political party. The Young Conservatives, founded in 1945, now have 150,000 members. The party (1955-56) is represented by 345 members in the House of Commons, led by Sir Anthony Eden. The party in the House of Lords is led by the Marquess of Salisbury. Mr. Oliver Poole is Chairman and Sir Stephen Piersen General Director of the party organisation, headquarters at Abbey House, Westminster.

**Consistory,** a term applied to the private council or state under the Roman Empire, but in later times used to designate the higher ecclesiastical courts and senates of the Anglican and Roman Churches.

**Constable,** an office of high rank in mediæval times, and still, in some few offices, representing considerable dignity. The office of Lord High Constable of England existed until 1521, since when it has been revived temporarily for special occasions such as Coronations. Before the

introduction of the police system in England, every hundred and parish had its constables upon whom devolved the duty of keeping the peace. The official designation of a policeman is police constable.

**Constitution,** the fundamental organic law or principles of government of a nation, state, society, or other organised body, embodied in written documents, or implied in the institutions and customs of the country or society; also a written instrument embodying such organic law, and laying down fundamental rules and principles for the conduct of affairs. The British constitution is "customary" or "unwritten," and may be modified by an ordinary act of Parliament. (*See also "A Citizen's Guide."*)

**Constitution of the United States.** A written constitution of 1778 which, with amendments, is the basis of the federal Government of the United States. Its text is interpreted by the *Supreme Court*, which decides whether legislation is constitutional. *Congress* or *Parliament* consists of the lower house (House of Representatives) and the upper house (Senate). The lower house has a two years' term of office and has a large membership. The Senate retires in thirds every two years and has only ninety-six members (two for each State whatever its size). Congress meets in the Capitol, Washington. Distinguishing feature of the American constitution is the separation of powers as between executive authority (the President) and the legislature (Congress). Laws can only be made by the agreement of the lower and the upper house. The President, who enjoys a four-year term of office, is the formal head of the nation and the head of the executive. In the latter role he can veto any Bill which cannot muster the support of two-thirds of each house of Congress. The Supreme Court has no connection with the legislature or the executive and the judges hold office during good behaviour. (*See also "A Citizen's Guide."*)

**Consul,** the title borne by the two chief magistrates of the Roman Republic. Three consuls were appointed for France after the dissolution of the Directory in 1799, Napoleon becoming First Consul and holding the office until 1804, when he was made Emperor. Today diplomatic and commercial representatives abroad of sovereign states styled consuls.

**Continent,** a word used in physical geography to denote the larger continuous land masses in contrast to the great oceans of the earth. They are: Eurasia (conventionally regarded as 2 continents, Europe and Asia), Africa, North America, South America, Australia, and Antarctica.

**Contrabass.** (*See Double Bass.*)

**Contralto,** the feminine equivalent of the male alto. Where altos and contraltos are present in the same choir they sing the same part. But, whereas the alto is the highest adult male voice, the contralto is the lowest female voice.

**Conurbation,** a term which has been defined as "an area occupied by a continuous series of dwellings, factories, and other buildings, harbours, and docks, urban parks and playing fields, etc., which are not separated from each other by rural land; though in many cases in this country such an urban area includes enclaves of rural land which is still in agricultural occupation." The term has been widely adopted for the contiguous densely populated areas which form continuous urban areas. The seven officially recognised in Britain are: Greater London, Greater Manchester, Greater Birmingham, West Yorkshire, Merseyside, Tyneside.

**Convention** is an assembly of delegates, representatives, members of a party met to accomplish some specific civil, social, political, ecclesiastical or other important object.

**Convocation,** an assembly called together to deliberate ecclesiastical affairs. In the Church of England the provinces of Canterbury and York each have their convocation.

**Copper,** one of the most familiar of metals, used in ancient times as an alloy with tin in producing bronze, and preceding iron as an industrial material. Copper ores are most abundant in the U.S.A., Chile, Canada, Northern Rhodesia and the Belgian Congo. All copper compounds are poisonous. Copper sulphate is largely used in calico-printing and in the pro-

duction of blue and green pigments. World production of copper before the war was over 2 million tons.

**Copts**, descendants of the ancient Egyptians, professing a modified Christianity, the head of their system being a Patriarch. They do not marry out of their own race.

**Copyright** of literary work is vested in the author for the period of his lifetime and fifty years following, after which it passes into the public domain and becomes freely available to any who wish to make use of it. The Copyright Libraries, entitled to receive *gratis* copies of books published in the United Kingdom, are the British Museum, the Bodleian at Oxford, Cambridge University, the National Library of Wales, the Scottish National Library, Edinburgh, and Trinity College, Dublin. (See Copyright, Business Dictionary.)

**Coral**, a small marine animal closely related to the sea-anemone, but differing from it in two ways: corals move about when fully grown and develop a limy skeleton. They multiply chiefly by budding. The structure of the coral sections assumes a variety of forms, fan-like, tree-like, mushroom shape, and so forth. Red coral (the skeleton of *Corallium rubrum*) is mainly obtained from the Mediterranean. The coral reefs of the Pacific and Indian Oceans are often many miles in extent.

**Cor Anglais** (English horn = corno inglese). A tenor version of the oboe.

**Cordite**, a smokeless explosive adopted for small arms and heavy artillery by the British Government in the naval and military services in 1889, and composed of 58 parts of nitro-glycerine, 37 of gun-cotton, and 5 of vaseline. It is a jelly or plastic dough, and used in the form of sticks.

**Cork**, the bark of a species of oak grown largely in the South of Europe and North America. The cork tree is said to yield bark every six to ten years for 150 years, and grows to a height of from 20 to 40 ft. Its lightness and elasticity enable it to be used for a variety of commercial purposes, especially for stoppers of bottles.

**Cormorant**, a large, long-billed water-bird which captures fish by diving. It has bronze-black plumage with white cheeks and sides and is found around the sea coasts of most parts of the world, including the British Isles. It nests in colonies on sea cliffs and rocky ledges. The Shag or Green Cormorant is a smaller bird with green-black plumage and a crest.

**Cornet**, an instrument which is fundamentally a small trumpet. Its tone is neither so bold nor so powerful as that of the trumpet, and it is therefore of use in small orchestras whose balance would be upset by the inclusion of trumpets.

**Corn Laws** were statutes intended for the benefit of British agriculture, and generally prohibited export and imposed a duty on imported corn. From 1436 to the middle of the 19th century such laws were in force, and were often of a stringent nature. They became so oppressive and caused corn to reach so high a price that the poorer classes were plunged into distress. A powerful anti-corn law agitation was organised, of which Cobden, Bright, and Villiers were the leaders, and Sir Robert Peel, in 1846, passed an Act lowering the corn duty to 1s. per quarter. In 1869 this nominal duty was abolished by Robert Lowe in a Customs Duty Act. Since the second world war an effort is being made to control the acreage, purchase and distribution of crops on a world-wide scale.

**Coronae**, series of luminous rings surrounding sun or moon, produced by the diffraction of light by water droplets in the atmosphere. Usually seen when sun shines through altostratus cloud. The outside of the ring is red and the inside bluish. (See Halo.)

**Coronation**, the ceremony of crowning a monarch at the beginning of a new reign. The crowning takes place at Westminster Abbey and has been performed by the Archbishop of Canterbury since pre-conquest times. The ceremony takes place in three stages. First comes the Recognition and the taking of Oaths. The ancient right of acceptance of the sovereign by the people goes back to Saxon times, and though the succession from father to son or daughter has been secured since the reign of Edward IV, the inclusion of the Recognition scene in the Corona-

tion ceremony is a reminder of the people's right to accept their monarch. The sovereign in turn swears to reign in accordance with the law and to uphold the Protestant Faith. The Oath has varied down the centuries; the promise to maintain the Protestant Religion was added at the coronation of William and Mary in 1689, but the Oath itself goes back to remote antiquity, and has always been regarded as a safeguard of the liberties of the people. Then comes the religious ceremony of anointing the sovereign with holy oil on hands, breast, and head, a practice dating from Saxon times. The monarch sits in St. Edward's chair (made for Edward I), beneath which is the Stone of Scone on which the Scots were crowned. The Spurs and Sword are presented as emblems of knighthood, and the Sword is girt on to symbolise justice and strength; next comes the Investiture with the Kingly garment and the delivery of the Orb. Ring and Sceptre are presented and then comes the supreme moment of crowning. After that all the peers put on their coronets, the sovereign is presented with the Bible, blessed and lifted to the Throne, to receive the homage of the princes and peers present. The Coronation regalia nearly all date from the reign of Charles II., when they had to be remade because Cromwell had had the old regalia melted down and sold. The only relics of the former regalia are the gold Anointing Spoon, the Ampulla (or gold eagle to hold the anointing oil) and Queen Elizabeth's salt cellar. St. Edward's Crown is used only for the actual Coronation and is not worn afterwards owing to its weight (5 lb.). It is replaced by the Imperial State Crown, worn also at the Opening of Parliament. All arrangements for the ordering of the Coronation are made by the Earl Marshal of England, an office hereditary in the family of the Dukes of Norfolk since 1677. He takes charge of the Abbey from the Dean and Chapter some months before the event. One of his duties is to assist at the Court of Claims over which the Lord Chancellor presides. This Court, whose history goes back 600 years, decides on the claims of those who are to perform the ancient services at the Coronation, e.g., the right of the Lord Great Chamberlain to carry the monarch his (or her) clothes; the right to carry the Standard of England or Scotland, or to present a glove for the Sovereign's right hand.

**Coroner**, an officer whose duty it is to hold inquests on the bodies of people who are suspected of having died from other than natural causes. He is usually both a lawyer and a doctor; an inquest takes the form of a legal inquiry, a court being constituted, with a jury, the coroner being the presiding officer. Fire inquests are held only in the City of London under a special Act of Parliament.

**Corpus Christi Festival** is one of the great celebrations of the Roman Catholic Church, and takes place on the Thursday after Trinity. It was instituted by Pope Urban IV. in 1264.

**Cortes**, the name of the Parliamentary assemblies of Spain and Portugal.

**Cosmic Rays**, a form of radiation coming from outer space, of deep penetrating power and of great scientific interest. The rays are believed to consist chiefly or particles endowed with positive electric charges, but nothing is known as to how they are produced. The balloons which are sent into the upper atmosphere to collect data about cosmic-ray bombardment have been referred to in the Press as "flying saucers."

**Cotton**, the name of a plant of several species, bearing large yellow flowers with purple centres. These centres expand into pods, which at maturity burst and yield the white fibrous substance known as cotton. The raw cotton contains a large proportion of seeds which are removed by "ginning." Long before the Christian era, cotton had been grown and used with great skill in India to make fabrics. The industry was not introduced into England until the middle of the 17th century when Protestant refugees from Flanders came to settle in the wool textile districts of East Anglia and Lancashire. With improvements in machinery and expansion of overseas trade in the 18th and 19th centuries, Lancashire became the centre of the world's cotton industry. Since the First

- World War there has been a marked decline in Britain's cotton industry; cotton manufactures representing 7.3 per cent. of the total value of U.K. exports in 1950 compared with 25.6 per cent. in 1913.
- Cotton Seed Oil** is an oil extracted from the seed of the cotton plant, and is of considerable commercial value; used as a substitute for olive oil.
- Council of Foreign Ministers.** A Council of the Foreign Ministers of the United Kingdom, U.S.A., U.S.S.R., and France, set up after the second world war to prepare the peace treaties. (See also "A Citizens' Guide.")
- Counterpoint** (adj. contrapuntal). The weaving together of two or more distinct melodies to create harmony.
- County.** The geographical counties of England are of very early origin and the word "county" was first introduced after the Norman conquest as an equivalent of the old English "shire". The 52 ancient or geographical counties of England and Wales should not be confused with the 62 administrative counties (created by the Local Government Act of 1888 when several of the geographical counties were subdivided) which themselves exclude the 83 county boroughs or towns with the status of a county. Scotland has 33 and Ireland 32 counties.
- Coup d'Etat.** Is applied to a violent change in the constitution of a State. There was the overthrow of the French Republic in 1851 by Louis Napoleon, who then became Emperor, and more recently in 1952 the military *coup* in Egypt which led to the abdication of King Farouk.
- Court Leet,** a court of record held annually before the steward of any particular manor or lordship; originally there was only one court for a manor, but in the time of Edward I. it branched into two, the court baron and the court leet.
- Covenanters** were a body of Scottish Presbyterians who in 1638, and again in 1643, pledged themselves to uphold the Presbyterian faith, as against both prelacy and popery.
- Covent Garden,** in London, now a great flower and fruit market, was once a convent garden owned by the abbot and monks of Westminster.
- Crabs** are familiar crustaceans, carrying a shell, breathing through gills, and are provided with ten external limbs or claws, the side and smaller limbs being used for walking, and the two front claws for grasping purposes.
- Crane,** a large, graceful wading-bird with elegant long legs and neck, greyish plumage, superficially resembling the heron and related to the bustard. They migrate in V or W formation and have trumpet-like voices. There are several species, found in all continents except S. America, including the Crowned Crane with golden coronet and the Demoiselle with tuff-like crest of white feathers. The Common Crane nested in East Anglia in medieval times but now comes only as a rare visitor from the Continent.
- Creed,** a brief enumeration of a particular belief or religion. The three important Christian creeds are the Apostles' Creed, the Nicene Creed, and the Athanasian Creed.
- Cremation,** the ancient custom, revived in modern times, of burning the dead. Many scientific men commend the practice on hygienic grounds, particularly in densely populated countries. Cremation was first legalised in Great Britain in 1885 and the first crematorium opened at Woking in that year. Application for cremation must be accompanied by two medical certificates.
- Creole,** a West Indian and Spanish American term applied to a person born in the country but of a foreign race. It is also used for a negro born in the country, not brought from Africa.
- Cretaceous System** is the term given to the uppermost strata of rocks of the Mesozoic period. It has the following subdivisions: Maestricht beds, chalk with flints, chalk devoid of flints, chalk marl, upper greensand, and gault.
- Cricketer,** a genus of insects of the grasshopper order which move by leaps. The male produces a chirping noise by rubbing its wing-covers together.
- Crimean War (1853-56).** This war between Russia and the allied powers of Turkey, England, France, and Sardinia, was connected with the Eastern Question (*q.v.*) and the desire of Russia for a port on the Mediterranean. Chief engagements were the Alma, Balaklava, and Inkerman. Fighting virtually ceased with fall of Sevastopol in September 1855. Treaty of Paris signed March 30, 1856.
- Crinoids (Crinoidea).** (See Sea Lily.)
- Crinoline** was the name given to a stiff material, originally of horse-hair, worn by ladies as a skirt-expander from about 1855 to 1860. (See Farthingales.)
- Crocodile,** the name of the largest existing reptile, and classed with the alligator and the gavia. The crocodile inhabits the Nile region, the alligator the lower Mississippi, and the gavia is found in the waters of the Ganges.
- Cromlech,** the name given to an ancient monumental erection consisting of a large rough stone placed on three or more upright stones and found in various parts of Great Britain and the Continent.
- Crore (Hind. *kror*),** an Anglo-Indian word meaning ten millions, used commercially to signify that number of rupees (100 lakhs).
- Crosier,** the staff, or crook, of a bishop carried before him on special episcopal occasions. It is generally richly decorated in gilt at the top.
- Crow,** a family of birds including many well-known species such as the rook, raven, jackdaw, carrion crow, hooded crow, magpie, nut cracker, jay, and chough. (See *p. 1004*.)
- Crusades** were military expeditions undertaken by some of the Christian nations of Europe with the object of ensuring the safety of pilgrims visiting the Holy Sepulchre and to retain in Christian hands the Holy Places. For two centuries between 1095 and 1271, various crusades were undertaken. There were eight crusades in all: 1st, 1096-9, under Godfrey of Bouillon, which succeeded in capturing Jerusalem; 2nd, 1147-9, led by Louis VII., and unsuccessful; 3rd, 1189-92, in which Richard I. took part, against Saladin, also unsuccessful; 4th, 1202-4, led by Count Baldwin of Flanders, and resulting in the founding of a Latin empire in Constantinople; 5th, 1217, led by John Buene; 6th, 1228-9, under the Emperor Frederick II.; 7th 1248-50, led by St. Louis (Louis IX. of France); and 8th, and last, 1270-71, under the same leadership, but resulting in failure. Millions of lives and an enormous amount of treasure were sacrificed in these enterprises, and when all was done Jerusalem remained in the possession of the "infidels."
- Cryolite,** a mineral, sodium aluminium fluoride, found in extensive beds in Greenland. It is used in the electrolytic process for extracting aluminium, and small amounts go into the manufacture of opalescent glass.
- Crypt,** a vaulted subterranean portion of an abbey, cathedral, or church, now generally used for burials or monumental purposes.
- Cryptogam.** A plant without flowers, as opposed to the *phanerogams*. The cryptogamic plants include the seaweeds, fungi, mosses, liverworts, ferns, and sclaginellas.
- Cuckoo,** a well-known migratory bird which is found in Great Britain from April to July, and has a very characteristic note, uttered during the mating season only by the male. The hen has a soft bubbling call. It lays its eggs in the nests of other birds (the Meadow Pipit being the commonest foster-parent), but only one egg in each nest. Feeds entirely on insects, particularly hair caterpillars.
- Cuidees,** one of a class of religious recluses, existing in Ireland and Scotland from the 7th to the 12th century.
- Cuneiform,** the term applied to the written arrow-headed characters found in Assyria, Persia, and Mesopotamia. Good examples may be seen in the British Museum, some of them several thousand years old.
- Cupola,** the inner portion of a dome. Famous cupolas are those in the Roman Pantheon, the Mosque of St. Sophia at Constantinople, St. Peter's at Rome, and St. Paul's in London.
- Curfew,** the bell which William the Conqueror ordered to be rung at eight o'clock each night in the towns and villages of Britain, as a signal to the inhabitants to extinguish lights and go to bed. It originated in the fear of fire when most cities were built of timber. It was abolished in

1100, but at Ripon, Sandbach, Chesham, Penrith, Ibberton, Wokingham, it is still rung as a matter of custom.

**Curlew**, a wading bird of which there are several species. It frequents marshy places, feeds on worms and insects, and possesses a very long curved bill.

**Cybernetics** (derived from the Greek word meaning "governor") is the American term for the science of automatic control by machines. The work of the American scientist, Dr. Norbert Wiener, has led to great advances in the construction of electronic computers and to interesting speculations in the field of sociology. (See *Calculating Machines*.)

**Cyclone**, a term usually applied to a tropical revolving storm. Cyclones often occur towards the end of the hot seasons and are mainly confined to tracks in the western areas of the oceans, being known as hurricanes (Caribbean and Pacific), cyclones (Indian Ocean), and typhoons (China Seas). The circulation of air in a cyclone is similar to that in the depression of temperate latitudes, but the region of low pressure is much more localised and the pressure gradients steeper. Winds of hurricane strength and torrential rain occur generally, although at the centre of the storm there is a small area, known as the "eye," where fair, calm weather prevails.

**Cyclotron**, or atom-smasher, invented by Prof. E. O. Lawrence at Berkeley, California, in 1930, is one of the new devices for fundamental work in atomic physics, designed to accelerate electrically-charged particles to energies corresponding to several million electron-volts. Other high-voltage accelerators are the synchrotrons, cosmotrons, betatrons and bevatrons. Great Britain has recently constructed particle accelerators on a major scale, which will be of value not only in the field of nuclear research but in curative medicine. (See also *Meson* and *p. 186*.)

**Cymbals**. Two plates of brass which, when brought sharply together, produce a clashing sound. In a large orchestra this task falls to the player of the bass drum.

**Cynics** were a set of Greek philosophers, founded by Antisthenes, the pupil of Socrates. They held that virtue was the only good, and condemned arts, sciences, pleasures, and riches. Diogenes was the most famed of the cynics.

**Cyrenaics**, a school of Greek philosophy, said to be founded about 400 B.C. by Aristippus of Cyrene, who held that pleasure was the most worthwhile thing in life but that it was necessary to use good sense in choosing the pleasures likely to avoid future pain and make for a pleasant life.

**Czar** was the title of the Emperor of Russia, and is derived from Caesar. The first Czar was Ivan IV., crowned in 1547. The Czar's wife was styled Czarina, and his eldest son Czarevitch. The last Czar was Nicholas II., killed (July 1918) during the revolution.

## D

**Dab**, a species of flat fish, common round the British coast, and a better table fish than the flounder.

**Daboya**, an Indian viperine serpent, venomous, and of nocturnal habits, of the genus *Daboia*.

**Dace**, a small fresh-water fish of the carp family, of elegant shape and silvery appearance.

**Dacelo**, a quaint-looking bird of the kingfisher order, common to Australia, one variety of which is known as the "laughing-jackass."

**Dachshund**, a German badger-hound, remarkable for its short legs and long body.

**Dacite** consists of plagioclase and quartz, together with minerals of the hornblende and pyroxene families. Occurs mostly in Transylvania and the Cordilleran districts of America.

**Dacoits**, Indian brigands, or professional robbers, who were formerly very numerous and terrorised the districts they infested, especially Lower Bengal. Mansingh, "the greatest dacoit of all time," was killed by the Uttar Pradesh police in 1955 after a manhunt lasting many years.

**Dacrydium**, a genus of plants of the yew family,

native of New Zealand and the East Indies, the young branches of which are used in the making of a beverage not unlike spruce beer.

**Dactyl**, a measure in versification, consisting of a foot of three syllables, the first long, and the second and third short, as *lovingly, verily*.

**Dactylomys**, a South American rodent of the size of a rat, possessing a long scaly tail.

**Dactylopterus**, a fish of the gurnard family, with wing-like pectoral fins; sometimes known as the flying fish, though that appellation is more generally given to *Exocoetus exilis*.

**Dado**, a term denoting the portion of a pedestal between the base and the cornice; also applied to the lower part of the walls of a room when decorated differently from the upper part.

**Dafila**, a kind of fresh-water duck, with long supple tail, found in Europe, Asia, and America. The pintail duck belongs to this genus.

**Dagger-ale**, a kind of liquor often referred to in 16th-century English literature, and sold at the sign of the Dagger in Holborn, a London house much frequented by the gallants of the time.

**Dagoba**, an edifice dedicated to the custody of relics of Buddha, and numerous in the temples of Ceylon and other Buddhist countries.

**Dagonal**, the feast of the Philistines in honour of Dagon, their god, which was depicted with the head of a man and the lower part of the body like a fish.

**Daguerreotype**, a first practical photographic process, invented in Paris by M. Daguerre during the years 1824-39. The light-sensitive plate was prepared by bringing iodine in contact with a plate of silver. After exposure a positive image came by development of the plate in mercury vapour. Even for open-air scenes the first daguerreotypes involved exposure of 5-10 minutes. The wet collodion process (1851) rendered the technique obsolete.

**Dahabiyeh**, a kind of boat much used on the Nile, broad at the stern and tapering off gracefully at the prow. It carries one or two masts and lateen sails.

**Dail Eireann**, the name of the national parliament of the Irish Republic.

**Dais**, an elevated part of a floor or a platform, in a large room or hall. It usually has a seat or seats upon it, and is covered with a canopy. It is the place of honour occupied by the most distinguished personages, as the King, a bishop, etc.

**Dalmatian Dog**, the old-fashioned coach dog, white, spotted with black.

**Dalmatic**, a wide-sleeved ecclesiastical vestment, reaching below the knee. Worn by bishops and deacons over the alb or stole.

**Dama**, the scientific name of the fallow deer, which is fawn coloured or brown, with white spots.

**Damask**, a textile figured fabric, made in various forms, with silk threads of many colours, as originally woven in the city of Damascus; in a combination of silk and wool or cotton; in linen only for table-cloths, etc.; or in cotton.

**Damaskeening**, the art of inlaying one metal upon another, largely practised in the East in medieval times, especially in the decoration of sword blades. In its modern form it has been greatly developed.

**Damp**, humidity, moisture, assumes numerous forms. Fire-damp, however, has nothing to do with humidity or moisture but consists of methane, a poisonous vapour met with in mines and often the cause of explosions; choke-damp is mainly composed of carbon dioxide and causes suffocation.

**Dan**, a mining term applied to a vessel in which water is conveyed to the surface.

**Danburite**, a substance found in crystals in various regions of America, and in Switzerland, and of a yellowish-white colour. A borosilicate of calcium.

**Dancette** is an architectural term, applied to a form of zigzag moulding often found in ancient buildings.

**Dandies**, the name given to a class of exquisites prominent in early Victorian days, and who attracted attention by excessive regard for dress.

**Danegeld**, a tax imposed in England in Anglo-Saxon times to raise funds for resisting the Danes or to buy them off. Edward the Confessor abolished the tax, but it was revived by the Conqueror and subsequently retained, under another name, after the danger from the Danes

was past. It is the basis of all taxation in this country. Domesday Book was originally drawn up for the purpose of teaching the State how to levy the tax.

**Danelaw**, the law enforced by the Danes in the kingdoms of Northumbria, East Anglia, and in the districts of the five (Danish) boroughs—lands grouped round Leicester, Nottingham, Derby, Stamford, and Lincoln—which they occupied during the Viking invasions of the 9th and 10th centuries. The country occupied was also called the Danelaw or Danelagh.

**Danes' Blood**, a common plant of the elder family, deriving its name from the tradition that it originally grew from the blood of Danes killed in battle.

**Darien Project** was an unsuccessful scheme entered upon at the close of the 17th century by Pater-son, the Scottish financier, for colonising the Isthmus of Darien and thereby diverting trade from the East in the direction of Scotland.

**Darter**, 1. A genus of birds of the pelican family, with long pointed bill and serpent-like neck and resembling cormorants in appearance. 2. A family of small fishes.

**Dartsnake**, the name of a serpentine lizard of the Aconitas family, noted for the darting manner in which it attacks its prey.

**Datary**, a Roman ecclesiastical functionary, who acted for the Pope in all matters relating to the issuing of grants and dispensations; the dater or dispatcher of the Papal bulls.

**Date Palm**, a native of Northern Africa, where it is grown in great profusion. It is also known in Southern Europe and Western Asia to some small extent. It grows to 100 ft. and continues to bear for 2 or 3 centuries, its fruit being of great value as a food. From the leaves the Africans make roofs for their huts; ropes are made from the fibrous parts of the stalks; and the sap furnishes a stimulating beverage.

**Dauphin**, the title borne by the eldest sons of the Kings of France from 1349 to the Revolution of 1830.

**"Davy Jones,"** a nautical term of a humorous turn supposed to apply to the spirit of the sea; it is said among sailors, when a person dies at sea, that he is committed to "Davy Jones's locker."

**Day** is the most natural unit of time and may be defined as the period of rotation of the earth relative to any selected heavenly body. Relative to the sun it is called the *solar day*. Relative to a fixed star it is called the *sidereal day*. Owing to irregularities in the earth's movements, the time taken for the earth to rotate through 360° relative to the sun is variable, and so the *mean solar day* of 24 hours has been introduced, which is the average throughout the year. The *mean solar day* is our standard, used for purposes of the calendar, and astronomers use *sidereal* clocks to check mean solar time. In practice, for convenience, the *sidereal day* is determined by the earth's rotation relative to the vernal equinox or first point of Aries, and is equal to 23 hours 56 minutes and 4.091 seconds of mean solar time (i.e., about 4 minutes shorter than a solar day).

**Day Nurseries** are modern institutions, the result of a movement for the protection of the young children of working people, and consist of *crèches* where infants are nursed and cared for while their mothers are at work. The first infant open-air nursery schools in Britain were opened by Margaret McMillan at Deptford in 1914.

**D.D.T.** (dichloro-diphenyl-trichloroethane). One of the most powerful synthetic insecticides. Mosquito-breeding areas are now sprayed from the air. (See also p. 910.)

**Deacon**, an ecclesiastical official, who assists in some of the smaller ministerial duties in church or chapel; in the Anglican Church he ranks below a priest.

**Dead Languages** are such as the ancient Greek and Roman tongues, which are no longer spoken but are preserved in literature.

**Dead Sea Scrolls**, a group of documents, consisting of scrolls and fragments, which have been recovered in the vicinity of Qumran near the Dead Sea and which represent one of the most important finds ever made in the field of Biblical archaeology. The scrolls were found

in 3 different localities, the first by chance in 1947 by an Arab shepherd. They were written in Hebrew or Aramaic on leather and consist of Biblical texts which antedate by almost a thousand years the earliest Hebrew manuscript of the Old Testament. The second find were documents relating to the Second Jewish Revolt against Rome in A.D. 132 and the third are fragments from 25 caves consisting largely of Biblical texts comprising the whole of the Old Testament with the exception of Esther. Subsequent excavations at Khirbet Qumran have uncovered a complete Jewish "monastery". All the new material is being studied by scholars in the Palestine Museum and it is too early yet to say who the religious sect was to whom the literature belonged. Some believe it to have been the Essenes.

**Deal**, the name given to planks of fir-tree wood of Northern Europe, 9 inches wide and 3 inches thick, 50 cubic feet of which form a load, and 100 superficial feet a square. An American deal, it should be noted, is 12 inches broad and 2½ inches thick and of the uniform length of 12 feet.

**Dean**, a Church of England dignitary, ranking next below a bishop, and the head of the chapter of a cathedral. A rural Dean supervises a *deanery* or group of parishes. There are also Deans of Faculties in some universities, and at Oxford and Cambridge the *Dean* is in charge of chapel services and disciplinary arrangements.

**Death's Head Moth**, a large insect, not uncommon in England, and remarkable because of its having on its thorax the outlined semblance of a human skull. It emits a peculiar, mournful sound when startled.

**Death-watch**. The so-called death-watch, with its mysterious ticking in the night-time, is due to nothing more serious than the furniture-beetle. The larva of this insect burrows in the furniture, making the pinholes which are often to be seen in old furniture. It is three years in its pupa condition, and at last becomes a little brown insect with a great talent for shamming dead, so that it is not very much observed. These beetles often strike the wood of their galleries with their heads, and so produce a ticking sound which is a call to the mate. The ticking is most frequent in the summer months, but in warmed rooms it may be heard at any time.

**Decade**, the number 10, or a period of 10 years.

**Decalogue**, the Ten Commandments, which, as related in Exodus, were given by God to Moses on Mount Sinai, and contained on two stone tablets.

**Decapods**. Crustacea with ten (five pairs of) appendages: include lobsters, crabs, shrimps, and prawns.

**Deceased Wife's Sister's Marriage Act** was passed in 1907. This measure was put before Parliament for many years; it usually passed the Commons, but was rejected by the Lords, the bishops being its real stumbling-block. Marriages with sister of deceased wives are legal in many countries, including Canada, Australia, New Zealand, and Ceylon.

**December**, the twelfth month of the year, and the tenth of the old Latin calendar. The Anglo-Saxons called it Mid-winter monath and Yule monath.

**Deciduous Trees** are such as shed their leaves, or "fall" at maturity, or at certain seasons, as distinguished from evergreens or permanent foliaged trees or shrubs.

**Decimal System** is based on the unit of 10. Fractional numbers are expressed as divisions of 10; thus the number 3.458 means  $3 + \frac{4}{10} + \frac{5}{100} + \frac{8}{1000}$ . (See Metric System.) The decimal system is used to classify books in libraries (see p. 143).

**Declaration of Independence** was an Act by which the American Congress, on July 4th, 1776, declared the American colonies to be independent of Great Britain. "Independence Day" is a holiday in all the States and territories of the United States.

**Decollation** is the act of beheading or decapitation as a form of punishment. Decollation was very generally resorted to in mediæval times, but it is confined mainly to France at the present day, the guillotine being the beheading instrument.

**Decomposition** is the act of disintegrating the

- elements of any compound substance. Oxygen and hydrogen are obtained by the decomposition of water.
- Decree** is a special edict or regulation issued by a supreme or governing power. The judgment of a superior court is also called a decree.
- Decree Nisi**, a law term used in regard to a Divorce Court decree which dissolves a marriage, if at the end of six weeks nothing arises to interfere with the decision, whereupon it is made absolute and the parties are free.
- Deemster** is the title of the two judges in the Isle of Man.
- Defender of the Faith**, a title conferred by Pope Leo X. upon Henry VIII. of England for his tract "Assertion of the Seven Sacraments" against Luther. Later it was withdrawn, but in 1544 was confirmed to him by Parliament and has since been used by English sovereigns.
- Deficiency Disease**. Disease due to deficiency of dietary factors, which though essential are required only in minute amounts—these factors include vitamins, and certain minerals. Examples of vitamin-deficiency diseases are scurvy (vitamin C), rickets (vitamin D).
- Delft ware**, a kind of enamelled pottery first made at Delft in Holland in the 14th century.
- Deliquescence**, the process of liquefaction or dissolving by the absorption of moisture from the atmosphere. For instance, chromic acid crystals on exposure to the air quickly deliquesce.
- Delta**, a triangular tract of land between diverging branches of a river at its mouth, and so called from its general resemblance to the Greek letter  $\Delta$  *delta*. The best-known examples are the deltas of the Nile, the Ganges, the Niger, and the Mississippi.
- Deluge**, a flood, a term commonly applied to the story of the Deluge contained in the Bible, in which Noah and the Ark figure. A similar tradition lingers in the mythologies of all the ancient nations.
- De Lunatico Inquirendo**, the name for a writ sanctioning an inquiry into the condition of mind of a supposed insane person, with powers to secure a due administration of his affairs if shown to be insane.
- Democracy** is the condition of direct popular government—"by the people for the people"—the executive powers being vested in representatives elected by the people. A republic is in theory the most perfect form of democracy. It is the rule of the majority of the free and equal citizens, as opposed to monarchy, aristocracy, and dictatorship.
- Democratic Party of the United States** is one of the two major parties, the other being the Republican Party. The party is sometimes regarded as the more liberal party in the U.S.A., but the difference is not a clear cut left-and-right difference. The Democratic Party was the party of low tariffs and of the rights of the states (in opposition to the federalists). It was very strong in the Southern states which contained the slavery states and thus called "the solid South." The 20-year Democratic era of Roosevelt, who stood for the *New Deal*, and Truman, who stood for the *Fair Deal*, came to an end in 1952 when Gen. Eisenhower won the Presidential election for the Republican Party.
- Demoiselle**, the Numidian crane, a wading bird.
- Denarius**, a Roman coin, originally of silver, first coined in 288 B.C. It is the penny of the New Testament.
- Denticulus**, a member of the moulding ornamentation of Ionic and also Corinthian entablatures, over the frieze and under the corona, but, properly speaking, because of its projection, part of the latter. It consists of a row of rectangular blocks, at regular intervals, resembling teeth; hence the name.
- Dendrite**, any stone or mineral on which appears natural tracery resembling trees, leaves, or flowers, the result of the action of the hydrous oxide of manganese.
- Denier**, an old French coin, and the chief silver coin of Europe during the mediæval period.
- Density**, a measure of the mass per unit volume of a material, usually expressed in grams per cubic centimetre. *Specific gravity* is the ratio of the density of a material at the temperature under consideration to that of water at the temperature of its maximum density (4° C.). In grams per cubic centimetre the density of gold is 19.3, silver 10.5, lead 11.3, water 0.99997, air 0.00129.
- Deodand**, the name given in old English law to a personal chattel which had been the cause of an individual's death. This chattel—it might be a cart that had run over and killed a man—was declared a deodand and forfeited to the king to be applied to religious uses. Deodands were abolished in 1846.
- Deodar**, a coniferous tree of the cedar order.
- Department**, a division of a country or province, applied in France to the chief administrative territories (*départements*), which again are subdivided into *arrondissements*.
- Depas**, a double-handled drinking-cup used in ancient Greece, and referred to by Homer.
- Depression**, a region where barometric pressure is lower than that of its surroundings. These areas of low pressure enclosed by the isobars are usually less extensive than anticyclones and may vary from 100 to 1,000 miles in diameter. The winds, often of gale force when the depression is deep, blow round the system in an anticlockwise direction in the Northern Hemisphere (in the reverse direction in the Southern Hemisphere) and inwards across the isobars. The majority of depressions which cross the British Isles travel from the Atlantic, sometimes in series or families, at rates of between a few miles and 700 miles in a day, bringing their generally unsettled weather with them. (See p. 383.)
- De Profundis** (out of the depths), the first two words of the Latin version of the 130th Psalm, and commonly used to designate this psalm.
- Derby**, the leading English horse-race, run on the Epsom course usually in May but sometimes in June. Originated in 1780 by the twelfth Earl of Derby, carries with it a stake of £19,118 10s. (1953), and is competed for by the best three-year-old colts and fillies of the time who must be entered when they are yearlings. The distance of the course is 1½ miles.
- Derrick**, the name of a special jib crane, for lifting and moving heavy weights. It was originally applied to a kind of gallows built by a Tyburn hangman called Derrick in the 17th century.
- Dervish**, a Mahomedan mendicant monk. There are many orders, including the "howling," "wandering," and "whirling" dervishes. Also one of the fanatical followers of the Sudan Mahdi.
- Descant**. An additional contrapuntal part, often much ornamented, woven in with an existing part. The vocal descant is one of the earliest uses of counterpoint.
- Deserts**, vast, barren, stone or sandy wastes where there is almost no rainfall and little or no vegetation. These regions are found in the interior of the continents Africa, Asia, and America between 20° and 30° north and south of the equator. Europe is the only continent without deserts. The most famous are the Sahara, the largest in the world, the Gobi desert of central Asia, the Kalahari desert of south-west Africa, and the great Australian desert.
- Destiny**, a supposed foreordained end, an overmastering force that impels the current of events to a final climax. In ancient times, fate, or destiny, was a common belief.
- Detectives** are secret police employed in collecting evidence or effecting the capture of offenders in cases of more than ordinary difficulty.
- Detergents**. (See Soapless Detergents.)
- Determinism**, the doctrine that behaviour is determined by natural laws and that nothing happens by chance.
- Detonator**. Substance for initiating an explosion. Most important detonators are mercury fulminate and lead azide.
- Deuterium** or "heavy hydrogen." The second isotope of hydrogen; the third is called tritium. Deuterium atoms have in their nuclei a neutron as well as a proton; tritium nuclei have two neutrons and one proton. In ordinary hydrogen gas about one out of every 5,000 atoms is a deuterium atom. Deuterium was discovered in 1932 by Professor Harold Urey. The oxide of deuterium corresponding to water is called "heavy water."
- Deuteronomy**, the fifth book of the Pentateuch, purported to have been written by Moses, and

containing the statement of the law, but regarded by many modern critics as of a much later period.

**Deviation of the Compass**, caused by the counter-attraction of the iron of a ship, is generally corrected by putting magnets near the compass, and by careful watching and calculation.

**Devil**, the spirit of evil, *Sātan*, *Beelzebub*, "the tempter," the enemy of God and of good, to whom a varied personality has been given by different religious systems in different ages.

**Devil-fish**, a strange marine animal of large size and of several species. As it is met with in European waters it is called the fishing frog, and the chief American species is the giant ray.

**Devil-worship** consists in a belief in, and of incantations to propitiate, evil spirits. This kind of worship is confined to certain primitive races of Asia and Africa, and a few Red Indians of North America.

**Devonian System** in geology refers to the strata between the Silurian and the Carboniferous Formations. It includes the Old Red Sandstone Formation. The fauna of the Devonian include the group of fishes known as the Rhipidistia (on the evolutionary route towards the amphibians), *Actinistia* (coelocanth), and the Dipnoi or lung fishes.

**Dew**, moisture deposited by condensation of water vapour on exposed objects especially during calm, cloudless nights. The loss of heat from the ground after sunset, by radiation, causes the layer of atmosphere close to the surface to be chilled below the temperature, known as the dew-point, at which the air is saturated with vapour. Part of the vapour condensed may be transpired from blades of grass and foliage of plants.

**Dew Pond** is a shallow artificial pond which is on high ground and rarely dries up, even during prolonged droughts, despite being used by cattle and sheep as a drinking source. The name arose from the belief that dew deposits at night provided the moisture for replenishment. Drainage of rain-water and mist condensed on neighbouring trees and shrubs are probably more important factors.

**Dextrin**, a white, odourless, viscid substance of the same composition as starch, from which it is obtained. It is used as gum, being the material put on the backs of postage stamps and other articles which are required to be made adhesive. It also is utilised in calico printing.

**Dhole**, the wild dog of the Deccan, of a bright bay colour, and living on game, which it hunts in packs.

**Dhow**, a one-masted trading vessel, much in evidence on the east coast of Africa and the Red Sea, and formerly employed in the transportation of slaves.

**Diadem** was originally a head ornament or fillet worn only by royal personages and from being of plain white material came to be of rich gold embroiderings, and set with precious stones. Now the term is applied to a crown or other head-badge worn by royalty, or the head ornament of a peeress, which, however, is more frequently styled a tiara.

**Dieresis**, the sign (·) placed over the second of two vowels coming together, and indicating that each is to be pronounced distinct from the other, as *de·rated*; also employed to indicate that a vowel, ordinarily silent, must in this case receive pronunciation, as "Oh, curs'd spite," "My be·loved," etc.

**Dial or Sun Dial**, an instrument for telling the time of day by a shadow thrown on a marked surface. This was the first form of outdoor clock, and was introduced into Europe from the East. It is made in various forms—horizontal, upright, or inclined.

**Dialect** is a form of speech special to a locality or district, and differing from the general literary language of the country. In England these dialects are numerous, but in all of them some survivals from what was once good old English speech are to be found. From the works of Chaucer, Spenser, Shakespeare, and from even later writers, many words are to be read that are obsolete as regards modern literary expression, but are still familiar in dialect idioms.

The dialect that has forced itself most into modern literature is the Scottish, a fact largely due to the compositions in dialect of Burns and other Scottish poets. For the full understanding of the force and meaning of English dialects, Professor Wright's monumental *Dictionary of Dialects* is to be commended.

**Diallage**, a kind of pyroxene mineral, containing calcium and iron; green in colour, and of foliated structure; common in serpentine rocks.

**Diamagnetism**, the phenomena revealed by certain substances which, under magnetic influence and suspended, assume a position showing the longer axis at right angles to the magnetic lines of force.

**Diameter**, a straight line passing through the centre of a circle or other figure, terminated at both ends by the circumference. In architecture, the diameter of the lower bed of a column, divided into 60 parts, constitutes the scale whereby all the parts of a classical order are measured.

**Diamond-beetle**, a South American beetle of very brilliant, luminous, spotted marking.

**Diana Monkey**, a large African monkey that derives its name from the supposed resemblance of its white frill to the crescent bow of the goddess Diana. The Palatine monkey of Pennant, *Cercopithecus Diana*.

**Diana's Temple at Ephesus**. The temple of Ephesus, built after the model of Karnak, was looked upon as the greatest of the "seven wonders of the world." Its interior length was 425 ft., its breadth 290 ft.; its roof was supported by 127 richly sculptured pillars, each the life-work of a king. Originally erected by Ctesiphon, it was enlarged and enriched by every succeeding prince. On the day that Alexander the Great was born, Erostratus tried to destroy it by fire, and partly succeeded; the Ephesians rebuilt it, and the world at large contributed to its restoration. Some years later Alexander the Great commanded his engineers to improve and beautify it. At the entrance to this famous temple was placed the "Altar of Sacrifice." In the Adytum was a second altar, the "Altar of sweet herbs." At the entrance to the Penetralia was a third, the "Altar of sweet incense," on which only the richest and most costly perfumes were placed. The statue of Diana was behind purple curtains.

**Diapason**. The concord of the first and last tones of an octave and the fixed rule by which organ pipes are arranged to proper pitch. The open metal flue pipes which form the basis of an organ are called the diapason "stops." Their pitch is expressed in terms of length, e.g., 4-ft. diapason, 8-ft. diapason, 16-ft. diapason. The pitch of other pipes is related to that of the diapason: e.g., a trumpet, which is a reed stop, may be said to have an 8-ft. tone, i.e., its pitch is the equivalent of an 8-ft. diapason.

**Diaper**, a figured textile fabric, the pattern of which is small and is shown in the material, without resorting to colour or difference of fibre. Many kinds of decorative products, treated in the same style, are termed diaper work.

**Diaspore**, an infusible hydrate of aluminium, almost colourless, and occurring in crystals and foliated masses. A small portion placed in a flame instantly disperses.

**Diathermy**, application of electrical heat to the treatment of various diseases. The cautery knife for the removal of tonsils, etc., is now sometimes used instead of the scalpel and promotes better healing of tissues.

**Diatrie**, a hard cement, compounded of shellac and silica.

**Diatoms**. One-celled algæ, common in fresh and salt water. Distinctive feature is the siliceous wall which is in two halves, one fitting over the other like the lid of a box. These walls are often very finely and beautifully sculptured. The diatoms constitute the division of the plant kingdom known as the Bacillariophyta. *Diatom ooze* is a deep-sea deposit made up of diatom shells. *Diatomite* or *diatomaceous earth* is the mineral form that such diatom oozes assume; also known as kieselguhr—mixed with nitro-glycerine yields dynamite.

**Diatonic Scale**. The ordinary major and minor

scales on which most European music is built, *e.g.*,

C major C-D-E-F-G-A-B-C  
Tone intervals 1-1- $\frac{1}{2}$ -1-1-1- $\frac{1}{2}$

C minor C-D-E $\flat$ -F-G-A $\flat$ -B-C  
Tone intervals 1- $\frac{1}{2}$ -1-1- $\frac{1}{2}$ -1- $\frac{1}{2}$

Dice, an ancient game played with small ivory cubes, each face of which is spotted with black marks like domino pieces, and thrown from a box held in the hand, the one who throws the highest number of spots being the winner. The Lydians played dice.

Dictaphone, a dictating machine used in offices. It records the dictator's voice on to a wax cylinder, which when full the typist, wearing earphones, places into a transcribing machine. The voice is then reproduced, and the typist types the words as she hears them. This eliminates stenography. The wax cylinder can be shaved and used repeatedly.

Dictator, the title given by the ancient Romans to their supreme magistrates under the republic, in times of great exigency. The term was limited to six months, but while it lasted the Dictator's rule was absolute. Another class of dictator was the Greek Tyrant, and many despotic rulers of more recent times, like Hitler and Mussolini, have been dictators. (See Fascism.)

Dictionary, a book containing the words of a language, alphabetically arranged, giving their definitions, and in many cases their pronunciation and etymological significance. The Greek word for dictionary was *lexicon*, hence lexicographer, someone who compiles a dictionary. Samuel Johnson (1709-84), known as the "Great Lexicographer," published his famous dictionary in 1755. The most elaborate of English dictionaries is the *New English Dictionary* (or the *Oxford Dictionary*), edited by Sir J. A. H. Murray, Henry Bradley, Sir W. A. Craigie, and C. T. Onions. This is the accepted authority for English spelling and pronunciation, and is a large work of many volumes. The small *Concise Oxford Dictionary* is derived from it. The standard dictionary of America is *Webster's International Dictionary* (20th century), derived from Noah Webster's *American Dictionary of the English Language* (1828). There are also special dictionaries dealing with music, biography, etc.

Dies Iræ (the Day of Wrath), a famous 13th-century Latin hymn, sung at burial services, and taking its place in translated form in the English hymnology.

Diesel Engine. A compression-ignition engine. The air in the cylinder is compressed to over 500 lb. per sq. in. and its temperature is about 800° F.; oil injected into the hot compressed air ignites immediately. The modern oil engine has been evolved mainly from the principles enunciated by Herbert Akroyd-Stuart in his patent of 1890 and, like the steam and other inventions, represents the improvements achieved by many men, including those by Rudolf Diesel of Germany, in respect of high compression pressures and greater fuel economy.

Diet, an assembly of dignitaries or delegates called together to debate upon and decide important political or ecclesiastical questions. The most famous Diets in history were those of Worms in 1495 and 1521, and the Diet of Augsburg of 1530, all of which dealt with matters of religious controversy awakened by the Reformation movement.

Diffusion is the process of mixing which occurs when two liquids or gases are in contact. It is most rapid between gases, and, as laid down by Graham's law, "the rates of diffusion of different gases are in the inverse proportion to the square roots of their relative densities."

Digit, a finger or toe. In arithmetic any number of one figure is a digit, the nine Arabic numerals being indicated by the fingers in counting on them, as one, two, three, four, five, six, seven, eight, nine.

Dika Bread, a West African vegetable substance, prepared from the fruit kernel of the *Magnifera Gabonensis*, and somewhat resembling cocoa. It furnishes a nutritive food to the natives.

Dilemma in logic is an argument which resolves

itself into two alternative conclusions, each of which amounts to a denial of the proposition maintained. Hence the term the "horns of a dilemma." The often-quoted example of a dilemma from Gellinus may be repeated:—"Every woman is fair or ugly; it is not good to marry a fair wife, because she will flirt; it is not good to marry an ugly wife, because she will not be attractive; therefore, it is not good to marry at all."

Dilettante, a term applied to amateurs in any of the arts or sciences.

Dimensions are measured magnitudes and involve the qualities of length, breadth, and thickness. A line has only one dimension: length; a plane surface two; length and breadth; and a solid three; length, breadth, and thickness. (See p. 761.)

Diminutives are grammatical expressions denoting smallness or littleness, as illustrated in the suffixes "kin," "ler," "ling."

Dimorphism, the quality of assuming two distinct forms. For instance, carbon, which is graphite in one form, is the diamond in another.

Dinar, a gold coin of the ancient Arab dynasties, usually of the weight of 65 grams troy. In the British Museum there is an example of a dinar struck in the time of Haroun-al-Raschid. In modern times the standard unit of Yugoslav currency. See p. 753.

Dingo, the wild dog of Australia, which is very like a wolf. It is of a reddish colour with a bushy tail and is very destructive to sheep.

Dinner, the chief meal of the day, was in olden times partaken of about midday, but the fashionable hour for dinner has undergone many changes, eight o'clock being now the formal dinner hour in Court circles. In the time of George III. it was four o'clock; under George IV. it was six o'clock; then it came to be seven; but Queen Victoria set the example of eight o'clock dinners.

Dinosaur, the name given to a group of extinct reptiles of the Mesozoic period, some of which were of immense size—much larger than crocodiles. (See Diplodocus.)

Diocese, a territory under the pastoral authority of a bishop. The term originated in the time of the Roman Empire, and represented then rather an administrative territory than an ecclesiastical one.

Diopside, a variety of pyroxene occurring in prismatic crystals, chemically calcium magnesium silicate. Two light-green varieties, malacolite and alalite, are gemstones.

Diopside, or emerald copper, a scarce copper ore occurring in prismatic emerald green crystals, and composed of silicate of copper.

Diorama, a series of spectacular paintings exhibited in a darkened room with the light thrown on to the pictures in such a manner as to produce optical effects that give the appearance of reality. These effects can be varied so as to represent night or day scenes, or scenes of cloud or sunshine, as may be desired. The diorama was the invention of Daguerre and Bouton in 1822, and was first shown in London in 1823.

Diorite, an igneous rock of crystalline structure composed of felspar and hornblende. It used to be classed as greenstone.

Dip Needle. Instrument for measuring the dip or inclination of the earth's magnetic field.

Diplodocus, one of the best known of the extinct mammoth dinosaurs, belonging to Mesozoic times. Fossil remains have been discovered in Colorado and Wyoming, and in 1905 a cast of one of these huge monsters, taken from the original in the Pittsburg Museum, was presented to the British Museum by Mr. Andrew Carnegie and is now at the Natural History Museum, South Kensington. It has been named the Diplodocus Carnegii, and is 84 ft. in length, having been reconstructed out of four defective skeletons all found in Wyoming. The height to the top of the spines of the dorsal vertebrae is nearly 14 ft.

Diplomacy, the practice of official intercourse between nations as carried on by ambassadors and other agents of states and governments.

Diplomatics, the science of diplomas, or ancient writings, and the deciphering of them. It is also (and now more commonly) called palaeography.

**Dipnoi or Lung Fishes.** These have the air bladder adapted to function as a lung, and they can remain alive when the stream or marsh in which they live dries up. Species of lung fish occur in Australia, Africa, and S. America. (See *Devonian System*.)

**Diptera**, an order of insects. Their main characteristic is that they are two-winged, and the common house-fly is the best-known example. There are at least 50,000 species of these insects, including gnats, blow-flies, mosquitoes, tsetses.

**Diphthong**, the conjunction of two vowels pronounced in one syllable. What is called a proper diphthong combines the sound of both vowels, as in "boy," "noise," "out," etc., while the improper diphthong only represents the sound of one of the vowels, as in "pail," "breach," "juice," etc. Belonging to the latter class are the diphthongs "æ" and "œ," but these are confined to words from the Latin or Greek.

**Diptych** was a folding two-leaved tablet of wood, ivory, or metal, with polished inner surfaces, utilised for writing with the style by the ancient Greeks and Romans. The same term was applied to the tablets on which the names of the persons to be commemorated were inscribed in the early Church. In art any pair of pictures hinged together is styled a diptych.

**Directory**, a term applied to the executive of the later French Revolution period, from Oct., 1795, to Nov. 9th, 1799, when Napoleon overthrew it and established the Consulate. The term, as in general use, signifies a book in which names of residents, traders, etc., in any particular locality or sphere are recorded, such as the London Post Office Directory, the Directory of Directors, etc.

**Dirge**, a hymn or song of mourning and lamentation, which may be music only, or a song only, but is usually a combination of music and words.

**Dirk**, an ancient Scottish stabbing weapon, dagger-shaped but much longer and heavier. It was usually worn in a scabbard.

**Discipline**, a specific training in accordance with strict regulations, and applying to religious, military, and civil guidance.

**Discus**, a circular piece of metal or stone about 12 in. in diameter, used in athletic contests by the ancient Greeks and Romans. Throwing the discus was a very favourite game, which was deemed worthy of celebration in the famous statue of a Discobolus of the 5th century B.C., now preserved amongst the Townley marbles in the British Museum.

**Disestablishment** is the withdrawing of State support from Church organisation. The agitation for the disestablishment of the Church of England has slumbered for some years past. The Irish Protestant Church was disestablished in 1869. An agitation for the disestablishment of the Church in Wales, carried on for many years, led to the passing of a Bill, and the Church was finally disestablished in 1919.

**Disk**, an astronomical term denoting the seemingly flat surface of celestial bodies as seen by the eye.

**Dispensing Power** was a right claimed by English kings of releasing any of their subjects from oaths and vows on payment of certain indulgence fees, but the Bill of Rights of 1689 abolished this privilege, and since then the Pope has been the only authority claiming to exercise such rights. The gross abuse of the dispensing power was one of the causes of the Reformation.

**Displaced Person**, a person uprooted from his home and living in a country foreign to that person. Before VE day it was estimated that there were in Europe 12 million D.P.s belonging to the United Nations. The numbers of D.P.s whose fate awaits solution are variously estimated and may be as high as 3 million.

**Dissenters** are those who decline to conform to the usages of the Established Church. All Nonconformist bodies, whether Protestant or Papist, are included in the term Dissenters.

**Distaff**, the staff of a spinning wheel, being a cleft stick on which wool, cotton, or flax was wound for spinning on the spindle. It was held between the left arm and the side. In olden times there was a "Distaff Day," which fell on the day after "Twelfth Day," so named because women were then supposed to resume their distaffs.

**Distal**, applied to the end of a limb or bone in

anatomy, or to an organ in botany, farthest removed from the point of attachment.

**Distance** is the space between two objects, or between two points of time, and is calculated by various methods. What is called an accessible distance can be measured by an ordinary linear measure; inaccessible distances are calculated by triangulation. The line of distance is a straight line between the eye and the chief point of the plane; the mean distance of a planet from the sun is an arithmetical mean between its greatest and least distances.

**Distemper**, a pigment prepared for a special method of painting, and consisting of colours mixed with a binding medium soluble in water.

**Distich**, a term used in poetry to indicate a couple of lines or verses constituting a complete idea, and, according to modern usage, rhyming.

**Distillation**, a process used to separate liquids of different boiling points. This is effected by placing the mixture in a distillation apparatus and heating. The liquid with the lower boiling point distils over first, the vapour being condensed and collected, forming the first *fraction*. With continued heating the second liquid reaches its boiling point, distils over and the mixture is said to be *fractionated*. Mixtures of liquids with close very high boiling points require more elaborate apparatus. Fractional distillation is a common process in the chemical industry, particularly in the refining of petroleum.

**Distinguished Service Order** was instituted by Queen Victoria in 1886 for rewarding exceptional service in the Army and Navy. Its badge is a gold cross, with a crown on one side and the royal cypher on the other, each enclosed in a laurel wreath.

**Dithyrambus**, a Greek lyric composition originally written in honour of Bacchus, but afterwards developed in celebration of other gods and heroes, and generally couched in excessive strains of laudation.

**Diuretics** are drugs or agents for aiding the secretion of urine.

**Divertissement**, a short musical entertainment which is usually accompanied by dancing.

**Divorce** is a legal dissolution of the marriage tie, and in England may be either complete or limited—in the old legal term—a *mensa et thoro* (from board and bed). In the latter category may be included what is termed judicial separation, which does not allow of the separated persons remarrying. Under the Matrimonial Causes Act of Jan. 1st, 1938, a marriage is voidable on the following grounds: (a) the wilful refusal of the respondent to consummate the marriage, (b) that either party was at the time of the marriage of unsound mind or a mental defective, or subject to recurrent fits of insanity or epilepsy, (c) that the respondent was at the time of marriage suffering from venereal disease in a communicable form, (d) adultery since marriage, (e) desertion for three years before petition, (f) cruelty to petitioner. (See p. 728.)

**Docket**, a summary copy of any decree; a brief list, or label; derived from dock, to curtail.

**Docks** are enclosed water spaces wherein ships rest while being loaded or unloaded, or waiting for cargo. The wet dock is simply for loading and unloading; the dry dock, or graving dock, is for overhauling and repairing vessels, and is so constructed that, after a ship has been docked, the water can be drawn off; the floating dock is a rectangular structure which is sunk beneath a ship and raises it. The largest series of docks in the world are those on the Thames, extending many miles. (Tilbury has one of the most up-to-date docks.) Those of Liverpool are the next largest. The launching of big vessels of the *Queen Elizabeth* and *Queen Mary* type renders a large increase of dock accommodation necessary. In July 1933 the world's largest dry dock at Southampton was opened by King George V. This dock is large enough to accommodate any ship afloat and is 1,200 ft. long, 135 ft. wide and 50 ft. deep.

**Dodo**, an extinct bird, giant and flightless, which lived on the island of Mauritius up until 250 years ago. Another species, the white dodo, lived on Réunion. Some reached exceptional sizes. By the end of the 17th century Mauritius, Rodriguez, and Réunion had all been colonised,

and the dodo along with many other birds vanished forever because of their inability to stand up to man and the animals imported into the islands.

**Dog-days** date from July 3rd to Aug. 11th, covering a period of 40 days, when Sirius, or the dog-star, rises and sets with the sun. The ancient superstition was that this star exercised direct influence over the canine race.

**Doge**, the chief magistrate in the former republics of Venice (697-1797) and Genoa (1339-1797, 1802-1805).

**Dogfish**, a well-known genus of fishes of the shark family, of small size, seldom more than 3 ft. in length. The flesh is sold as "rock salmon." The eggs are contained in horny cases called "mermaid's purses."

**Dog Licences** are necessary for household dogs of six months of age or over. The cost per dog is 7s. 6d., and the licence can be obtained at any Post Office. Dogs for tending sheep or cattle, or for leading blind persons, are exempt.

**Dogmatics**, the science which seeks to describe the various Christian doctrines. The term is also applied to the medical theories propounded by Hippocrates.

**Dogs** belong to the genus *Canis*, and descend probably from one or more wild species, such as the wolf, fox, jackal, etc. The domestic dog is usually grouped in six classifications: wolf-dogs—including the Borzoi, Eskimo, Newfoundland, St. Bernard, sheep-dog, etc.; cattle and watch-dogs—comprising the German boarhound, the deerhound, the Danish dog, etc.; the greyhounds; the hounds—such as the staghound, bloodhound, foxhound, pointer, etc.; the curs—terriers, etc.; and the mastiff breeds—including the various mastiffs, the bulldog, pug, etc. The subdivisions of these classifications—which are by no means arbitrary—are numerous and fanciful, especially when what are called "toy-dogs" come under consideration. The dog does not reach full growth until two years old. It does not perspire, but expels heat through the tongue, which it hangs out when hot. A litter of puppies is usually from six to eight, and the period of gestation is 63 days. (See Domestic Pets Section.)

**Dolly**, a small napkin or table mat, used to place glasses or earthenware on; also the name of a species of woollen fabric.

**Doit**, an old Dutch copper coin worth about a farthing; also the name of an old Scotch coin once current, worth from one-eighth to one-twelfth of a penny.

**Dolce**, a musical term indicating that the music has to be rendered softly and sweetly.

**Doldrums**, a nautical term applied to those areas of the Atlantic and Pacific towards which the trade winds blow and where the weather is calm, hot, and sultry but liable to change suddenly to squall, rendering navigation difficult. To be "in the doldrums" is to be "down in the dumps."

**Dole**, an apportionment of money, food, or other charitable gifts, distributed according to the terms of the charity. In olden times doles were often associated with monasteries and churches, and some still survive. There was dole-bread and dole-beer. The "benefit" received under the old Unemployment Insurance Act used commonly to be referred to as "the dole."

**Dollar**, unit of the monetary systems of the United States and Canada, and coined in gold and silver. Dollars are in use in many other countries, especially in the Republics of South America, and the word is derived from the German thaler. The U.S. dollar is worth about seven shillings English money compared with five shillings before sterling devaluation in 1949.

**Dolomite**, the name given magnesium-limestone, the double carbonate of calcium and magnesium.

**Doloroso**, a musical term denoting a sorrowful or plaintive style of playing.

**Dolphin**, an ocean mammal of the whale family, from 6 to 8 ft. long, with a long, sharp snout, and of an active disposition. They abound in most temperate seas and swim in shoals. A few species live in large rivers (Ganges and Amazon). They can cruise for long periods at around 15 knots and produce bursts of speed in the region of 20 knots, the water apparently flowing smoothly past their bodies.

**Dome**, a large cupola, hemispherical in form, rising over the main building of a cathedral or other prominent structure. The finest existing dome, that of the Pantheon at Rome, is also the oldest, dating from the time of the Emperor Augustus. It is 142 ft. in diameter and about the same in height. The dome of St. Peter's, in the same city, has a double shell, is 330 ft. high and 140 ft. in diameter. The dome of the cathedral at Florence is 139 ft. in diameter and 310 ft. high, and that of St. Paul's, London, has 3 shells and is 112 ft. in diameter and 215 ft. high. The circular reading-room of the British Museum has a dome 140 ft. in diameter and is 106 ft. high. The largest of its kind in the world was the aluminium dome of the Dome of Discovery on the Festival of Britain South Bank site (1951), 365 ft. in diameter and 93 ft. high.

**Dome Cover**, the copper or brass cover to the dome of a locomotive engine, to prevent heat radiation.

**Domesday Book** is the famous register of the lands of England framed by order of William the Conqueror. According to Stowe, the name was derived from *Domus dei*, the name of the place where the book was deposited in Winchester Cathedral; though by others it is connected with doom in the sense of judgment. Its compilation was determined upon in 1084, in order that William might compute what he considered to be due to him in the way of tax from his subjects. William sent into each county commissioners to make survey. They were to inquire the name of each place, the possessor, how many hides of land were in the manor, how many ploughs were in demesne, how many homagers, villeins, cottars, serving men, free tenants, and tenants in soccage; how much wood, meadow, and pasture; the number of mills and fish ponds; what had been added to or taken away from the place; what was the gross value at the time of Edward the Confessor. So minute was the survey that the Saxon chronicler of the time reports "there was not a single hide, nor one vintage of land, nor even, it is shame to tell, though it seemed no shame to do, an ox, nor a cow, nor a swine was left that was not set down." The record, which did not take in Northumberland, Cumberland, Durham, and parts of Lancashire and Westmorland, was completed on Nov. 15th, 1085, and was comprised in two volumes—one a large folio, sometimes called the Little Domesday, which deals with Essex, Norfolk, and Suffolk, the other a quarto, sometimes called the Great Domesday. The first is written on 384 double pages of vellum in one and the same hand, and in a small but plain character, each page having a double column. The quarto is written on 450 pages of vellum, but in a single column and in a large, fair character. The original is preserved in the Public Record Office. (See also Danegeld.)

**Dominant**, in music, the fifth tone of the modern scale, and the reciting tone in the Gregorian scale.

**Dominicans**, an order of mendicant preaching friars founded by St. Dominic in Languedoc in 1215 and confirmed by the Pope in 1216. The rule of the order was rigorous. The dress was a white habit and scapular with a long black mantle. This gave them the name of Black Friars. Their official name is Friars Preachers.

**Dominion**, a title formerly used to describe the self-governing countries (other than the United Kingdom) of the British Empire. The term has now given place to "Member of the Commonwealth." See pp. 134, 380.

**Don**, originally a Spanish title of nobility, but now accorded as a courtesy title. Also applied to a person with an academic appointment at the Universities of Oxford and Cambridge.

**Donatists**, an early Christian sect formed in Africa in the 4th century as a protest against the election of Cæcilianus as Bishop of Carthage. They were headed by Donatus, and held that they only represented the true Church. Subjected to many persecutions and repressive acts, they continued to exist up to the 7th century, though the conciliatory measures of St. Augustine in 411 won many back to the orthodox fold.

**Donative**, a term in ecclesiastical law signifying a benefice given to a person without formal induction.

**Donjon**, the keep, or inner tower of a castle, and the strongest and most secure portion of the structure. This was the last refuge of the garrison, and there was usually a prison on the lower floor, hence the name *dungeon*.

**Don Juan**, the legendary hero of many famous works, supposedly based on the life and character of the unscrupulous gallant Don Juan Tenorio of 14th-century Seville. The first dramatisation of the legend and the most famous is Tirso de Molina's *El Burlador de Sevilla*. Don Juan was also the subject of Molière's *Le Festin de Pierre*, Mozart's *Don Giovanni*, Byron's *Don Juan*, and José Zorrilla's *Don Juan Tenorio*. The latter is played on All Saints' Day throughout Spanish-speaking countries.

**Don Quixote**, the "knight of the doleful countenance," the hero and title of Cervantes' classic novel of 16th-century Spain. Don Quijote de la Mancha, a gentle country gentleman of lofty but unpractical ideals, having read many chivalric romances, believes he is called upon to redress the wrongs of the world. Mounted on his nag Rosinante and accompanied by his companion Sancho Panza, a hard-headed and practical peasant, he sets out on his journeys of knight-errantry.

**Doonga**, a rough kind of East Indian canoe, constructed from a single piece of wood, and carrying a square sail. Used chiefly in salt-collecting around the shallow waters of the Ganges.

**Dorians**, the name given to an early Greek race who traced their origin to Dorus, father of Æolus. They were at one time very powerful, and held the southern and western parts of Peloponnesus.

**Dormer**, the name of a special kind of window projecting from a sloping roof, and of vertical form. Such windows were common to the architecture of the Netherlands, northern France, and Belgium from the 14th century, and form picturesque features of general architecture.

**Dormouse**, a small, squirrel-like rodent widely distributed throughout Europe and Asia, and living mainly on fruit and nuts. It is of nocturnal habits and sleeps through the winter.

**Dort**, Synod of, Assembly of the Dutch Reformed Church, convened in 1618-19, resulted in the adoption of Calvinism as the Reformed religion, and the condemnation of the teachings of Arminius.

**Dory**, John, a species of mackerel found in European seas, and a good table fish. The name is from the French Doré, yellow and gold.

**Dot**, a French term indicating the property which a wife brings to her husband on marriage, and is usually settled on the woman, being her separate property, though the income from it may go towards the general household expenses.

**Dotterel**, a bird of the plover family, appearing in the spring and autumn in large numbers in the higher latitudes of Europe, and common in the mountain regions of Scotland.

**Double-Bass**. The largest and deepest-toned instrument of the Violin family. The Violoncello corresponds with the vocal bass so that the pitch of the Double Bass has no vocal counterpart—hence its name.

**Double-entendre**, a corruption of the French phrase "double entente," and used in English to indicate a word or sentence of indelicate double meaning.

**Double Star**. When two stars appear as one to the naked eye but can be distinguished by means of the telescope, one speaks of a "double star." First double star to be discovered (1650) was Zeta Ursæ Majoris.

**Doublet**, a body garment worn by men from the 15th to the 17th century; at some periods with skirts and belt, at others padded at the hips and in the sleeves. In their later form, under the Stuarts, doublets were made without sleeves and formed a sort of vest.

**Drachm (or Drachma)**, an ancient Greek silver coin and weight. One drachma was equivalent to six obols. The word has survived as the name of a weight: Avoirdupois, one-sixteenth part of an ounce; Apothecaries' Weight, one-eighth part of an ounce.

**Draco**, a northern constellation, the Dragon.

**Drag**. Term used in aerodynamics, for resistance offered by the air to the passage of a body

moving through it. When speed of sound is reached drag increases abruptly about tenfold.

**Dragoman**, an Oriental term used to designate a guide or interpreter. In some regions it is not considered safe to travel without an attendant of this kind. They often assume larger responsibilities, however, and contract for the organisation of caravans and the carrying out of tours.

**Dragon**, a fabulous monster common to folk-lore in most countries; generally represented as a winged reptile, with fiery eyes and breath of flame. A dragon guarded the garden of the Hesperides; in the New Testament there is mention of the "dragon, that old serpent, which is the devil"; St. George, England's patron saint, is supposed to have overcome the dragon; mediæval legend abounds in dragons. In heraldry it has also a conspicuous place; and in China was the imperial emblem.

**Dragonade**, the term given to the series of persecutions of Huguenots in France in the reign of Louis XIV., just before and after the revocation of the edict of Nantes, dragons being chiefly employed in the work. Since then the term has been used in reference to any onslaught on the people by soldiers.

**Dragonet**, the name of the fish of the *Callionymus* genus, beautifully coloured, and about a foot in length. They are common on the British coast and in the Mediterranean.

**Dragon Fly**, the common name of a well-known class of insects having two pairs of membranous wings, and often of very brilliant colours. They are swift of flight and may be seen hovering over sheets of water in the sunshine all through the summer.

**Dragon's Blood**, a dark-red resinous substance obtained from the fruit of a Malay palm, and possessing medicinal virtues. In a special technique used for making line blocks in printing, dragon's blood is used.

**Dragoons**, a mounted military force dating from the 17th century, and at first serving alternately as infantry and cavalry as needed. (Classed as heavy or light dragoons.)

**Drama**. The word *drama* comes from a Greek word meaning to do or to act, and it is from Greece that the play originates (at least, so far as the West is concerned). Plays have their origin in the long-ago past when players dressed up as various supernatural beings to perform rituals designed to make the gods carry out desired actions. Three or four hundred years B.C. such playwrights as Æschylus, Sophocles, and Euripides began to write plays partly religious and partly secular for the pleasure of their audiences: this was one of the greatest periods the theatre has seen, and such plays as *Edipus Rex* and *Antigone* still give pleasure in our own theatres. Roman drama was of little significance in general, and the next important stage in the history of the theatre is the Catholic mystery play of the Middle Ages, which, at the time of the Renaissance, developed into the play as we know it now. In England the great Elizabethan playwrights Webster, Ford, Shakespeare were in the forefront of this movement. Cromwell disapproved of the theatre, and the next important stage is the Restoration Drama following the Restoration of the monarchy in 1660. The only European achievement comparable to that of Britain in the history of the stage is that of France with such great playwrights as Molière and Racine. In the 19th and 20th centuries the great playwrights have been Oscar Wilde, Shaw, and others in Britain; Pirandello in Italy; Ibsen in Norway; Strindberg in Sweden; Hauptmann in Germany; Chekov and Turgenev in Russia. There are signs that the drama in verse is once more becoming popular in this country with such writers as T. S. Eliot and Christopher Fry. A summary such as the foregoing cannot include the great dramas stemming from another tradition in Asia—the plays of Japan, China, and India.

**Dramatic Unities**, as prescribed in ancient times, comprise Time, Place, and Action.

**Draughts**, a game played with dark and light pieces on a chequered board. (See "Sports and Pastimes.")

**Dravite**. A variety of tourmaline.

**Drawbridge**, a bridge that can be lifted up so that no passage can be made across it. It was a

usual feature of a fortified castle in the Middle Ages, and was raised or lowered by chains and levers. It spanned the fosse, and on the approach of an attacking party was raised and formed a special barricade to the gate. Modern drawbridges are such as are raised to allow of the passage of boats up and down a river or estuary. The Tower Bridge is a famous London bridge of this type.

**Dredging Machine**, an apparatus employed in collecting mud and silt from the bottoms of harbours, rivers, canals, etc. They are usually flat-bottomed, carrying a crane, and an endless chain of buckets, which descend into the water, collect the mud, etc., bring it up, and discharge it into the flat alongside the machine. Steam dredges, of which there are many forms, are now generally in use.

**Dripstone**, a projecting stone or moulding over a doorway, for carrying off dripping rain-water.

**Drongo**. The King Crow or Indian Black Drongo is frequently seen in India perched on branches or telegraph wires, darting suddenly to catch insects. Other members of the family are found in Asia, Africa, and Australia. Its plumage is black with steel-blue gloss.

**Drosophila or Fruit Flies**. More has been learnt by geneticists from breeding experiments with this insect than with any other.

**Dross**, the name generally applied to the refuse of molten metal, composed of slag, scales, and cinders.

**Drought**, a period of dry weather, is a normal and recurring condition in many warm climates, and is frequently provided against by irrigation. In the British Isles really long rainless spells are somewhat rare, and an "absolute drought" is defined officially as a period of at least fifteen days on each of which the rainfall is less than  $\frac{1}{160}$  inch. The summer of 1947 was exceptional over many parts of Europe, regarding lack of rainfall, abundant sunshine, and warm weather. In parts of N.E. England at the beginning of 1953 an absolute drought lasted 38 days.

**Druids**, priests and learned men of Celtic Britain and Gaul. Little is known for certain about them, and the chief records come from Roman authors, notably Pliny and Caesar. Worship of the sun, belief in special deities and in the immortality of the soul were the central features of their religion. The oak and mistletoe were sacred to them, and they are supposed to have offered human sacrifices. The Romans did much to stamp out Druidism in Gaul, but in Britain it yielded only to Christianity. The megalithic stones at Stonehenge were formerly ascribed to the Druids, but recent evidence suggests that the monument belongs to a Bronze Age culture (c. 1500 B.C.).

**Drum**. There are three main kinds of drum: the bass drum, the side drum, and the kettle drum.

**BASS DRUM**: a large shallow wooden cylinder whose ends are covered with skin or parchment rendered taut. It is used in a vertical position and beaten on both sides with padded leather hammers. Much used by military bands to beat out the rhythm of a march.

**SIDE DRUM**. A smaller version of the bass drum, sometimes with a metal body. It is used horizontally and played on the upper side with a pair of wooden drumsticks or, in dance bands, with a wire brush. Jazz-drummers use a combination of bass drum and several side drums on which complicated solo passages may be performed. To increase the rattle, strings of catgut may be strung across the lower parchment. The drum is then called a snare drum.

**KETTLE DRUM**: a large copper bowl whose mouth is covered with parchment. The tension of the parchment may be altered by means of hand-screws so that the drum may be tuned to a particular note. In a normal orchestra there are two kettle drums known collectively as the tympani.

**Drupe** is the scientific term for stone fruit. The stone forms the inner part (endocarp) of the fruit, and encloses a seed or kernel, the latter being liberated after setting in the ground by the decomposition of the shell.

**Drury Lane Theatre** is the oldest London playhouse. There was a theatre of the name in the Stuart period. It was destroyed by fire in 1671.

The next theatre on the site was built by Wren, and burned down in 1809. The present house dates from 1812. Sheridan was its manager for a long time.

**Dryocopus martius or Black Woodpecker**, a large, black bird about the size of a rook, with slightly crested scarlet crown, found in mountainous regions of N. Europe.

**Dry-rot** is caused in timber by a fungoid growth, and occurs chiefly in damp situations. The most effective cheap treatment is saturation with creosote. Dry wood always escapes dry-rot. Chief fungi causing dry-rot are *Merulius* and *Porcia*.

**Dualism** is a term used both in religion and in philosophy. In religion it involves the doctrine of two distinct principles, one good, the other evil, as the controlling influence; in philosophy it opposes materialism and idealism, and insists that spirit and matter are separate substances.

**Dublin University or Trinity College** was founded by Queen Elizabeth in 1591. Its library, built between 1712 and 1732, has over half a million books and a very fine manuscript collection.

**Ducat**, a coin formerly widely current on the Continent, first coined in Apulia in the 12th century. A gold ducat was worth about 9s. of our money, and a silver ducat half that sum.

**Ducatone**, a large silver coin once current in the republic of Venice, and worth about 6s. English.

**Duchess**, the wife or widow of a duke, or the lady who has in her own right control or sovereignty in a duchy.

**Duck**, water bird smaller than the related goose and swan, which together form the family Anatidae. Duck refers to the female, drake to the male. The duck family falls into two separate groups: the river or fresh-water (surface feeding) ducks, such as the mallard, pintail, wigeon, shoveler, mandarin, teal, garganey, and the sea (diving) ducks, such as the goldeneye, pochard, scoter, eider, and the fish-eating mergansers or "sawbills." The ancestor of all domestic breeds is the mallard. (See also Poultry section.)

**Duck-bill or Ornithorhynchus**, a fur-covered mammal inhabiting Australia and Tasmania, possessing a bill like a duck and a body resembling that of a mole. Called also the duck-mole and the duck-billed platypus.

**Ducking-stool or Cucking-stool**, a stool in which common scolds, disorderly women and dishonest tradesmen were formerly tied and plunged into water as a punishment. Ducking prevailed from the later 15th century until the early 18th.

**Ductility** is a property possessed by most metals which renders them capable of being stretched without breaking. Gold is the most, and lead the least ductile of metals, the order being gold, silver, platinum, iron, copper, palladium, aluminium, zinc, tin, lead. In animated nature the spider and the silkworm, with their elastic secretions, are the most noted examples of ductility.

**Duelling** originated in France in the so-called days of chivalry. It is an encounter between two persons, with deadly weapons fought according to conventional rules and prearranged, with the object of settling a personal quarrel. There is no instance of a private duel in England before the 16th century. The Duke of Wellington fought a duel with Lord Winchelsea in 1829, and Castlereagh, Pitt, Fox, Sheridan, and Canning all took part in duels. Duels are frequently described in literature.

**Duet**. A musical composition for two voices or two instruments. A pianoforte duet may be performed by two players on the same instrument.

**Dugong**. A marine mammal, belonging to the order Sirenia (sea-cows). Inhabits Red Sea and Indian Ocean; also found as far East as the Philippines and Australia. Lives on seaweed. Related to the Manatee.

**Duke**, the highest rank in the British peerage next to that of a royal prince. Edward, the Black Prince, eldest son of Edward III., who died before his father, was the first English duke, being created Duke of Cornwall in 1337. Since that time all Princes of Wales have held that title.

**Dukeries**, a range of English woodland and park country, mainly in Nottinghamshire, comprising the adjacent demesnes of several English dukes

and nobles. The Dukeries include Sherwood Forest and the estates of Welbeck Abbey, Clumber Park, Worksop Manor, and Thoresby Hall.

**Dukhobars or Doukhobars** (Russian = spirit wrestlers), a Russian religious sect founded in the 18th century and numbering many thousands of followers. Their leader was Peter Veregin. They deny the divinity of Christ, interpret the gospels figuratively, believe in the equality of all men before God, and reject all authority, including that of the Government. They were severely persecuted in Russia and were befriended by Tolstoy. Many emigrated to Canada to settle in Saskatchewan and British Columbia in 1898-99, where they have become absorbed in the Canadian community and only occasionally get into trouble with authority over the education of their children and their ascetic practices (which include nudism).

**Dulcimer.** An instrument of stretched wires which are struck by hammers held in the hands. It is the logical precursor of the pianoforte.

**Duma,** the Russian Parliament established by an imperial ukase August 19th, 1905, and consisting of representatives elected on a restricted franchise. It was abolished by the Bolsheviks in 1917.

**Dunciad,** Pope's famous satire in verse, in which he replied to the attacks of his enemies and denounced the critics and postasters with scathing effect.

**Dunes.** Sand dunes are elliptical or crescent-shaped mounds of loose sand produced by wind action. The dune has a gentle slope on windward side; a steep slope on the leeward side.

**Dunlin.** Common British shore-birds of the Sandpiper family.

**Dunmow Flitch,** a custom which originated in the parish of Little Dunmow, Essex, in the reign of Henry III., which was that the husband who was prepared to swear before the prior, convent and townsfolk of Dunmow that he had not repented of marriage or quarrelled with his wife for a year and a day, should be rewarded with the gift of a flitch of bacon. The custom has frequently been abolished and revived.

**Dunnock** (*Prunella modularis*), a small bird of the countryside of rich brown and dark grey plumage. Sings a cheerful song all the year round. Called hedge-sparrow in southern England. Another member of the same family, the larger Alpine Accentor (*Prunella collaris*), is found on rocky mountain slopes of Europe and Asia.

**Duodecimo,** a sheet of paper folded into twelve leaves, written "12mo."

**Durbār,** a term used in India for a State reception, from the Persian word *darbār* meaning "court" or "audience". It may be either a council for administering affairs of state, or a purely ceremonial gathering. Native rulers of India received visitors and conducted business in *darbār*. The word was applied to great ceremonial gatherings like Lord Lytton's *darbār* for the proclamation of the Queen-Emress in 1877 and the Delhi *darbār* of 1911.

**Durham University,** founded in 1832, a federal university composed of two divisions, the Durham Colleges (5 men's and 3 women's colleges, 2 non-collegiate societies) and King's College, Newcastle upon Tyne.

**Dust,** solid particles of matter floating in the atmosphere, produced chiefly by volcanic eruptions, sand-storms in desert regions, and industrial and domestic smoke. When the island of Krakatoa erupted in 1883, more than 1 cubic mile of dust was thrown into the air and carried three times round the earth by the explosion wave. The particles in dust-storms are much finer than those in sand-storms and are swept up to far greater heights. The local whirlwinds which form over loose dry soils are termed dust-devils.

**Dyke,** the term applied to masses of igneous rock which have flowed into grooves of strata or become infused therewith; the word also signifies in alternative usage, a sea wall and an open drain.

**Dynagraph,** a machine for recording the condition of a railway line, the speed of a train, and the amount of coal and water used on a journey.

**Dynamics,** deals with natural forces either in motion or at rest, describing their positions, velocities, and constitution.

**Dynamism,** Leibnitz's doctrine that all substances in nature involve force.

**Dynamite,** a powerful explosive whose chief element is nitro-glycerine. It was discovered by Nobel in 1867, who absorbed nitro-glycerine in kieselguhr; has a disruptive force of about eight times that of gunpowder.

**Dynamo.** Machine for transforming mechanical energy into electrical energy. Depends on principle of electromagnetic induction whereby a current is produced in a conductor (e.g., copper wire) traversing a magnetic field. The two essential parts of a dynamo are the conductors or *armature* and the *field magnets*.

**Dynasty,** a succession of monarchs of the same family, as the Carolingian dynasty, the Bourbon dynasty, the Plantagenet dynasty, etc.

**Dysprosium.** Element discovered in 1886 by Boisbaudran: one of the rare-earth metals.

**Dytiscus,** the name of a large and common water-beetle, a voracious feeder on larva and tadpoles.

## E

**Eagle,** large bird of prey with huge hooked bill, related to the buzzard, kite, hawk, harrier, falcon, and vulture, together forming the family Falconidae. There are many species to be found throughout the world, the Golden, Imperial, Tawny, Spotted, and Lesser Spotted being found in Europe. The Golden Eagle, a magnificent-looking bird, nests in the Scottish Highlands, and the White-tailed Sea Eagle, which used to breed in Britain, is now only an occasional visitor. The eagle has been the symbol of royal power since the earliest times, and the American or Bald Eagle is the emblem of the United States.

**Eagle,** a ten-dollar gold coin of the United States. There is also a double-eagle of 20 dollars.

**Eaglewood,** a name given to aloeswood, the fragrant Asiatic wood yielding a resinous gum, derived from two species of the genera *Alseodylon* and *Aquilaria*. It is valued for medicinal purposes, as an incense, and for the beautiful grain of its wood.

**Ear,** the organ of hearing, comprises in mammals, the *external ear*, containing the pinna and auditory meatus; the *middle ear*, containing the drum or tympanum; and the *internal ear*, through which the sound vibrations are transmitted to the brain. (See Deafness, Medical Section.)

**Ear-ring,** a very ancient form of personal adornment worn by both sexes in Oriental nations. In Anglo-Saxon times ear-rings were worn in Britain, but from the 10th to the 15th century were out of fashion. Under Elizabeth they were again worn, also by men, and have continued to be worn by women since the days of Charles I.

**Earl,** a British title of nobility of the third rank, duke and marquis coming first and second. The title dates from Saxon times, and until 1837 ranked highest in our peerage.

**Earl-Marshall,** in England ranks as the eighth of the great officers of state, is head of the College of Arms, attends the sovereign in opening and closing the session of Parliament, arranges state processions (especially coronations) and assists in introducing newly created peers in the House of Lords. The office is hereditary in the family of the Dukes of Norfolk.

**Early English Architecture,** is the pointed style, with long lancet-headed windows, and came between the Norman and the Decorated periods. It continued through the 12th and 13th centuries.

**Earth,** our habitable globe, is the third of the planets of the solar system in order from the sun, and on an average throughout the year takes 24 hours to turn completely round relative to the sun, the whole earth revolving round the sun in a slightly elliptical orbit once in a year of 365-2564 days. The mean distance of the earth from the sun is 93,004,000 miles. The shape of the earth is that of an oblate spheroid, its equatorial and polar axes measuring 7,926 miles and 7,900 miles respectively. The crust consists of an outer layer of surface soil of varying thickness, beneath which there is a mass of hard rock several miles deep, the per-

centage (by weight) of the principal elements present being oxygen 47, silicon 28, aluminium 8, sodium and potassium 5, iron 4.5, calcium 3.5, magnesium 2.2, titanium 0.5, hydrogen 0.2, carbon 0.2, phosphorus and sulphur 0.2. Mass of the earth is estimated to be 6,000 million million tons. Two-thirds of the earth's surface is covered with water. It has only one satellite, the moon. The age of the earth is estimated to be between 2,000 and 3,500 million years. (See "The World of Science.")

**Earthenware.** The term comprises objects or utensils composed of non-translucent, baked or fired clay, and may be either unglazed or enamelled. The word is frequently employed to designate only the coarser kinds of pottery.

**Earth-Nut** is a term applied to tuberous roots of several plants belonging to the family *Umbelliferae*.

**Earthquake**, a sudden violent disturbance of the earth's crust; the region of the surface immediately above the "focus," or source where the earthquake originates, is termed the "epi-centre." On account of their destructive power earthquakes have attracted attention from the earliest times, but accurate study dates only from the last century and the development of a world-wide network of recording stations from the present one. The majority of severe earthquakes result from fractures, usually along existing faults, in underlying rock strata subjected to great strains, the shearing movement sometimes extending to the surface. These dislocations set up vibrations which are propagated as waves throughout the bulk of the earth or round the crust. Frequently the main shock is followed by a series of smaller after-shocks. Minor local earthquakes may be attributed to the effects of volcanic activity, but most of the larger ones originate in non-volcanic regions. Generally the ground is felt to tremble, undergoing oscillations which may gradually or suddenly increase to a maximum and accompanied by sounds. Each year there are about 100 destructive earthquakes, a large proportion occurring beneath the bed of the sea. One of the greatest of historic times was that which destroyed and flooded Lisbon in 1755, the reputed loss of life amounting to 50,000. Among the notable shocks of the present century rank those of San Francisco (1906), Messina, Italy (1908), Tokyo, Japan (1923), Napier, New Zealand (1931), N.E. Assam (1950), and South Ionian Is. (1953).

**Earthworm**, of which there are several species, has a cylindrical body, tapering at both ends, and segmented into rings. It moves by contraction of its rings, aided by retractive bristles; is eyeless, but has a mouth, gullet, and stomach. Earthworms exist in immense numbers, and perform an important part in the scheme of nature by loosening the soil and rendering it more amenable to tillage. They also form a valuable food for birds and many mammals, and are unequalled as bait for certain kinds of fish.

**Earwig**, a genus of insects of the cockroach family, possessing two pairs of wings and anal forceps. It is of nocturnal habits, lives on vegetable matter, and hides by day under stones or bark. The old belief that it deliberately creeps into people's ears is altogether unfounded.

**Easement**, a legal term applied to a privilege enjoyed by anyone over another's property, the most familiar examples being the right of way and ancient lights.

**Easter**, the annual Christian festival in commemoration of the resurrection of Christ, the English name being derived from Eostre, goddess of Spring. The date cannot fall earlier than March 22 nor later than April 25. Many disputes arose among the early Christians as to the proper time to celebrate this day which governs all other movable feasts. It was eventually ruled at the Council of Nicaea in 325 that Easter Day should be the first Sunday after the full moon following the vernal equinox. If this happens to be a Sunday, then Easter Day is the Sunday after. It should be remembered, however, that this moon is the paschal moon of the ecclesiastical calendar, quite imaginary, and generally one or two days ahead of the real moon we see in the heavens. In fact the reverend fathers at Nicaea did us a bad turn in

having anything to do with the moon but then they had no Astronomer Royal to advise them of the complications. (See p. 751.)

**Eastern Question**, a term formerly applied to the problems arising from the instability of the Mohammedan power of Turkey and its relations with the other nations of Europe. Later connected with other problems of the Near East, such as the possession of Constantinople and the position of the Balkan states.

**East India Company** was incorporated by Elizabeth in 1600. In 1613 the Company set up a factory at Surat, India, and in 1662 Bombay came under the Company's influence and developed into an important trading port. Dupleix wanted to establish French power in India and a struggle for supremacy took place. Clive gained the victory for England and thenceforward British dominion in India remained undisputed except by native princes. In 1772 Warren Hastings was appointed the first Governor-General and in 1784 Pitt's India Act established a Board of Control for the India Company. A great increase of trade resulted, and this rule continued down to 1858, when, as a result of the mutiny, the Crown assumed the sovereignty. With the passing of the Indian Independence Act of 1947, British dominion ended and India was handed back to the Indians.

**Eastward Position**, a position taken at the altar by the Celebrant or officiating Priest at the Holy Eucharist (or Communion) Service.

**Eau-de-Cologne**, a popular distilled perfume first manufactured at Cologne in the 18th century by Johann Maria Farina, an Italian, and since made in large quantities in Cologne and elsewhere.

**Ebionites** were a religious party of Judaizing Christians of some prominence from the 2nd to the 4th century. They contended for the authority of the Mosaic law, denied the divinity of Christ, and opposed the teachings of Paul.

**Eblanine**, a crystalline spirit procured from crude pyroxylic spirit.

**Ebony**, a name applied to various hard black woods, the best of which are grown in Mauritius and Ceylon. There are also Indian and American varieties. Only the inner portions, the heart-wood, of the trees are of the necessary hardness and blackness. Ebony is largely used in ornamental cabinet work for piano keys, canes, etc.

**Ecballium**, the scientific name of the squirting cucumber, so named from the fact that when ripe it breaks from the stalk and ejects its seeds and juice from the hole made by the breakage.

**Ecce Homo** ("Behold the Man!"), used in reference to the pictures and sculptures representing Christ crowned with thorns.

**Ecclesiastes**, a book of the Old Testament, the word signifying "the preacher." Supposed to contain the reflections of Solomon, though many critics dissent from this view.

**Ecclesiastical Commissioners.** By a measure which came into force on Apr. 1, 1948, the Ecclesiastical Commissioners and Queen Anne's Bounty were amalgamated as the Church Commissioners (which see).

**Ecclesiastical Courts**, dealing exclusively with Church affairs, are those of the Archdeacons, the Bishops, and the Metropolitan (York or Canterbury), with the Judicial Committee of the Privy Council as the final Court of Appeal.

**Ecclesiasticus**, the title of one of the books of the Apocrypha, dating from about 180 B.C. Its alternative title is "The Wisdom of Jesus, the Son of Sirach."

**Echidna.** The spiny ant-eaters of Australia and Tasmania. There are several species of these egg-laying mammals, which belong to the order Monotremata.

**Echinodermata.** The division of invertebrate animals which include star-fish, sea urchins, sea cucumbers, brittle stars, sea lilies (crinoids). The adults have a radial symmetry.

**Echo** is the reflection of a sound. Woods, rocky defiles, valleys, mountains, or walls all act as echo-producers under favourable conditions.

**Eclectics**, a philosophical system built up of selected parts of other philosophies.

**Eclipse**, an obscuration of the light of the sun, moon, or other heavenly body by the passing of another body either between it and the eye or between it and the source of its light. The sun

is eclipsed by the moon intervening between it and the earth; the moon by the earth passing between it and the sun. Total eclipses of the sun have occurred over parts of the British Isles in the years 1424, 1433, 1593, 1652, 1715, 1724, 1927, 1954, and the next will be seen only from near Land's End on August 11, 1999.

**Ecliptic** is the sun's apparent path in the sky; the great circle described by the sun from west to east in the course of a year. The sun is exactly on the equator on approx. Mar. 21st and Sept. 23rd, and the points where the celestial equator and ecliptic intersect on these days are called the *equinoctial points*. On approx. June 21st and Dec. 21st the sun reaches its greatest and least midday elevation and its greatest distance north and south of the equator, and the points on the ecliptic on these days are called the *solstices*. (See Seasons, "General Compendium.") These four points are equidistant from each other by 90°. The equinoctial points are not fixed. The angle of inclination of the ecliptic to the equator is called the obliquity of the ecliptic, which is also variable, being influenced by the gravitational action of the other planets on the earth. At present the angle is 23½°.

**Ecumenical Council.** (See **Œcumenical Council**.)

**Edda**, the name given to two important collections of early Icelandic literature—the *Elder* or *Poetic Edda*, poems handed down from the 9th and 10th centuries, probably Norwegian in origin, and the *Younger* or *Prose Edda* of Snorri Sturluson compiled about 1230. They treat of mythical and religious legends of an early Scandinavian civilisation.

**Edystone Lighthouse** stands on a group of rocks about nine miles from the Cornish coast and fourteen from Plymouth. The present structure is the fourth that has occupied this dangerous position. The first was of wood, completed by Winstanley in 1700, but three years later washed away, its architect with it. In 1709 a second and stronger wood lighthouse was built by Rudyard. This lasted until 1755, when it was destroyed by fire. Smeaton built the third lighthouse, of granite and Portland stone, on the model of an oak trunk, and this, which was finished in 1759, withstood the storm and tempest for over a hundred years, being superseded by the present building, erected in 1879–82 by Sir James Douglas. It is wholly of granite. Its light can be seen over seventeen miles, and in foggy weather it gives an explosive signal every 5 minutes.

**Edelweiss**, a white perennial flower of the daisy order, common in Alpine regions.

**Edentata**, the name given to an order of mammals which are without teeth in the front part of the jaws. Sloths, ant-eaters, and armadillos belong to this order.

"**Edinburgh Review**," the great Whig quarterly from 1802 until 1929, was edited by Jeffrey, and numbered among its contributors Lord Brougham, Sydney Smith, and Macaulay.

**Edinburgh University**, the youngest of the Scottish universities, was founded in 1582 by the town council and is now one of the leading medical centres of the kingdom. The present buildings were begun in 1789, and the library contains over 300,000 books and 8,000 MSS.

**Education.** In the United Kingdom schools for boys founded by private individuals and religious bodies, unaided by the state, were established even before the 16th century, and these, in course of time, developed into the grammar school and public school. Some are very old foundations, like Eton, Winchester, Harrow, Rugby. No serious attempt, however, was made to establish a system of elementary education until the beginning of the 19th century. The first parliamentary grant in aid of elementary education was made in 1833. In 1870 "Board Schools," as distinct from "Voluntary Schools," were established, and by the 1880 Act the framing of bye-laws on school attendance by school boards and attendance committees became obligatory. In 1899 the Board of Education was created "charged with the superintendence of matters relating to education in England and Wales." The Act of 1902 abolished the school boards, whose functions were transferred to county,

borough, county borough and urban district councils, known as local education authorities (L.E.As.). Under this Act secondary and technical schools were also rapidly developed and a number of training colleges for teachers established. The Education Acts of 1918 (the Fisher Act) and 1921, despite post-war setbacks and financial restrictions, paved the way for the comprehensive changes which become operative under the Education Act, 1944. By this Act the Board of Education has become the Ministry of Education, and while administration remains decentralised, the Minister has increased control over publicly aided education. Primary and secondary education becomes free to all children. The old elementary and higher education is gradually being replaced by a three-stage continuous process, a progressive system of primary education (nursery, infant and junior up to 12 years of age), secondary (12 and over), and further education (vocational and non-vocational training for young people over school age and for adults). School-leaving age was raised to 15 in 1947, and will later be raised to 16. The General Certificate of Education replaced the School and Higher School Certificates in 1951. Papers are offered at two levels, ordinary and advanced, and there are also Scholarship papers for the purpose of selecting pupils for university and other scholarship awards. With the establishment in 1954 of a new examining body, independent of the universities, the basis of the G.C.E. has been broadened to meet the special needs of secondary school pupils and technical college students taking technical or commercial subjects, arts and crafts, and intending to enter industry or commerce, rather than the universities and professions. (See also **Universities**.)

**Eels** are soft-finned, serpentine fishes, almost without scales, abundant in European waters, salt and fresh. Young female eels make their way from salt to fresh water, and when full-grown return to the sea for breeding purposes. The Conger (marine) eel grows to more than twice the size of the fresh-water eel. The Electric eel of South America is a variety of great interest, possessing the power of emitting electric shocks.

**Egg-plant** or **Aubergine**, a plant cultivated for its ovate fruit, varying in colour from dark purple to white.

**Egret**, a slender, graceful bird of the heron family of pure white plumage, famed for its beautiful silky plumes (aigrettes), which appear in the breeding season, and for which it was ruthlessly hunted and would have been exterminated had not international action been taken to protect it. The Little Egret with black bill, black legs, and yellow feet breeds in the Mediterranean countries.

**Egyptian Vulture** is smaller than other vultures. Found in S. Europe, frequents native villages and scavenges for offal.

**Elder**, a large diving duck, found along the rocky coasts of northern latitudes, well known for the beautifully warm soft down, called "elder down," which the female bird plucks from her breast to line her nest. In Norway and Iceland the haunts of the elder are preserved and the birds protected by law on account of the much prized "elder down," which is collected from the nests just before the breeding season. "Elder down" is so elastic that a pound or two of it will fill an ordinary bed covering.

**Eiffel Tower**, built by the French engineer Alexandre Gustave Eiffel (1832–1923) for the Paris Exhibition of 1889. The tower which is made of iron is 985 feet high and weighs about 7,000 tons.

**Elkon Basilike** (Royal Image), the title of a work issued in 1640, supposed to have been written by Charles I. in support of kingly divinity, and replied to by Milton in the same year with his *Eikonoklastes* (image breaker).

**Eire** (or **Eyre**), an old legal term still in use in Scotland in connection with the circuit of judges. Justices in eyre were judges journeying from assize to assize for the purpose of holding trials.

**Eisteddfod** (a sitting) was originally a congress of Welsh bards and minstrels, and dates from before the 12th century. These assemblies, discontinued for a long period, were resumed in

1819, and have been held yearly since, each lasting three or four days. Their object is to foster the Welsh patriotic spirit; they are devoted to orations and competitions in poetry, singing, and harp-playing, prizes being awarded to the successful contestants.

**Eland**, the largest species of antelope, a native of Africa; has large pointed horns, stands 5 feet high at the withers, and weighs several hundred pounds.

**Elasticity** is the power of a body to recover its original size or shape after it has been subjected to a stress. The greatest amount of elasticity is possessed by india-rubber, tempered steel, ivory, glass, etc., the least by lead, clay, and fats.

**Elatridæ**, a family of beetles of a numerous species with short legs and indented antennæ. Commonly known as Click-beetles or Shipclacks. Their larvae are the wireworms which cause so much damage to farm crops.

**Elder**, a genus of small trees of the *Sambucus* genus, with pinnate leaves, and bearing clusters of small purplish-black berries. The black elder, the best known, is common in most parts of Europe, and thrives in Britain. A wine is made from its berries, and the juice is used as an aperient.

**El Dorado**, a "golden land," was an idea much favoured in the days of the early Spanish explorers. It was believed that somewhere on the South American continent there was a country abounding in gold and precious stones. Many expeditions were fitted out to discover it. Sir Walter Raleigh also went forth on this illusive quest. The term is still used in regard to any place of rich promise.

**Eleatic Philosophy**, a school of philosophy founded by Xenophanes of Elea (6th century B.C.) which taught that there was no such thing as change.

**Elecampane**, a perennial plant found in damp meadows in England, and bearing a large yellow flower. The root possesses certain medicinal properties, and when dried is in popular repute as an aromatic and tonic.

**Election**, in theology, is the theory that God elects to grant eternal life and heavenly favour to a certain number of human beings, and passes over the rest. Calvinism supports the theory as absolute, Arminianism makes it conditional.

**Electra**, in astronomy, one of the Pleiades; also an asteroid, discovered in 1873 by Peters.

**Electric Light** is light produced by electricity, and is of three kinds, the arc-light, incandescent light, and fluorescent light. The first is produced when a strong current passes between two carbon electrodes, first brought together, then slightly separated, leaving the current to continue, but setting up a resistance that causes the carbon points and the air between them to assume a white heat which gives forth an intense light, thus completing what is called the electric arc. The incandescent light is obtained by passing the current through a thin metallic wire or other strong resisting substance until it heats to the point of incandescence. In fluorescent lamps electrical energy is transformed into ultra-violet light, and visible light is produced when this falls on the fluorescent substances with which the lamps are coated.

**Electric Telegraph** may be said to date from 1836, when Sir Charles Wheatstone and his co-inventor Cooke introduced their Single-Needle instrument, which was soon followed by the Double-Needle apparatus. Morse, in 1837, invented his famous recording instrument. The first electric cable was between Dover and France, and was laid in 1850. The first Atlantic cable was laid in 1858, and the second in 1866. It was in 1899 that the first Marconi wireless telegraph messages were sent between England and France.

**Electrolysis** is the condition established when an electric current passes through a conducting liquid, between electrodes, connected with the poles of a battery, resulting in the decomposition and separation of the liquid, if a compound. Water thus becomes decomposed into hydrogen and oxygen.

**Electrometer**, an instrument for measuring differences of electrical potential. Unlike the magnetic or heating effects of an electric current, the electrometer is operated by electrostatic

forces, there being no flow of current through the instrument. They are employed to make systematic measurements, near the earth's surface, of the potential gradient or strength of the atmospheric electric field.

**Electron**. All matter is pervaded by these tiny negatively-charged particles whose mass is about  $9 \times 10^{-28}$  gram. When current flows in a metal wire this represents a flow of electrons. All atoms contain electrons, but electrons can be isolated from atoms, as in cathode rays. The electron was discovered by Sir J. J. Thomson in 1897, which ushered in the era of modern physics. (See p. 161.)

**Electron Microscope**. A microscope in which beams of electrons are focused by magnetic lenses in a manner analogous to the focusing of light beams in the ordinary optical microscope. Direct magnification 10,000 times is practicable; indirectly (by enlargement of photographs taken through the electron microscope) magnifications of 100,000 have been obtained. The first electron microscope was German and dates back to the 1890s; since then American and British instruments have come on the market. Still higher magnification is expected from the proton microscope.

**Electronics**. The science which deals with the behaviour and control of free electrons. It started with the discovery of the electron by Sir J. J. Thomson in 1897. The practical applications, constituting electronic engineering, have given us radio, radar, photo-electric cells, cathode-ray oscillographs, electron microscopes, computing machines, etc.

**Electrophorus**, a simple device for producing static electricity, consisting of a smooth disc of resin or ebonite mounted on a metal base and with a metal cover carrying an insulated handle. The disc is first electrified (negatively) by rubbing it with a dry catskin or flannel and the cover replaced, the upper surface receiving a positive charge and the lower a negative. On lifting off the cover, after having touched it with the finger, the negative charge leaks away to earth and the positive charge is isolated on the cover. The action may be repeated a number of times before it is necessary to replenish the original charge on the disc.

**Electroplating** is the process of coating metals or other substances with a metallic film, applied in a bath of the solution of the coating material by the action of an electric current.

**Elegiacs**, a kind of verse originated by the ancient Greek poets, afterwards adopted by the Romans, and frequently used in modern times, for compositions of a mournful character. An elegiac consists of distiches, each of a dactylic hexameter followed by pentameter. Among the Roman elegiac poets, Catullus, Tibullus, and Ovid were noted.

**Elements**. In chemistry, an element is a substance in the simplest form to which it has been reduced. About eighty-eight elements exist in Nature, and as a result of experiments connected with atomic energy a number of artificial radioactive elements have been made in the laboratory. (See pp. 161 and 762.)

**Elemi**, the name given to a venous exudation obtained from various trees of the *Burseraceæ* order found in most tropical regions. Valuable in pharmacy, also for varnishes, and for chewing.

**Elephant**, a proboscidean mammal of which only two species survive—the Asiatic, in India, and the African elephant. No other animals possess a trunk. Both males and females have large ivory tusks, of considerable commercial value. The Indian elephant is usually about 9 ft. high and weighs about 3 tons; African elephants are larger, weigh about 6 tons, and are usually much fiercer. Several fossil elephants of still larger bulk have been discovered, including the mammoth and the mastodon. The Indian elephant is domesticated and used as a beast of burden.

**Eleusian Mysteries**, festivals common throughout Ancient Greece, agricultural in their symbolism.

**Elevation**, rising ground, as a hill; also a military expression, being the angle to which the barrel of a gun is raised to throw a projectile the required distance.

**Elf**, a fairy personage who is supposed to interfere in human affairs with mischievous intent.

**Elgin Marbles**, a great collection of sculptures, got together by the 7th Earl of Elgin, in Greece, and brought to England in 1812. These celebrated treasures had originally formed part of the Parthenon at Athens, and were the work of the sculptor Phidias. Lord Elgin expended over £70,000 upon them, and they were purchased for £35,000 for the British Museum, where they can now be seen displayed.

**Elixir**, a term derived from the alchemists, and referring to a substance or tincture which would make the old young again. The word is now applied to many essences and decoctions.

**Elk**, the largest animal of the deer family, possessing enormous antlers, and standing, when mature, about seven feet high. The American moose is of the same family.

**Ell**, an old English cloth measure, representing a length of 45 in. It varied in other countries, from 22 in. in Saxony to 47 in. in France.

**Ellipse**, in geometry, a compressed circle or oval, forming a curve so marked out that the sums of the distances of each point in its periphery from two fixed points are the same.

**Elm**, a large, wide-spreading tree having a dozen species, and common to Europe, India, China, and North America. It makes valuable timber, its wood being hard and durable, and for shade and ornament is unsurpassed.

**Elongation**, an astronomical term for the angular distance from the sun at which a planet is observed.

**Elopement**, a clandestine running away of a woman with a lover, rendering the man liable to punishment when the woman is under eighteen.

**Elzevir**, the name of a celebrated family of Dutch printers, who produced editions of Latin, French, and German classics, which were highly valued for their beauty of type and accuracy of printing. They flourished in the 17th century.

**Embalming**, the process by which dead bodies are preserved from decay by means of spices and drugs. The art reached perfection in ancient Egypt, as the mummies which still exist so powerfully testify. In modern times many experiments in embalming have been tried, with various degrees of success.

**Ember-days** are set apart for fast and prayer in the English and Romish churches, at the periods appointed for ordination, viz., the Wednesday, Friday, and Saturday after the first Sunday in Lent, the same days after Whist Sunday and after the festival of the Holy Cross in September, and St. Lucia in December.

**Emblem**, a symbolical figure or design referring to some person, power, or quality, divine or mortal. **Emblems** are land crops, or profits thereof, which belong to a tenant, or his executors, although the lease of the land may have expired before the crops matured.

**Embossing**, the art of stamping in relief letters or designs upon pliant substances.

**Embryology**, that branch of biology which deals with embryos, tracing their development from fertilisation of the germ or seed to maturity.

**Emerald**. The rich green variety of beryl (beryllium aluminium silicate). The colour is due to the presence of chromium oxide.

**Emery**, a granular substance of the corundum order, generally mixed with other metallic substances, and used in a powdered state for polishing and grinding purposes. Emery stone is chiefly found in Asia Minor and the Grecian Archipelago.

**Emetine**, an alkaloid forming the leading principle in *Ipecacuanha*, and largely used as an emetic; hence its name.

**Emigration** is the removal of a person or family from one country to another for the purpose of settlement, and has been a common practice from ancient times. The general stream of emigrants in modern times has been from Europe to America.

**Eminence**, a title of honour conferred on cardinals of the Church of Rome by Pope Urban VIII. in the year 1630.

**Emplectum**, a kind of masonry used by the Greeks and Romans, consisting of walls built with hollow spaces between, which were filled in with rubble. Much used in fortification construction.

**Empyrean**, the highest heaven of the Ptolemaic system, and the supposed abode of the Deity.

**Emu**. Flightless herbivorous birds of Australia. **Enamel**, a vitrified substance applied as a coating to pottery and porcelain. The art was practised by the Assyrians and Egyptians, and was introduced to Europe by way of Greece. Enamels are all either of the transparent or opaque kind, and are susceptible to an immense variety of colouring, according to the metallic oxides introduced.

**Encænia**, a festival commemorating a dedication; at Oxford University the annual commemoration of benefactors, accompanied by the conferring of honorary degrees, is held in June.

**Encarpus**, an architectural ornamentation consisting of sculptured representations of garlands or festoons of flowers or fruits, and generally wrought on friezes or capitals of columns.

**Encaustic Tiles** were much used in ancient times, as the evidences of ancient Rome and of the mediæval period in Europe generally clearly indicate. In modern times there has been a revival of this art, which has been very successful in many of the present-day examples of our own tile manufacturers, being more beautiful and durable than those of former times.

**Encyclical Letters**, a term used in reference to letters addressed by the Pope to his bishops upon matters of doctrine or discipline.

**Encyclopedists**, a term first applied to the eminent writers who collaborated in the French *Encyclopédie* (1751-65). These writers were Diderot, D'Alembert, Voltaire, Helvetius, and others, and their writings generally were sceptical as to religion, and destructive as to politics, and had great influence in popularising the social ideas which afterwards resulted in the French Revolution.

**Endive**, a plant of the chicory family grown as a hardy annual and yielding a profusion of leaves, is generally used for salad.

**Energy** may be recognised in many forms: kinetic, potential, electrical, heat, chemical, radiant, and atomic energy. When energy disappears in one form it appears in others, in each case according to a fixed rate of exchange. (*See Work*.) Atomic energy is quite different from other forms of energy and is released when matter is actually destroyed, a small amount of matter giving rise to a relatively enormous amount of energy. During the war atomic energy research developed at great speed and culminated in the production of the atom bomb (*q.v.*) when a few pounds of uranium released energy comparable to that of 20,000 tons of high explosive. Research is now being directed to the conversion of atomic energy into electric power, via heat. (*See also p. 187.*)

**English Language** is composed of many elements, Anglian, Saxon, Norman French, Scandinavian, Dutch, and the various underlying contributions from Latin and Celtic sources. The result is a strong, expressive, composite language, now spoken by all races of English descent, and is the mother tongue of over 200 million people living in Britain and the Commonwealth and the United States of America.

**Engraving** is the art of cutting or otherwise forming designs of pictures on wood, stone, or metal surfaces for reproduction by some method of printing. Wood-engraving was the earliest in the field, dating from the 15th century. Later, engraving on steel and copper plates was introduced, and mezzotint, lithography, stipple, aquatint, etc. With the development of photography, and an increased knowledge of the use of acids, many readier methods of engraving were adopted, and now wood-engraving, which was formerly resorted to for all general engraving purposes, is comparatively little used. What is styled "process" engraving is the most utilised.

**Ensign**, a former title given to a commissioned officer of the lowest rank in a foot regiment, and so called because he was entrusted with carrying the colours or ensign. The rank was abolished in 1871. Officers of like rank are now styled second-lieutenants.

**Ensilage**, a method of storing and preserving fodder, vegetables, etc., in pits dug in the ground and excluded from air or light. The system was practised in ancient Rome and revived in England in the 19th century.

**Entablature**, that portion of a building which

surmounts the columns and extends to the roof of the tympana of the pediments. It comprises three parts, the architrave, the frieze, and the cornice.

**Entasis**, the swell of the column in either of the orders of architecture.

**Entellus**, one of the common monkeys of India, with a ridged forehead, a long tail, and whiskers and beard. It is regarded by Hindus as sacred, and enjoys immunity from injury at their hands.

**Entomology** is the study of insects. (See *Insects*.)

**Entomotraca**, a Crustacean sub-class, known as water-beans, from their jerky method of progression.

**Entozoa** is a term used to designate generally internal parasites, such as intestinal worms.

**Envelopes**, as wrappers for enclosing letters, were not in ordinary use until after the introduction of the penny postage system in 1840. They were known in France, however, in the 17th century.

**Envoy**, a special diplomatic agent deputed to represent a government at a foreign court, or to perform a special service, such as the negotiation of a treaty.

**Enzyme**, Organic catalysts which accelerate chemical processes occurring in living organisms. Examples are: *lipase*, which speeds the hydrolysis of fats; *diastase*, which is involved in the conversion of starch to glucose. Fermentation of sugars to alcohol requires the presence of the enzyme *zymase*. (See p. 168.)

**Eocene**, a geological term applied to the lower division of Tertiary strata, and evidencing the beginnings of existing species.

**Epaulette**, a shoulder badge fringed with cord, worn by English army officers until 1855; now confined to naval officers, and varying in form and richness according to the rank of the wearers.

**Ephemoptera** or *May-flies*, an order of insects. In the larval condition they exist from two to three years, but no sooner do they arrive at maturity than their lives are hurried to a close. They rise up in pyramids on warm summer nights, take no food, propagate, and perish. The Latin name expresses the fact that the adults have an ephemeral existence.

**Ephesus**, Councils of, were held in A.D. 431 and 449 to deal with heretical doctrines.

**Ephod**, a vestment worn by a Jewish high priest, and sometimes by priests of lower rank. In olden times it was of rich texture and set with gems.

**Ephors** were the five annually elected magistrates who exercised almost supreme authority in ancient Sparta; and later the office was adopted by the Romans. The last of the Spartan ephors existed in 225 B.C. when Cleomenes III. exterminated the existing magistrates and abolished the office.

**Epic**, a heroic narrative poem dealing with important events and introducing supernatural features; the most famous examples are Homer's *Iliad* and *Odyssey*, Virgil's *Æneid*, Ariosto's *Orlando Furioso*, Tasso's *Jerusalem Delivered*, and Milton's *Paradise Lost*.

**Epiciene**, pertaining to both sexes, a term now usually applied, in grammar, to nouns which indicate indiscriminately male and female animals, as sheep.

**Epidemiology**, the science of epidemics, which in recent times has formed one of the most important branches of medical study.

**Epidiascope**, a modern magic-lantern which throws on to a screen images not only of transparencies such as lantern slides but also of any opaque object (book illustration, photograph, etc.). Is much in use in schools.

**Epidote**, a mineral occurring in green-black or yellowish-green crystals. Chemically it is a hydrated silicate of calcium, aluminium, and iron. Also known as *Pistachite*.

**Epiglottis**, a lamella or cartilage designed to cover and protect the entrance to the larynx during the process of food swallowing.

**Epigram**, a term originally used to indicate a monumental inscription; afterwards applied to any concise and pointed specimen of verse, but in later times is applied to short, witty expressions in prose as well as verse.

**Epilogue**, an address, in prose or verse, delivered at

the end of a play, and a usual accompaniment to the dramatic work of the 16th, 17th, and 18th centuries, but now fallen into desuetude.

**Epiphany**, a church festival celebrated on January 6, Twelfth Day.

**Epiphytes**, plants which grow on other plants, but do not derive nourishment from them, e.g., ferns, mosses, lichens, and numerous orchids.

**Epithalamium**, a nuptial hymn or song, originally sung by the ancient Greeks and Romans at the door of the bride-chamber. Many specimens of this class of composition by Sappho, Catullus, etc., have come down to us.

**Epithelium**, a tissue covering a surface or lining hollow organs.

**Epoch**, a period of time of such importance that succeeding years are numbered from it; an era is a succession of time, but an epoch is a point of time. Among the various epochs may be counted the birth of Christ and the Reformation. There are also the geological epochs, and epochs in arts, science, and invention, as well as in history generally.

**Equator**, the imaginary great circle of the earth, every point of which is 90 degrees from the earth's poles, and dividing the northern from the southern hemisphere. It is from this circle that the latitude of places north and south is reckoned. The celestial equator is the circle in which the plane of the earth's equator meets the celestial sphere.

**Equidae**, the zoological term for the family of hoofed quadrupeds comprising two genera—*Equus*, to which the horse belongs, and *Asinus*, comprising the ass and zebra. In the Tertiary period there were several other species of Equidae—*Hipparion*, *Protohippus*, etc.—of which fossil remains have been discovered.

**Equinox**, the time when the sun crosses the plane of the earth's equator, making day and night of equal length, occurring about the 21st March and the 22nd September, when the spring and autumn quarters are respectively entered upon.

**Equites**, a body of ancient Roman cavalry, recruited from citizens of rank.

**Equity**, a term used to express a modification of the severer form of law in order to insure equal justice. It is the principle of fairness applied to general rule, and in recent times all English courts administer equity as well as law. (See "A Citizen's Guide.")

**Eras** are distinctive periods of time associated with some remarkable historical event or personage. The *Christian era*, dating from the birth of Christ, adopted for the reckoning of the years about the 8th century, was invented by the Christian scholar Dionysius Exiguus in the 6th century. It is now generally understood that the year A.D. 1 is put too late by four years. The *Jewish era* dates from 3761 B.C.; the *Julian era* from the alteration of the calendar by Julius Caesar, 45 B.C.; the *Mahomedan era* from A.D. 622.

**Erastians**, followers of Erastus, who, in the 16th century, advocated the restriction of ecclesiastical power.

**Erbium**, Element discovered by Mosander in 1842. Belongs to the group of rare-earth metals.

**Ergot**, a fungoid growth, that affects the seeds of various grasses, causing them to blacken and lose their virtue. The ergot of rye has medicinal value, and is used to assist contraction in maternity cases.

**Eridanus**, the constellation of the winding river in ancient astronomy, situated south of the Taurus, and visible only in the southern celestial hemisphere. It contains one star of the first magnitude, Achemar.

**Erl-King**, a forest fiend of German mythology, who lured children from their homes and carried them off. In Goethe's ballad the "Erlkönig" it is a traveller's child who is lured to destruction.

**Ermine**, a small animal found in northern latitudes, and abundant in Arctic America. Its coat becomes a lovely white in winter, the tip of the tail only remaining black. Its fur is highly prized.

**Eros**. This asteroid is 15-20 miles in diameter. It comes closer to the earth than any other member of the solar system with the exception of the moon and several very small asteroids.

**Determination of solar parallax** based on observations of Eros in 1930-31 yielded the most accurate estimate of the distance of the sun from the earth (93,004,000 miles).

**Ere**, the old Gaelic dialect of Ireland, and afterwards of the Lowland Scots. Now revived as the Irish National Language since 1932.

**Escapement** is the contrivance by which the pressure of the wheels in a watch or other timepiece is accommodated to the vibratory action of the pendulum or balance-wheel, providing the regulating power which maintains an even impulse in spite of irregularities caused by friction or air resistance.

**Escarpment**, the face of an abrupt cliff or hill; also a portion of fortified ground whose edge is cut away almost vertically to prevent the enemy from climbing.

**Escurial** or **Escorial**, a magnificent palace built in the 16th century by Philip II. of Spain at a village 26 miles north-west of Madrid. In addition to a palatial residence it has a fine Doric church, a valuable library, and the royal mausoleum, the burial-place of the kings of Spain.

**Escutcheon**, a shield-shaped surface called a field, upon which a man's armorial bearings are represented. A woman's escutcheon is lozenge-shaped.

**Esoteric**, a term which had its origin in the teaching of Aristotle, but in later times has been applied to such doctrines as are intended only for privileged students or those of the inner circle.

**Espalier**, lattice work upon which to train fruiting or ornamental trees.

**Esparto** Grass grows in great abundance in Spain and North Africa, and the pulp is largely used for paper-making as well as for other purposes.

**Esperanto**, an artificial international language created by L. Zamenhoff of Warsaw and first published in 1887. It does not seek to replace national languages but to serve as a second language for international communication. It is based on the internationality of many words in the principal modern languages, and is entirely phonetic in spelling and pronunciation.

**Eskimos**, the people of the Arctic regions. They dwell in skin tents in summer and snow igloos in winter and live by hunting, fishing and trapping.

**Eskimo Dog**, a very hardy animal of great utility to the inhabitants of the Arctic regions as sledge-drawers. In appearance it suggests the Pomeranian, but is of a larger breed and has a wolf-like head.

**Esquire** was formerly something of a distinctive title applied to the otherwise untitled sons of nobles, also of knights, officers, officials and professional men; now used generally as a matter of courtesy in addressing people who are of good social standing.

**Essenes**, a Jewish sect established in the 2nd century B.C., aiming at a higher spirituality, and living an ascetic life. "The love of God, the love of virtue, and the love of man" was their motto. They were restricted to Palestine, and did not exist as a sect after the destruction of Jerusalem.

**Essential Oils** are oils derived from plants by distillation or expression, and much used in perfumery as well as to some extent in medicine.

**Estates of the Realm** in Great Britain are the Lords Spiritual, the Lords Temporal, and the Commons. They are the great classes invested with distinct political powers, and whose concurrence is necessary to legislation.

**Etching**, a process of engraving, on copper usually, the design being drawn with a steel needle, and the lines produced by the action of an acid or mordant.

**Ether**, a volatile liquid, consisting of carbon, oxygen, and hydrogen. It is a valuable anæsthetic obtained by heating alcohol with sulphuric acid.

**Ethics**, the science of moral conduct and duty. Aristotle, Plato, Kant, Bacon, Hobbes, Paley, Whewell, Hume, Bentham, Locke, Mill, and Herbert Spencer have all contributed to the development of Ethics, the last-named being the most illuminating of exponents of a clear ethical system.

**Ethide**, a compound formed by the union of an element with the monad radical ethyl.

**Eton College**, a famous school for boys, near Windsor, founded 1440.

**Etruscans**, people from Asia Minor who colonised Italy about 900 B.C., settled in what is now Tuscany and part of Umbria, reached the height of their civilisation about 500 B.C., and were ultimately absorbed by the Romans. They were skilled technicians in bronze, silver, and goldwork, and excelled in the art of granular decoration.

**Etude**. (See Study.)

**Etymology** treats of the science and structure of words, including classification and derivation.

**Eucalyptus**, an Australian tree that grows to a great height, and possesses remarkable properties. It exudes a valuable gum, has a fibrous bark, and yields an oil from its leaves which is of great use in bronchial affections.

**Eugenics**, the science of racial progress as affected by heredity and environment, first formulated by the late Sir Francis Galton, who in 1905, in this connection, endowed a Research Fellowship at the University of London, and at his death in 1911 bequeathed to the University £45,000 for the study of national eugenics. A Galton Professorship of Eugenics was established.

**Euomphalus**, a species of extinct snail whose fossil discoidal shell is frequently found in the rocks of the Palæozoic period.

**Eupatorium**, a genus of plants of the Compositæ order, with clustrous flowers, native of America. One species, hemp agrimony, is found in Britain.

**Euphonium**, alternative name for the Bass Saxhorn in B♭. A large brass instrument of the trumpet type played by operating three valves.

**Euphorbiaceæ**, an order of apetalous plants of wide distribution, comprising herbs, shrubs, and trees, bearing flowers and fruit. The latter sometimes yields an acid, more or less poisonous, juice, and in other kinds yields starch cassava, certain oils, and caoutchouc. The box-tree is of this order.

**Euphuism**, an affected literary style, originating in the 16th century, and deriving its name from Euphuus, the chief character in John Lyly's *Anatomy of Wit*, issued in 1579, a word of forced elegance and bombast. From these exaggerations, however, there sprang many acceptable embellishments to the English language.

**Eurasian**, a half-caste or person of mixed European and Asiatic parentage.

**Europium**, element discovered by Demarcay in 1906. A member of the rare-earth metal group.

**Euterpe**, an order of palms belonging to tropical America and the West Indies, with very long, slender stems, surmounted by a close cluster of leaves and an edible fruit.

**Evaporation** is the process by which a solid or liquid is resolved into vapour by heat. As it is rarely that the atmosphere is completely saturated, evaporation is nearly always going on at the surface of the earth, especially over the sea and other water surfaces, the vapour rising and, being lighter than the air, forming clouds which afterwards break, the vapour thereupon falling to earth again as rain. The same process occurs over smaller surfaces, the rate of evaporation being dependent on the general atmospheric conditions.

**Everest Expeditions**. For many years after Mt. Everest had been shown to be the highest mountain in the world, political conditions in Nepal, lying south of the summit, and in Tibet, to the north, prevented mountaineers from attempting an ascent. At last in 1921 the Tibetan authorities gave permission, and the first expedition, organised, as were all subsequent British expeditions, by a joint committee of the Royal Geographical Society and the Alpine Club, and led by Col. C. K. Howard-Bury, was sent out. This was primarily a reconnaissance; besides mapping the northern flanks, it found a practicable route up the mountain. By 1939, six further expeditions had climbed on the northern face. Some were balked by bad weather, others by problems previously little known, such as the effect of high altitudes on the human body and spirit. Nevertheless, notable climbs were accomplished. In 1924, for example, Col. E. F. Norton reached 28,163 ft., and it was on this expedition that G. L. Mallory and Andrew Irvine were seen

going well at about the same height. They never returned, however, and what disaster befell them is not known. After the war, political conditions again closed the Tibet route: permission was eventually obtained from the Nepalese Government to make the attempt from the south. In 1951 a reconnaissance expedition under Eric Shipton reached the ice-fall at the exit of the Western Cwm (a high valley lying south-west of the massif), and reported favourably on the prospects for an ascent. The first attempt from this side was made the following year by a Swiss expedition led by Dr. E. Wyss-Dunant, two members of which made an attempt on the summit, but were stopped at approx. 28,200 ft. by the intense cold and the very strong winds. When the British 1953 Expedition, led by Col. (now Brig. Sir) John Hunt, was being organised, stress was laid on three main points: proper acclimatisation of the climbers; use of oxygen for the final stages; and the establishment of very high altitude camps, so that the final assault parties would set out fresh and unencumbered. Great attention was also paid to recent developments in diet, clothing, and equipment. In all these matters the 1953 expedition was able to draw on the accumulated experience of their predecessors. By the end of April, a base camp had been established below the ice-fall, and with the aid of thirty-four Sherpa porters supplies had been carried up into the Western Cwm. The next critical stage was the ascent of the steep head of the cwm, the Lhotse face, with the threat of avalanches always present. By most strenuous efforts, a camp was established on the South Col (25,800 ft.) on May 21. From this camp on May 26, T. D. Bourdillon and R. C. Evans climbed the South Peak of Everest (28,720 ft.), then the highest altitude ever attained. On May 28, Edmund Hillary and the Sherpa leader, Tenzing Norkey, spent the night at the highest camp (27,900 ft.) and on the following day, May 29, climbed to the South Summit, negotiated the difficult final ridge, and reached the summit of Everest—the climax of a long, arduous, and stirring endeavour.

**Evolution**, in biology, is, in the words of Huxley, "a general name for the history of the steps by which any living being has acquired the morphological and the physiological characters which distinguish it." The theory, as laid down by Darwin, is that all existing species, genera, and classes of animals and plants have developed from a few simple forms by processes of change and selection. Up to the time of Darwin a large part of the civilised world believed that life had been created suddenly at the beginning of the world as described in the Book of Genesis, in 4004 B.C. The evidence of the rocks, however, gave a more convincing theory of creation, and by studying the fossils preserved in the various layers of the earth's crust the past history of the earth's life has been pieced together. See "The World of Science."

**Excommunication**, exclusion from the rights and privileges of the Church. It is of two kinds—the major, which means a total cutting off, and the minor, which shuts out only from participation in the Eucharist. In medieval times, major excommunications were often launched against rulers and leaders.

**Exelastes**, a genus of flies of the ichneumon family with impectinate claws, and having about 50 species, more than half of which are European.

**Existentialism**. An anti-rational modern philosophy best known through the literary works of the Frenchmen Jean Paul Sartre and Camus. As a philosophical movement, it dates back to the German Heidegger (rector of a university in Nazi Germany), Kierkegaard, the 19th-century Danish theologian, and even Dostoevsky. There appears to be no consistent body of belief, and existentialism is mainly concerned to express an emotional attitude to the universe. Man, it is inferred, is a failure, unacceptable to Nature; he is, and always must be, imperfect. Sartre (an atheist) considers that the world is meaningless, there is nobody to help human beings in their predicament—they must help themselves. "Man is what he makes of himself." If a man is able to realise that he is abandoned to the tyranny

of Fate, absolutely alone, and can count only on his own powers, then he will find freedom and greatness in this knowledge. Each individual must be free to make of himself what he can; everything is permitted to him within reason. Kierkegaard, on the other hand, was a Christian who believed that the intellect must be crucified—Christianity is not a belief, it is a form of relationship with God. There must be a defiant affirmation of God. This belief, often called Christian existentialism, has influenced such theologians as Brunner, Barth, Haecker, and others. The only consistent beliefs which appear to be accepted by all existentialists are: (1) defiance of reason and science; (2) an excessive individualism—an assertion of the right of each man to make himself in whatever way he thinks best.

**Exorista**, a parasitic fly, having its antennae projecting from the middle of the face, and the third joint considerably longer than the second.

**Exoterics**, the opposite of esoteric, is the term applied to doctrines openly expounded.

**Exotics** are plants of tropical origin not fully acclimatised.

**Exploration**. Modern exploration began in the second half of the 15th century with the voyages of the great Portuguese and Spanish discoverers. They were followed by sailors of other European nations, who profited from their developments in navigation and from their charts, and in less than one hundred years the coast-lines of much of the Americas, Africa, and south-west Asia had been revealed and the globe circumnavigated. The motives of these early explorers were mixed: they were seeking adventure, trade, plunder, national power, and the conversion of the heathen. Few if any were directly interested in advancing scientific knowledge. But from the reports of their voyages and travels, scholars at home compiled descriptions of the strange new world which stimulated their successors to undertake more systematic enquiries. One of the earliest English expeditions to be despatched for scientific research was that of William Dampier on the *Roebuck*, which was sent out by the Admiralty in 1699 to examine the coasts of North-west Australia. In the 18th century British explorers were at work mainly in the Pacific Ocean, with the object of breaking the Spanish monopoly of trade. Capt. James Cook sailed thither in 1769 to observe first the transit of Venus at Tahiti, and then to search for the alleged great southern continent. On this voyage he discovered and charted much of the coasts of New Zealand and the east coast of Australia. On his second voyage he was the first to sail across the Antarctic Circle, and he showed that the southern continent was much smaller than had been supposed. By 1800 the general outlines of the continents, except for Antarctica were known, and explorers in the 19th century were largely engaged in opening up the interiors. In Africa British explorers solved two problems which had puzzled men for centuries: Mungo Park and Richard Lander established the true course of the River Niger, and Sir Richard Burton, J. H. Speke, Sir Samuel Baker, and others revealed the true sources of the Nile. The greatest African explorer of that age was undoubtedly David Livingstone, the missionary, who in three great journeys explored the Zambesi and the region of the Great Lakes, spreading the Gospel, fighting the slave trade, and opening up the interior to settlement and trade. In North America Alexander Mackenzie was the first to cross the main breadth of the continent from sea to sea. In Asia motives were also mixed; men like Charles Doughty, who explored in Arabia, and Sir Francis Younghusband, who journeyed from China to India across the Gobi and the Himalaya, were impelled by a love of adventure and the quest for knowledge, but political considerations were often involved. In recent years, with the main features of the world's surface known, exploration has become more intensive. Teams of scientists go out to study restricted areas in detail. An Antarctic expedition can contribute to our knowledge of world weather, or by biological research into the life history of whales, can help to improve our food supplies. Similarly, expeditions in Africa

can help to check the loss of valuable agricultural land through soil erosion, or to develop areas of settlement by schemes for irrigation and power. And there are still great areas to be adequately mapped. All these problems are inter-related, and in solving them the modern explorer can call on many improved techniques and instruments—the aeroplane, the aerial camera, tracked motor vehicles, radio, in fact all the resources of modern science. But the human element is still vital, and for those with the old explorers' spirit there will always be problems left to solve.

**Explosives** are substances which burn to produce gases in such great volume that an explosion is induced. Gunpowder was the first explosive to be used; Roger Bacon's powder, consisting of charcoal, sulphur, and nitre, was the only practical explosive for centuries. 1845 brought gun-cotton, made by treating cotton with a mixture of sulphuric and nitric acids; but it was not until 1865 that Sir Frederick Abel perfected the process of manufacture that made it safe enough to store and use. In 1867 Alfred Nobel discovered how to make dynamite by absorbing nitro-glycerine in kieselguhr; in 1886 he produced cordite, evaporating a solution of gun-cotton and nitro-glycerine in acetone, the resultant jelly being squeezed through jets to form cords. Cordite came into general use as a propellant. High explosives, providing bursting charge for shells and bombs, include: T.N.T. (trinitrotoluol), picric acid (known as lyddite, melinite, etc.), cyclonite (R.D.X.). Chemical explosives have been eclipsed by the atomic explosives: Uranium 235 and plutonium; 1 kilogram (2½ lb.) of Uranium 235 is equivalent to about 20,000 tons of T.N.T.

**Extreme Unction**, the final sacrament of the Roman Catholic and Greek Churches, administered to a dying person, and consisting of the anointing with holy oil, after confession and absolution.

**Eyebright**, a genus of plants, of which only one species, the common Eyebright, or Eyewort, is known in Europe. Its juice is aromatic and astringent, and used to be a country remedy for eye ailments.

**Eyra**, a species of wild cat, with reddish fur, exceptionally long body, and long tail, native to Texas, Louisiana and South America.

## F

**Fabian Society**, a society of British socialists established in 1883. George Bernard Shaw, H. G. Wells, Beatrice and Sidney Webb became its leading personalities. The Fabians stood for a non-Marxian, evolutionary socialism and believed in the "inevitability of gradualness". It is affiliated to the Labour Party and has a strong intellectual influence on the Labour movement.

**Fables** are fictitious narratives intended to enforce some moral precept, and may be either in prose or verse, and deal with personified animals and objects or with human beings. Aesop in ancient times and Hans Christian Andersen and the Brothers Grimm (in many of their stories) in later days, have given fables. Mention must also be made of La Fontaine's and Krylov's fables.

**Faction**, a name originally given to the contending parties in the ancient Roman chariot-racing sports. In modern times, a party, combination, or clique within a state, government, party or other association.

**Fagging**, a public-school custom in England, once very prevalent, but now falling into disuse, whereby junior scholars were made to perform menial duties for their seniors, receiving in return protection from the insults or attacks of other boys.

**Faience**, a kind of decorated glazed earthenware invented in Faenza, Italy, about the end of the 13th century. Wedgwood-ware is a notable example of modern faience.

**Faille**, a light silk fabric used for veiling material and other purposes of adornment. In the Middle Ages the name was applied exclusively to long veils worn by nuns.

**Fairies** are imaginary creatures supposed to be invested with supernatural powers. At one time a general belief in them was prevalent,

especially amongst the peasantry, and the uncivilised races still existing cling to similar ideas. It was fancied that the world of fairyland was composed of good and evil spirits, variously embodied, always contending for supremacy, and exercising good and bad influence over humankind. If a person was lucky it was the work of the good fairy, if unfortunate the evil fairy was the cause. Early literature is crowded with the denizens of fairyland—fairies, elves, fays, sylphs, sprites, gnomes, goblins, genii, and so forth. Shakespeare's "Midsummer Night's Dream" is a fairy world of its own, and Spenser's "Faerie Queen" is a still more separate and distinct creative effort. Among the fairies of the domestic order, "Robin Goodfellow" was much talked of in England; as the "Banshee," with its warning apparition, was peculiar to Ireland; while the "Brownie," who rendered nocturnal help in household affairs, was more special to Scotland.

**Fairs** were established in mediæval times as a means of bringing traders and customers together at stated periods, and formed the chief means of distribution. The great English fairs of early times were those of Winchester and Stourbridge near Cambridge. Traders from the Netherlands and the Baltic gathered there with the great merchants of London, and goods of every kind, wholesale and retail, were sold. In Great Britain today improved conditions of transport and distribution and the commercial traveller have rendered commercial fairs practically unnecessary. Cattle, sheep, and pleasure fairs are still held. The British Industries Fair is the modern counterpart of the mediæval fair. Famous continental fairs are held at Leipzig, Lyons, Vienna, etc.

**Fairy Rings** are the circles caused in grassland by certain fungi. The circles expand outwards as the fungus spreads and at the advancing margin there is a ring of lush vegetation, and inside this, where the fungus is most dense, a ring of dead plants. Farther inward where the fungus is dying there is again a belt of strong vegetation. In olden times these rings were held to be the scene of fairy dances.

**Fakirs** are Mahomedan or Hindu mendicants who are held in great regard in India. There are two classes: those who are strict devotees to the principles of Islam and are called dervishes (*q.v.*); and those who are unattached to any religious order, but are simply wandering beggars—or itinerant so-called "holy men." Some of the more fanatical fakirs commit self-mutilation, and pride themselves upon their wretchedness.

**Falange**, the ruling party in Spain which came to power as a result of the Nationalist revolt against the Liberal Government, which gave rise to the Civil War of 1936. All power is vested in the Leader (El Caudillo), General Franco.

**Falchions** were a kind of sword, generally curved, used by the Roman soldiers, and afterwards adopted by other nations.

**Falcon**, name given to diurnal birds of prey which belong to the same family, *Falconidae*, as the hawk and eagle. They are swift of wing and feed on birds and small mammals. These birds have long, pointed wings, strong, hooked and notched bill, long, curved claws, and an eye of great power. They are found all over the world. Those that breed in Britain are the Kestrel (the most common), Hobby (one of the swiftest of European birds), Merlin, and Peregrine, a swift and magnificent bird with slate-grey back, blackish crown, black "moustache" and whitish breast. It makes its eyrie on sea cliffs or mountain crags. Other members of the family are the Gyrfalcon from northern latitudes, Iceland and Greenland, which is a winter visitor to Britain, the Lanner, Saker, Eleonora's falcon, Red-footed falcon, and the Lesser Kestrel. The Gyrfalcon and the Peregrine were used in the sport of falconry in olden times. Because of its fearlessness and larger size, the female bird was used. When the quarry was sighted, the bird was unhooded, set free, and after mounting high into the air would dart swiftly down to strike the prey. The heron was the usual victim.

**Falcularia**, a black-and-white bird only found in Madagascar, possessing a bill shaped like a sickle.

**Faldstool**, formerly a folding stool, but now

- applied to a small reading-desk in cathedrals and other churches at which the litany is recited by the officiating cleric.
- Falernian Wine**, famed for its place at the banquets of the ancient Romans, was made from grapes grown at Falernus. Virgil, Horace, and Martial all referred to it with enthusiasm.
- Fallow Deer**, received its name from its fallow or yellow colour. It is smaller than the red deer, and has cylindrical antlers with palmed ends. It is native to many parts of Europe.
- Falsetto**, tones of a voice, particularly the male voice, which are pitched higher than the natural tones of the voice. Used in choral singing by male altos.
- Familists**, a sect existing in England and Holland in the 16th century, founded by Hans Niklas, who advocated the doctrine that religion was a matter of love rather than of faith.
- Fandango**, a lively Spanish dance executed by two persons, who usually mark time with castanets.
- Fans** were used in ancient times in Greece and Rome; seen in England after the Conquest, when they were introduced from France. Examples of Egyptian fan-handles are to be seen in the British Museum.
- Fantail**, a variety of the domestic pigeon; also a genus of Australian birds of the *Muscicapidae* family.
- Fantasia**, a composition for orchestra or solo pianoforte which is not bound by the rules governing formal compositions, i.e., symphonies, sonatas, etc.
- Fantocini**, or marionettes, were first introduced in Italy, where they are still popular. Our English "Punch and Judy" descended from this source.
- Fan Tracery**, a complicated style of roof-vaulting, elaborately moulded, in which the lines of the curves in the masonry or other material employed diverge equally in every direction. It is characteristic of the late Perpendicular period of Gothic architecture, and may be seen in St. George's Chapel at Windsor and the Chapel of Henry VII. at Westminster Abbey.
- F.A.O. (Food and Agricultural Organisation of the United Nations)**. See "A Citizen's Guide."
- Farce** is comedy in its broadest form, usually confined to short pieces, and admitting of free and exaggerated treatment calculated to arouse laughter.
- Farmer-General**, the name given to any of the numerous aristocrats who in the days of the old French monarchy farmed certain taxes, contracting to pay the Government a fixed sum yearly, on condition that the specified taxes were collected and appropriated by themselves. The revolution of 1789 swept Farmers-General away.
- Farthing**, an English coin which has been current from the time of Edward I., when it was composed of silver. The copper farthing was first introduced in the reign of James I. It is equal to the fourth of a penny.
- Farthingale**, a hoop of whalebone worn beneath a woman's skirts for the purpose of extending them, fashionable in the 16th and 17th centuries. The crinoline of the 19th century was a partial revival.
- Fascism**, a movement which started in Italy in 1918 under the leadership of Mussolini to suppress Socialism. The Fascist party came into power in Italy in October 1922, following the March on Rome. In Germany the Fascist party came into power in August 1934, when Hitler began to exercise supreme and uncontrolled authority, following the death of President von Hindenburg. Fascism is a doctrine which sets the State above the individual and gives supreme power into the hands of one man. It flourishes in times of great depression. It seeks to destroy parliamentary democracy and working-class movements, is nationalistic in sentiment and in the past has not shrunk from using any means to achieve its ends. Italian fascism derived its name and emblem from the Latin word *fascis* (= bundles). The *fascis* were the axe and bundle of rods carried by the Roman lictors before praetors, consuls, dictators, and emperors and symbolised the discipline and authority of the state.
- Fasti Capitolini**, marble tablets found in the ruins of the Roman Forum in the 16th century, and containing a list of the Consuls from the year of Rome 250 to 765.
- Fata Morgana**, the name given to a curious mirage often observed over the Straits of Messina, attributed to the magic of the fairy Morgana, half-sister of King Arthur, who was fabled to live in Calabria.
- Fathers of the Church** were early writers who laid the foundations of Christian ritual and doctrine. The body of their writings includes important controversial works, legal codes, histories, topographies, and speculations of a scientific and philosophical nature. The earliest were the Apostolic Fathers, some of whom were contemporary with the Apostles. The next in order are the Primitive Fathers of the 2nd and 3rd centuries, including Justin Martyr, Clement of Alexandria and Tertullian. The later Fathers were of the 4th and 5th centuries, among them being Athanasius, Basil, John Chrysostom, and St. Augustine.
- Fats** are important foodstuffs. In physiology they constitute a valuable form of reserve food. They contain carbon, hydrogen and oxygen; chemically they are described as esters of glycerol (glycerine). Commonest fats are stearin, palmitin, and olein, esters formed by the combination of glycerol with stearic, palmitic, and oleic acid respectively. Fats are converted into soap by alkali; this process (saponification) also releases glycerol.
- Fault**, a term designating a breakage coupled with displacement of geological strata.
- Favosites**, a fossil coral found in the Silurian, Devonian, and Carboniferous strata.
- Feathers**, the epidermal covering forming the plumage of birds. A feather comprises a main stem, or shaft, a supplementary stem of after-shaft, and a series of lateral webs, each of which contains numerous small branches termed barbs. A bird carried various classes of feathers, the two main divisions being the quill feathers of the wings and tail, and the clothing feathers of the body. Feathers are of every variety of colour and of many shapes, the more beautiful of them being extensively utilised in millinery and for other adornments.
- February**, the second month of the year, comprising ordinarily 28 days, but in leap years extending to 29 days. When first introduced into the Roman calendar by Numa about 713 B.C. it was made the last month of the year and preceded January. It was not until 450 B.C. that it was made the second month.
- Federal Union**. (See "A Citizen's Guide.")
- Federation**. (See "Confederation.")
- Fee**, a payment of services, originally lands enjoyed in exchange for services under feudal law. The etymological meaning is property. The term is used in property law; e.g., fee-simple, an estate which can be willed freely by the owner; fee-tail, entailed property, etc.
- Félibrige**, a movement founded in 1854 to revive the ancient glories of Provence, initiated by the French poet Frédéric Mistral.
- Felidae**, the scientific name of all mammals of the *Carnivora* order which walk upon the tips of their toes, and embracing the members of the cat family, from the lion downwards.
- Fell**, a term in weaving indicating the end of a web formed by the last thread of the weft; and in sewing a form of hem in which one edge is folded over the other and secured with stitches; also a rocky upland, usually barren.
- Fellahs or Felaheen**, are Egyptian labourers, agricultural chiefly, and form the lowest class of the community, possessing little or no political status. They are of Nubian, Coptic, and Arab descent.
- Felo-de-se**, one who deliberately and while in sound mind destroys himself.
- Felony**, in law, is any crime of a more serious nature than a misdemeanour. In former times such an offence was punishable by death and forfeiture of lands, but since 1870 the only felonies involving capital punishment are those of murder and treason.
- Felspar**, the name given to a group of minerals, silicates of aluminium, which make up probably more than half of the earth's crust. It is formed in granite and other rocks, both igneous and metamorphic.
- Felt** is unwoven wool, hair, and fur matted to-

- gether by moisture and heat, the fibres becoming so closely intertwined that a compact cloth surface is formed. Roofing felt is produced by mixing the material with coal-tar or asphalt.
- Felucca**, a long narrow vessel with two lateen sails; occasionally propelled by oars and used on the Mediterranean for carrying light merchandise.
- Feme (or Femme) Covert**, a legal term designating a married woman who, in consequence of being under the protection and control of her husband, cannot sue or be sued for debt (except as regards her separate property, legally secured to her), or be proceeded against in minor criminal cases because of the presumption that she would act under her husband's compulsion. Since 1st January, 1883, by the operation of the Married Women's Property Act, a married woman is in the same position as regards property and continues as a *feme sole*.
- Fencibles**, a body of volunteer cavalry organised in 1794 for service within the United Kingdom. It comprised over 14,000 men, was of great utility during the invasion panic of that period, and seems to have been the forerunner of the yeomanry cavalry.
- Fenestella**, the niche set apart on the south side of the altar for the piscina in Roman Catholic churches.
- Fenians**, the name of an Irish-American revolutionary secret society, founded by John O'Mahoney in America in 1858 with the object of establishing a republic in Ireland. James Stephens was the first Fenian leader in Ireland. In 1866 a number of Fenians were arrested in Ireland. Bands of Fenians attempted to invade Canada in 1866 and 1870, but were suppressed. After about 1870 they became merged in other societies of a similar character.
- Fennel**, a plant cultivated for its aromatic seeds, which are of considerable utility as a medicament; also used for salads and garnishing.
- Fens** are low-lying lands covered with water, or of a boggy or marshy nature. The Fen districts of England are chiefly in Lincolnshire and Cambridgeshire, but in recent times most of the Fen land has been drained and cultivated.
- Feoffment**, an act or deed of transfer by which the fee-simple of any specified land is transferred for a consideration from one person to another (obsolete).
- Fermentation**, the action of chemical ferments or *enzymes* in bringing about chemical changes in the materials of living animals and plants.
- Ferret**, a carnivorous animal of the Pole-cat family, with a pointed head and long sinuous body, well adapted for following rabbits and game into their burrows and hiding-places, it being kept in this country for that purpose. It is a native of Spain and Africa, and does not exist in England in a condition of natural freedom. (See Domestic Pets Section).
- Fertilisers**, Artificial, chemical compounds which plants can use in building up their bodies, and which therefore promote the growth of agricultural crops. The most important are: ammonium sulphate, sodium nitrate (Chile salt-petre), calcium cyanamide, "superphosphate," and the sulphate and chloride of potassium. (See Gardening Section, p. 909.)
- Feudal System** existed in England from the Saxon period down to the end of the 13th century. It was a military and political organisation, based on land tenure, the land being divided into fiefs or fiefs, held on condition that certain military duties were performed; and, in default of this, the land reverted to the superior lord. Feudal tenures were abolished by statute in England in 1660, although from 1495 they had practically been inoperative. The system was not abolished in France until the Revolution of 1789. There was a feudal system in Japan as late as 1871.
- Feu de Jole**, the discharge of guns to denote public rejoicing.
- Feuilleton**, a French term for a serial story or other light literature occupying the bottom portion of a newspaper page, and adopted in England to some extent in recent years, several of the daily journals now running serial stories.
- Fiasco**, an Italian word signifying a flask, but applied both in Italy and elsewhere to a complete breakdown or failure in any enterprise, especially in regard to musical or dramatic performances.
- Flat** ("Let it be done"), a legal term generally applied to a degree, judgment, or warrant commanding a specific thing to be done.
- Fibrin**, an insoluble proteid substance. When blood clots a meshwork of fibres is produced, and these fibres are composed of fibrin.
- Fibrolite or Sillimanite**, a white or light-grey mineral of a fibrous structure; a silicate of aluminium.
- Fidia**, a very small leaf-beetle, covered with short white hair and destructive to grape vines.
- Fieldfare**, a kind of thrush, a regular winter visitor to this country. It is of a reddish-brown colour with spotted breast and is about ten inches long.
- Field-Marshal**, the highest ranking title in the British army, and only bestowed on royal personages and generals who have attained great distinction. The first British Field-Marshal was created in 1736, when John, Duke of Argyll, had the title conferred upon him by George II.
- Field-mouse**, the name given to such mouse-like British rodents as are not true or "house mice."
- Field-Officer** is of military rank between a captain and a general, as major, lieutenant-colonel, and colonel.
- Fieri Facias**, in English law, a writ of execution after judgment obtained in action of debt or damages.
- Fiery Cross**, a call to arms used in the Scottish Highlands in olden times, and consisting of a wooden cross, which, after being set on fire and quenched in goats' blood, was carried blazing to and fro among clansmen to rouse them to action.
- Fife**, a small flute with a compass of about two octaves used only in military drum-and-fife bands.
- Fifth Column**. When Franco, the Spanish dictator, revolted against the Spanish Republic in 1936 and attacked Madrid with four armies, he declared that a group of fascists within the city was assisting the besiegers. The term is used to describe a body of spies behind a fighting front.
- Fifth-Monarchy Men** were a fanatical Puritan sect which proclaimed about 1645 that the Millennium was near at hand, when Christ would come to earth again and establish the Fifth Universal Monarchy. They were dispersed by Cromwell in 1653, but in 1661 revived and became a menace to the public peace, and 11 of them were arrested and executed.
- Fig**, a tree common in most hot countries and bearing a fragrant fruit which has a large general consumption.
- Figaro**, a well-known comic character in drama and opera, invented by Beaumarchais, adopted by Mozart, and the name of a popular paper of Paris.
- Fighting-Fish**, small pugnacious Siamese fish with long anals and ventrals of five rays. They are kept in glass globes in Siam, and when brought into contact will fight to the death, these encounters being the occasion of much gambling.
- File Fish**, a fairly common fish in European waters, mostly found in the Mediterranean, but not infrequently off the southern coast of England. It averages from 18 in. to 2 ft. in length, and derives its name from its toothed dorsal fin.
- Filibuster**, a name first given to pirates and buccaners in the 17th century, who took possession of small islands or lonely coast lands, and there maintained themselves apart from any governing authority. In later times the term was used to specify men taking part in expeditions whose object was to appropriate tracts of country and settle upon them in disregard of international law. The most notable expeditions of this kind in modern times were those of Narcisco Lopez against Cuba in 1850-51, and of William Walker against Nicaragua, between 1855 and 1860. Both leaders were captured and executed. The term is also used to express the right of a minority in the United States Senate for unlimited debate, which is used on occasions to delay legislation for an unlimited period.
- Filigree**, the name given to a class of ornamental work done with threads of gold or silver, or with fine wire, and frequently attached to

- apparel or decorative objects. It was made by the ancient Greeks, and in the Middle Ages was greatly in vogue, and reached a high standard of artistic beauty. It is still made in certain parts of Italy.
- Floque**, the part of the Nicene Creed which proclaims that the Holy Ghost emanates jointly from Father and Son, and is styled the doctrine of the "double procession." It is generally accepted in the Western Church, but is rejected in the Greek Church.
- Filter**, an apparatus used for separating solids from liquids and constructed in many different forms. The filtering substances used range from sand, charcoal, and sponges to porous stones and fabrics.
- Filtration** is the process of separating suspended solid matter from a liquid. This is effected by passing the liquid through a filtering medium such as cloth, paper, carbon, kieselguhr, or sand, when the suspended matter is retained by the medium. In the purification of water for domestic purposes, filter beds made up of fine and coarse sand, fine and coarse gravel, and large stones are used.
- Finches**, a large family of small birds belonging to the Passerine order of birds. (See under separate names and also p. 1004.)
- Finial** (*archit.*), the ornamental apex of a spire, pinnacle, or gable, and of Gothic origin.
- Fir**, a cone-bearing tree with small evergreen leaves and of considerable use as timber. There are four leading varieties—the Silver Fir, the Norway Spruce, the Larch and the Lebanon Cedar. All these firs attain to a considerable height, and all yield turpentine or other resinous material.
- Fire Engines** for forcing water upon burning buildings have been known since A.D. 70. (See also London Fire Brigade.)
- Fire-Fly**, a small winged insect which is able to throw out a strong phosphorescent light in the dark. There are some remarkable specimens in tropical countries.
- Fire of London**, of 1666, extended from East to West, from the Tower to the Temple church, and northward to Holborn Bridge. It broke out in a baker's shop in Pudding Lane, and lasted four days, and destroyed 87 churches, including St. Paul's Cathedral, and many public buildings, among them the Royal Exchange, the Custom House, and the Guildhall. In the ruins were involved 13,200 houses and 400 streets. The plague had not disappeared from London when the fire occurred.
- Fireship**, the name given to a vessel stored with inflammable and explosive material, and floated into the midst of an opposing fleet to cause destruction and alarm.
- Firkin**, a former measure of capacity, the fourth part of a barrel, now only used in reference to a small cask or tub for butter, lard, tallow, etc.
- Firman**, a document of authority issued by Oriental governments granting any special privilege or concession, containing a command or installing a new officer, or conveying protection like a passport. The decree is issued by the ruler and signed by one of his ministers.
- Fischer-Tropsch Process**. A process for making synthetic petrol from carbon monoxide and hydrogen. The synthesis is accelerated by cobalt-thoria and nickel-thoria catalysts.
- Fish Louse**. Parasitic crustacea found on marine and fresh-water fishes.
- Fission, Nuclear**. A nuclear reaction in which the nucleus of an atom (*e.g.*, Uranium 235, plutonium) captures a neutron, and the unstable nucleus so produced breaks into two nearly equal fragments and throws out several neutrons as well. In biology the term fission is applied to reproduction by fragmentation of a single-cell organism, as in amoeba.
- Five-Mile Act** forbade any clergyman or schoolmaster from coming within 5 miles of a city or corporate town unless he swore that he would "not at any time endeavour any alterations in Government either in Church or State." It was passed in 1665 and repealed in 1689.
- Fabelum**, an ecclesiastical fan, formerly employed to drive away flies from the chalice during the celebration of the Sacred Mysteries; the fabelum was usually formed of the tail-feathers of the peacock.
- Flagellants** were a fanatical sect which sprang into notice at Perouse in the 13th century during a time of plague. They held processions and flogged themselves as they walked naked about the streets until they bled. They declared that sins could not be remitted without such practices. The sect continued down to the 16th century, in spite of their being declared heretics by Pope Clement VI., and 90 of them being burnt at the stake.
- Flageolet**. A sweet-toned instrument which is in effect a portable organ pipe whose length, and therefore pitch, may be varied by opening or closing holes in the pipe with the fingers. Sometimes called the English Flute or "Penny Whistle."
- Flag Officer**, a British naval officer who enjoys the right of carrying a flag at the mast-head of his ship, and is of the rank of Admiral, Vice-Admiral, or Rear-Admiral.
- Flagship**, the ship that flies the Admiral's flag, and from which all orders proceed.
- Flamen** were priests of ancient Rome dedicated to the service of particular deities, such as those of Jupiter and Mars, and were always of patrician birth.
- Flamingo**, a strangely beautiful, extremely slender wading bird of white and rose-pink plumage with long, slender legs and neck and a long, down-curved bill with which it rakes the mud and obtains its food of worms and molluscs. The wings are bright crimson, bordered with black, and a flock in flight is a picture of singular beauty.
- Flash-Point**. This is found by heating an oil in a special cup and taking the temperature at which sufficient vapour is produced to ignite when a small flame is applied. It is an index of the inflammability of oils.
- Flat**. A keyboard instrument has white keys and black keys. The notes played by the white keys are called "naturals." There are eight of these to each octave and they are called A, B, C, D, E, F, G, A. The black key immediately below a natural (one semitone interval) is called its "flat," *e.g.*, the black note below B is B flat and is written B $\flat$ . Conversely the black key above a natural (one semitone interval) is known as its "sharp," *e.g.*, the black note above A is A sharp and is written A $\sharp$ . Since B natural is a full tone above A natural, it follows that B flat and A sharp are the same note.
- Flax**, a textile fibre obtained from the flax plant, which is an annual, and is largely cultivated for commercial purposes, being grown in Russia, Germany, Italy, Holland, and the North of Ireland. After undergoing various preparatory processes, the flax is spun into yarn and woven into linen fabrics.
- Flea**. Fleas are small parasitic insects belonging to the order *Aphamptera* (so called because these creatures have no wings). They obtain their food by sucking blood from their host. They are laterally compressed, which immediately distinguishes them from lice. The human flea (*Pulex irritans*) is able to jump vertically a distance of over 7 in.
- Fleet Prison**, a noted debtors' prison that stood in Farringdon Street, London, where the Congregational Memorial Hall now stands, taking its name from the Fleet Ditch. Notorious for the cruelties inflicted on prisoners. It was pulled down in 1846.
- Fleet Street**, a famous thoroughfare in London, now the centre of journalism and newspaperdom, though it was long celebrated for its taverns where the literary coteries of the day were wont to meet. It takes its name from the Fleet stream which used to run from Hampstead through Holborn to the Thames at Blackfriars.
- Flemings**, the people of Flanders, whose ancestors of mediæval times excelled in the textile arts; England owes its early eminence as a manufacturing nation to the migration of numbers of Flemings to this country in the 16th and 17th centuries.
- Fleur-de-Lis**, the former national emblem of France, the flower of the lily. It was superseded by the Tricolour in 1789, but is still adhered to by the supporters of the old French royalties.

**Flint**, a kind of silica of a light grey colour and excessive hardness, which enabled it to be utilised in the formation of cutting implements in prehistoric times, and, before the invention of lucifer matches, was used along with steel for striking lights.

**Flint Implements** are objects found in the earlier geological strata, and constituting evidence of the condition and life of the period. They include knives, clubs, arrow-heads, scrapers, etc., used as weapons, tools and possibly as surgical instruments and in religious ceremonies. At the end of the Neolithic Period and the beginning of the Bronze Age a people using a new type of stone axe became evident in Europe, advancing towards the south and central regions, and supposed by many to be the ancestors of the present European stock, or Aryans. Similar to prehistoric specimens are the flint and obsidian implements of some modern savages, e.g. the Maori. Ritual weapons and sacrificial knives continued to be made of stone long after the introduction of metals for practical purposes.

**Flock**, a fibrous material for stuffing mattresses, upholstery, etc.; it is made by reducing coarse woollen rags, waste, etc., to a degree of fineness by machine manipulation.

**Flodden Field, Battle of** (Northumberland), was fought on Sept. 9th, 1513, when England under the Earl of Surrey defeated Scotland under King James IV.

**Florin**, a coin first made in Florence in the 13th century. The name was afterwards given to an English gold coin of the value of 6s. issued in 1493. The English florin of to-day represents 2s., and dates from 1849.

**Florist**, one who cultivates or is concerned in the cultivation of flowering plants.

**Flounder**, one of the most familiar of the smaller flat fishes common round the British coasts, and seldom attaining a weight of over three pounds.

**Flour**, the finely ground meal of any kind of grain, but more particularly applied to that of wheat.

**Fluorine**, a chemical element found in combination with calcium in fluorspar, and occurring in minute quantities in certain other minerals. Discovered by Scheele in 1771, it was first obtained by Moissan in 1886. A pale yellow gas, it is very reactive and combines with most elements except oxygen. Its acid, hydrogen fluoride, etches glass, the fluorine combining with the silicon to form volatile silicon fluoride.

**Fluorescent Lamp.** (See Electric Light and Ultra-Violet Rays.)

**Fluorspar**, a mineral; chemically, calcium fluoride. Can be colourless, green, or yellow, but is most commonly purple. Blue fluorspar under the name of Derbyshire "blue John" has been used for ornamental purposes.

**Flute**. A wooden musical instrument, part of the wood-wind of an orchestra, played by blowing across a mouth-hole, the notes being produced by pressing the fingers on finger-holes or keys. It has a compass of three octaves and a singular purity of tone. In simple form the flute has been known since Greek times, but the modern flute dates from the 18th century.

**Flux**, any substance used to assist soldering and brazing of metals. The fluxes most used for large operations are limestone or fluorspar, and for smaller purposes, alkalies, borax, etc. Black flux is obtained from cream of tartar, and is used mainly for analytical operations, while white flux, used for decomposing minerals, is obtained from carbonates of sodium and potassium in equal portions.

**Fly**, the popular name for a large number of insects with one pair of wings and a proboscis terminating in a sucker through which fluid substances can be drawn up. The best-known species are the common house-fly, the blue-bottle, and the blow-fly. In the larval form flies are maggots, and feed upon decaying substances, animal flesh, etc. Flies are able to walk upon ceilings or upright surfaces by having suckers at the soles of their feet.

**Flycatcher**, name of a large family of small birds, the Muscipidae. They are insect feeders, catch their food in the air, and are distributed over most countries of the world. The spotted fly-catcher and the pied fly-catcher are summer visitants of Britain.

**Fly-drill**, a kind of machine-tool having a reciprocating fly-wheel imparting steady momentum, the driving power consisting of a cord winding in reverse directions alternately upon a rotating spindle.

**Flying Dutchman**, a mythical mariner who, as the legend goes, was doomed as an expiation for his crimes to be for ever striving to reach harbour with his ship but never succeeding. Wagner constructed an opera round this weird subject.

**Flying Fish** are frequently to be seen in southern waters, and are capable of gliding considerable distances without touching the water. To build up speed for its "take-off" the fish swims rapidly, to break the surface at 15-20 miles an hour. Maximum air speed is about 40 miles an hour.

**Flying Fox**, an animal of the bat family, but of much larger size, and confined to the tropical and sub-tropical Old World. Like the bats, it is nocturnal, but it feeds entirely on fruits.

**Flying Lemur**, a remarkable genus of mammals, of which there are only two species, inhabiting Malaya and the Philippines respectively. They live on insects, fruit, and birds, and are provided with a parachute-like membrane which covers them from the neck to the tip of the tail, and is used in regulating their gliding.

**Flying Lizard**, a kind of Asiatic lizard, possessing wing-like projections from each side, which enable it to make flying leaps through the air, though not sufficient for continuous flight.

**Flying Saucers**, the name given to certain saucer-like shapes which have on occasion been seen travelling through the atmosphere. For some time speculation was rife, especially in America, but it has now been established that when not hallucinations, meteorological or cosmic-ray balloons, they are nothing more than atmospheric phenomena like mirages or mock suns caused by unusual atmospheric conditions. Described by Dr. Menzel, astrophysics professor at Harvard "as real as rainbows are real."

**Flying Squirrel**, rodents of which there are several species in Europe and America. It possesses a parachute-like fold of skin by means of which it projects itself through the air. In appearance they are much like ordinary squirrels, to which they are related. The African flying squirrels belong to a different family.

**Focus**, a word designating the point at which radiation such as heat or light is concentrated by refraction or reflection.

**Fodder**, food stall-fed to horses, cattle, etc., as distinguished from pasture feeding; also a weight standard for lead, equivalent to 21 cwt. avoirdupois.

**Fog** is caused by the presence of particles of condensed water vapour or smoke in the surface layers of the atmosphere, the term being applied meteorologically when the resulting obscurity is such as to render objects invisible at distances of up to 1 km. Fogs are frequently formed when the air near the ground is cooled below its dew-point temperature by radiation on a still, cloudless night, by flowing over a relatively cold land or water mass, or by mixing with a colder air stream. An accumulation of smoke over a large city may cause a high fog cutting off the daylight and producing gloom.

**Foil**, an extremely thin layer of rolled metal, as gold, tin, or lead, according to the purpose for which it is intended. Jewellers use it as a background to increase the colour or lustre of inferior precious stones. Any thin substance used for similar purposes—throwing into relief other objects—is termed foil. Tin-foil, as its name implies, is tin rolled out into thin sheets in the flattening mill.

**Fold**, an enclosure or pen for sheltering sheep or cattle.

**Foliation**, a geological term applied to rocks whose component minerals are arranged in parallel layers as the result of strong metamorphic action.

**Folio**, a paper and printing term for paper which is only folded once, a half sheet constituting a leaf.

**Folklore** concerns itself with the mental and spiritual life of the people—both civilised and primitive—as expressed in the traditional beliefs, customs, institutions, and sayings that

have been handed down from generation to generation by word of mouth, and with the observation, recording, and interpretation of such traditions. (The word *folklore* itself was first suggested and used—as two words *Folk Lore*—by W. J. Thoms in *The Athenæum* of August 22nd, 1846, and was at once absorbed into the English language.) Traditional lore of the kind included in the term folklore takes many forms and ranges from omens of good and bad luck (spilling the salt, breaking a mirror, dropping an umbrella, etc.) and the wearing of amulets or the possession of talismans (such as the horse-shoe) as protection against misfortune, to elaborate ceremonial dances such as the Abbots Bromley Horn Dance, the Hobby horses of Padstow and Minehead, the Northern sword-dances, and the Christmas mummers' plays. Especially important are the beliefs and customs associated with birth, babyhood, marriage, and death, such being occasions when the individuals concerned require special protection or when unusual happenings can be used for foretelling their future. The child born on a Sunday will be the luckiest; rocking an empty cradle will ensure the speedy arrival of a new baby; throwing an old shoe after a newly-married couple brings them luck; the bride should be carried over the threshold of the new home; on the sea-coast, death is believed to take place at the ebb-tide; the bees must be told of the death of the master of the house, or they will leave the hive. Another very large section of the subject deals with the traditional sayings and practices associated with particular days and seasons of the year—calendar customs, as they are called. The eating of pancakes on Shrove Tuesday; Mother Sunday customs and the simnel cake; Good Friday as the right day for planting potatoes, but emphatically the wrong day for washing clothes or cutting one's finger-nails; the necessity of wearing something new on Easter Sunday; the children's maypole dances and May garlands; midsummer fires; All Hallowe'en as the most favourable occasion for divining the future—especially in respect of marriage—and for games and sports such as apple-bobbing; the numerous practices accompanying the harvest. All these are examples of calendar customs; their full story would occupy several volumes. Folklorists are interested in all such oral tradition because they think that to a large extent it represents what folk have mentally stored up from the past and transmitted to their descendants throughout the centuries, and because therefore it is able to assist other historic methods—ethnographical, linguistic, archaeological, etc.—in the elucidation of the early story of man. In those countries with a great diversity of peoples in all stages of culture, a knowledge of folklore and what it can teach of the mind of man is of great importance to administrators. The Folk-Lore Society was founded in 1878, and that part of the subject represented by song and dance has now its own organisation in the English Folk Dance and Song Society.

**Foot**, a lineal measure of 12 in. of almost universal use, and originally adopted from the average length of the human foot. In prosody a foot is a measure of syllables making rhythmical accent.

**Football** is one of the most ancient outdoor winter sports, and was in a crude form popular in England in the Middle Ages. For modern development of the game, see articles in "Sports and Pastimes."

**Foot Guards** in the British Army include the Grenadiers, Coldstream, Scots, Irish, and Welsh Guards, from which the garrisons of London and Windsor are formed.

**Foraminifera**, an order of animals belonging to the sub-kingdom Protozoa, carrying a porous shell usually of calcium carbonate and having gelatinous bodies without definite organs.

**Force**, as a term in physics, signifies an influence or exertion which, when made to act upon a body, tends to move it if at rest, or to affect or stop its progress if it be already in motion. The c.g.s. unit of force is the dyne; the practical unit 1 gram-wt. = 980·616 dynes at sea-level Lat. 45°.

**Forgery**, the fraudulent imitation of a signature or writing whereby injury is done to another, or some deceit is practised. Forgery was punish-

able with death in England until the passing of the Forgery Act, 1861. The law is now consolidated in the Act of 1913.

**Formaldehyde**. Chemically it lies between methyl alcohol and formic acid; oxidation of methyl alcohol yields formaldehyde, and oxidation of formaldehyde produces formic acid. It is used as a disinfectant, in silvering mirrors, and in the manufacture of phenol-formaldehyde plastics (of which bakelite is the best-known example).

**Forme**, a body of letterpress type, composed and secured for printing from; or a stereotype or electrotype. The former is used more for newspaper formes and the latter in good book work.

**Formic Acid** can be obtained from a colourless fluid secreted by ants and other insects and plants. It is a strong irritant. Commercially it is obtained from sodium formate, which is synthesised by the absorption of carbon monoxide in caustic soda. It is used in the electroplating, tanning, and textile industries.

**Formula**, in mathematics and physics a statement of certain facts in symbolical form.

**Forte**, a musical term signifying "loud," and represented by the letter "f"; "ff" (fortissimo) indicating "very loud."

**Forth Bridge**, which spans the Forth at Queen's Ferry, near Edinburgh, was completed in 1890 at a cost of nearly £2,000,000. It is 1½ miles in length.

**Forum**, in ancient Rome, was a public meeting place and the centre of judicial and public business. It was also a market.

**Fossils** are the petrified remains of plants and animals and have been the means of disclosing a knowledge of prehistoric periods and of the history of the earth's life which would otherwise have been unknown. (See p. 163.)

**Foucault's Pendulum**. This instrument, which demonstrates the rotation of the earth, was conceived by the French scientist Foucault in 1851. It is a pendulum consisting of a metal ball suspended at the end of a long wire. Its direction of swing in space remains constant, but owing to the earth's rotation it appears to change direction by 15° in an hour, and this amount represents the hourly angular rotation of the earth.

**Four Freedoms**, a phrase coined by President Roosevelt in January, 1941, embodying what should be the goal of the Allies. They were (1) Freedom of speech and expression; (2) Freedom of every person to worship God in his own way; (3) Freedom from want; (4) Freedom from fear.

**Fox**, a well-known carnivorous animal of the Vulpine family, found in considerable numbers in most parts of the world. The common fox of Europe is a burrowing animal of nocturnal habits, living upon birds, rabbits, and domestic poultry, in the capture of which it displays much cunning. The fox in Britain is preserved from extinction chiefly for hunting purposes. Among other notable species are the Arctic fox and the red fox of North America, of which the valuable silver fox, coveted for its fur, is a variety.

**Fox-Shark**, a large species of shark common in the Atlantic and in the Mediterranean. It is very destructive to small fish, but although it attains a length of 15 ft. it is not to be classed with the sharks that are dangerous to man.

**Franc**, the unit of French currency, and a silver coin equivalent to a hundred centimes.

**Franchise**, an incorporeal hereditament, usually granted by a charter. It is usually interpreted as the right to vote.

**Franciscans**. (See Friars.)

**Franco-German War (1870-71)**. It was opened by a declaration of war by Napoleon III., but the Germans who were better prepared than the French, won victory after victory. In September Napoleon and the whole French army were made prisoners at Sedan, a Republic was then proclaimed, and Paris sustained a four months' siege. In the end France ceded Alsace and part of Lorraine to Germany, who claimed a war indemnity of over £200,000,000.

**Francolin**, a genus of birds closely related to the common partridge, belonging to Africa and sometimes referred to as the spur-legged partridge. The common francolin ranges from Cyprus to Assam, where it is known as the black partridge.

**Franks-Tireurs**, an irregular body of French troops prominent in the Franco-German War. Also any organised corps of irregular troops who conform to the usages of war.

**Frankincense** is of two kinds, one being used as incense in certain religious services and obtained from olibanum, an Eastern shrub, the other is a resinous exudation derived from firs and pines, and largely used in pharmacy.

**Franklin**, the name given in feudal times to a country landowner who was independent of the territorial lord, and performed many of the minor functions of local government, such as serving as magistrate.

**Freehold**, a legal term signifying an estate in fee-simple, or fee-tail, or for life, and to which no service or to a superior (as in copyhold) attaches.

**Freemasonry** dates back to mediæval times, if not to a more remote period. It is a secret organisation, having lodges for social enjoyment and mutual assistance. The Grand Lodge of England was established in 1717; that of Ireland in 1730, and that of Scotland in 1736. Roman Catholics are prohibited by Papal ban from being masons.

**Freestone**, any stone that can be easily worked with tools, the term being generally, however, specially applied to fine-grained sandstone.

**Fresco**, a painting executed upon plaster walls or ceilings, and much in favour for churches and public buildings in former times. The work is done with prepared pigments.

**Freshwater Shrimp**, a small crustacean abounding in British streams, and feeding on dead fish or other decomposing matter. Although of shrimp-like form it is not closely related to salt-water shrimps. Its generic name is *Gammarus*.

**Frequency Modulation**. A technique of radio transmission in which the frequency (instead of the amplitude) of the carrier wave is modulated.

**Friars**, members of certain mendicant orders of the Roman Catholic Church. The four chief orders are the Franciscans or Grey Friars, the Dominicans or Black Friars, the Carmelites or White Friars, and the Augustinians (Austin Friars).

**Friday**, the 6th day of the week, named after Frigg, the wife of Odin. It is the Mohammedan Sabbath, and is a general abstinence day of the Roman Catholic Church. According to popular superstition, Friday was an unlucky day.

**Frigate**, a small, swift war-vessel, generally with two decks, and carrying a number of guns, usually from 30 to 60. Now superseded by the armoured cruiser.

**Frigate-Bird**, a web-footed bird widely distributed over tropical latitudes, and deriving its name from its great expanse of wing and forked tail, which seem to suggest the shape of a swift vessel. It feeds on flying fish mostly, being unable to dive. A frigate-bird was found dying on the Hebridean island of Tiree in July 1953; only twice previously had one been recorded in Europe—the first on the German coast in 1792, and the second on the coast of France in 1902.

**Fringillidæ**, the scientific family name of a large class of passerine birds, including finches, redpolls, crossbills, grosbeaks, linnets, and buntings. (See p. 1004.)

**Frisians**, an old Teuton race formerly settled on lands now covered by the Zuyder Zee. Many of them joined in the Anglo-Saxon invasion of England, and occupied Mercian territory.

**Fritillary**, the name of a large class of British butterflies, all of them of beautiful colours and marking. There are seven species, the most prized of which is the "Queen of Spain" variety.

**Frog**, a familiar amphibian, breathing through gills in the earlier (tadpole) part of its existence, and through lungs later. It remains three months in the tadpole stage. The frog hibernates in winter at the bottom of the water.

**Frost** occurs when the temperature falls to, or below, 32° F., which is freezing point. Hoar frost is applied to the needles or feather-like crystals of ice deposited on the ground, in the same manner as dew. Glazed frost is the clear icy coating which may be formed as a result of rain falling on objects whose temperatures are below the freezing point. These layers of ice, often rendering roads impassable for traffic, damaging overhead power and communication

systems and endangering aircraft, can also be caused by condensation from warm, damp winds coming into contact with very cold air and freezing surfaces.

**Froth-Hopper or Frog-Hopper**. A family of bugs (belonging to the insect order Hemiptera) which in the young stage surround themselves with a protective mass of froth. These insects, which suck the sap of plants, bear a faint resemblance to frogs, and the adults possess great leaping powers.

**Fucaeæ**, an order of seaweeds of a leathery structure, with dark spores underlying the fronds, and found both attached to rocks and floating. There is a gelatinous kind which is edible, and is commercially valuable as the source of iodine and as a manure.

**Fugue**. A contrapuntal piece of music in which the several "voices" take up the theme in turn.

**Fulani**, a Mohammedan race inhabiting the Sudan, at one time possessing a kingdom in Nigeria, sometimes called the Sokoto Empire.

**Fuller's Earth**, a special kind of clay or marl possessing highly absorbent qualities, and used from ancient times in the "fulling"—that is, cleansing and felting—of cloth. It is common in certain parts of the south of England, and is valued as a skin emollient.

**Fungi**, a class of organism resembling plants, which reproduce from spores and lack the green colouring matter *chlorophyll*. They consequently have to get their food from organic substances, whether as parasites on living plants and animals or as saprophytes on dead matter. Fungi include moulds, rusts, mildews, smuts, mushrooms, etc. Penicillin was produced from a mould fungus. Potato blight is a fungus disease which caused the failure of the potato crop in Ireland in 1846. 50,000 different fungi are known. (See also *Agaric*.)

**Fusible-Plug**, a safety-plug placed in the skin of a steam-boiler, so as to be melted and allow of the discharge of the contents when a dangerously high temperature is attained.

**Fusil**, the old fire-lock gun which superseded the match-lock in our army, and was fitted with a flint and steel; it was about the length and calibre of the musket, but of lighter construction.

**Fusiliers** were originally bodies of foot soldiers carrying fusils, at a time when archers and pikemen still formed the main part of an army. There is still a British regiment called the Royal Fusiliers.

**Fustian**, the name given at various times to different kinds of textile fabrics. Originally, fustian was made of linen and cotton; later, wool was used; but in recent times the name has been mainly applied to a twilled cotton material with a nap surface.

**Fustic**, a kind of dyewood yielding various shades of yellow according to the mordants used. The tree grows in India, tropical America, and the West Indies.

## G

**Gabardine**, a long, loose, coarse, over-garment, worn by men of the common class in the Middle Ages, and prescribed by law as the distinctive garment of the Jews.

**Gabbatha**, the Hebrew term for that part of a judgment-hall which was occupied by the governor or supreme authority, and from which he pronounced sentence. Used in John xix. 13 to designate the place where Pilate sat at Christ's trial.

**Gabbro**, a kind of igneous rock, often very coarse-grained, containing a good deal of plagioclase feldspar, and monoclinic pyroxene; it may occasionally also include biotite, magnetite, ilmenite, and hornblende. A gabbro containing nickel at Sudbury in Canada is one of the richest sources known of that metal.

**Gabbroinite**, a mineral of foliated structure, mostly of a greyish colour, and of the appearance of scapolite. It is found in Norway.

**Gaberlunzie**, the name given to an old-time class of beggar in Scotland, who had licence to ply his "profession" within a prescribed district.

**Gable**, the triangular end of a building, rising above the cornice to its apex. The end wall of a sloping roofed house is called the gable-end; and a

gable-window is a window situated in the gable or constructed in gable form.

**Gabrielites**, a sect of Anabaptists, founded by Gabriel Schelling in Pomerania.

**Gadfly**, a widely distributed family of flies with only one pair of wings (*Diptera*), possessing great power of flight. The females are very voracious, being able to bite through the skin and suck the blood of animals. The males are harmless.

**Gadolinium**. An element belonging to the rare-earth metals discovered in 1886 by Marignac.

**Gaelic**, relating to the Gaels and their language, a term now applied only to the Celtic people inhabiting the Highlands of Scotland, but formerly also to the Celts or Ireland and the Isle of Man.

**Gag**, a word of modern stage slang referring to dialogue or expressions other than the author's words, introduced into a play by an actor, and usually indulged in by comedians for raising a laugh.

**Gahnite**, a grey mineral substance of the spinel group, an aluminate of zinc. Also called zinc-spinel. Called after Gahn, a Swedish chemist.

**Gaine**, a sculptured figure, the upper part of which is in natural form and outline, and the lower part (except sometimes the feet) is some simple architectural feature seeming to envelop the body and legs. The gaine was often used in ancient Greek and Egyptian architecture.

**Galacite**, a stone found in Scotland, yielding, when moistened and rubbed, a milk-like juice. A zeolite intermediate between natrolite and mesolite.

**Galago**, a sort of lemur, native to Africa, large-eyed, in keeping with its nocturnal characteristics.

**Galatians**, St. Paul's Epistle to the, is supposed to have been written by the Apostle about A.D. 56. It was addressed to the Galatian Churches, and, in addition to supporting Paul's apostolic authority, advocated justification by faith.

**Galaxy or Milky Way** is the part of the heavens, in Milton's words, "powdered with stars."

The term galaxy is also used as a name for our stellar universe, the huge disk-shaped cloud of gas and stars that is turning in space like a great wheel, with a diameter of about 100,000 light years. The Milky Way is really only a small part of this disk, and every star in the galaxy is moving round the centre under the gravitational control of the whole. The sun and planets lie near the edge of the disk, and it takes them about 250 million years to travel once round. The number of stars that can be seen with the unaided eye is just over 2,000, and they all belong to our galaxy. With the large modern telescopes many other systems, similar in size and weight to our galaxy, have been discovered, scattered more or less uniformly through space, and the universe is said to include at least 100 million such galaxies. (See "The World of Science.")

**Gale**, a high wind now technically defined as one of at least Beaufort force 8. Between thirty and forty gales a year occur on the north and west coasts of the British Isles and only about half of this number in the south-east. At St. Ann's Head, Pembroke, the anemometer registered a gust of 113 m.p.h. on Jan. 18, 1945, which is a record for these islands. Gusts exceeding 70 m.p.h. are rarely experienced in London. Gale warnings are issued for specified areas by the Meteorological Office, the warnings taking the form of radio broadcasts and the hoisting of storm signals at certain points on the coast. See Beaufort Wind Scale, p. 752.

**Galena**, the mineral, lead sulphide, containing over 80 per cent. of lead, of which metal it is the most important ore.

**Galerites**, a genus of fossil sea urchins, found in the chalk formation.

**Galidia**, a kind of ichneumon (*G. elegans*) peculiar to Madagascar, valuable for its fur, which in some varieties is beautifully striped; it is easily tamed, and serviceable as a destroyer of vermin.

**Gall**, abnormal vegetable growths, usually the result of an egg-deposit on leaves or bark by certain small flies called Cecidomyiids. Two of the best-known galls of oak are oak-apples and bullet-galls. The latter are spherical in form and yield tannin, useful for tanning and other commercial purposes.

**Galleon**, the name given to the old three-decked Spanish treasure vessels employed in conveying

the precious minerals from the American colonies to Spain. The term is often applied to any large, especially stately, sailing vessel.

**Galley**, an oar-propelled sea-boat used by the ancient Greeks and Romans for transport purposes, manned by slaves. Boats of a similar class were used by the French down to the middle of the 18th century, and manned by convicts.

**Gallic Acid**, obtained from gall nuts, sumach, tea, coffee, and the seeds of the mango, is used in the manufacture of inks and as an astringent in medicine. It is odourless, has a bitter taste, and is mostly of a pale yellow colour.

**Gallium**, a white metal related to aluminium, but which can be cut with a knife. It was discovered by Boisbaudran in 1875. Long before Mendeleeff predicted an element with its properties would be found to fill the then existing gap in the Periodic Table; this gap came immediately below aluminium, so he suggested the name "eka aluminium" for it.

**Gallows**, a wooden erection consisting of two posts surmounted by a cross-beam, suspended from which is a rope used for hanging criminals. Sometimes it takes the form of a single projecting wooden beam which serves to carry the rope.

**Gallup Poll**, a system, introduced by Dr. Gallup of the United States, for testing public opinion on topical subjects by taking a test poll on questions framed to elicit opinions.

**Galvanised Iron** is iron coated with zinc. The name comes from the fact that such a coat protective against rust could be deposited electrolytically. Electrodeposition is sometimes used, but the cheaper and more common process depends on dipping the iron in a bath of molten zinc.

**Galvanism**, a term, now obsolete, for the branch of electricity which deals with electric currents produced by chemical action, and named after its discoverer, Galvani.

**Gambeson**, a protective garment of leather or padded material, reaching from the neck to the knees, worn by soldiers prior to the introduction of plate-armour, and also beneath the hauberk.

**Gamboge**, a resinous gum obtained from certain trees native to Siam, Indo-China, and Ceylon, and used as a yellow pigment in paints and also as a purgative.

**Game** is the term applied to wild animals which are protected from indiscriminate slaughter by Game Laws. In the United Kingdom game comprehends deer, hares, pheasants, partridges, grouse, black game, moor game, woodcocks, bustards, and certain other birds and animals of the chase. Game can only be killed (with few exceptions) by persons holding game licences, which cost £3 a year. Occupiers of land and one other person authorised by them in each case are allowed to kill hares and rabbits on their land without licence. Game cannot be sold except by a person holding a proper licence. There is a "close time" prescribed for the different classes of game; for instance, the selling or exposing for sale of any hare or leveret during March, April, May, June, or July is prohibited by law. Grouse cannot be shot between Dec. 11th and Aug. 11th; partridges between Feb. 2nd and Aug. 31st; pheasants between Feb. 2nd and Sept. 30th; and black game between Dec. 11th and Aug. 10th. In regard to foxes, stags, and otters, custom and not Parliament prescribes a certain law which sportsmen rigidly adhere to. Game reserves are legally protected areas where natural vegetation and wild life are allowed to remain unmolested by sportsmen or those who might destroy for economic ends. See also p. 750.

**Gaming, or Gambling**—i.e., staking money on the chances of a game—differs from betting in that it depends upon the result of a trial of skill or a turn of chance. Gambling has long since been illegal in Britain, and no public gaming houses have existed here since the early part of the 19th century. Gaming is carried on by the sanction of the law at Monte Carlo. A gambling debt cannot be recovered at law, but is simply "a debt of honour." The Gaming Act, 1854, repealed the old Statute of 33 Henry VIII, so far as the prohibition of tennis, bowling, and other games of skill is concerned.

**Gamut**. The set of lines and spaces on which music is written.

**Ganga**, the pin-tailed sand-grouse, a handsome bird mostly found in North-Western Africa.

**Gangue**. Useless minerals associated with metallic ores.

**Gannet**, a fish-eating bird which dives on its prey from a great height, swallowing it under water; is found in large numbers off the coast of Scotland, and has breeding stations in the Hebrides, St. Kilda, Ailsa Craig, the Bass Rock, and Grassholme Island. It is a bird of white plumage, black tips to long narrow wings and wedge-shaped tail, and weighs about 7 lb. The gannet breeds in colonies on ledges of steep, rocky, island cliffs. Related to the cormorants, pelicans, and frigate-birds.

**Garden Cities** in England were founded by Ebenezer Howard (1850-1928), and his ideas were put forward in his book *Tomorrow—A Peaceful Path to Real Reform* (later re-issued as *Garden Cities of Tomorrow*). New towns should be so placed and planned as to get the best of town and country life, an adaptation of the model villages of certain industrial philanthropists such as Salt, Richardson, Cadbury, Leverhulme, and others. The Garden City Association (later the Town and Country Planning Association) was formed in 1899, and the first garden city was begun at Letchworth in 1904 and successfully established. Welwyn Garden City was also Howard's foundation, established in 1919.

**Gardener-Bird**, a bird possessing many of the characteristics of the bower-bird, and found only in Papua-New Guinea. See also *Bower Bird*.

**Gargantua**, the giant hero of Rabelais' satire, of immense eating and drinking capacity, symbolical of an antagonistic ideal of the greed of the Church.

**Gargoyle**, a projecting spout for carrying off water from the roof gutter of a building. Gargoyles are only found in old structures, modern water-pipe systems having rendered them unnecessary. In Gothic architecture they were turned to architectural account and made to take all kinds of grotesque forms—grinning goblins, hideous monsters, dragons, and so forth.

**Garial** or **Gavial**, the crocodile of the Ganges, feeding chiefly on fish. It has a long snout, and its overall length may exceed 20 ft.

**Garibaldi**, a kind of blouse-jacket formerly a good deal worn by women, and so styled because of its resemblance to the shirts worn by the Italian patriot and his soldiery.

**Garlic**, a bulbous plant of the same genus as the onion and the leek, and a favourite condiment among the people of Southern Europe. It possesses a very strong odour and pungent taste and its culinary use is age-long.

**Garnet**, a group of minerals; chemically they are orthosilicates of the metals calcium, magnesium, titanium. Garnets can be coloured yellow, brown, black, green or red; the blood-red garnet is an important gemstone.

**Garnishee**, a person who has received legal notice not to pay away sequestered moneys owing by him to a third party.

**Garrison**, a body of soldiery stationed in a fortified place to defend it against a foe, or to keep the surrounding population in subjection; also such a fort, manned with troops, guns, etc.

**Garrot** (Goldeneve), the name of a species of wild duck, widely distributed over the Arctic regions and a winter visitant to the northern parts of Britain. It is distinguished by having a large white spot in front of each eye on a dark ground.

**Garrote**, a method of strangulation used as capital punishment in Spain, and consisting of a collar which is compressed by a screw that causes death by piercing the spinal marrow. Garroting was also applied to a system of highway robbery common in England in 1862-63, the assailants seizing their victims from behind, and by a sudden compression of the windpipe disabling them until the robbery was completed.

**Garter**. The Most Noble Order of the Garter was founded (c. 1348) by King Edward III, and is the premier order of knighthood in Great Britain. The traditional story associating the garter and the motto with the Countess of Salisbury, who it was said dropped her garter while dancing with the King, who remarked "honi soit qui mal y pense" cannot be ac-

cepted. The order was originally limited to the Sovereign and 25 knights, but the number has been extended, and it may now be bestowed on royal personages and leading representatives of the British peerage. The insignia of the order are the garter of dark-blue velvet with the motto in letters of gold, the mantle of dark-blue velvet lined with white silk, the surcoat and hood, and the gold-and-enamel collar. The garter is worn on the left leg below the knee and by women as a sash over the left shoulder. (See *Knighthood*.)

**Gas** is an elastic fluid substance, the molecules of which are in constant motion, and exerting pressure. The technique whereby gases are liquefied depends on increasing pressure and diminishing temperature. Each gas has a critical point; unless the temperature is brought down to this point no amount of pressure will bring about liquefaction. Last gas to be liquefied was helium (1908) which boils at  $-209^{\circ}$  C. (See *Gas Laws* p. 762.)

**Gas from Coal** for lighting and heating purposes is obtained from bituminous coal. Such a gas was produced and used for illuminating purposes by William Murdoch towards the end of the 18th century in Birmingham, and about 1807 the illuminant was introduced in London, one side of Pall Mall being lighted with it. It soon supplanted oil and candles for outdoor and indoor lighting, and is still, in spite of the advances of electric light, a common illuminant, its power having been greatly increased by the incandescent burner. It is widely used for space heating and cooking. (See *Underground Gasification*.)

**Gas Turbine**. This kind of engine has recently become a competitor of the internal combustion engine. Mechanical movement is produced by a jet of gas impinging on a turbine wheel. Gas turbines are being used in aeroplanes, locomotives, and ships. These engines are mechanically simple compared with internal combustion engines, and require less maintenance. It has been stated that the jet-propelled Comet cruises at 450 m.p.h. burning less than  $\frac{1}{2}$  lb. of Kerosene per passenger mile.

**Gastropoda**, a class of molluscs which includes all such as possess a univalve shell—snails, whelks, limpets, etc.

**Gate House**, a structure built over and flanking a gateway, and common in ancient times at the more important entrances of a city, castle, monastery, abbey, or college. The Gate House of Westminster, built in 1370, was used as a prison. This was demolished in 1776, but one of its walls remained until 1836.

**Gauchos** are South Americans of Spanish descent, and of a wild and fearless disposition. They are mostly employed in the management of cattle, and are noted for their skill in the saddle, and for their lasso throwing. Their numbers grow less from year to year, and as the Pampas comes more under modern European control their existence as a distinct class will gradually dwindle away.

**Gauge**, a standard dimension or measurement, applied in various branches of construction. Thus, the Standard Railway Gauge is 4 ft. 8½ in. in the United Kingdom, United States of America, Canada, France, Germany, Austria, Holland, Egypt, Belgium, Denmark, Italy, Hungary, Sweden, Switzerland, and Turkey. In India, Ceylon, and Spain the gauge is 5 ft. 6 in. In Soviet Russia and Finland, 5 ft., Ireland, 5 ft. 3 in. Narrow railway gauges of different standards are in use on very steep inclines in various countries. Other standard gauges are fixed in building, gun-boring, and other operations.

**Gauls** were inhabitants of ancient Gaul, the country which comprised what is now France, Belgium, and parts of the Netherlands, Switzerland, and Germany.

**Gault**, a stratum of blue clay between the Lower Greensand and the Chalk. A typical section of the Gault can be seen at Folkestone.

**Gauntlet**, a glove of armour, worn in the 12th and 13th centuries as a sort of mitten, and attached to the sleeve of the hauberk. In the 14th century gauntlets were made of mail, and later of hammered steel with separated and jointed fingers.

**Gauze**, a thin, transparent material made of silk combined with cotton, linen, or hemp, and plain

- or figured. There are also gauzes of flannel, lace, ribbon, and wire.
- Gavel**, enough grain in the straw to form a sheaf, into which it is converted by binding.
- Gavelkind**, an old English custom of land tenure in Kent and other places in England, whereby on the death, intestate, of a property owner, his property is divided equally amongst his children and not according to the law of primogeniture. It was abolished by the Law of Property Act, 1922, and the Administration of Estates Act, 1925.
- Gayal**, a kind of wild ox about the size of an English bull. A native of Eastern India, and easily domesticated.
- Gaydiang**, a junk-like Annamese vessel, with two or three masts and triangular sails, carrying cargo from Cambodia to the Gulf of Tonkin.
- Gazelle**, an animal of the antelope family, of small and delicate shape, with large eyes and short cylindrical horns. It is of a fawn colour, a native of North Africa, and easily domesticated.
- Gecko**, the name of a family of lurid-hued lizards common in or near the tropics. They are of nocturnal habits and feed on insects, and though by some accounted venomous, they are harmless.
- Geez**, a Semitic or Arabic dialect, or language-variant, surviving in the ecclesiastical literature and speech of Abyssinia, mostly superseded by the Amharic.
- Geiger Counter**. The instrument most commonly used for making radioactive measurements.
- Geissler's Tubes**, invented by Geissler, contain rarified gases (at about  $10^{-5}$  atmosphere pressure), and when an electric discharge passes through them the gases glow brightly.
- Gelada**, the name of an Abyssinian baboon, possessing a large mane and long tufted tail. It is of a dark brown colour, and is closely allied to *Hamadryas*.
- Gelalean Era**, an era introduced by and named after Gelal-u-Din, Sultan of Khorassan, and commencing March 4th, A.D. 1079.
- Gelatine**, a transparent, tasteless, organic substance obtained from animal membranes, bones, tendons, etc., by boiling in water. It is of various kinds, according to the substance used in making it. Isinglass, the purest form of it, is made from air-bladders and other membranes of fish, while the coarser kind—glue—is made from hoofs, skin, hides, etc. Its constituents are carbon, hydrogen, oxygen, and nitrogen. Gelatine is applied to an immense variety of purposes, from the making of food jellies to photographic materials.
- Gemini**, one of the signs of the Zodiac lying east of Taurus and containing numerous stars, only two of which—Castor, the upper and brighter one, and Pollux, the lower one—are visible to the naked eye. The stars are named after twin divinities of classical mythology.
- Gemsbok**, a large South African antelope, with long straight horns and tufted tail. Light fawn in colour, it has a black streak across its face, and is very fleet of foot.
- Gems** are precious stones cut and polished for wearing as jewellery.
- Gender**, a distinction made in grammar between words to indicate the sex or lack of sex of the objects denoted by these words. While there are but two sexes, there are in some languages, like English and German, three genders: masculine, feminine, and neuter. In English, as a rule, words denoting inanimate objects are neuter gender (exceptions: sun (masculine), ship, engine (feminine), etc.), while in German, inanimate objects, besides being neuter, may be masculine or feminine gender. In French the neuter gender does not exist.
- Genealogy** is the science of family descent, treating of ancestors and their descendants in various branches in the natural order of succession. Pedigrees of the principal families in Great Britain are recorded at Heralds' College.
- General**, a military title next in rank to that of Field-Marshal, the highest officer in the army. Ranking below full General are Lieutenant-General, Major-General, and Brigadier.
- Generation**, a time-measure reckoned at about 30 years when children are ready to replace parents; also the body of persons existing at the same time or period.
- Generation, Spontaneous**. (See Abiogenesis.)
- Genesis**, the first book of the Pentateuch, compiled in the 5th century B.C., which carries the scriptural narrative from the Creation to the death of Joseph. The stories of the Creation, Garden of Eden, the Fall, and the Flood were largely derived from Babylonian mythology; the conditions described around the figures of Abraham, Isaac, Jacob, and Joseph have a genuine historical basis.
- Genet**, one of the smaller carnivorous animals, about the size of a cat, but with longer tail and spotted body. It is a native of Southern Europe, North Africa, and Western Asia, and is valued for its fine soft fur, and also for a perfume it produces.
- Genetics**, the science of heredity.
- Geneva Convention**, an agreement made by the European Powers at Geneva in 1864, establishing humane regulations regarding the treatment of the sick and wounded in war and the status of those who minister to them. All persons, hospitals, hospital ships are required to display the Geneva cross—a red cross on a white ground. A second conference held at Geneva in 1868 drew up a supplementary agreement. An important result of this Convention was the establishment of the Red Cross Society in 1870.
- Genii**, fabulous beings, regarded by the Arabs as between mankind and the angels, capable of becoming invisible at will, or assuming any shape.
- Genite**, an ancient sect of Jews spoken of by Purchas in his Pilgrimage as claiming to be of the pure stock of Abraham, by reason of their not having "taken strange wives."
- Genouillieres**, ancient metal caps for covering the knees of an armed man; an example may be seen on the Black Prince's monument in Canterbury Cathedral.
- Genre**, an art term used to describe a style of painting which deals with subjects of homely life, but also applied in France in connection with other kinds of paintings as *genre du paysage* (landscape painting), *genre historique* (historical painting), etc.
- Gens**, a group term used by the ancient Romans to designate the kindred or connections of any particular family, but only used in regard to the members of a noble family.
- Genthite**, a silicate of nickel and magnesium, found in stalactite formation in certain parts of Pennsylvania, and named after its discoverer, Dr. Genth.
- Gentian**, the name for a species of plants of the *Gentiana* genus. Gentian root is used in pharmacy.
- Gentian Root**, the dried root of the *Gentiana lutea*, much used in pharmacy as a tonic. The plant bears clusters of mostly blue flowers, and the most valuable species commercially are those of central and southern Europe.
- Gentile**, a term used in the Scriptures to designate any person who is not a Jew.
- Gentlemen-at-arms**, a corps of army officers of distinction under a captain whose duty it is to attend the Sovereign on ceremonial occasions. The corps was formed by Henry VIII in 1509 as personal bodyguard. They come under the direction of the Lord Chamberlain.
- Genus**, a term applied in biology to designate any kind, sort, or class of species.
- Geochemistry**, that branch of chemistry which deals with the composition of the earth and the chemical actions which have proceeded and are proceeding in it.
- Geodesy**, the science of calculating the configuration and extent of the earth's surface, and determining exact geographical positions and directions, with variations of gravity, etc. Land-surveying is a branch of geodesy.
- Geography**, the science which describes the earth's surface, its physical peculiarities, and the distribution of the various animals and plants upon it. It is usual to divide the subject into two main branches—physical geography, which deals with the composition of the earth's surface and the distribution of its living occupants, animate and inanimate; and human geography, which includes economic, political, and social geography.
- Geology**, the science which deals with the condition and structure of the earth, and the evidence afforded of ancient forms of life. The

geological strata are classified in the following categories: *Primary* or *Paleozoic* (the oldest rocks including the Cambrian, Ordovician, Silurian, Devonian, Carboniferous, Permian); *Secondary* or *Mesozoic* (Triassic, Jurassic, Cretaceous); *Tertiary* or *Cainozoic* (Eocene, Oligocene, Miocene, Pliocene, Pleistocene, Holocene); *Post-tertiary* (most recent rocks). (See "The World of Science.")

**Geometrical Progression** is a term used to indicate a succession of numbers which increase or decrease at an equal ratio—as 3, 9, 27; or 64, 16, 4.

**Geometry** is the branch of mathematics which demonstrates the properties of figures, and the distances of points of space from each other by means of deductions. It is a science of reason from fundamental axioms, and was perfected by Euclid about 300 B.C. The books of Euclid contain a full elucidation of the science, though supplemented in modern times by Descartes, Newton, and Carnot.

**Geophysics**, the term applied to the branches of physics which are concerned with the earth and its atmosphere. Meteorology, atmospheric electricity, terrestrial magnetism, seismology, and hydrology are geophysical subjects.

**George-Noble**, a gold coin, so called from St. George and the dragon depicted on its obverse. First issued in the reign of Henry VIII.

**German Silver**, an alloy of copper, zinc, and nickel, and used in the manufacture of table-ware, such as spoons, forks, etc.

**Germanium**. A silver-white hard brittle metallic element chemically related to silicon and tin. Discovered by Winkler in 1886. Its richest ore is germanite containing 6 per cent. of the metal. Coal is also a relatively rich source.

**Gesta Romanorum**, a Latin collection of stories published in the Middle Ages, and of unknown origin. It was used by our earlier writers, who found many romantic incidents and legends which they were able to turn to good account. The collection circulated over Europe, and is believed to have been written by a monk, Pierre Bercheur, of the convent of St. Eloi, Paris.

**Gestation**, the carrying of young in animals during pregnancy, varies considerably in its length. In the case of an elephant, the period is 21 months; a camel, 12 months; a cow, 9 months; a cat, 8 weeks; a horse, 48 weeks; a dog, 9 weeks; and a pig, 16 weeks. Hens "sit" for 21 days; geese, 30; swans, 42; turkeys, 28; pigeons, 18.

**Gethsemane**, a secluded spot on the side of the Mount of Olives, half a mile from Jerusalem, said to be the scene of Christ's Agony in the Garden.

**Geysers**, hot springs of volcanic origination and action, are remarkable for the fact that they throw out huge streams of boiling water instead of lava as in the case of a volcano. The most famous geysers are those of Iceland, which number over a hundred, the principal one having an opening 70 feet in diameter and discharging a column of water to a height of 200 feet. There are also geysers in the Yellowstone region of America, and some in New Zealand. Also a device now in common domestic use for heating running water quickly by gas or electricity.

**Ghat**, a river landing-place or stairway in India: a passage, or gateway. "Ghaut," another form of the word, means a mountain pass in the Mahratta tongue.

**Ghee**, a kind of butter much used in the East Indies and made from coagulated milk. It will keep sweet for a long time when properly prepared.

**Ghetto**, the name given to the quarter in any city or town where Jews were formerly compelled to live, shut off by gates from the rest of the city. Not only were the quarters usually allocated badly situated, but the Jews had to pay a tax for the privilege of living there.

**Ghost-Moth**, an interesting nocturnal insect (*Hepialus humuli*), common in England, possessing in the male a white collar and known for its habit of hovering with a pendulum-like action in the twilight over a particular spot where the female is concealed.

**Giambeaux**, metal armour for the legs and shins, worn by the warriors of Richard II.'s reign.

**Giants**, men of abnormal stature and bulk, have been met with in all ages, but it may be doubted whether ever any actual race of giants has existed, except in mythological fable.

**Gibbet**, a kind of wooden gallows with a projecting arm from which in former times criminals were hung in chains and left to decay.

**Gibbon**, the name of a long-armed ape mainly inhabiting S.E. Asia. It is without tail, and possesses the power of very rapid movement among the trees of the forests.

**Gilbertines** were members of a religious order founded by St. Gilbert in the 12th century, which did not spread beyond England. The order included both men and women who lived in double houses which had no communication. The habit was black, covered with a white cloak.

**Gimp**, a narrow trimming of worsted or silk cord, largely used for edging to gowns, draperies, etc.

**Gimp-Machine**, a narrow-warp loom designed to catch the woof and form loops or patterns, the gimp-cords of variant sizes being carried by independent needles or shuttles.

**Gin**, a well-known spirit distilled from malt or barley and flavoured with the juniper berry. The principal varieties are the English and American, known as "Gin" or "Dry Gin," and the Dutch, referred to as "Geneva," "Schnapps" or "Hollands." The word "Gin" is an abbreviation of "Geneva," both being primarily derived from the French *genièvre* (juniper).

**Ginger** is obtained from a reed-like perennial plant grown in tropical countries. There are two varieties, black ginger and grey ginger. The former is obtained by peeling and drying the root, the latter by scalding and drying. Ginger is largely used as a condiment.

**Gingham**, an ordinary kind of cotton fabric, dyed, plain, or figured, which received its name from being originally manufactured in Guingamp in Brittany.

**Gipsies** are a nomadic race, supposed to be descended from some East Indian tribe. Their language, Romany, is certainly a Hindi dialect mixed with other tongues. They are spread over many parts of the world, but are most common in Europe, having appeared in the Eastern portions of the Continent about the 14th century, finding their way to England at the beginning of the 16th century. They give evidence of their Eastern origin in their dark skins, large black eyes, black hair, and pearly white teeth. They are born wanderers, and pass from place to place following certain small occupations such as tinkering, basket-making, and the like, while some of the men are clever as horse-dealers, and some of the women pose as fortune-tellers.

**Giraffe**, the tallest of existent animals, reaching a height of from 18 to 20 feet when full grown. Its sloping back and elongated neck seem to be the natural evolution of an animal that has to feed on the branches of trees. It is a native of Africa, is of a light fawn colour marked with darker spots, and has a prehensile tongue.

**Giralda**, a beautiful and remarkable example of Arabian art, erected in 1195 at Seville, still in existence. Minarets similar to the Giralda are to be found at Morocco, Tunis, and Tetuan.

**Girandole**, a branching chandelier, or swing-armed candelabrum.

**Grasol**, a mineral of the opal variety. Of a bluish-white colour, with a red reflection under a bright light.

**Girl Guides**, founded by the late Lord Baden Powell in 1910, as a parallel movement to the Boy Scouts. Incorporated in 1915 and granted a Royal Charter in 1923, the movement spread rapidly throughout the world. It gives girls between the ages of 7½ and 21 a training in citizenship and leadership, with special emphasis on homecraft subjects and outdoor activities, such as camping. World Chief Guide: Lady Baden Powell.

**Girondins** or **Girondists**, one of the prominent parties of the early period of the first French Revolution. They were moderate, and up to 1792 were a strong party. Their first leaders were from the department of Gironde, hence their name. With the Reign of Terror their influence came to an end, Robespierre and his party overthrew them, most of them being sent to the guillotine.

**Girton College**, founded at Hitchin in 1869, and removed to Cambridge in 1873, is one of the leading English university colleges for women.

**Glacial Epochs or Ice Ages.** It is known from the evidence of the rocks that there have been three major glacial periods in the geological history of the earth, separated by long periods of time: the earliest in pre-Cambrian times, 600-700 million years ago, the second in late Palaeozoic times, 250 million years ago (in the southern hemisphere), and the third in the Pleistocene period, when an ice-sheet covered northern N. America and northern Europe. From the evidence of fossils world climates appear to have been temperate during the inter-glacial periods. (See "The World of Science.")

**Glaciers form** in the higher Alpine ranges, and are immense consolidated masses of snow, which are gradually impelled by their own force down the mountain-sides until they reach a point where the temperature causes them to melt, and they run off in streams. From such glaciers the five great rivers, the Rhine, the Po, the Rhône, the Inn, and the Adige, have their source. The longest of the Swiss Glaciers is the Gross Aletsch, which sometimes extends over 10 miles. Some of the glaciers of the Himalayas are four times as long. The Muir in Alaska is of enormous magnitude, and that of Justeldals Brae in Norway is the largest in Europe.

**Glacier-valley**, a vale, the essential factor in the formation of which has been glacial action.

**Glacis**, a sloping bank of fortification forming a parapet to the covered way, and serving to expose besiegers to the line of fire.

**Gladiators** were professional athletes and combatants in ancient Rome, contesting with each other or with wild beasts. At first they were drawn from the slave and prisoner classes exclusively, but so much were the successful gladiators held in esteem that men came to make a profession of athletics, and gladiatorial training schools were established. When a gladiator was vanquished without being killed in combat, it was left with the spectators to decide his fate, death being voted by holding the hands out with the thumb turned inward, and life by putting forth the hands with the thumb extended. Gladiatorial shows were the chief public displays in Rome from the 3rd to the 4th centuries A.D.

**Glands** are secretory organs whereby certain natural matters, such as urine, milk, bile, saliva, sweat, tears, etc., are drawn from or distributed over the system. Such of the matters as undergo rapid glandular expulsion, as urine, etc., are termed *excretions*, while such as are utilised in promoting the performance of the functions of digestion or milk-production are called *secretions*. Glands are composed of numberless minute secreting cells, arranged in simple or compound vesicles. (See "Medical Section.")

**Glasgow University**, founded by Pope Nicholas V. in 1451, had a new charter granted to it in 1577 by James VI. of Scotland, and in 1858 and 1899 was remodelled by the Universities (Scotland) Acts. It has usually about 5,000 students, including women.

**Glass**, a substance obtained from the fusion of silica (sand) with various bases, and is more or less transparent. There are numerous kinds of glass, but they group themselves under one or other of the following classifications:—Flint glass or crystal, whose components are potash, silica, and oxide of lead; window glass, made from soda, lime, and silica; Bohemian glass, containing potash, lime, and silica; and bottle glass, composed of soda, lime, alumina, silica, and oxide of iron. Heat-proof glasses used for making cooking utensils contain boron. Glass was made by the Phœnicians, and was familiar in ancient Egypt. The Egyptians introduced it into Rome. In the Middle Ages Venice was famed for its glass manufactures, but after the 17th century Bohemia acquired pre-eminence. English glass reached its highest level in artistic design in the 17th and 18th centuries. Window glass was not used in this country for dwellings until the end of the Middle Ages.

**Glass-Snake**, a legless lizard, with a long, sinuous tail, which has the faculty of regrowth if broken off. Four species are known; in S.E. Europe, S.W. Asia, Indo-China, and N. America.

Attains a length of about 2 feet, and its main colouring is green, with black and yellow markings.

**Glaucanite.** A green mineral, chemically a hydrated silicate of potassium and iron. Commonly found in sands (hence these rocks are known as "greensands") and sandstones.

**Glaucus** is a curious genus of sea lizards (Nudibranchs) often called the Sea Lizard. It is without shell and has a soft body, with horny mouth and four tentacles. It is a native of the South Atlantic, and is not more than 1½ inches in length.

**Glee**, an unaccompanied piece for three or more voices. Glee-singing was popular in England during the 18th and early 19th centuries and glee-clubs are still in existence.

**Glencoe, Massacre of**, occurred on February 13, 1692. The victims were the Macdonald clan, who had failed to take the oath of allegiance to William III. The chief and thirty-seven of his clan were butchered at the instigation of Dalrymple. A clamour arose, William was forced to grant a commission of inquiry and, as a result, in 1695 Dalrymple resigned his office.

**Gliding** is a form of engineless flight which is being enthusiastically practised on the Continent, in America, Australia, and in this country. Two Germans, Kronfeld and Magersuppe, have brilliantly demonstrated the possibilities of the modern high-efficiency glider or sail-plane and the two Germans Bödecke and Zander remained in the air for 5½ hours (December 11, 1938). The present distance record (205 miles) for the British Isles was made by P. A. Wills in the same year. Soaring is possible by using the energy of the air currents, and experiments are now being pursued to discover how a glider may be kept in the air over flat land surfaces where there are no favourable air currents. Towed gliders were used to transport men and military equipment in the second world war.

**Globigerina**, an oceanic unicellular animalcule with a perforated shell, and occurring in certain parts of the Atlantic in such vast numbers as to form a bed of chalk ooze with their empty shells.

**Glockenspiel**, an instrument composed of metal bars each of which is tuned to a note. The bars are struck by hand-hammers and give forth chiming sounds.

**Gloria in Excelsis** ("Glory to God in the highest") is the opening of the Latin hymn adapted from Luke ii. 4, and the most prominent hymn of the ecclesiastical rites in the Christian liturgies.

**Gloria Patri**, the lesser Doxology, with which chants are generally concluded in the English Church service—"Glory be to the Father, and to the Son."

**Gloriosa**, a genus of gorgeous flowering climbers growing in the Himalayas and Senegambia, lanceolate of leaf, with clinging tendrils and large red or yellow bloom; is of the Lily family.

**Glory or Brocken-spectre** is the series of coloured rings which an observer sees around the shadow of his own head as cast upon a bank of mist or thin cloud. This diffraction effect is produced by the scattering of light by the directly illuminated water droplets.

**Gloss**, an explanatory statement or marginal note, often found in ancient manuscripts, and is sometimes more valuable than the text to which it refers.

**Glove-Money**, an extraordinary reward paid to officers of courts, and fees given to clerks of assize and judges' attendants by a County Sheriff when no offenders were left for execution; the white gloves presented to justices when there is a maiden session are a survival of this old legal usage.

**Gloves** are coverings for the hand with a separate sheath for each finger, and are made of a great variety of materials. They were not in general use in England before the 13th century, and were not manufactured in this country until the next century. There was a London Glovers' Company in 1464.

**Glow-Worm**, a kind of beetle, possessing in the female the power of emitting a phosphorescent light underneath the extremity of the body. The male has the same power, but to a very limited extent, and has wings, while the female

is wingless and looks like a larva throughout her life.

**Glucinium or Eeryllium**, is a white metal prepared from beryl, and found also in the emerald and other rare minerals. Most of the salts of this metal have a sweet taste, hence the name.

**Glucose, Dextrose or Grape Sugar**. It is produced by hydrolysis from cane sugar, dextrine, starch, cellulose, etc., by the action of reagents. It also occurs in many plants, fruits, and honey. For brewing purposes glucose is prepared by the conversion of starch by sulphuric acid. Malt also converts starch into glucose.

**Glue**, a gelatinous substance obtained by boiling and chemically treating hides, hoofs, etc.

**Gluten**, a protein present in flour or wheat and other grains.

**Gluton or Wolverine**, the biggest animal of the weasel order, inhabits the northernmost parts of Europe and America. In build it resembles the bear, and is rather larger than a badger. Its fur is of a brown-black hue, but coarse; the animal has great strength, and is remarkable for its voracity.

**Glycerine or Glycerol**, occurs in natural fats combined with fatty acids, and is obtained by decomposing those substances with alkalis or by superheated steam. It is colourless and oily and sweet, and is put to a variety of commercial uses, being widely utilised for medicaments, for lubricating purposes, and in the manufacture of nitro-glycerine.

**Glycogen or Animal Starch**, a carbohydrate which is found in the liver. It is convertible into glucose.

**Glyptodon**, an extinct species of gigantic armadillo, fossil remains of which have been discovered in S. America. It was some 9 feet long, carried a huge tortoise-like shell, and had fluted teeth.

**Gnat**. (See Mosquito.)

**Gneiss**, a metamorphic rock containing quartz, felspar, and mica. It is banded, the light-coloured minerals being concentrated apart from the dark minerals.

**Gnomes**, dwarf supernatural beings, popularly supposed to exercise protective powers over mines and minerals.

**Gnostics** were an early Christian sect prominent from the 1st to the 6th century. They held that Christ was of divine origin, but they rejected the literal interpretation of the Scriptures; contending that God was unknown and beyond man's comprehension, and that knowledge rather than faith was the passport to Heaven.

**Gnu**, an animal of the antelope family, combining the characteristics of the buffalo in its head and horns, the ass in its neck and mane, and the horse in its long and bushy tail. There are two species, the common and the brindled, and they are about the size of an ass. They abound in Africa and congregate in herds.

**Goa Ball**, a peculiar and powerful drug, scented with musk, and sold in India in egg-shaped masses. It is a favourite specific in cases of fever and certain skin diseases, but its precise composition is kept secret.

**Goat-Moth**, a large moth of the *Zenaxeridae* family, common in Britain, evil-smelling, and very destructive in the larval stage to trees of the poplar and willow genus, into the wood of which the caterpillar bores during its three years' period of development.

**Goats** are horned ruminant quadrupeds, indigenous to the Eastern Hemisphere, but now domesticated in all parts of the world. Though allied to the sheep, they are a much hardier and more active animal. The male has a tuft of hair under the chin. Many species, including those of Cashmere and Angora, are valuable for their hair, which is used for fine textile fabrics. The milk of the goat is nutritive and medicinal, and goat-skins are in good demand for leather for gloves, shoes, etc.

**Goatsucker** is the popular name of the night-jar, and the bird was so called from the old country superstition that it was in the habit of sucking goats. It is a regular summer visitor to this country, and lays its eggs on the ground.

**Gobelin Tapestry** was originated by a family of dyers named Gobelin in the 15th century in Paris. The Gobelin establishment, which produced this beautiful tapestry, made of silk and

wool, or silk and cotton, was taken over by the Government of Louis XIV, in 1662, and since then has been the French national factory for that class of fabric.

**Goby**, the name of a well-known and widely distributed fish, of many species, some of which are common along the British coasts. The ventral fins of the Black Goby form a hollow disc, whereby the fish can cling to the rocks or other external objects.

**God** is the term by which the idea of the one Supreme Being is expressed. The conceptions of God vary with different religions and different countries. Theism regards God as a personal being, and the author and ruler of the universe; Pantheism identifies God with the universe and not as a personal being.

**Goethite**. A mineral; chemically, a hydroxide of iron. Colour: yellow, brown, red, or nearly black. It occurs in association with hæmatite and limonite.

**Gog and Magog**, two legendary City of London giants, supposed to be the offspring of certain wicked daughters of the Emperor Diocletian and a band of demons. They were brought captive to London and made to serve as prisoners at the Palace of Brute, which stood on the site of Guildhall. Effigies of the giants have stood in Guildhall since the time of Henry V. They were destroyed in the Great Fire of 1666, replaced in 1672, and used to be carried through the streets of London in the Lord Mayor's Show. The present figures, newly carved in lime wood by Mr. David Evans, replaced those carved in 1708 by Richard Saunders, which were destroyed in an air raid during the last war.

**Gold**. The greatest amount of gold is obtained by treating gold-bearing quartz by the cyanide process. The gold is dissolved out by cyanide solution, which is then run into long boxes filled with zinc shavings when the gold is precipitated as a black slime. This is melted with an oxidising agent which removes the zinc.

**Gold-Beaters' Skin** is the outside membrane of the large intestine of the ox, specially prepared and used by gold-beaters for placing between the leaves of gold while they beat them. This membrane is of great tenacity, and gets beaten to such extreme thinness that it is used to put on cuts and bruises.

**Gold Standard**, a system whereby bank notes are changeable into gold at a fixed rate at any time. Until the first world war North America and most countries of Europe adopted this system, that is to say, they were "on the gold standard." It was generally suspended during that war (not by the United States). Britain returned to the Gold Standard in 1925, but like some other countries, found it impossible to remain and came off the Gold Standard in 1931.

**Golden Age** of the classical mythology was the age of peace and innocence and patriarchal years.

**Goldeneye**. See Garrot.

**Golden Legend**, the title of a famous history of the Saints, compiled by Jacobus de Voragine, a Dominican monk, in the 13th century, translated and published by Caxton in 1483.

**Golden Number**, the number of any year in the metonic cycle of 19 years, deriving its name from the fact that in the old calendars it was always printed in gold. It is found by adding 1 to the number of the year A.D. and dividing by 19, the remainder being the Golden Number; or, if no remainder, the Golden Number is 19. The only use to which the Golden Number is put now is making ecclesiastical calculations for determining movable feasts.

**Golden Rose**, the Pope's rose of wrought gold blessed and sent from time to time to the church or community his Holiness selects to honour.

**Goldsmiths Company**, one of the richest London City Companies, and the official assayers of gold and silver, invested with the power of "hall-marking" the quality of objects made from these metals. First charter granted in 1327.

**Gondola**, the old regulation black boats so common on the canals of Venice, propelled by a gondolier with one oar who stands at the stern, his passengers being accommodated in a covered space in the centre.

**Gonfalon**, the pennon affixed to a lance, spear, or standard, consisting usually of two or three streamers, and made to turn like a weather-cock.

**Gophers.** Rodent mammals. The pocket gophers are stout-bodied burrowers common in the U.S.A. The slender burrowing gophers, also called "ground squirrels," occur in central and western U.S.A. The siskin or suslik is a related European species. They are a great pest among grain crops.

**Gordon Riots of 1780** were an anti-popey agitation fomented by Lord George Gordon. Called also "No-Popey Riots."

**Gorilla**, the largest of the anthropoid apes, found in the forests of Equatorial Africa, and at maturity standing from 4 to 5 feet high.

**Goshawk** (*Accipiter gentilis*), a diurnal bird of prey, fearless and extremely agile; loves wooded country and is very destructive of poultry and game-birds. It resembles the peregrine falcon in appearance, but has shorter, rounded wings. This bird was a great favourite of falconers in medieval times. It is still a familiar sight in parts of Europe, was once common in England, where it is said to have bred again in recent years.

**Gospels** are those portions of the New Testament which deal with the life, death, resurrection, and teachings of Christ. They are the gospels of Matthew, Mark, Luke and John, and the first three are called the *synoptic gospels* because of their general unity of narrative. That of John is of somewhat wider scope, and gives in addition to the story of the Passion an account of the ministry in Judea.

**Goths**, a Teutonic people who descended on Central Europe from Baltic regions and dominated a great part of the Continent. Under the leadership of Alaric (and then known as the Visigoths) they sacked Rome in 410, but by the 8th century they became merged in the Spanish race. There were Ostrogoths (Eastern Goths) and Visigoths (an offshoot of the Ostrogoths).

**Gourd Family or Cucurbitaceæ.** This family of about 650 species of flowering plants includes the gourds, pumpkins, cantaloupes, cucumber, gherkin, water-melon. Most abundant in the tropics, the cucurbits are mainly climbing annuals with very rapid growth. The bathroom loofah is the skeleton of one cucurbit fruit, *Luffa cylindrica*. The squirting cucumber is another member of the family. (See *Echallium*.)

**Governor.** A device attached to an engine, turbine, compressor, etc., which automatically controls the engine's speed in accordance with power demand. Most governors depend upon the centrifugal action of two or more balls which are thrown outwards as their speed of rotation increases and actuate a throttle valve or cut-off. The centrifugal governor was invented by Thomas Mead, patented by him in 1787, and used on windmills. Watt adapted it to the steam engine.

**Gowrie Conspiracy** was an unsuccessful project for securing the person of, or assassinating, James VI. of Scotland, afterwards James I. of England.

**Grail.** (See *Holy Grail*.)

**Gram or Gramme**, the unit of weight in the metric system, defined as the 1000th part of a standard cylinder of platinum-iridium kept at Sevres. Subdivision gives the centigram (100th part of 1 gram), milligram (1000th part) and so on. 1 ounce avoirdupois is equivalent to 28 grams approximately. (See *Metric System*.)

**Gramophone**, an apparatus on the disc principle for recording and reproducing vocal sounds, invented by E. Berliner, and was at one time the most popular of the talking machines.

**Grampus**, a cetacean of the Dolphin family frequent in temperate waters, and at maturity being over 20 ft. long.

**Grand Prix**, the "French Derby," was established by Napoleon III, in 1863. It is the chief French race and is an international competition of three-year-olds.

**Graphite or Plumbago**, commonly called black-lead, is a form of carbon occurring in foliated masses in limestone, graphite, etc. It is soft, will make black marks on paper or other plain surfaces, and is mainly used for lead pencils. It is also a valuable lubricant. Pure graphite has found a new use with the construction of atomic piles (*vide*). Important deposits occur in Siberia, Ceylon, Madagascar, Canada, and the U.S.A.

**Graphotype**, a kind of block for printing from, the drawings for which are made on a chalk surface with a siliceous ink. The soft parts are brushed away after the surface is dry, and a block is made from what remains in relief.

**Grapple**, a modified kind of boat's anchor, with flukes for holding by. Also an arrangement of hooks or clamps for fixing to and holding one ship to another while being boarded in an engagement.

**Graptolites**, fossil animals which became extinct after the Silurian period. Structurally and in their way of life they were similar to the living hydrozoa; they grew attached to seaweed or the sea-bed. The specimens best preserved occur in shales.

**Grass-Cloth**, a fabric made from China grass, the fibre of certain plants of the nettle order.

**Grasses or Gramineæ.** This family of flowering plants, including about 4,000 species, is the most important economically. Ordinarily the farmer applies the term "grass" to the pasture plants on which cattle, etc., feed, but botanically grasses take in the various cereal plants (wheat, barley, oats, rice, millet, etc.), and the bamboos.

**Grasshopper.** There are many species of these leaping insects which are related to the locusts. Most are vegetarians; a few eat flies and caterpillars also. The chirping sound they make comes by scraping the hind legs against the wings; in some species a noise is produced by rubbing the wings together.

**Gravitation**, the force of mutual attraction between massive bodies. Newton formulated the law of gravitation in these words: Any two particles of matter attract one another with a force directly proportional to the product of their masses and inversely proportional to the square of the distance between them. (See p. 157.)

**Gravity Railway** is a railway worked by the power of gravity alone. The road is constructed on inclined planes, usually so arranged that descending cars pull the cars from below to the higher level.

**Graylag**, the ordinary wild grey goose of Europe, the species from which domestic geese are derived; frequents fens and marshes; breeds in decreasing numbers in Scotland; distinguished by pinkish legs and feet and lack of black markings on bill.

**Grayling**, a fresh-water fish of the salmon family having a large dorsal fin, and averaging about 1 lb. in weight. It affords good sport to the angler.

**Great Circle Sailing** is the art of steering a ship in a line with a straight diameter of the earth.

"**Great Eastern**," the paddle steamship built by Scott Russell at Millwall, launched in 1858, then the largest vessel afloat, measuring 691 ft. in length and 83 ft. in breadth, and of 22,800 tonnage. It was used for some years in cable laying in the Atlantic and Mediterranean, and in 1888 was sold to be broken up.

**Great Powers**, the most powerful nations of the world, especially in political influence, resources, and military and naval strength.

Between the first and second world wars France, Germany, Gt. Britain, Italy, Japan, Russia and the United States were so regarded.

**Great War (1914-18).** Hostilities were precipitated in July 1914 by the Austrian ultimatum to Serbia, protesting on account of the assassination of the Archduke Ferdinand of Austria at Sarajevo, and demanding a large indemnity under conditions which it was impossible to accept, and being virtually a declaration of war. This involved the Russian Government, which was bound by promises to protect the interests of Serbia. In the meanwhile tension between France and Germany had become acute, and German troops occupied Belgium in August in defiance of the Treaty defending the neutrality of Belgium, signed by France, England and Germany in 1830. War was declared on Germany by this country on Aug. 4th, 1914. The war involved Italy, Rumania, Japan and ultimately the United States as allies of Great Britain and France, while Turkey and Bulgaria participated on the Germano-Austrian side. The war areas included eastern France, Poland, Transylvania, the Balkans and Northern Italy. Other complications resulted in fighting in Mesopotamia, Syria, E. Africa and on the high seas, the chief naval theatre being the North Sea.

The decisive engagements include: the Battles of the Marne (1914), which checked the advance of German troops on Paris; Neuve Chapelle; Ypres in the British offensive of 1915; German offensive: Verdun, 1916; naval battle of Jutland, May, 1916; Franco-British offensive; Somme, in 1916, Vimy Ridge, Passchendale Ridge, etc., 1917; German offensive on Western front, March, 1918; Rheims, Amiens, Cambrai, etc. A treaty was concluded between Germany and Russia in 1917 at Brest-Litovsk. Mutiny in the navy and the general breaking down of the morale of the German army, the exhaustion of the working masses and their political leaders culminated in a revolution and induced Germany to sign an armistice on Nov. 11, 1918. Peace Treaties were signed in Paris in 1919.

**Grebe**, a diving bird of beautiful plumage found over a great part of the world on lakes and oceans. The two species familiar in Great Britain are the Dabchick or Little Grebe and the large and handsome Great Crested Grebe, which has a feathery tuft on each side of the head. Grebes have remarkable courtship displays. The breast feathers are of a downy softness and silver lustre, for which they were formerly much hunted.

**Greek Church** represents the churches in accord with the Greek patriarchal see of Constantinople, and marks the point of separation from the Roman Catholic Church which occurred in A.D. 1054 when Pope Leo IX. excommunicated the patriarch, and the countries comprised in Greek, Greco-Roman, Russian, and certain Oriental groups remained faithful to the Patriarchal cause. The Greek Church accepts the doctrine of transubstantiation, believes in the intercession of the Virgin and saints, and the power of priestly absolution; but rejects purgatory, Papal supremacy, and allows its priests to marry. Greatly weakened after Russian Revolution and in Turkey after 1923.

**Greek Fire**, a combustible, supposed to have been composed of sulphur, nitre, naphtha, and asphalt, used with destructive effect by the Greeks of the Eastern Empire in their wars.

**Greek Kalends**, equivalent to never, as only the Romans, not the Greeks had kalends.

**Green Room**, the common assembling room for actors and actresses behind the stage, so called from the first room of the kind being decorated in green.

**Gregorian Calendar**, introduced by Pope Gregory XIII in A.D. 1582 to replace the inexact Julian calendar. Great Britain did not adopt it until 1752 when eleven days were dropped in the month of September. See Calendar.

**Gregorian Chant**, ritual music with a system of harmony suitable for church use. First established by Pope Gregory I.

**Grenadier** was originally a picked soldier, employed in throwing hand grenades.

**Gretna Green**, a celebrated village in Dumfries, just over the border from England, where runaway marriages were performed from 1754 to 1856, though only completely stopped during present century.

**Greyhound**, one of the oldest known varieties of dog, bred for the chase, and of great fleetness. Used in the popular sport of coursing and for dog-racing. Among its sub-varieties are the Scotch deerhound, the Irish boar-hound, and the Russian wolf-hound.

**Griffe**, the name given to a claw-like architectural decoration common in mediæval buildings, and placed at the base of columns.

**Griffin**, in ancient mythology, a winged creature with an eagle's head and body of a lion, found in ancient sculptures of Persia and Assyria. Its origin is traced to the Hittites. It had the same religious significance as the winged sphinx of Egypt. The griffon vulture is a bird named after the mythological creature, found in Europe, Africa and India.

**Grille**, a metal-work covering in the form of decorative bars, used to protect apertures in walls or doors.

**Grilse**, a young salmon, at that period of its development when the fish makes its first return to fresh water, usually in its second year.

**Grimm's Law**, formulated by Jacob Grimm, an eminent German philologist, lays down a principle of consonantal change in the Germanic

languages. For instance, Lat. *pater*, Eng. *father*, Ger. *Vater*; Lat. *frater*, Eng. *brother*, Ger. *Bruder*; Lat. *decem*, Eng. *ten*, Ger. *zehn*.

**Grindstone**, a wheel of sandstone, employed in smoothing surfaces, and grinding and sharpening tools; it may be worked by treadle or machinery. The millstones used for grinding corn are also called grindstones.

**Groat**, an old English silver coin of the value of 4d. It was first issued in the reign of Edward III., but after 1662 only coined as Maundy money. The fourpenny piece was resumed, though not under the old name, in 1836, but in recent years has dropped out of the coinage.

**Groats (or Grits)** are the grain of oats deprived of the husks; and, crushed, become whole meal.

**Grog**, the beverage served out to sailors, and compounded of spirit and water in prescribed proportions. The name, it is said, was derived from the fact that Admiral Vernon, who introduced it into the English navy in 1745, wore Grogam breeches. Now, any sort of mixed drink is called "grog."

**Gram**, a kind of rough fabric made of wool and some other fibre, such as silk, mohair, or cotton, formerly much used for commoner kinds of wearing apparel.

**Groschen**, a silver coin introduced into the German currency about the 14th century but not now in use. It was a thirtieth of a thaler, or about 1½ of a penny, English.

**Grotto**, a natural or artificial cave. Some grottoes are of great beauty, and are much frequented. Among the most famous are the Blue Grotto of Capri and the stalactite grotto of Antiparos. The latter has been known since 1673 and is of singular picturesqueness.

**Ground Wave**, that part of the energy emitted by a radio transmitter which travels along the ground; as opposed to the sky wave which is reflected back to earth by the ionosphere. With the lower radio-frequencies, the ground wave can be picked up over several thousand miles; in the broadcasting band, over a hundred or so miles; it is virtually useless at high frequencies.

**Grouse**, game bird of the northern latitudes where some 30 species occur. They are stout, compact, ground-dwelling birds, protectively plumaged (the willow grouse turns white in winter), the male usually being larger and more brightly coloured than the female. The red grouse of the English and Scottish moors is not found outside the British Isles. Of the same family are the blackcock, ptarmigan, capercaillie, American prairie-hen, and the common partridge. Grouse shooting begins in Britain on August 12th.

**"Grundy, Mrs."**, a sort of Mrs. Harris, introduced by Dame Ashfield, a character in Morton's comedy "Speed the Plough." The Dame considers every action from the point of view of Mrs. Grundy (a personification of British respectability), and is continually putting the question, "What will Mrs. Grundy say?" Thus the name became proverbial.

**Gruyère**, a special kind of cheese, first peculiar to the small town of that name in the canton of Freiburg, Switzerland, but now made in other parts of Switzerland and in France. It is of a pale yellow colour, and contains air passages and bubbles which give it a rather honeycombed appearance.

**Guanaco**, a large species of llama, common to South America, and utilised as a beast of burden.

**Guano**, the excrement of sea-birds, found in large quantities on the rocky islands of the western coasts of South America and Nauru Is. It forms a useful fertilising agent, being rich in phosphate and ammonia, and first came into use in 1841, since which time Peruvian guano has been a recognised article of commerce. Beds of guano of from 50 to 60 ft. in thickness are not uncommon. Fish guano and bat guano from caves in South America and the Bahamas are also used as fertilisers.

**Gudgeon**, a small fresh-water fish of the carp family.

**Guelph and Ghibelline**, italianised forms of the German words "Welf" and "Waiblingen," the names of two rival princely families whose conflicts made much of the history of Germany and Italy during the Middle Ages. The

feuds between these two factions continued in Italy during the campaigns of Emperor Frederick I., and later developed into the fierce struggles of the 13th century between Emperor and Pope. In Italy the Ghibellines supported the side of the German emperors and the Guelphs the cause of the Pope. It is interesting to note that Dante was a Ghibelline and Petrarch a Guelph. The present Royal Family of England is descended from the Guelphs, through the ducal House of Brunswick; the name of Windsor was assumed during the first world war.

**Guereza**, a large African monkey, with long flowing masses of white hair and tufted tail.

**Guildhall**, the place of assembly of the members of a guild, and at one time, when guilds were in full strength, was practically the Town Hall. The London Guildhall is to-day the hall of meeting for the City of London Corporation.

**Guilds** for the fostering and protection of various trades have existed in England since Anglo-Saxon times, and from the 12th to the 16th centuries exercised great influence and enjoyed many privileges. There were trades' guilds and craftsmen's guilds, and in all large cities and towns there was a guild hall. Their successes in the Middle Ages led to many monopolistic abuses, and in the end it became necessary to free the country from their restrictive power. Seventy-nine guilds, including the Mercers, Grocers, Drapers, still exist and enjoy considerable revenues, but they are now only private bodies and have little direct influence upon the course of trade.

**Guillemot**, a genus of sea-birds of the auk family, common in Northern Europe, two species—the Common Guillemot and the Black Guillemot—being natives of our own sea coasts, nesting and breeding on the cliffs.

**Guillotine**, the apparatus used in France for the execution of the death penalty. It consists of an oblique-edged knife, fixed between two grooved posts, which is heavily weighted and falls forcibly on the neck of the victim, severing head from body. A French physician, J. I. Guillotin, proposed in the Constituent Assembly of 1789 that it should be used instead of an axe or sword. It was invented by Dr. Antoine Louis, and was called at first "Louisson" or "Loutsette."

**Guinea**, an English gold coin of the value of twenty-one shillings, current from 1663 to 1817, and deriving its name from the first guinea coinage having been struck from gold obtained on the coast of Guinea.

**Guinea-Pig**, a rodent of the cavy family about 10 in. in length and with a tail so short that it does not project outside the body. It makes an excellent pet, though easily frightened. Its ancestors were species of the wild cavy of S. America said to have been domesticated by the Incas of Peru. (See p. 995.)

**Guinea Worm**, a large roundworm (nematode) which is parasitic in man. Occurs in tropical Asia and Africa.

**Guitar**, a six-stringed instrument with a hollow resonant body, the strings being plucked by the fingers. The instrument seems to have originated in Spain, but there is a variant known as the Hawaiian Guitar. A recent development is the Electric Guitar, in which the mechanical vibrations of the strings are converted into electromagnetic vibrations, amplified, and reproduced by a loud-speaker.

**Gulden**, a former gold coin of Germany, the Low Countries, and a former silver coin of Austria, worth about 1s. 8d. English. The silver gulden is still current in Holland.

**Gules**, a heraldic term, denoting a rose of red tincture, indicated by vertical lines drawn or engraved without colour.

**Gulf Stream** is confined entirely to the western side of the N. Atlantic and is the warm-water current flowing through the Straits of Florida from the Gulf of Mexico, parallel to the American coast up as far as Cape Hatteras. From there it continues north-eastwards as a slower, broader, cooler (yet even so, relatively warm) drift of water, merging with the North Atlantic Drift and losing its identity about 40° N. Lat., 60° W. Long. It is a common error to attribute the warmth of the British Isles and Western Europe

generally to the Gulf Stream, but this has no influence whatever except in so far as it feeds the North Atlantic Drift. Both the Gulf Stream and the North Atlantic Drift owe their movement to the direction of the prevailing winds, and it is the south-westerly airstream coming from warmer regions and passing over the surface waters of the Atlantic Drift that brings the warmth inland to influence the climate of Western Europe.

**Gull**, a web-footed, long-winged, sea-bird of numerous species, inhabiting the sea coasts of most parts of the world. They are mostly of a soft greyish-white plumage. Of the nine species native to Britain, the herring-gull and the so-called black-headed gull are the most abundant, the latter frequently being seen inland, especially in the winter.

**Gulliver**, the hero of Swift's satire, *Gulliver's Travels*, who, in Lilliput and Brobdingnag, passed through a series of adventures which were so contrived as to reflect the humour, follies, and shortcomings of Swift's day. Apart from its satire, it forms one of the best books ever written.

**Gums** are glutinous compounds obtained from vegetable sources, soluble in cold or hot water, but not in alcohol. There are innumerable varieties. Gum Arabic is exuded from a species of acacia grown in Senegal, the Sudan, Arabia, India and other countries, and is a valuable commercial product, used in dyeing, ink-making, as a mucilage, and in medicine. India-rubber is an elastic gum. Gums are also made from starch, potatoes, wheat, etc., from seeds, bark, roots, and weeds. Many so-called gums are resins.

**Gun-Cotton**, a powerful explosive manufactured by subjecting a prepared cotton to the prolonged action of a mixture of three parts sulphuric acid and one part of nitric acid. It burns without explosion on ignition, but by percussion explodes with a force five times greater than that of gunpowder.

**Gun-Money**, the name given to debased coins issued by James II. in Ireland in 1689 and made partly of metal from old cannon.

**Gunny**, a coarse cloth made in India from jute and hemp, used chiefly for bags and sacking, though sometimes also for clothing by the very poor. Gunny cloth is largely manufactured in Dundee.

**Gunpowder**, the oldest of explosive mixtures, is a compound of saltpetre, sulphur, and charcoal thoroughly amalgamated and reduced to fine powder. The proportion of the ingredients is varied according to the uses for which it is destined.

**Gunpowder Plot** was a conspiracy by a desperate band of Roman Catholics in the reign of James I. to avenge the harsh treatment to which Catholics were subjected. Barrels of gunpowder were secreted in the vaults underneath the Houses of Parliament, and it was proposed to fire these when the King and his Ministers assembled on Nov. 5th, 1605. The plot was betrayed and Guy Fawkes and his co-conspirators were arrested and executed. The date serves to perpetuate the ancient custom of burning the effigy of Fawkes, a custom in which young people are the most enthusiastic participants, with bonfires, fireworks, etc.

**Gunter's Chain**, a surveyor's chain, 22 yd. long divided into 100 links, invented by Edmund Gunter (1581-1626), Professor of Astronomy at Gresham College, for the measurement of areas. 1 acre contains 100,000 square links.

**Gurnard**, a sea-fish, with large, bony head and diminutive body, of which there are some forty species. They are plentiful in British waters.

**Gutta Percha**, the concrete juice of an evergreen tree common in the Peninsula and Islands of Malay. It possesses normally and naturally little elasticity, but becomes pliant under a rising temperature and has many commercial uses. In recent times it has become of considerable value as a covering for electric wires, being a non-conductor, while it is largely employed in making hose, belting, and other flexible goods. Combined with the more elastic caoutchouc it is easily vulcanized.

**Guy's Hospital**, founded by Thomas Guy in Southwark, London, in 1725.

**Gybing**, in navigation, means the moving of any boom-sail from one side of a mast to the other.

**Gymnasium**, originally the name given in ancient Greece to the public places where Greek youth used to exercise and receive instruction. Plato, Aristotle, and other great teachers lectured there. The Greek institution was never very popular with the Romans, and it was not until the 18th and 19th centuries that the cult of combining physical with intellectual activity again found a place in educational systems. In Germany the name was applied to the classical grammar school; in this country and America to the halls where gymnastics were practised.

**Gymnosperms**. In the pine and related plants the seeds are exposed and not contained in an ovary; because of the nakedness of the seeds, these plants are called gymnosperms. The gymnosperms, the most primitive of seed-bearing plants, include the Cycads, Ginko (maiden-hair tree), Conifers, and the Gnetales. Fossil gymnosperms were abundant by Carboniferous times.

**Gypso-plast**, a cast taken in white lime or Plaster of Paris.

**Gypsum**, a whitish mineral consisting of hydrated sulphate of calcium. The finest gypsum is alabaster. When heated gypsum is converted into the powder called Plaster of Paris; the water it loses can be taken up when the plaster is wetted, and the reconversion of Plaster of Paris into gypsum accounts for the way in which the former sets hard. The name "Plaster of Paris" came from the location of important gypsum quarries in the Montmartre district of Paris. It was found after the flood disasters of January 1953 that gypsum could undo the effect of sea-water. By spreading it for the rain to wash into the soil, thousands of acres of farmland in Holland and Britain were made productive again.

**Gyromancy**, divination by walking in circles, was one of the ancient superstitions. The person for whose benefit the art was invoked walked round and round in a circle (about which certain signs had previously been placed) until he fell from giddiness. From the manner of his fall in relation to the signs, the interpretation was formulated.

**Gyroscope**, an application of the principle of the spinning top to a single-rail railway, the steering of ships, and the steadying of torpedoes. (See *Compass*, also *Brennan, Louis, Prominent People*.)

## H

**Habeas Corpus**, the name given to a writ ordering the body of a person under restraint or imprisonment to be brought into court for full inquiry into the legality of the restraint to be made. The first Habeas Corpus Act was passed in 1679, though nominally such a right had existed from Magna Carta, but some of the more despotic kings had disregarded it. In times of public peril the privilege of *habeas corpus* is sometimes temporarily suspended, many instances occurring in the history of Ireland and during the First and Second World Wars.

**Haber Process**, the important industrial process for synthesising ammonia from atmospheric nitrogen. Nitrogen and hydrogen are made to combine at high pressure (200 atmospheres or upwards).

**Habrocoma**, a genus of South American rodents, possessing four toes to each fore-foot, having large ears, and a fine, soft chinchilla-like fur.

**Hackling-Machine**, an apparatus employed in removing burrs and other foreign substances from raw flax prior to spinning. It consists of a pair of rollers covered with brushes and hackles.

**Haddock**, one of the best-known fishes abounding in northern seas and averaging about 4 lbs. in weight. Largely used for curing, and sold as "finnan haddies."

**Hade** of veins, a mining term indicating the particular inclination that any vein, seam, or strata may have from the perpendicular; thus, in Weardale the veins mainly "hade" to the north.

**Hadrian's Wall**. (See *Roman Walls*.)

**Hæmatite**, peroxide of iron; one of the principal iron ores, containing about 70 per cent. of the metal. It is usually found in kidney-shaped

masses, and is specular, red or brown, in thin fragments, but greyish in bulk.

**Hæmocyania**, the respiratory pigment of crustaceans and molluscs. It functions like hæmoglobin, from which it differs in containing copper instead of iron and being blue when oxidised instead of red.

**Hæmoglobin**, the pigment containing iron which gives red blood corpuscles their colour. It is a respiratory pigment, having the property of picking up oxygen when the blood passes through the lungs to produce the compound known as oxyhæmoglobin. In other parts of the body the oxyhæmoglobin breaks down, liberating oxygen, which is used in the oxidation processes (respiration) that the body tissues carry on.

**Hafiz**, besides being the pseudonym of a famous Persian poet, is a title conferred upon any Mohammedan who has committed the whole of the Koran to memory.

**Hafnium**, a metallic element discovered by Coster and Hevesy in 1922. It occurs in most zirconium minerals to the extent of about 5 per cent.

**Hag-fish**, a parasite sea-fish with soft backbone and eel-like form; found within the bodies of other fish, and called sometimes the "borer," or "the glutinous hag-fish."

**Hagiarchy**, a form of government composed of priests.

**Hagiology**, a branch of literature that is wholly given up to the history of the saints, and the setting forth of the stories and legends associated with their names.

**Hail**, hard, roughly spherical, balls of ice, consisting of white cores covered by layers of both transparent and opaque ice, frequently falling during thunderstorms. They usually do not exceed 1 inch in size, but hailstones larger than apples and weighing more than 2 lb. have been observed. The general theory of a hailstone is that near the top of a cumulonimbus cloud a raindrop becomes frozen, grows in size by condensation and through collisions with snow particles, and eventually becomes so weighty as to overcome the ascending air currents in the cloud. Falling, it first encounters supercooled water drops, immediately freezing on it, increasing the white core, and then at lower levels ordinary water drops, freezing more slowly, producing a layer of clear ice. Before the hailstone arrives at the ground gusts and lulls may transport it several times up and down both regions, adding alternate coatings of soft white and hard clear ice.

**Haileybury College**, in Hertfordshire, originally established in 1809 for the education of boys for service under the East India Company. Since 1862 it has been a public school, receiving its charter in 1864.

**Hair**. See "Medical Dictionary" and "Hygiene and Cosmetics."

**Hake**, a fish of the cod family, found in large numbers in the seas of Europe, but not in high favour for the table with fastidious feeders.

**Halberd**, a kind of spear much used as a military weapon in feudal times. Its blade was sharp-edged, and it bore an axe or projecting knife a few inches from the point. Halberdiers often formed the bodyguard of kings and notables.

**Halcyon**, a term associated in olden times with the kingfisher and days of soothing calm, "halcyon days" being a frequently used expression. The legend was that the kingfisher laid its eggs on the sea at a time of perfect stillness.

**Halibut**, one of the largest of the flat fishes, averaging when full grown from 4 to 6 feet in length, and highly esteemed for the table. Specimens of still larger size occasionally occur. It is plentifully distributed. Its two eyes are on the right side of the head.

**Hall-mark**. A mark or group of marks, impressed by an assay office on gold or silver articles guaranteeing the standard of fineness of the precious metal used in them. These marks, which have been applied to silver made in London since the beginning of the 14th century and perhaps earlier, make it possible to establish the year and place of assay as also the name of the maker. English pieces of silver usually have not less than four marks, viz., (1) town mark; (2) maker's mark; (3) date letter; (4) sterling mark.

The town mark is rarely changed; in London a crowned leopard's head was used from the earliest days until 1820 with only minor modifications, except for the period 1697-1720 when a lion's head erased was substituted; since 1820 the crown has been omitted.

Until the late 17th century a symbol was often used as a maker's mark, from 1696 to 1720 the first two letters of the maker's surname, and subsequently the maker's initials. Owing to the destruction of the earlier mark plates at Goldsmiths' Hall no maker's name prior to the late 17th century can be identified with certainty.

The London date letter is changed at the end of May each year, so each letter covers seven months of one year and five months of the following. The London date cycle has usually consisted of twenty letters: the alphabet of each cycle is of different style, and the letters are enclosed in shields of different shape.

The sterling mark, the lion passant, was introduced in 1544 and continued in use until 1697, when the higher Britannia standard was introduced in order to discourage the practice current amongst goldsmiths of melting down coin of the realm to make plate. The leopard's head crowned and the lion passant were then replaced by a figure of Britannia and a lion's head erased. Though the regulation imposing the higher standard was withdrawn in 1720, a small amount of Britannia standard silver continued to be made and still is made.

From 1784 until 1890 a plate tax was levied on all silver assayed in Great Britain and an additional duty mark, the sovereign's head, was used during this period. A Jubilee mark bearing the head of George V and of Queen Mary was used in between the years 1935 and 1935, and in 1953 a coronation mark with the head of Queen Elizabeth was introduced.

The tables of hall-marks on pp. 743-45 give the London date letter cycles from 1598 to the present day. The form of town mark and sterling mark used during each cycle is given at the head of each column. Where a major alteration took place in either of these marks during a date-letter cycle, the alternative forms are also shown. The date of the change can be established by reference to the notes above. At the bottom of each page the marks used by the major provincial, Scottish and Irish assay offices are shown. Owing to lack of space, the complete date-letter cycles are not shown, but two examples only from the 17th, 18th or 19th centuries. Where a provincial assay office was established in the 17th century or earlier, the marks of one year in the 17th and 18th centuries respectively are shown, where the office was not established until the 18th century, the marks of one year in the 18th and 19th centuries are given.

**Halloween** (Oct. 31st), the eve of All Saints' Day, a time associated, especially in Scotland, with certain pleasing superstitions attractively set forth in Burns's famous poem "Hallow-e'en." It is the night when young men and maidens are supposed, by observing certain rites, to have their future wives and husbands disclosed to them.

**Halo**, a luminous circle usually of 22° radius, surrounding sun or moon, produced by the refraction and reflection of light by ice crystals of high cirrus cloud. It is a very common occurrence, in the British Isles almost one day in three. The inner side is red and the outer a whitish-yellow colour. "Mock suns," i.e., patches of light at the same elevation as the sun are much rarer occurrences, sometimes being of great beauty and brilliance. (See *Coronae*.)

**Halogens**, the group name for the four non-metallic elements, chlorine, bromine, iodine, and fluorine. The term "halogen" means "salt-producer."

**Halteres**, the vestigial rear-wings of the two-winged flies or *Diptera* (e.g., the house-fly). The equilibrium in flight of these insects depends on the halteres, which are commonly called "balancers."

**Hampton Court Conference**, presided over at Hampton Court Palace by James I. in 1604 and which brought about his authorised translation of the Bible, had an important bearing on the

religious differences of the time. James refused to grant tolerations to the Puritans. This sowed the seeds of civil war. Following the conference three hundred English Puritan clergy were ejected from their livings.

**Hamster**, a kind of burrowing rodent, about the size of a rat, an inhabitant of Northern Europe and Asia. Remarkable for its cheek pouches, in which it stores food. Its fur is of considerable commercial value. The golden hamster (*Mesocricetus auratus*) is a delightful pet. (See *Domestic Pets* Section.)

**Hanaper Office**, a former Chancery office, deriving its name from the fact that its writs and papers were kept in a hanaper (hamper). The Chancellor's officer thus came to be known as the Hanaper. The Comptrollers of the Hanaper were abolished in England in 1842.

**Hand**, a measure of four inches, the average size of the palm; used in reckoning height of horses.

**Handfasting**, an informal marriage custom once prevalent in Scotland, whereby a man and woman bound themselves to cohabit for a year and a day, and at the end of that period either confirmed their contract by a regular marriage or separated.

**Handspike**, a wooden bar shod with iron to raise weights, used on shipboard and by artillery.

**Hansard**, the title given to the official reports of Parliamentary debates, so named after Luke Hansard who in 1774 became partner in a firm of printers to the House of Commons. His son T. C. Hansard was first the printer and then the publisher of an unofficial series of parliamentary debates inaugurated by William Cobbett in 1803. In 1909 production was taken over by H.M. Stationery Office and today's volumes contain full substantially verbatim reports of what is said in both Houses of Parliament.

**Hanseatic League** was a confederation of North German towns established about 1241 for purposes of mutual protection in carrying on international commerce. The League became so powerful that it was able to dominate the foreign trade of Norway, Sweden, Denmark, and even to some extent of London. A branch was established in London and had its guild hall in Cannon Street for hundreds of years. The League existed down to the middle of the 17th century. Hamburg, Lübeck, and Bremen are to-day the only cities which, as free ports, still by commercial courtesy retain the name of Hanse towns.

**Hansom**, a two-wheeled one-horse cab, invented by Joseph A. Hansom in 1843. It was, until the introduction of the motor-cab (or "Taxi"), the cab in most ordinary use in London and many other cities and towns in the United Kingdom. Lord Beaconsfield styled it the "gondola of London." It is constructed to seat two persons, and the driver sits on a "dickey" behind, level with the roof of the cab.

**Hara-kiri**, the custom of suicide by compulsion, or "happy despatch," once common in Japan, but no longer permitted. The condemned person gave himself the first cut, and if his courage then failed him, the fatal blow was dealt by a friend.

**Hare**, the leading member of the *Lepus* genus, and common in Northern Europe. Noted for having four upper front teeth, one pair behind the other, long ears, short tufted tail, and a cleft upper lip. It is a very swift animal, and intelligent in eluding pursuit, therefore much hunted, greyhounds being used to chase it, the sport being called "coursing." The hare makes a nest of grass, called a "form." It is prohibited by law to sell a hare or leveret during March, April, May, June and July.

**Harleian MSS.** comprise some thousands of volumes of MSS. and documents, collected by the first Earl of Oxford (1661-1724) and his son Edward. After the death of the latter, his widow handed the MSS. over to the nation for £10 000, a sum that did not represent a quarter of their value, and they are deposited in the British Museum.

**Harlequin**, the buffoon of ancient Italian comedy. As adapted to the British stage, however, harlequin is a pantomime character only, in love with Columbine, appearing in parti-coloured garments and carrying a wand, by which he exercises a magic influence in thwarting the fantastic tricks of the clown and pantaloon.

**Harmattan**, a dry wind which may blow between January and May across the Sahara to the Gulf of Guinea. Although affording relief from the tropical heat, vegetation withers because of its extreme dryness and much irritation is caused by the clouds of fine dust which it carries.

**Harmonic Motion**, regular periodic motion of the kind exemplified by a ball bobbing up and down at the end of a spring, and by the piston in a steam engine. It may be simple (simple harmonic motion) or composed of two or more simple harmonic motions. In simple harmonic motion the acceleration is proportional to the distance of the moving body from its original rest position.

**Harmonics**. Flute-like tones which can be produced by touching the strings of a violin in a certain way. The effect is due to the suppression of the fundamental frequency at which the string would normally vibrate. In consequence only the harmonics or overtones (notes one octave or more above the fundamental which combine to give the characteristic timbre of the instrument) are heard.

**Harmonica or Mouth Organ**, a small instrument consisting of reeds enclosed in separate chambers through which air is blown or sucked by the mouth. Recent improvements and elaborations have made of it a versatile solo instrument in the hands of an expert.

**Harmonium or American Organ**, a small organ of one or two manuals consisting entirely of reed stops. There is no pedal organ, the feet being used to operate the bellows.

**Harp**, a musical instrument of ancient origin consisting of many strings stretched on a frame. The player stands beside it and plucks the strings with his fingers. Used orchestraly in early Italian operas (17th century).

**Harpoon**, a kind of barb-headed spear used for attacking whales. These used to be thrown by hand, but the modern harpoon is an instrument of ingenious mechanism, with shaft, slot, and ring, and is fired from a gun.

**Harp-seal**, the ordinary Greenland seal, with a dark harp-shaped marking on its back, hence its name. It abounds in Newfoundland waters and further northward towards the Arctic.

**Harpisichord**, a keyboard instrument with a compass of up to six octaves in which stretched strings are plucked by quills. The harpischord was an instrument of great importance from the 16th to the 18th centuries, but it was eventually eclipsed by the pianoforte, in which the plucking action (*cf.* Harp) was replaced by a striking action (*cf.* Dulcimer).

**Harp-y Eagle**, a large bird of prey named from the winged monsters of Greek mythology, inhabiting the forest regions of Central and South America. It has a handsome grey plumage and large crest. It attacks and kills animals much larger than itself, and was called by the Aztecs "winged wolf".

**Harrier**, a bird of prey of the falcon family: of the various species distributed over the world, three breed in Britain: the moorland Hen harrier, the March harrier, and Montagu's harrier. They are slender birds with long tails and pointed wings. They nest on the ground and eat small mammals, frogs, lizards, and small birds.

**Harrow**, an agricultural implement with a series of strong teeth underneath which, when pulled over it, the ground is broken up. Iron is now largely used both for teeth and frame.

**Harrow School**, founded 1571, is a famous boys' school with great traditions.

**Hartebeest**, common African antelope of a grey-brown colour, with ringed and knotted horns bending backward and tapering to sharp points; gregarious, of large size, and capable of domestication. There are several species. Its flesh is not unlike beef in flavour.

**Hart's Tongue**, the common name for ferns of the *Scolopendrium* genus, only one species of which is found in England in the wild state.

**Harvard University**, the first American University, established at Cambridge, Massachusetts, in 1636, by John Harvard, a settler from Cambridge, England.

**Harvest Bug**, a very small insect, of a dark red colour, which appears in large numbers in the fields in autumn, and is peculiarly irritating to

animals and man by the tenacity with which it attaches itself to the skin and burrows underneath. Probably the larvæ of spinning mites (Trombidoids).

**Harvest Moon**, the full moon that occurs nearest to the autumn equinox, in September. It rises for several nights running about the same time, and yields an unusually brilliant series of moonlight nights.

**Harvestman or Phalangid**, animals related to the spiders. Usually with small oval bodies and extremely long thin legs. Harvestmen with shorter legs may be confused with spiders; the abdomen, however, is always segmented, a point of distinction from the spiders.

**Hashish**, a narcotic drug prepared from the gum extracted from Indian hemp, and largely used for smoking by the Arabs, and made into a beverage called *bang* in India, in both cases having much the same effect as opium.

**Hatchment**, in heraldry, is a square board, in vertical diagonal position, placed outside a house or on the tomb at the death of a member of a family and so arranged that it indicates the sex and condition of the deceased.

**Hatchways**, places or openings in the centre of a ship's decks, through which goods are lowered to or lifted from the hold.

**Hauberik**, a name first given to a portion of mail armour worn over the neck and shoulders, but later applied to a coat of mail extending below the knees.

**Hawfinch**, a well-known European bird of the finch family, having a variegated plumage, a sturdy bill, and black-and-white tail. In England it is seldom found away from the Midland and Eastern Counties. (*See* p. 1004.)

**Haw-haw**, a fosse or ditch sunk between slopes for defensive purposes, and not perceptible until closely approached.

**Hawk**. This name is applied to almost any diurnal bird of prey other than eagle, falcon, or vulture, but in its strict sense applies only to the *Accipiter* genus—the small Sparrow Hawk and the larger Goshawk, round-winged, long-tailed birds with barred under-parts. They prey upon small birds captured in flight.

**Hawk-moths**, large species of moths, thick of body and strong of wing, which fly with rapid swooping motion, hence its name. There are numerous handsome species in Britain.

**Hearth-Money** was a tax laid on hearths (in all houses paying the church and poor rates). Charles II. introduced it in 1662, and it was repealed in the reign of William and Mary.

**Heat**, a form of energy possessed by a body in virtue of the motion of its molecules. Heat can be conducted to other bodies and raise their temperature, or it can be radiated as waves into space. When a body changes its state, energy is involved. Thus when a liquid changes into vapour, as in evaporation, there is a fall of temperature, the energy absorbed being known as the latent heat of vaporisation. Conversely, when a gas changes into a liquid, as in condensation, the temperature rises, the energy released being known as the latent heat of condensation. Water has a great capacity for heat, the oceans being huge storehouses, a factor of the utmost importance in meteorology. The specific heat of a substance is the number of calories of heat required to raise the temperature of 1 gram of the substance through 1° C. In the case of gases the specific heat has two values, one at constant pressure and one at constant volume. (*See* p. 760.)

**Heath**, a flowering plant of that section of the family *Ericaceæ* called *Ericææ*. Heaths are widely distributed over uncultivated spaces of Europe and Africa. In Britain they are represented by heather (of which there are several species) and ling (*Calluna*), which cover thousands of acres of moorland. Some of the African or Cape heaths are very beautiful and much prized by florists. One species of heath (*Erica arborea*) which grows in S. Europe and N. Africa has close-grained woody rootstock used for making briar pipes.

**Heat Wave** is a spell of very hot weather, due chiefly in this country to a warm southerly current of air caused by the presence of an anticyclone over western or central Europe at the same time as a depression is stationary

- over the Atlantic. In the heat wave of May 29-June 8, 1947, temperatures of at least 85° F. were registered each afternoon in London. High humidity increases the discomfort.
- Heaviside-Kennelly Layer**, the layer of the ionosphere 60-70 miles above the ground which reflects radio waves of medium wave-lengths. It is a more efficient reflector at night than during the day. Short waves penetrate this layer.
- Hebrews**, Epistle to the, one of the books of the New Testament, to which no direct authorship can be assigned. Its chief mission was to proclaim Christianity as the continuation and fulfilment of the older Jewish faith.
- Hecatomb**, the name given to the public sacrifice of a hundred oxen in ancient Greece. In later times the word has been used to express any wholesale sacrifice of human beings or animals.
- Hedgehog**, a common insectivorous animal covered with sharp spines which it can, when on its defence, project in every direction by rolling itself up into a ball. During winter hedgehogs hibernate and should not be disturbed. (See Domestic Pets Section.)
- Hegira**, an Arab term signifying departure or flight, and used in reference to Mahomed's departure from Mecca for Medina, A.D. 622, from which date the Mahomedan era is reckoned.
- Helicopter**, heavier-than-air aircraft which obtains its lift from blades rotating above the fuselage in windmill-fashion. The first successful helicopters were the Focke-Wulf 61, a German machine (1936), and the VS-300, designed by Igor Sikorsky, flown in 1937. Helicopters can hover, and rise and descend vertically, in addition to being capable of horizontal flight.
- Heliograph**, an apparatus, used for sun-signalling, consisting of a movable mirror fixed on a tripod, which mirror flashes light reflections to a distant station in the Morse code, forming an effective means of communication. Heliograph signalling can be carried on up to 50 miles in ordinary weather without the aid of field glasses.
- Heliumeter**, an astronomical instrument for investigating the parallax of the fixed stars, and consisting of a telescope which has had its objective cut through the optical axis, admitting of both halves being conjointly utilised, one directed on one star while the other brings another into coincidence.
- Helio-stat**, an instrument used in astronomical observations which reflects the sun's rays continuously in the same direction.
- Heliotrope**, a favourite sweet-scented flowering plant, common in tropical and sub-tropical countries; the Peruvian heliotrope is the "cherry pie" of our summer garden borders.
- Heliotype**, a method of printing from photograph negatives by the use of a chemically treated gelatine surface as from a lithographic stone.
- Helium**, a gaseous element first discovered by means of the spectroscope in the sun's atmosphere. This discovery, made in 1868 by the astronomer Sir Norman Lockyer, was followed in 1895 by Sir William Ramsay's proof that the element existed on earth. He found it in the uranium ore, cleveite. Later it was established that helium is formed by the radioactive decay of many elements which emit  $\alpha$ -particles (nuclei of helium atoms) and is contained in all radioactive minerals. The largest source of helium is natural gas, the richest in helium being the gas from certain wells in Utah, U.S.A. Next to hydrogen, helium is the lightest gas known, has a lifting power equal to 92 per cent. of hydrogen and the advantage that it is inert and non-inflammable. It is used in the U.S.A. for inflating airships. Ordinary air contains 1 part in 200,000 of helium. It was the last gaseous element to be liquefied, this being achieved by Onnes in 1908 in Leyden.
- Hell**, according to the teaching of the earlier Christian fathers, is a place of eternal torment, to which the spirits of the wicked are doomed after mortal death. The Inferno, as imagined by Dante, is even now believed in by many; but in the general broadening of philosophic inquiry in modern times, the idea of this material hell has been greatly modified. The most orthodox of preachers in these days would hesitate to proclaim his belief in the hell of burning fires as accepted so generally a few generations ago.
- Hellebore**, a plant of the *Ranunculaceae* order. The best-known British examples are the green and stinking varieties. There is also a garden kind which flowers in December called the Christmas Rose. Hellebore yields a bitter substance which forms a drastic purgative, but is now little used.
- Hellenism** is the pursuit of the Greek ideal of physical and intellectual culture. Matthew Arnold's doctrine of "sweetness and light" had its foundation in Hellenism.
- Helmet**, originally a soldier's protective head covering, now a term applied to defensive head-gear generally. In mediæval times helmets were for the most part of metal, and varied in shape from reign to reign. Roman gladiators wore helmets that covered the face entirely, and the helmets worn at tournaments in the 15th and 16th centuries were so closed in that the wearers could only see through the perforations of the visor. The stiff hats worn by soldiers, policemen, and firemen generally are now styled helmets.
- Helots**, bondmen of ancient Sparta upon whom devolved the most menial occupations without other recompense than food and lodging.
- Hemiptera**, the order of insects to which belong the true bugs. Their wing structure is in most species incomplete, hence the term hemiptera. This order includes the familiar water insects, the water boatman and water skater, also the aphids, cicadas, leaf hoppers, scale insects.
- Hemisphere**, half of the terrestrial or celestial globe. Thus, taking the equator as the dividing line, we have the Northern Hemisphere above that line, and the Southern Hemisphere below it. Again, there is the geographical division of the Eastern and Western Hemispheres, the former comprising Europe, Asia, Africa, and their outlying islands; the latter including North and South America.
- Hemlock**, a plant of the *Umbelliferae* family, growing in all parts of Britain, and containing a strong alkaloid poison. Used medicinally, this alkaline substance is of considerable service, being a powerful sedative. According to Pliny, hemlock was the poison used by the Athenians in putting criminals to death.
- Hemp**, name of a plant native to Asia, now cultivated widely for the valuable fibre contained in the stalk or in some species in the leaves. Hemp fibre has been replaced by cotton for textiles and jute for sacks and is now chiefly used for cordage and twine. It contains a resinous substance from which the narcotic hashish is made. The seed yields a valuable oil. The term hemp is also used for other fibre plants, including manila hemp from the Philippines, sunn hemp from India, sisal from W. and E. Africa and phorium from New Zealand.
- Henbane**, a plant found in Britain and other parts of Europe and Northern Asia. It belongs to the potato family *Solanaceae*, grows mostly on waste ground, and bears yellow-brown flowers veined with purple. The leaves yield a poisonous alkaloid substance which, medicinally prepared and administered, is of great use. Tincture of henbane is often preferred to laudanum.
- Henna**, an Egyptian plant bearing small white flowers; Mahomed's "chief of flowers," and the "camphire" mentioned in the Bible. The leaves yield a dye with which it is the practice of Eastern women to stain their nails, eyelids, and hair.
- Heptameron**, a book of stories, written or compiled by Queen Margaret of Navarre in imitation of Boccaccio's *Decameron*, and supposed to have covered seven days in the telling.
- Heptarchy**, a word derived from the Greek *hepta*, seven, and denoting the seven kingdoms (*archai*) into which Anglo-Saxon England was supposed to have been divided before 900. The seven presumably were Kent, Essex, Sussex, Wessex, Mercia, East Anglia, and Northumbria.
- Heracleum**, a plant of the *Umbelliferae* family, common in southern and central Europe, though only one species, the cow parsnip, grows in England. It has a bitter root, and from the juice of the stem an intoxicating liquor is occasionally prepared.

**Herald**, an officer of state empowered to make formal proclamations and deliver messages from the sovereign or other high personage whom he served. In the developments which took place in armorial bearings, the herald was the functionary charged with the duty of their proper depiction.

**Heraldry**, the art or science of genealogy and armorial bearings, was mainly the outcome of the love of outward distinction which prevailed in mediæval times. "Heraldry," says Stubbs, "became a handmaid of chivalry, and the marshalling of badges, crests, coat-armour, pennons, helmets, and other devices of distinction grew into an important branch of knowledge." The *shield*, or *escutcheon*, is the ground upon which armorial signs are traced, the colour of the shield being called the *tincture*, the signs recorded the *charges*. There are seven *tinctures*—or (gold), *argent* (silver), *gules* (red), *azure* (blue), *vert* (green), *purpure* (purple), and *sable* (black). The *charges* are classed as "Honourable" and "Subordinate" ordinaries, comprising lines and geometrical forms; and "Common" ordinaries, which latter includes all representations of natural objects. There is also a system of external signs, such as crowns, coronets, mitres, helmets, mantlings, wreaths, and crests, each having its distinctive significance. For other distinguishing marks see *Hatchments*, *Badges*, *Quartering*, *Rampant*, *Peau*.

**Heralds' College** or **College of Arms**, was incorporated by Richard III. in 1483. Its head is the Earl Marshal (an office hereditary in the family of the Dukes of Norfolk), and there are three King-of-Arms, six Heralds, an extra Herald, and four Pursuivants. The business transacted is wholly connected with the tracing of genealogies and the granting of armorial bearings. In Scotland the Heraldic functions are performed by the Lord Lyon King-of-Arms, and in Ireland by the Ulster King-of-Arms.

**Herbarium**, a systematically classified collection of preserved plants. One of the largest herbaria in the world belongs to the Royal Botanic Gardens at Kew.

**Herbivora**, animals subsisting upon grass, herbs, or other plants.

**Heredity** is the study of the transmission of physical and mental characteristics from one generation to another. Gregor Mendel (1822-1884), a great experimenter in the field of inheritance, considered the sex cells to be the bearers of hereditary characteristics, by which they are handed on. The modern theory is that hereditary factors are situated in the minute bodies known as genes, which form the constituent parts of chromosomes, found in the centre of the nucleus of each cell. In general psychological characteristics are due more to social environment than to inheritance. (See p. 173.)

**Hereford Cattle**, a breed having a dark-red body, with a white face and breast, and sometimes a long line of white upon the back. They are hardy, good grazing animals, excellent for the butcher, but not useful for dairying purposes.

**Heretics**, a term applied to those who choose their own creed instead of adopting one imposed by authority. In the past heretics were severely dealt with, thousands being burned at the stake.

**Heriot**, a fine or acknowledgment of service due to a manorial lord and paid on the decease of the tenant, originally in the form of military equipment, afterwards money or beast.

**Hermaphrodite**, human beings, animals, or plants possessing both male and female generative characteristics. True hermaphrodites very rarely occur.

**Hermetic Philosophy**, the doctrine or system propounded by Hermes Trismegistus, an Egyptian of the 2nd century, who was supposed to have written forty-two books devoted to religion and the occult sciences, which books were always kept under secret guard, hence the term "hermetically sealed." These Hermetic Books were presumed to be copied from the ancient sacred books of Egypt.

**Hermit**, one who retires into seclusion for the purpose of religious contemplation and a desire to live apart from the world. Hermits were regarded with reverence in mediæval times and were free to wander about. Peter the Hermit instigated the first Crusade.

**Hermit Crab**, a kind of crab having a soft fleshy body, without shell-protection. It possesses itself of the empty shell of some mollusc, into which it backs itself, and thus usurped shell it carries about with it thenceforward, or until it has outgrown its dimensions, when it seeks a larger one. The common Hermit Crab of Britain usually resorts to a whelk shell.

**Heron**, a large wading bird with long curved neck and pointed bill, is a member of the *Ardeida* family, of which there are many species. Egrets and bitterns are included as herons. Herons are to be met with in marsh lands and near rivers and lakes, where they feed on fish and frogs. They nest in trees in large numbers, these colonies being called heronries. The common heron is native to England, and other species from the Continent are frequent visitors.

**Herring**, a common sea-fish abounding in northern seas and always to be found in large numbers round the British coasts. The herring fishing is the most important fish industry in this country, a very numerous fleet being engaged in it. The fishing season proper lasts from May to October, the enormous shoals being followed as they move from place to place. The spawning season is about the end of August. One female herring will yield from 20 to 50 thousand eggs.

**Heteromys**, a species of "spiny pocket" rodents, possessing cheek pouches, belonging to the family *Sacomysina*, and indigenous to Trinidad.

**Heulandite**, a mineral; one of the best known zeolites; chemically, calcium-sodium-aluminium silicate.

**Hexagon**, a figure consisting of six sides and six angles, called a regular hexagon when all the sides and angles are equal.

**Hexahedron**, a solid body having six sides, particularly exemplified in the cube, or regular hexahedron.

**Hexameter**. See *Mètre*.

**Hexapla**, a 3rd-century edition of the Old Testament in parallel Hebrew and Greek characters, by Origen.

**Hexateuch**, the title given to the first six books of the Old Testament, comprising the Book of Joshua in addition to the five books of the Pentateuch.

"**Hiawatha**," the title of one of Longfellow's best-known poems. The hero is a being supposed by the Red Indians to be a spirit sent from realms of space to lead them to a higher existence.

**Hibbert Lectures**, on theology by eminent authorities, founded in 1878 by the bequest of John Hibbert, a West Indian merchant.

**Hibernation**, expresses the dormant condition in which numerous mammals, reptiles, amphibians, insects, plants, etc., pass the winter. Before hibernation sets in, the animals fatten themselves up, but in spite of this there is considerable loss of weight sustained during hibernation. Animals of the torrid regions pass through an analogous period during the hot season, when the sources of food are dried up.

**Hickory**, an American tree of the walnut family, remarkable for its very hard, solid, heavy white wood, and bearing an edible, four-lobed nut.

**Hickory-shirt**, an American term signifying a shirt made from checked cotton stuff.

**Hicksites** were a small community of American Quakers, who separated themselves from the parent church, under Elias Hicks, in 1827.

**Hierarchy**, a term applied to ecclesiastical or Church government, and involving a graded organisation with a supreme head.

**Hieroglyphics** are the earliest form of pictured symbolic expressions, and are supposed to have been introduced by the ancient Egyptians. They consist of rude depictions of animals, plants, signs, and objects, and in their later examples express, in abridged form, ideas and records from which significant historical information has been gleaned. The deciphering of Egyptian hieroglyphics long formed an ardent study, but gradually the key to the riddle was discovered, and most of the ancient records can now be understood. But the Mexican and Maian picture writings are still largely unsolved. (See *Rosetta Stone*.)

**Hieronymites** were hermits following the rule of St. Augustine with additions taken from the writings of St. Jerome, founded in the 14th century on the Peninsula. They went to

- Spanish and Portuguese America and helped to Christianize the American Indians. The order still survives in Spain.
- Hindi**, the great Aryan vernacular language of Northern India.
- Hinduism**. The original inhabitants of India (the Dravidians) were primitive tribes who worshipped many nature gods. Some time about 2000 B.C. India was invaded from the North by the Aryans, a light-skinned and civilised people; the word Hindu is believed to be a Persian word used by the Dravidians to describe their conquerors. "Hinduism" is not only the religion but also the social institutions of about three-quarters of the population of the country. The original religion of the Aryans described in the religious books known as the Vedas mingled with the polytheism of the Dravidians to form a most complex mixture now known as Hinduism. At the highest level, known as Brahmanism, belief is in a subtle and sophisticated form of monotheism (Brahma is a universal and all-embracing spirit), but there is a tolerant acceptance of more primitive beliefs. Thus Vishnu (a conservative principle) and Siva (a destructive principle) are accepted as aspects of the deity. Krishna is said to be an incarnation of Vishnu, somewhat as Christ is in the Christian world accepted as an incarnation of God. There are, however, many other gods, and the religion embraces many primitive and crude beliefs.
- Hindustani**, the *lingua franca* of India, a Sanskritized Hindi vernacular introduced by the British in 1837 to replace the official Persian. It is written in Devanagari (Sanskrit) characters. The Persianized Hindi vernacular is known as Urdu.
- Hippodrome**, in ancient Greece, was a building set apart for horse and chariot races, and was often the scene of great spectacular performances.
- Hippogriff**, a fabulous animal, like a horse in body, but with the head, wings, and front legs and claws of an eagle. The monster frequently appears in the romances of the Middle Ages.
- Hippopotamus**, the largest living representative of the hog family, and widely distributed over Africa, where it is known as the "river-horse." It is of immense bulk, attaining a length of 12 feet and a weight of 4 tons and stands about 5 feet high. Its skin is hairless and about 2 inches thick, and it has a pair of tusks often weighing as much as 6 lb. It spends most of its time in the water, and lives entirely on vegetation, both aquatic and terrestrial. The pigmy hippopotamus, which occurs in forests and swamps in W. Africa, is only half the size.
- Hippuris**, a genus of plants growing in marshy places. It has an erect stem, bears polygamous flowers, and has its leaves in whorl form. Its astringent qualities render it of use in medicine. The common Mare's-tail is a well-known species.
- Hisingerite**, a hydrous iron silicate found in certain parts of Scandinavia, and named after Hisinger, the Swedish mineralogist.
- Histology** is that part of anatomical science which deals with those details of the human structure that can only be investigated with the aid of the microscope.
- Historiography**, the writing of history.
- Hittites**, an ancient race (often mentioned in the Old Testament) who inhabited Asia Minor and N. Syria from the third to the first millennium B.C. Excavations have revealed that they attained a high level of civilisation round about 1350 B.C. They were rivals of Egypt, disputing with Pharaoh the mastery of the Middle East.
- Hobby**, a bird of the falcon family, about 12 inches long, seen in England in the summer, and formerly flown at small birds, which are its chief food.
- Hobson's Choice**, a term meaning the compulsory acceptance of the thing offered, is an English proverbial phrase which had its origin in the circumstance of the letting of horses by a Cambridge innkeeper named Hobson, who compelled each customer to take the horse which stood nearest to the stable door; "that or none."
- Hochheimer**, a Rhine wine of high repute, made from the yield of the vineyards of Hochheim, near Mainz, Germany.
- Hog**, the common name of animals of the Suina family, including the wild boar, pig, and sow. The wild boar, *Sus scrofa*, is the common ancestor. The skin of the hog is covered with bristles, the snout truncated, and each foot has four hoofed toes. Hogs are omnivorous feeders and eat almost anything that is given them.
- Hogmanay**, the Scottish New Year's Eve festival and a national holiday of the country. The custom of demanding Hogmanay bread is still upheld in many parts of Scotland.
- Hogshead**, a cask of varying capacity, also a specific measure. In the old English measure a hogshead was 52½ imperial gallons, or 63 old gallons of wine. Of beer 54 old gallons make a hogshead.
- Holland**, the name given to a fine kind of cloth made from flax, originally manufactured only in Holland. Brown Holland is the kind not fully bleached.
- Hollands**, Schiedam, or Schnapps, a kind of gin made mostly in Holland from rye and malt, with a flavouring of juniper berries.
- Holly**, a hardy evergreen shrub, largely grown in England. Its bright dark green prickly curved leaves and its clusters of red berries are familiar in all parts of the country, and used as house decoration between Christmas Eve and Twelfth Night. Its wood is white and hard, valued for carved work, while its bark yields a gummy substance which is converted into birdlime.
- Holograph**, a letter, manuscript, or document written throughout by its author.
- Holothuroidea**, the class of marine animals commonly called sea-cucumbers. Dried sea-cucumber is called trepang or béche-de-mer, which is highly prized as a food, particularly in China.
- Holy Alliance**, an alliance ostensibly for conserving religion, justice and peace in Europe, but used for repressing popular tendencies towards constitutional government. Formed by Alexander I. of Russia, Francis I. of Austria and Frederick William III. of Prussia, at Paris on September 26, 1815. Subsequently joined by all the sovereigns of Europe, except the Pope and the King of England. It ended after the 1830 revolution in France.
- Holy Coat of Treves**, a garment preserved in the Cathedral of Treves and said to have been worn by Christ. It was brought from Jerusalem by the Empress Helena in the fourth century.
- Holy Grail**, the cup from which Christ drank at the Last Supper, and supposed to have been preserved by Joseph of Arimathea. Many poets and romancers have made the "Quest of the Holy Grail" the subject of their imaginings, Tennyson making fine use of it in his "Idylls of the King."
- Holy Rood**, an annual Roman Catholic festival held on September 14th to celebrate the Elevation of the Cross in commemoration of its re-erection in Jerusalem by the Emperor Heraclius in 628 after it had been lost for nearly 300 years and had fallen into the hands of the Persians. Also included in the Church of England calendar.
- Holyrood**, the ancient royal palace at Edinburgh, dating from the 15th century, and inhabited by many Scottish sovereigns, notably Mary Stuart, the rooms occupied by her (including the one in which Rizzio was murdered) being still shown. It is now known as Holyrood House and is still used as a royal residence.
- Holy Water**, water blessed by a priest and kept in small fonts at the entrance to Roman Catholic churches, and used by worshippers going in, and out, or by priests in sprinkling.
- Holy Week** is the week preceding Easter Sunday, and includes the days of the Sufferings of Christ, ending on Good Friday.
- Homage**, an act of fealty whereby a person acknowledges his service of inferiority to another.
- Home Rule**, the term applied to a separate Irish Parliament, which was the object of two Bills introduced by Mr. Gladstone in 1886 and 1893, both of which were rejected, and led to the establishment of a Liberal Unionist party of seceding Liberals. Mr. Asquith introduced a new Home Rule Bill on February 12, 1912. In September strong counter demonstrations, headed by Sir Edward Carson, took place in Ulster; the Bill passed the Commons but was

rejected by the Lords. On the outbreak of war party politics were set aside, and ultimately the Bill was allowed to pass, its operation to be delayed until after the war. In 1920 another Bill was passed in lieu of that of 1914, providing for a Northern Ireland Parliament, sitting at Belfast and a southern Parliament sitting at Dublin. In 1921 a Bill was passed establishing the Irish Free State, later known as Eire. The Republic of Ireland Act, Nov. 1948, established the Irish Republic as a sovereign independent state outside the British Commonwealth.

**Homer** (Omer), an ancient measure of capacity used in Syria, Palestine and Babylonia.

**Homicide** (the killing of a human being) has three classifications—*justifiable*, as when the killing is an act of necessity, or performed in the execution of justice; *excusable*, when done in self-defence or by misadventure; and *felonious*, when done of deliberate intent, as murder, manslaughter and suicide.

**Homily**, something between a discourse and a sermon; not so discursive as the one, or so elucidatory as the other.

**Honey**, the sweet syrup formed by bees from the nectar of flowers, the sucrose in the nectar being converted into a mixture of the simple sugars, glucose and fructose.

**Honeydew**, a viscid secretion, from plant lice (aphids), found on leaves, chiefly in hot weather, and looking like dew.

**Honey-eater**, an Australian bird (of which there are many species) provided with a long curved bill, and tufted tongue. It lives by sucking the "nectar" from the flowers which abound in rural parts of Australia and New Zealand.

**Honours of War**, a privilege sometimes conceded to a defeated force of marching out of the place surrendered with colours flying and drums beating.

**Hookah**, an Oriental pipe for tobacco smoking, the smoke being drawn through the water of a glass goblet by means of a long flexible tube.

**Hook-money**, an old silver currency of Ceylon, in use in the 17th century, consisting not of coinage, but of hooked pieces of actual silver.

**Hookworm**. A minute roundworm (*nematode*) parasitic on man, causing the disease called also hookworm or ankylostomiasis. It passes through a larval stage in the soil and then penetrates into its human host through the skin, particularly the skin of the feet. It is then carried in the bloodstream to the lungs, whence it passes to the gut via the pharynx. A heavy infection results in acute anemia and severe debility. The disease is widespread, but most prevalent near the Equator.

**Hoopoe**, a remarkably handsome bird with vivid black and white-barred wings and tail and black-tipped crest which opens like a fan. Ranges over Europe, Asia, and Africa and occasionally visits Britain in the spring. Other species are confined to Africa, Madagascar, and India.

**Hoplite**, the name given to a heavily armed foot soldier in ancient Greece, carrying a shield and javelin, and wearing a helmet and armour.

**Hops**, the female "cones" of the hop plant used in brewing; their essential oils give beer an aromatic flavour, and their tannin and resin act as a preservative as well as accounting for the bitter taste desired. The hop is a perennial climber belonging to the mulberry family. The male and female organs are on separate plants; as only the female flower-heads are commercially useful, female plants predominate in a hop garden, only a very few male plants being grown so that the female flowers can be fertilised.

**Horary**, a term used of the arc which a celestial body describes in an hour, or the angle which that arc subtends, the eye of the onlooker being supposed to be at the angular point.

**Horizon**, the limit of vision, the apparent line where sea and sky, or land and sky meet. This is termed the *sensible* or visible horizon. An ordinary person at the height of 5 feet can see for 3 miles, at 20 feet 6 miles, at 50 feet 9½ miles, and at 1,000 feet 42 miles. The figures are approximate.

**Hormone**, a distinct chemical substance produced by an endocrine or ductless gland which causes a physiological reaction in another organ (or organs) to which it is carried by the bloodstream. Examples are: insulin (secreted by

the pancreas), thyroxine (thyroid gland), adrenaline (adrenal glands), and sex hormones. (See Glands, "Medical Dictionary.")

**Horn** or **French Horn**, a brass instrument of the trumpet family (i.e., played by three valves) whose tube is very thin and long (Horn in F = 12 ft.). In consequence the tube is curled in a complicated manner. Owing to the sweet tone it is capable of producing, the Horn sometimes plays as part of the wood-wind.

**Hornbill**, large bird found in Africa and oriental regions, remarkable for its having an immense horned upward-curved helmet, growing over its downward curved beak. It inhabits tropical regions, and feeds on fruits. When the female has laid her eggs in the hollow of a tree, the male bird stops up the entrance, and keeps her imprisoned until the hatching is completed and the young ones are able to fly. There are several species.

**Hornblende**, a hard common mineral, a silicate of calcium, magnesium, iron and aluminium, of a dark green colour. It is a constituent of numerous rocks, including diorite, syenite, and hornblende schist.

**Horn Book**, a children's alphabet and primer which had a cover of thin horn. It was in use until about a hundred years ago.

**Horned Viper**, a curious African genus of *Viperidae*, with a small pointed bone over each eyebrow; a venomous species, found in Egypt, is thought by some to be identical with the "adder" mentioned in Genesis xlix. 17.

**Hornet**, a general name for many of the bigger wasps. It usually nests in hollow trees, and despite its rather fearsome appearance does not sting unless unduly provoked.

**Hornpipe**, an old English single-step dance, which used to be executed to the music of an ancient hornpipe, hence its name.

**Hornstone**, a dark flint used for flint mills in potteries.

**Hornswink**, a popular name for the lapwing.

**Horology**, the science of time-measurement, including the construction and management of clocks, watches, etc. Instruments of this kind are not known to have existed before the 12th century, and until the introduction of the pendulum in the 17th century, clocks were ill-regulated and inaccurate. The time-recording mechanisms of the present day include (a) the *clock*, which shows the hours and minutes by hands, and strikes the hours, and sometimes quarters; (b) the *timepiece*, which is not generally a fixture and shows the time, but does not strike; (c) the *watch*, which is a pocket time-keeper; (d) the *chronometer*, which indicates the minutest portions of time; (e) electric timepieces, mains electric clocks; (f) the highly accurate quartz-crystal clocks used for astronomical purposes. See also Clocks.

**Horoscope**, an astrological term, indicating the reading of the signs of the planetary bodies, according to the methods of the astrologers, at the date of a personal nativity, or other given date. In ancient times there were astrologers attached to the various courts, and their "castings" and predictions had many believers.

**Horse Chestnut**, one of the large forest trees, with ample branches and full foliage, and much esteemed for parks and ornamental grounds. The bark and fruit seeds yield substances of commercial value, but the timber is not worth much. The tree came originally from Asia about the 16th century.

**Horse Guards**, the building in Whitehall which until 1872 was the headquarters of the Commander-in-Chief of the British Army. The archway is still sentinelled by mounted guards.

**Horse Latitudes** are the belts of calms between the regions of the trade winds and the westerlies of higher latitudes. At one time when ships transporting horses were becalmed in these belts the horses were thrown overboard.

**Horse, Master of the**, the Court official having charge of the royal stables, the provision of horses, carriages, and motor-cars for the royal family. The duties are actually carried out by the Crown Equerry.

**Hospice**, a place of refuge and rest for travellers and pilgrims. The most famous is that of the St. Bernard Pass, where dogs are kept for the succour and help of belated wayfarers.

**Hospitallers, Knights**, were of the order of St. John of Jerusalem, at first devoted to the aid of the sick, but afterwards military monks, who became prominent figures in the Crusades of the 12th century; in the 16th century they had the island of Malta given to them and continued there until dislodged by Napoleon in 1798. There has been some attempt to revive the order, and the modern English institution of Knights of St. John commemorates the old name and continues something of the original service. (See *Templars and Teutonic Order*.)

**Hospitals**. The earliest hospital is supposed to have been at Caesarea in the 4th century. In the 7th century the Hôtel Dieu was founded in Paris; in the 9th century there were 24 hospitals in Rome. Some of the earliest hospitals of Great Britain are in London; St. Bartholomew's 1123, Bethlehem 1247, St. Thomas's 1213, Westminster 1720, Guy's 1724, London 1740. The British hospitals have in the past been largely dependent on voluntary contributions. There are excellent equipped medical schools attached to most general hospitals, and expert research workers are engaged on the investigation of diseases. The best physicians and surgeons give their services free to the hospitals. (See *The National Health Service*, p. 806.)

**Hôtel des Invalides**, the famous military hospital and soldiers' home in Paris, founded in 1670, and one of the attractions of the city in later years, as it contains the tomb of Napoleon.

**Hottentots**, name given to certain African natives by Dutch settlers in the 17th century. They used to occupy the greater part of Cape Colony, and though driven out a number still survive in S.W. Africa. Appear to be related to the Bushmen, though their culture is more advanced. In addition to herding, they practise some farming and know how to smelt iron.

**Hounds** are dogs that were originally bred and trained for hunting, such as the greyhound, foxhound, bloodhound, wolfhound, deerhound, beagle, harrier, etc., but now often kept also as domestic dogs. The greyhound, deerhound, and wolfhound hunt by sight, the others, with the bloodhound first in order, track by scent.

**Hour-glass**, a glass instrument tapering to the middle to a narrow orifice, through which a sufficient quantity of fine sand gravitates to mark an hour of time. When the sand has run through from one end, it can be reversed and made to count the hour in the opposite direction. The same kind of glass with smaller supplies of sand will indicate shorter periods, as an egg-glass, which runs its course in three minutes—time to boil an egg by.

**Hours**, according to the Koran, are beautiful nymphs of paradise set apart to attend upon the "faithful" Mohammedans as they enter the celestial abode.

**House Flies** abound in all countries and are exceedingly prolific. Their eggs are hatched within 24 hours of being deposited, and full maturity is attained in a month. They feed mainly on decayed animal and vegetable matter.

**Hovas**, the dominant tribe in Madagascar until the French took possession of the island in 1895.

**Howdah**, a railed, canopied seat fitted on to the back of an elephant for conveying people in. The name is also given to a somewhat similar contrivance for the backs of camels.

**Howitzer**, a cannon, short and light in proportion to its bore, used for throwing shells and case-shot, and requiring a comparatively small charge.

**Howler Monkey**, a species of South American monkey noted for a laryngeal conformation which enables it to emit a loud reverberant noise something between a yell and a howl, as the name suggests. The peculiarity is developed most strongly in the males, which are the largest American species.

**Hoy**, a small sloop-rigged vessel usually engaged in light traffic, such as conveying passengers and goods from the shore to steamers, or *vice versa*.

**Huanuco-bark**, a medicinal bark, brought from the Peruvian town of that name, and derived from the *Cinchona micrantha* tree.

**Huckaback**, a kind of strong linen cloth, with one side rough; generally used for towellings.

**Huguenots**, a name applied to the French Protestant communities of the 16th and 17th centuries. Henry of Navarre, by the Edict of

Nantes in 1598, granted them religious freedom, but more than a quarter of a century before—August 24, 1572—thousands had been put to death in the massacre of St. Bartholomew. The revocation of the Edict of Nantes by Louis XIV. in 1685 drove thousands into exile in England, Holland, Germany, and America.

**Hulsean Lectures**, a series of from four to six lectures delivered annually by a selected preacher before the University of Cambridge on Scriptural subjects, under the provision of the will of John Hulse, who died in 1790. There is also a Hulsean professorship of divinity at the same university, established in 1860 in substitution for the office of "Christian Advocate" originally founded by Hulse.

**Humane Society**, Royal, instituted in 1774 to collect and circulate the most approved and effectual methods for recovering persons apparently drowned or dead; to provide suitable apparatus in and around the Metropolis for rescuing persons from drowning; to bestow rewards for the preservation and restoration of life; and to encourage swimming exercises at public schools and training-ships with reference to saving life from drowning. Supported by voluntary contributions.

**Humanism**, represents a system of education based not only on the Greek and Latin classics but also on the civilisation of the Renaissance.

**Humble-bee or Bumble-bee**, the common name of the insects of the genus *Bombus*, of the Hymenoptera order. They live in small communities comprising males, females, and neuters, their habitations being underground. They do not have one queen bee only like the hive bee, but several females occupy the same nest, and these alone live through the winter, breeding and forming new colonies in the spring. Although this large bee buzzes loudly, it does not sting.

**Humidity**, the state of the atmosphere with respect to the water vapour it contains. "Absolute humidity" is defined as the density of the vapour present, while "relative humidity," more frequently employed, indicates the degree of saturation, i.e., the ratio of the actual vapour pressure to the saturation vapour pressure at the particular temperature, expressed as a percentage.

**Humite**, a mineral of the Chondrodite variety, crystalline and translucent, brownish-yellow to white in colour, composed of magnesia, silica, fluorine, and protoxide of iron.

**Humming Birds** are so called because of the humming noise made by the vibration of their wings in flying. They are of radiant plumage, and in size they are among the smallest birds. There are from four to five hundred species, and they are confined wholly to North and South America, being most numerous in the tropical latitudes. They have long, slender bills and tubular tongues which reach down into flowers to suck up the nectar on which they feed.

**Hummum**, the original name for what is now called the Turkish Bath in this country. One of the first of these baths to be established in London was the Hummums in Covent Garden.

**Hundred**, the ancient divisional name given to a portion of a county for administration or military purposes. It is supposed to imply the territory occupied by a hundred families; or the space of a hundred hides of land, or the capacity of providing 100 soldiers. Each hundred has its hundred court, with powers similar to those of a manor court, but this was abolished in 1867 by County Court Act.

**Hundred Days**, the interval of time between Napoleon Bonaparte's entry into Paris after his escape from Elba and his departure after his abdication, extending from March 20, 1815 to June 28. During this period occurred the battle of Waterloo, June 18.

**Hundredweight** in Great Britain is 112 lb, avoirdupois; in the United States it is an even 100 lb.

**Hundred Years' War**, a term applied to the almost incessant contest between England and France, lasting from 1338 to 1453, including such famous battles as Crécy, Poitiers, and Agincourt, and engaging successively Edward III., Henry V., and Henry VI., among English kings.

**Huns**, a fierce Asiatic race which swept over eastern Europe in the 4th century. Under Attila about the middle of the 5th century they obtained control of a large portion of central

and eastern Europe, forcing even Rome to pay tribute. Their defeat at Châlons-sur-Marne in 451 and the death of Attila in 453 terminated their empire.

**Hunterian Museum**, a celebrated collection of anatomical specimens originated by John Hunter, the distinguished surgeon and physiologist, towards the end of the 18th century in London, and now in the possession of the Royal College of Surgeons. Dr. William Hunter, the brother, founded a Hunterian Museum at the University of Glasgow.

**Hurdy-Gurdy**, an Italian rustic so-called musical stringed instrument of the lute order, the sounds of which are produced by the action of a rosined wheel turned by the left hand, the notes being made by the fingering of the right hand.

**Hureaulite**, a transparent, almost colourless mineral, found in granite measures at Limoges, near Hureau.

**Hurricane**. (See *Cyclone and Wind*.)

**Hussites**, followers of John Huss, the Bohemian reformer and disciple of Wyclif, who was burned at the stake in 1415. After their leader's death, the Hussites became a formidable body, and took up arms on behalf of their faith, their religion being strongly imbued with political feeling. In spite of persecution they survived until the Reformation.

**Hyæna**, a carnivorous quadruped of which there are three species: striped, or laughing hyæna common to North Africa, India, Syria, and Persia, and noted for the peculiar cry from which its name is derived; the brown hyæna, with long shaggy hair, a native of Southern Africa; and the spotted hyæna, also confined to Africa. They have great jaw-power, and are of nocturnal habits.

**Hybrid**, an animal or plant produced by the union of two distinct species.

**Hydra**, an aquatic animal of simple structure, whose body is in the form of a cylindrical tube, with a disc-shaped base by which it attaches itself to any shifting substance. Its mouth is surrounded by tentacles by which it catches its food. The Hydra has the power of reproducing lost parts.

**Hydrates** are compounds containing water of crystallisation.

**Hydraulic Press**, perfected by Joseph Bramah, the inventor, in 1795, is a useful apparatus, the pressing power of which is obtained by the action of water. Two plates, the upper one movable and attached to a large piston, the lower one fixed, are contained within two uprights. The movable piston works in a cylinder of water in connection with a small force-pump, and the pressure is applied by moving a lever which brings a well-known hydrostatic law into operation, and presses the material between the two plates to the required degree. The hydraulic press is largely used for compressing articles for packing, and for extracting purposes.

**Hydraulic Ram**, a form of automatic pump, used to raise water to a height by the action of its own falling velocity.

**Hydraulics**, the science of applied hydrodynamics, or water-machine engineering, ranging from pumps to marine engines.

**Hydrocarbons** are compounds of carbon and hydrogen. They include the *paraffins*, which are saturated compounds (e.g., methane); the ethylene, acetylene and other series which are unsaturated; compounds with ring structures, e.g., benzene, naphthalene, and anthracene. Petroleum is composed almost entirely of hydrocarbons.

**Hydrochloric Acid**, a colourless gas, consisting of hydrogen and chlorine, and resulting in considerable quantities as a bye-product of the soda-ash or salt-cake manufacture. Its solution forms the common hydrochloric or muriatic acid of commerce. It is present to the extent of nearly half a per cent. in the digestive juice secreted by the stomach.

**Hydrocyanic Acid**, cyanide of hydrogen or prussic acid; very poisonous, and of the odour of bitter almonds. Discovered by Scheele in 1782.

**Hydrodynamics**, the science of fluids in motion.

**Hydrofluoric Acid** is obtained by distillation of fluorspar with sulphuric acid, and is a compound of fluorine and hydrogen. Its action is

highly corrosive, it is a valuable agent in etching on glass, and is a rapid decomposer of animal matter.

**Hydrogen**, a colourless gaseous element and the lightest of all substances. Cavendish in 1766 was the first to recognise that it was an element. It is 14·4 times as light as air, and is found in a free state in volcanic regions. It can be obtained by the action of metals on acids, and when burned in air combines with oxygen to form water. Commercially it is used to produce the very hot flame of the oxy-hydrogen blow-pipe for cutting metals; to fill balloons and airships; to harden certain oils and render them suitable for margarine- and soap-production.

**Hydrography**, the science of water measurement, as applied to seas, rivers, lakes, currents, rocks, reefs, etc., and embracing the whole art of navigation.

**Hydrometer**, an instrument for measuring the specific gravity of liquids, especially for ascertaining the strength of spirituous liquors and solutions. It is usually in the form of a glass bulb, to the lower end of which a smaller bulb, containing mercury, is attached, which forces the instrument to sink into the liquid which it is to test. The larger bulb has a scale fixed to it, and the indication on this scale of the sinking point shows the specific gravity. There are many varieties: Twaddell's—a pear-shaped bulb containing mercury; Beaumé's, of similar construction, but applicable to liquids both heavier and lighter than water; Sykes's, largely employed for determining the strength of alcohol; and Nicholson's, used for taking the specific gravities of solids.

**Hydrophathy**, the method of treating disease with water, either by bathing or drinking. Natural springs of special chemical and therapeutic properties, such as sulphur springs, and other mineral sources, have been used since prehistoric times for this purpose. It is probably one of the most ancient methods of cure. Recently the beneficial effects of pure water treatment have been advocated. Hydropathic establishments have been set up in many health resorts.

**Hydrophilus**, the largest genus of water beetles, including the giant water beetle, which is of a shiny black and measures 1½ in. in length, and is common in N. America. There is also a European species (*H. piceus*), which is not quite so large.

**Hydroponics**, the culture of plants without soil. The plants are grown with their roots dipping into a solution of nutritive mineral salts; or they may be rooted in sand which is watered with such a solution.

**Hydrostatics**, the science of the pressure and equilibrium of liquids that are non-elastic.

**Hydrozoa** are, zoologically, a low order of water animals of the *Ctenophora* sub-kingdom to which Hydra (*vide*) belongs. In one order of the Hydrozoa, free-swimming colonies showing marked division of labour between the individual units occur; this order includes the Portuguese man-of-war.

**Hydrus**, a constellation of the southern celestial hemisphere commonly called the Southern Snake.

**Hygiene**, the science of health in its broad significance, the study of sanitary conditions, and the application of the laws of health generally. The progress made in hygienic science during the last hundred years has led to many legislative enactments and preventive measures which have resulted in a great improvement in the general standard of public health.

**Hygrometer**, an instrument for measuring the amount of water vapour in the atmosphere. A simple form of hygrometer, known as the wet-and-dry bulb, consists of two vertical thermometers affixed to a frame. One bulb is exposed to the air, and the other is covered with muslin which dips into a water-bath to keep it moist. If the air is saturated, it takes up no moisture from the wet bulb and the two thermometers read the same. If the air is not saturated, evaporation takes place from the wet bulb, latent heat is absorbed from the air, and the temperature of the wet bulb is lower than that of the dry bulb. Relative humidity and dew-point of the air can then be derived from suitable tables. Hygrometers depending

upon the expansion of human hair and gold-beater's skin and the deposition of dew on a polished surface, when cooled sufficiently, are also in general use. (*See Humidity.*)

**Hymenoptera**, the order of insects to which bees, wasps, hornets, ants and sawflies belong. They are notable for having four wings, the hind pair smaller than the front pair, to which they are attached by a row of hooks. They have mouths and tongues which enable them to bite, or to bite and suck, and the females possess an ovipositor used both for depositing eggs and stinging. There are about 70,000 species in this order.

**Hyperbole**, a rhetorical term implying extreme exaggeration for the sake of effect, and often indulged in by emotional orators, as well as in ordinary speech.

**Hypersthene**, a crystalline mineral of a grey-green colour, found foliated and massed in igneous and metamorphic rocks. It is a silicate of iron and magnesium, and has been met with in Cornwall, Northern Europe, and Tyrol, and North America.

**Hypnosis**, also known as Mesmerism, is an increased degree of suggestibility which sometimes leads to superficially puzzling phenomena. It must have been known in the East for many centuries, but was rediscovered towards the end of the 18th century by the Viennese Anton Mesmer, after whom it was named Mesmerism. The discovery created a sensation all over Europe at the time; for Mesmer was, although brilliant, somewhat of a charlatan and made the most fantastic claims. In his salons in Paris he claimed to cure all sorts of diseases by the new method, and since many illnesses are, in fact, neurotic in origin, numerous patients were cured (*see under Neurosis* in "Medical Section"). Mesmer believed that his cures were due to what he called "animal magnetism"—a physical influence passing from the operator to the patient, but this is now a discredited belief. As the British physicians Elliotson and Braid and the Frenchmen Charcot and Bernheim showed, hypnosis is a purely psychological state of increased suggestibility due to the influence of the operator on the patient in the emotional sense. There is nothing mystical about it. Nevertheless, the states which can be produced by hypnosis are astonishing enough: the patient can be put to sleep or can be made unable to feel pain so that a limb can be removed while he is in this state; he can be paralysed so that he is unable to move, and even blisters can be produced on the skin by the suggestion that it is being burned with a hot piece of metal.

**Hypocaust**, an arched fire vault or chamber through which heat is distributed to rooms above. Used in the baths of ancient Rome.

**Hypostyle**, an architectural term, designating a colonnade or pillared hall, such as in the famous hall of Karnak.

**Hypothec**, a Scottish legal term implying a landlord's lien on his tenant's cattle, sheep, and produce for rent. No right of hypothec has existed since 1880, where the land exceeds 2 acres.

**Hypothenuse**, the name given in geometry to that side of a right-angled triangle which is opposite to the right angle.

**Hypothesis**, an imaginary theory set forth in such a manner as to illustrate by parallel the force of some other theory which it is sought to demonstrate.

**Hypsometer**, an instrument formerly used by mountaineers to find the height above sea-level by indirectly measuring the atmospheric pressure by determining the boiling point of water at the particular height. Based on the fact that as pressure decreases with height so the boiling point is lowered. Superseded by the aneroid barometer.

**Hyrax**, an animal of the order *Hyracoidea*, possessing a cleft upper lip like the hare, molar teeth shaped similar to those of the rhinoceros, and in other respects showing ordinary rodent characteristics. It has a brown fur, and is confined to Africa, Syria, and Arabia.

**Hyssop**, a labiate plant, with blue flowers, growing wild in Southern Europe, and yielding a kind of

camphor; at one time largely used medicinally as an anti-spasmodic and carminative.

## I

**Iambic Verse**. (*See Metre.*)

**Ibex**, wild goats of several species found in the mountain regions of Europe, Asia, and Africa. The male has exceedingly large curved ridged horns. The species that lives in the Alps is called the steinbok or bouquetin.

**Ibis**, belongs to a family of birds related to the stork. The sacred ibis of ancient Egypt is now extinct in Egypt but is found in the lakes and swamps of the Sudan near the Upper Nile. It has white and black plumage and a long curved beak. Other species are found elsewhere, the Glossy Ibis (black plumage glossed with purple and green) occasionally visiting England.

**Ice** is frozen water. It is a colourless, crystalline and brittle solid. Being only 92 per cent, as dense as water, it floats on the latter; the expansion which occurs as water changes into ice causes the fracture of water-pipes, though the fracture only becomes obvious when the ice melts and leaks out through the crack. The temperature at which ice forms is 0° C. 32° F. Ice can be melted by pressure, and the ease and smoothness with which one is able to skate on ice depend on this phenomenon.

**Ice Age**, Great, began at the end of the Pliocene period more than half a million years ago when immense glaciers and ice sheets extended over large areas of the continents. There were four cold periods known as the First, Second, Third, and Fourth Ice Ages, separated by interglacial periods when the climate was warmer. During the Pleistocene Ice Age, as the Great Ice Age is sometimes called, the ice sheets in the British Isles reached as far south as the Thames valley. (*See also Glacial Epochs, Pleistocene, and p. 163.*)

**Icebergs** are detached masses of glacier which subside into the sea and float as wind or current may take them. About one ninth of an iceberg is above sea-level. The North Atlantic is the chief home of icebergs, which reach the ocean from the ice-clad plateaux of Greenland. Some of these floating masses of ice are of enormous proportions, and constitute in the spring and early summer seasons a great menace to the safety of ships, as was disastrously shown in the *Titanic* catastrophe of 1912. For some years past these menaces to N. Atlantic shipping have been kept under close observation by vessels specially detailed for this work.

**Ice-breakers** are heavy bow-plated boats used for breaking up ice on navigable rivers, and, in the Baltic and on the St. Lawrence in Canada especially, have the effect of considerably shortening the ice-bound period each winter.

**Ice-floe**, a small ice-field or sheet of floating ice, liable to be frozen to other ice-floes, imprisoning any ship enveloped.

**Iceland Dog**, a kind of white shaggy dog which was in former times a great domestic favourite, but is now little seen in this country.

**Icelandic Literature**, the Old Norse, which includes numerous works of poetry, mythology, and history of interest and importance. (*See also Edda.*)

**Iceland Moss**, a kind of lichen (*Cetraria*) which grows in great quantities in the mountain regions of Iceland and other Northern countries. It possesses certain nutritive qualities and is of some value in medicine.

**Iceland Spar**, a colourless form of calcite (calcium carbonate), frequently found in association with metallic ores; it has the power to produce strong double refraction of light so that two images are seen of an object viewed through a piece of Iceland spar.

**Iceni**, an ancient British race who in early times lived in Norfolk and other parts of Eastern England. Their most famous ruler was Queen Boadicea, who led her people against the Romans in A.D. 61.

**Ice Plant**, also called "dew plant" and "diamond plant." A South African mesembryanthemum commonly grown in British gardens. Its name is derived from the fact that the leaves are covered with small glistening bladder-shaped hairs that look like ice crystals.

**Ice Saints, St. Mamertus, St. Pancras and St. Servatius**, so called because of the legendary cold on these Saints' Days, namely, May 11-13.

**Ichabod**, signifying "the glory is departed," was the name of the son of Phineas, born after the latter was killed in fighting against the Philistines.

**Ichneumon**, the Egyptian mongoose, popularly known as "Pharaoh's Rat." It is of great use in checking the multiplication of reptiles. It is frequently domesticated.

**Ichneumon Fly**, a numerous group of hymenopterous insects abounding in many lands, and all having the peculiarity of depositing their eggs in the bodies of other insects. It destroys swarms of caterpillars, which become the unwilling hosts of its progeny.

**Ichthyography**, the art of drawing plans of everything connected with the ground floor of a building or site.

**Ichthyol**, a liquid used for rubbing on the skin in certain diseases, and obtained by distillation of a mineral in which fossil fish is found.

**Ichthyology**, the department of zoological science which concerns itself with the structure and variation of fishes, their habits and distribution.

**Ichthyornis**, a fossil bird with teeth discovered in the cretaceous strata of Kansas. About 8 in. in height.

**Ichthyosaurus** was a gigantic marine reptile of the Mesozoic age. The fossils are mostly found in the lias formation. Some were not less than 30 ft. in length.

**Iconoclasts** were originally an Eastern sect of the 8th and 9th centuries, whose object was to prevent the worship of, and to destroy, images used in religious rites. Also any Protestant who took part in or supported the destruction of images in churches in the 16th and 17th centuries. The term has been applied in modern times to enemies of religious beliefs generally.

**Iconoscope**, a form of electron camera used in television.

**Idea**, in its planitonic significance, had reference to what a thing seemed rather than the actuality, but in later philosophies an idea is, as Locke expresses it, "whatsoever the mind perceives in itself."

**Idealism**. Idealism is the belief that there is no matter in the universe, that all that exists is mind or spirit. Most philosophers have held that there were two principles, mind and matter; a few that the only reality was matter (see Materialism). Kant, Descartes, Locke, and even Plato believed in both spirit (mind) and matter; for, if Plato is often considered to be an idealist, he did believe that the universe contained physical objects, although spirit alone was the "real" world. Berkeley (1685-1753), a great British divine and philosopher, later Bishop of Cloyne in Ireland, was an idealist who believed that the universe was an idea in the mind of God, but the great period of pure idealism was 19th-century Germany. Fichte, Schelling, Hegel, Lotze, Schopenhauer, and Schleiermacher are its main philosophers. Fichte believed that the whole universe was God (that is to say, he was a Pantheist—one who believes that God is everything). Schelling thought that the universe was a world-spirit, which, however, only became self-conscious in man. Lotze believed that the universe was alive and was mind; Schleiermacher that God was the source of all life, but was more than the universe. Hegel, the greatest of the idealists, believed that the universe was a process of thought in continual evolution; in nature the process is unconscious, but in man the process becomes fully self-aware.

**Ides**, in the ancient Roman Calendar, the 15th of March, May, July, October, and the 13th of all other months; always the eighth day after the Nones.

**Idiograph**, a mark, signature, or flourish peculiar to any individual; a trade mark is an idiograph.

**Idiom**, an expression characteristic of a country, district, dialect or language, which usually gives strength and force to a phrase or sentence. The idioms of a language are its distinctive marks, and the best writers are the most idiomatic.

**Idolatry**, the worship of idols, images, inanimate objects, animals or symbols. A kind of idolatry existed in all primitive modes of existence, and

instances are numerous in the earliest records. In their most symbolised form images have a considerable part in the rites of the Roman Catholic Church.

**Idols** are images or effigies which are made objects of worship and are usually of wood or stone, but sometimes of ivory or more precious materials, and attain their symbolic significance after being put in the places destined to receive them, when they are made objects of veneration by some religious dedication.

**Idris**, a famous giant belonging to the myths of Wales, commemorated by a chair of rock on the top of the Cader Idris mountain in Merionethshire.

**Idyll**, a poem or story of a simple or pastoral kind dealing with rural characters and events for the most part, but sometimes used in a broader sense, notably in Tennyson's "Idylls of the King," which are of a distinctly imaginative form.

**Ignatian Epistles**, letters bearing the name of St. Ignatius, the authenticity of which is now generally accepted, and in their several forms exercised great influence in mediæval times. Fierce controversy raged around them in the 17th century, because of their strong support of episcopacy, and a good deal of doubt was thrown upon their genuineness.

**Igneous Rocks** are such as have been molten under conditions of great heat at some stage in their history: e.g., granite, basalt.

**Ignis Fatuus** or "Will-o'-the-wisp," a phosphorescent light which may often be seen on summer and autumn evenings hovering over marshy ground or graveyards. Its nature is hardly understood, though it is generally believed to be the result of the spontaneous combustion of the gases from decaying organic matter. In olden times when marshy grounds were more common than now, this "dancing light" was very frequently visible and was regarded with superstition.

**Ignorantines**, a Roman Catholic Order founded in 1679 at Rheims, reorganised by Jean Baptiste de la Salle and intended for special ministration among the children of the poor. The name "Ignorantine" was given to them because the admission to the order of priests with a theological training was forbidden.

**Iguana**, large South American lizards, with a long tail, a scaly back and head, a thick fleshy tongue and a prominent dew-lap in the throat. Specimens of the different species average 4-5 ft. in length, and they live mostly in trees, though they are equally at home on land or in the water. The flesh of some species is good eating, as are also the eggs.

**Iguanodon**, a genus of extinct dinosaurs, whose fossils are found in the jurassic and cretaceous rocks. Iguanodons were 15-25 ft. long, and walked on their hind legs, the front legs being small and adapted for grasping the branches of trees on the leaves of which they fed.

**Ilex**, mentioned by classical authors, is the holm- or holly-oak, which flourishes round the Mediterranean. To botanists Ilex is the genus to which the holly and maté plant belong.

**Iliad**, the great epic poem of ancient Greece, for many years attributed to Homer (c. 850 B.C.), though the opinion is now widely held that the epic is the work of a series of poets from about 750 to 550 B.C. It consists of ancient folk tale and saga, welded into an artistic unity, having as plot the carrying off of Helen by Paris to Troy and the subsequent siege of Troy.

**Illinium**, an element classed among the rare-earth metals. Discovered in 1926 by Harris, Yntema, and Hopkins.

**Illuminated MSS.** of great value and beauty of decoration exist in most public museums and in many private collections, some of them being of great antiquity, especially those of ancient Egypt executed on papyrus. Greek and Latin specimens are also numerous, and the British Museum contains fine examples of all these kinds and also an extensive collection of mediæval English MSS.

**Illuminati**, the name by which certain religionists of the 16th, 17th, and 18th centuries were known. They claimed the possession of superlative knowledge in everything pertaining to religious doctrines, rites and ceremonies, but

were not at any time a very numerous body. An Order of the Illuminati was formed at Ingolstadt which was a secret society, and professed to free religion and politics from superstition and despotism. It has some similarity to freemasonry.

**"Illustrated London News,"** the first of the weekly pictorial papers to be published in England. It was originated by Mr. Herbert Ingram, a Boston printer and newsagent, in 1842, and was a pronounced success from its foundation. The idea occurred to Mr. Ingram after he had noticed what an immense "run" there had been on a few crude pictures which one of the ordinary weekly papers had given of incidents connected with the Greenacre murder.

**Ilmenite**, a mineral widespread in igneous rocks: chemically it is an oxide of iron and titanium. Rich deposits have recently been found in the Allard Lake area of Quebec; the Travancore sands are also a source of ilmenite.

**Images**, in the form of carved, sculptured, or painted objects, have been regarded as aids to worship, by primitive races, and also in various Christian Churches from early times, but since the Reformation have been prohibited in the Church of England.

**Imagination** is the creative power and faculty enabling the mind to picture to itself scenes, events, and persons of which a person may hear or read, and in its more intense form constitutes the genius by which the poet, the novelist, the historian, the painter, and the musician attain their idealisations.

**Imam**, a Mohammedan religious title borne only by princes or leaders of the faith.

**Imbrex**, an architectural term given to the covering tile of the ancient roof.

**Immaculate Conception**, the dogma that the Virgin Mary was absolutely pure and sinless from the womb, after being a fierce subject of controversy for many centuries, was on Dec. 8th, 1854, expressly proclaimed by Pope Pius IX. to be an established doctrine of the Roman Catholic Church. Dec. 8th is the festival day of the Immaculate Conception in the Roman Church, and Dec. 9th in the Greek Church.

**Immolation**, the act of sacrificing a living object or objects for the propitiation of the Almighty, or, in classic days, the gods.

**Immortelles** are wreaths, crosses, or other designs made from what are called everlasting flowers, which are obtained from certain plants of the Composite order, and retain their colours and compactness for a long time. Immortelles are largely used as mementoes for decorating graves, especially in France.

**Impact**, in kinetics, is the impingement of two bodies one against the other. The principle of conservation of momentum states that total momentum of two bodies before impact is equal to their total momentum after impact.

**Impeachment**, a special arraignment, usually before Parliament or other high tribunal, of a person charged with some offence against the State. The custom in England was for the impeachment to be made in the House of Commons, and the trial to be before the House of Lords. The first instance occurred in 1376 when Lord Latimer was impeached. With present parliamentary procedure, impeachment is no longer necessary, since the Cabinet is responsible for the individual actions of its ministers, who, acting as a team, must carry the Commons with them, or resign, when it falls to the Leader of the Opposition to form a new Cabinet. Other famous impeachments were those of the Lord High Chancellor Francis Bacon (1621), Earl of Strafford and Archbishop Laud (1640), Warren Hastings (1788), the last being that of Lord Melville (1805). Under the constitution of the United States public officials may be impeached by the House of Representatives and tried by the Senate. The most famous case was that of President Andrew Johnson.

**Imperial Institute**, erected at South Kensington as a memorial to the Jubilee of Queen Victoria, by whom it was opened in 1893. Centre for spreading knowledge of the Commonwealth. Permanent exhibitions illustrating life, scenery, and interests of all countries of the Empire overseas. Guide lecturers available. Film shows daily.

Other services include supply of lecturers, film strips and other visual aids, and publications, Chairman of the Board of Governors—Viscount Hudson, C.H., Director—Kenneth Bradley, C.M.G.

**Imperial Service Order**, a decoration confined to members of the Civil Service. Founded in 1902 by Edward VII., it is limited to 700 members.

**Imperial War Museum** is a collection connected with the first world war and consists of war trophies, relics, arms, ship and other models, pictures, photographs, maps, etc., and a library of over 60,000 books. It was opened in 1920 at the Crystal Palace, transferred to Kensington, London, in 1924, and to Lambeth Road, S.E.1, during the winter of 1935-36.

**Impluvium**, a basin or tank in the hall or atrium of an ancient Roman house, serving the purpose of receiving the rain that dropped through the open space in the roof.

**Impressionist**, an artist or author who attempts in his work to convey by broad effects of colour or treatment the impressions which a subject has stamped on his own imagination, apart from detail or form.

**Impressment**, the forced seizure of persons for service on board British war-ships, sanctioned by laws still unrepealed, but not resorted to in this country since the Napoleonic wars.

**Imprimatur**, originally an official licence to print, and an important formula in the early days of printing. The term is now used in the wider significance of authority, stamp, or endorsement.

**Impromptu**, a piece of music for orchestra or solo instrument of informal construction and composed without preparation.

**Impropriation**, a legal term signifying the surrender of a benefice and its revenues into the hands of a layman or lay corporation, carrying with it the obligation to provide for the continuance of the ecclesiastical duties.

**Inbreeding**, mating of closely related animals and plants. Close inbreeding has long been held to be harmful, but this is not necessarily so, for if practised with selection, stock can be purged of the undesirable qualities and the race improved.

**Incarnation**, in Christian theology, designates the doctrine that the Divine Spirit, incarnated in human form in the person of Jesus Christ, has had actual existence on earth, subject to human limitations, yet without losing the Divine essence.

**Incas**, an Indian people who inhabited ancient Peru, founded a great empire, and reached a high level of civilisation; overthrown by the Spaniards in 1533.

**Incense**, an aromatic resinous substance which, under combustion, exhales a pungent odour, and is used, mixed with certain fragrant perfumes, in the celebration of Mass in Roman Catholic churches. Olibanum or frankincense is ordinarily the leading ingredient. It is not used in the orthodox service of the English Church except by the more pronounced Ritualists.

**Incisors**, the sharp-edged cutting teeth at the front of mammalian jaws.

**Incognito**, the dropping of name, identity, or distinctive mark, so as to pass unknown.

**Independence Day**, commemorates the adoption of the Declaration of Independence on July 4, 1776. July 4 is celebrated as a holiday in the United States.

**Independent Television Authority** was set up in August 1954 under the Television Act, 1954, to provide television services additional to those of the B.B.C. Its statute runs for 10 years. The Authority consists of a Chairman (Sir Kenneth Clark, K.C.B.), a Deputy Chairman and eight members. At the head of the Authority's permanent staff is the Director-General, Sir Robert Fraser. Privately financed companies provide the programmes, advertisers pay the programme companies for their advertisements and the Authority itself acts as controlling body.

**Index Expurgatorius** is an index, prepared under the authority of the Roman Catholic Church, of such books as may not be read by the faithful at all, and such as can only be read in part: that is, with what are considered objectionable passages expunged. The first Expurgatorial List was

issued by Pope Paul IV. in 1559 and all later lists have been under direct papal authority.

**India Office Library** (since 1947 called the Library of the Commonwealth Relations Office (Division B)). This is an orientalist library, which specialises in Indian studies. It was founded in 1801 by the East India Company, and contains 20,000 manuscripts in European languages and in Sanskrit, Persian, modern Indian, and other oriental languages, and a quarter-of-a-million printed books, of which three-quarters are in oriental languages. There are also collections of drawings, photographs, and other objects of oriental interest. It is accessible to *bona fide* students.

**Indian Cress**. Popularly known as "nasturtium"; the correct Latin name for the genus to which these plants belongs is *Tropaeolum*.

**Indian File**, marching forward in single formation, as Indians progress through the woods.

**Indian Ink**, a pigment made from lampblack and gum or glue, originally prepared in China and Japan. It is dried and is marketed in small sticks. It is used mainly by artists for shading and lettering.

**Indian Mutiny**. This turning-point in the history of modern India occurred in 1857-58. The ostensible cause was the serving out to the native troops of cartridges greased with animal fat, for contact with this was forbidden both by the Hindu and Mohammedan faiths. A rebellious feeling, however, had long been developing, and when the Sepoys at Meerut in May 1857 refused to obey the English officers, overpowered and put them to death, the mutiny spread like wildfire. The rebels took Delhi and Lucknow, and for many months terrible massacres and atrocities were committed; men, women and children were slain in thousands. Order was re-established in the autumn of 1858 when the governing power was transferred from the East India Company to the Crown.

**Indian Summer** is applied to a warm spell of weather occurring in the late autumn, the term originated in America. There is no evidence that such spells recur regularly in this country.

**Indicators**, substances which by a marked change in colour are used to indicate the course of a chemical reaction. Litmus paper, for instance, is red with acids and blue with alkalis. In biological work some radioactive substances are used as tracer elements.

**Indictment**, a formal document of accusation setting forth the criminal charge or charges upon which a person has to be tried before a proper tribunal. It represents the "finding" of the grand jury, and is framed on the "true bill" returned by that body.

**Indigo**, the substance obtained from the plant *Indigofera tinctoria*, a native of S. Asia, India being the chief producing country. The colouring matter is the result of the decomposition and fermentation of a glucoside contained in the plant. This is afterwards dried and becomes the caked indigo of commerce. Natural indigo has been eclipsed by artificial indigo, a coal-tar dye which came into commercial production at the end of the last century, which is cheaper and more uniform in quality.

**Indium**, a scarce lead-coloured metal found in zinc blende in Saxony and certain other ores. This element was discovered in 1863 by Reich and Richter.

**Individualism**, a theory of government which favours freedom of action on the part of the individual without the interference of the state; opposed to state-planned economy and collectivism. The extreme form of individualism is anarchism.

**Indo-European**, a term used to designate the great Aryan family of languages, which embraces Indo-Iranian, Celtic, Greek, Italic, Slavonic, and Germanic. Basque, Magyar, Turkish, and Finnish do not belong to this family.

**Indra**, an ancient Hindu god, personifying the sky; the supreme object of worship in Vedic times.

**Induction**, in Logic, is an argumentative inference in regard to an entire class of facts, based on actual demonstration as to individual facts comprised in that class. In Physics, it is a term applied to the action or effect produced by an

electrical or magnetic body upon a non-electrical substance near to it but not in actual contact.

**Induction Coil**, an electrical device which converts current of low steady voltage (as from a battery) into a high intermittent voltage. Used for ignition in internal combustion engines.

**Indulgence**. In the Roman Catholic Church the remission of the temporal punishment which often remains due to sin after its guilt has been forgiven by God. The indiscriminate sale of Indulgences by Tetzel and other Papal agents in the 16th century was one of the grievances which led to the Reformation.

**Indulgence, Declaration of**, was the proclamation by which James II. suspended the penal laws against Roman Catholics and Dissenters. It was issued in 1688, but the clergy as a body refused to obey, and the trial of the Seven Bishops and their acquittal by a jury followed. An invitation was thereupon sent to William of Orange to become King.

**Induline**, a group of aniline dyes used for various fabrics, all giving dark blue shades.

**Industrialism**, the pursuit and practice of commerce and industry until these branches become the dominating factors in the economic life of the country.

**Industrial Psychology**. Industrial psychology is the application of the principles of psychology to industry with a view to increased production on the one hand and increased well-being of the worker on the other. Although such an attitude must have existed in a general way for many centuries, the first important experiments in this field were carried out by an American, Frederick Winslow Taylor (known by his associates as "Speedy" Taylor). Born in Philadelphia of Quaker stock at the end of last century, Taylor became chief engineer at the Midvale Iron Works, where he soon became convinced that the traditional ways of doing things were often inefficient. His working principles were: (1) To employ only the best workers. (2) To discover by experiment the simplest motions for carrying out a given job. (3) To stimulate incentive by giving a higher wage for higher production. In this way he was able to raise the amount of iron handled by a worker from 12½ tons a day to 47½ tons. Since then, most industrial psychologists have concerned themselves: (1) with the study of individual differences—finding the worker most suited to the job, and (2) studies of fatigue and the effect of improved lighting, heating, etc., on the worker—i.e., the betterment of working conditions. Prof. Mayo, however, showed at Chicago in 1938 that *what* was done to help the worker was often less important than *how* it was done, that a happy and satisfied working group did better work than one based on purely technical conditions of efficiency. Today people often blame mass-production methods in industry for making work dull, frustrating, and uninteresting; but this is not the reason for industrial frustration at all. It is rather that workers have not been treated as intelligent beings who need to know *what* they are doing, *why* they are doing it, and to *what* end. Work is frustrating, not in terms of what it actually is, but in terms of what it means, or does not mean, and what is frustrating about the industrial situation is not that it implies dull work or hard work or work under bad conditions, but that it often seems to imply meaningless work. One of the greatest discoveries of 20th century medicine has been the rediscovery of the patient. This is of importance because its significance extends far beyond the bounds of medicine into psychology, sociology, and all the social sciences. *See also* "A Citizen's Guide", Industrial Relations.

**Inertia**, a term used in mechanics for the tendency of a body to preserve its state of rest or uniform motion in a straight line.

**Inescutcheon**, a small scutcheon borne heraldically within the shield of ordinary dimensions.

**Infallibility**, the Roman Catholic doctrine that accords the Pope divine immunity from error, in the execution of all that pertains to his pontifical functions. It was first proclaimed as dogma of the Church by the Vatican Council in 1870.

**Infante** was the title of any son but the eldest of the king or queen of Spain or Portugal. *Infanta* was similarly the title of any daughter except one that might be heiress to the throne.

**Infantry**, the portion of an army which consists of foot soldiers equipped with "small arms."

**Inflorescence**, a cluster of flowers upon a shoot. Many arrangements of the flowers are possible and there are many kinds of inflorescence; e.g., the spike, catkin, umbel, capitulum (in composites).

**Infra-Red Rays or Radiation**. This is the range of rays which come between the visible red rays and the ultra-short Hertzian radiation. The wave-lengths involved range from about 0.00076 millimetre (7,600 Angstrom units) to 0.4 millimetre. Infra-red rays penetrate haze; hence landscapes obscured by haze or cloud can be photographed using plates sensitive to infra-red. Many substances strongly absorb these rays and thereby become hot; this happens in toasting bread. Many industries use infra-red lamps for drying paints and lacquers.

**Infula**, a sacred fillet, of woollen material, worn on the head by priests anciently, and by magistrates and rulers on solemn occasions, also by persons fleeing for protection to sanctuary. The infula later became a pendant to the mitre of bishops.

**Ingoldsby Legends**, a series of whimsical metrical tales full of droll humour written by the Rev. R. H. Barham, and first published in *Bentley's Miscellany* in 1837.

**Ink**, a liquid pigment ordinarily made from an infusion of nut-galls, coppers, and gum arabic. Shumac is substituted for nut-galls for inferior inks. An acid is sometimes added to prevent oxidation, and for the blue-black inks a small quantity of solution of indigo serves for colouring. Copying ink contains glycerine or sugar, which keeps the ink moist. Lampblack used to be the leading ingredient in printer's ink but now new methods of manufacturing have been developed. Marking ink is composed of a solution of nitrate of silver, gum, ammonia, and carbonate of soda. For red, blue, and other coloured inks, colouring solutions are used. The earliest examples of ink writing (on wooden tablets) ever found in Britain were recovered from the well of a Roman villa (3rd cent. A.D.) during excavations in 1954 at Chew Stoke, Somerset.

**Ink Sac**, a glandular organ found in squids and other cephalopods which contains an inky solution. When roused the animal discharges the contents of the ink sac into the water, to make a cloud through which its enemies cannot see. The pigment, sepia, comes from the ink sac of the cuttlefish.

**Inlaying** is the introduction of one class of substance into another in some artistic or other design, such as silver let into zinc, copper, or lead, and called *bidri*; the insertion of gold and silver into iron or steel, which is *damascening*; the mingling of brass with tortoiseshell, *buhl work*; the inlaying of woods, *marquetry*; of stone, *pietra dura*; and of the arrangement of small pieces of stone, for floors, walls, etc., *mosaic*.

**Innocents' Day**, a festival day in Roman, Greek, and Anglican Churches in commemoration of the killing of the children of Bethlehem by Herod, Dec. 28th.

**Inns of Court**, the four bodies in London which enjoy the privilege of calling candidates to the bar after they have studied for a certain number of terms and passed certain examinations. The Inns are: the Inner Temple, the Middle Temple, Lincoln's Inn, and Gray's Inn.

**Inquisition**, a Roman Catholic ecclesiastical court which became a formidable weapon of the Church in the 13th century under Pope Innocent III, in dealing with charges of heresy. It was effectively set up in the various Catholic countries of the Continent, obtaining its fullest and most sweeping organisation in Spain in the days of Ferdinand and Isabella, when Torquemada was made Grand Inquisitor, and used its powers with terrible severity. (See *Auto-da-fé*.) In the 18th century its influence began to wane, and although the Congregation of the Holy Office still exists at Rome, its jurisdiction is limited to the suppression of heretical literature.

**Insectivora** are mammals which live almost exclusively on insects and worms. This mammalian order comprises hedgehogs, moles, shrews, etc.

**Insectivorous Plants** are of various orders, and are found in all parts of the world, the *Common Sundew* and the *Common Butterwort* being the best-known British species. These two plants have leaves with sticky hairs which entrap insects. Enzymes from the plant then digest the insects and the soluble compounds so formed are absorbed by the leaves.

**Insects**. This huge class of invertebrate animals includes about 700,000 species. Insects are ubiquitous except in the sea, only a very few species being adapted to marine existence. Characteristic features are: the body is divided into three parts, head, thorax, and abdomen: the head carries a pair of antennae, the thorax three pairs of legs, and usually two pairs of wings. The most primitive insects constituting the sub-class *Apterygota* are wingless. The other sub-class, *Pterygota*, is divided into the *Ecopterygota* (*Hemimetabola*), which have a simple metamorphosis; and the *Endopterygota* (*Holometabola*), with a complex metamorphosis. The fifteen orders of the *Ecopterygota* are: *Orthoptera*, *Isoptera*, *Plecoptera*, *Embioptera*, *Dermaptera*, *Ephemeroptera*, *Odonata*, *Psocoptera*, *Anoplura*, *Thysanoptera*, *Hemiptera*. The *Endopterygota* comprises nine orders: *Neuroptera*, *Mecoptera*, *Trichoptera*, *Lepidoptera*, *Coleoptera*, *Strepsiptera*, *Hymenoptera*, *Diptera*, *Aphaniptera*.

**Insignia**, marks or badges of office or honour, such as stars, ribbons, crosses, medallions or other designating objects, worn by members of special Orders or holders of prominent offices.

**Institut de France** was formed in 1795, and after various modifications was in 1832 organised on its present basis. Its five academies are—the Académie Française, Académie des Inscriptions et Belles-Lettres, Académie des Sciences, Académie des Beaux-Arts, Académie des Sciences Morales et Politiques. It is restricted to 40 members.

**Instruments, Musical**. Musical instruments may be classified in a number of ways, but in general they fall into one of the three main classes, String, Wind, and Percussion, according to how the sound is produced. **Stringed Instruments** are those which produce the sound by the vibration of a string: (a) by plucking, as in Harp, Lyre, Psaltery, Zither, Lute, Guitar, Balalaika, Ukelele, Harpsichord; (b) by friction (bowed), as in Crwth, Rebec, Viol, Violin, Marine Trumpet, Hurdy-Gurdy; (c) by striking (hammered), as in Dulcimer, Pianoforte, Clavichord; (d) by wind (blown), as in the Aeolian Harp. **Wind Instruments** are those in which the air in the instruments is set in vibration: (a) by blowing into a tube (flue-voiced), as in Recorder, Pandean Pipe, Flute, Organ; (b) by means of reeds (reed-voiced), as in Oboe, Clarinet, Saxophone, Bagpipe, Cor Anglais, Bassoon, Organ reed-stops; (c) those in which the sound is produced by the vibration of the player's lips against the mouthpiece (lip-voiced), as in Bugle, Horn, Trumpet, Tuba, Trombone, Saxhorn, Flügelhorn, Cornet. In a modern orchestra these are known as the *Brass*; instruments of the flute, oboe, and clarinet families as the *Woodwinds*. Then there are the **Percussion Instruments**, which include the Drums, Cymbals, Tambourines, Castanets.

**Insulation**, the condition in which an electrified body is prevented from communicating electricity to contiguous bodies by the interposition of a non-conducting material. Glass, shellac, ebonite, and gutta-percha are all non-conductors, and wires obtain insulation by wrappings of cotton or silk.

**Insulin**, the hormone secreted by the islet tissue of the pancreas, from which it was isolated in 1922 by Banting and Best. (See *Med. Section*.)

**Intaglio**, engraving or carving on a sunken ground, a method frequently adopted in the ornamentation of stones and rings.

**Intelligence**. Intelligence has been variously defined as "the ability to see the relationships between things" and "the ability to profit from experience." The idea of intelligence testing was first devised by the French psychologist Binet at the beginning of this century.

He was asked by the French government to invent a test which would weed out backward children in state schools, and thus save public money and avoid holding back the work of the class by teaching children who were incapable of learning at a given standard. Binet solved the problem by giving a large series of practical questions and finding how many could be solved by the majority of children in a particular age-group. The questions were arranged so that in one group the majority of problems could be solved by most children of ten, in another by most children of twelve, and so on. If a child of thirteen could solve correctly only those problems devised for a child of ten, his Mental Age was said to be ten, and his Intelligence Quotient was  $10/13$  multiplied by 100, of roughly 77 per cent. His intelligence, in other words, was only 77 per cent of the normal. More modern intelligence tests have been devised which to some extent discount the influence of learning, since "intelligence" refers to innate ability—the capacity to learn rather than learning itself. The following facts have been discovered about intelligence: (1) Men and women do not differ in average intelligence. (2) Different races do not vary in average intelligence. (3) Delinquents are more often of lower intelligence than others. (4) Intelligence is in-born, and does not increase after age 14. (See p. 175.)

**Interdict**, a Roman Catholic ecclesiastical prohibition, directed either against a country, community, or Church, or against persons. It is a weapon that is now rarely used, but in former times was often exercised with great power and severity.

**Interlude**, any short stage piece, or brief musical composition, for performances between more important pieces. In the strict musical sense an interlude is an instrumental composition played between the acts.

**International Date Line**, a line along the 180° meridian, marking the difference in time between E. and W. For the westward-bound traveller crossing the line the date would be put forward one day, for the eastward-bound, back one day. To avoid difference of date in adjacent land areas, the line deviates from the 180° meridian where this crosses land.

**I.L.O.** See "A Citizen's Guide," p. 132.

**Interval**, in music indicates the difference in pitch between two notes. This is often expressed numerically. Thus the interval between C and the E above it is a major third, that between C and E flat is a minor third, that between C and G is a sixth, and so on.

**Intransigents**, an ultra-republican party whose chief members were very active and aggressive in France, Italy, and Spain at the end of the 19th century. Henri Rochefort was a leading representative.

**Introut**, the psalm or hymn in common use in the Anglican Church, which is sung as the clergy enter the church to commence the divine service of Holy Eucharist.

**Invention of the Cross**, a Roman Catholic festival, held on May 3rd to celebrate the finding of the alleged True Cross at Calvary by the Empress St. Helena in 326. Also included in the Church of England calendar. (See Holy Rood.)

**Invertebrata**, the primary division of the animal kingdom used to be into vertebrates—animals with backbones—and the invertebrates. This classification is now obsolete (see Animal Kingdom), and the Invertebrata is now defined as the portion of the animal kingdom containing all but the phylum Chordata.

**Investiture**, the ceremony of conferring honour, office, or possession—the investment of the recipient with badge, token, or public recognition.

**Involution**, a form of magic or witchcraft that prevailed in older times, consisting of pricking a wax or clay image of a person whose death was desired, invoking simultaneously the aid of evil spirits, the belief being that the spell would have a fatal effect.

**Iodine**, a substance formerly exclusively obtained from the ribbon-wrack seaweeds. These were burnt and the ashes (kelp) extracted with water. After concentrating the iodides, these were distilled with manganese dioxide and sulphuric acid to yield iodine vapour which was con-

densed in stoneware bottles. Nearly all iodine now in use is derived from the iodine salt present in Chili saltpetre (sodium nitrate). Iodine is used in photography, as an antiseptic solution in alcohol or potassium iodide (tincture of iodine), and in medicine. Courtois discovered iodine in 1812.

**Ion**, an atom or group of atoms carrying a positive or negative electrical charge. When an electric force is applied to a solution the ions into which the molecule of the dissolved substance is dissociated are attracted to the oppositely charged electrodes, the movements constituting an electric current through the solution. In the same way gases, including air, conduct electricity by virtue of the free ions. Combustion, radio-activity, and ultra-violet and cosmic radiations produce ionisation.

**Ionic Order** of architecture is one of the five classic orders, its leading characteristics being the volute of its capital, which has on each side distinctive curved or scrolled ends.

**Ionosphere**, the layer above the earth's surface in which ionisation occurs, probably due to the absorption of ultra-violet radiation. The ionosphere is divisible into several layers with distinctive properties, these being known as the B, C, D, E, and F layers. The E layer is called the Kennelly-Heaviside layer; the F layer, the Appleton layer; these are respectively about 60 and 200 miles above the earth. The Kennelly-Heaviside layer reflects medium radio waves; the Appleton layer reflects short waves.

**Ipeacacanha**, a flowering plant of the madder family, a native of the Brazilian forests. Its root is of great utility in medicine.

**Ireland**. See Union of Gt. Britain and Ireland.

**Iridium**, a white and very hard metal discovered by Tennant in 1804. It occurs naturally as an alloy with platinum or osmium; tips for fountain-pen nibs have been made from the former native alloy. The standard metre is composed of platinum-iridium alloy, as are parts of scientific apparatus and surgical tools that must be non-corrodible.

**Iris**, the typical genus of the botanical order *Iridaceae*, with tuberous rhizomes and sword-shaped leaves, many of the family having beautiful flowers. About 100 species of Iris are recorded from the northern temperate zone, but only two species occur wild in Britain—the yellow flag and the gladdon. Orris root, used in perfumery, comes from another iris species.

**Irish Moss**, a kind of seaweed (*Chondrus*) found on certain parts of the Irish coast, and collected, dried, and bleached for use as cattle food or for making a nutritious jelly.

**Iron** is extracted by smelting from different ores, hematite, magnetic iron, and spathic iron, coal or coke being now universally used for smelting purposes. The kinds of iron produced are cast iron and wrought iron. Alloys of iron are called steels.

**Iron Age**, the period when primitive man made and used weapons and implements made from iron. It came after the Stone and the Bronze Ages.

**Ironclads**, ships of war cased in iron or steel plates of sufficient thickness to resist projectiles. They were first introduced (1858) in the French Navy, and in 1860 the first British ironclad, the *Warrior*, was launched.

**Iron Cross**, a Prussian order instituted in 1813 for distinguished services in war.

**Iron Crown**, the crown of the ancient kings of Lombardy and emperors of Germany, and noted for its iron band, said to have been forged from one of the nails of Christ's cross. Napoleon I. insisted on being crowned with it, and in 1866 it was presented to Victor Emmanuel at Turin.

**Iron Curtain**. In a speech at Fulton, U.S.A., on Mar. 5, 1946, Mr. Churchill used this phrase to describe the dividing line behind which, he said, lie all the capitals of the ancient States of Central and Eastern Europe—Warsaw, Berlin, Prague, Vienna, Budapest, Belgrade, Bucarest, and Sofia. These famous cities and the populations around them, said Mr. Churchill, lie in the Soviet sphere and are subject "to a very high and increasing measure of control from Moscow."

**Ironsides** were Cromwell's special troopers, so called because of their solidity and firmness in battle.

**Ironwood**, the intensely hard and heavy timber of

certain kinds of trees, natives of the warmer regions of Asia and Africa, and mostly of the *Sapotea* order.

**Irridentists**, a political party organised in Italy about 1878 with the object of incorporating with Italy neighbouring regions. Also a person, group, or party advocating policies for the restoration to their country of territory formerly belonging to it but later lost.

**Irrigation**, an artificial method of providing water for the growth of plants on lands where the natural supply of water is deficient. The science has made immense progress during the last fifty years, and has been the means of bringing into profitable cultivation vast tracts of territory in India and Western America which had previously been arid wastes. The systems are various and are utilised according to the special conditions of the land to be irrigated, but the success which has attended these experiments has been very gratifying. In fact, irrigated lands are often more productive than lands which receive a fair amount of moisture from the elements; the irrigation supply can be distributed and regulated exactly according to requirements. Irrigation also serves the purpose of supplying warmth in winter; e.g. in the English water-meadows, and in the more highly developed Italian *marcile* and winter-meadows, where the water is mostly applied in winter when there is plenty of rain. There are several other functions of irrigation; e.g., washing out of excess salts.

**Isinglass**, a gelatinous substance manufactured from the swim bladders of certain fish, the best kinds coming from Russia and Brazil. Coarser varieties are made from hides.

**Islam**, the Mahommedan religion, the word signifying devotion to God.

**Isobars** are the lines drawn on charts linking together points of equal barometric pressure.

**Isolationist**, the body of opinion in the United States advocating non-interference in European affairs. Its strength has much declined in the light of contemporary events.

**Isomerism**, a chemical term indicating two compounds having the same formulae and the same molecular weight, but differing in chemical or physical properties. This arises from the difference in the arrangement of the atoms in the molecule.

**Isopoda**, the crustacean order to which the wood-lice belong.

**Isotherms** are lines drawn on charts through points of equal temperature.

**Isotopes**. When one talks of an element, say, uranium or lead, the name of the element is a generic name for a collection of uranium species and lead species. The different species are called isotopes. For any particular element, the number and arrangement of electrons around the nucleus are the same in all the isotopes, so all the isotopes have the same chemical properties. Soddy has described isotopes as "elements, the atoms of which have similar outsides but different insides." For example, in the nucleus of the uranium isotopes, U 235, U 238, and U 239, there are respectively 143, 146, and 147 neutrons. The isotopes have different atomic weights, in this instance respectively 235, 238, and 239. Britain is the largest exporter in the world of radioactive isotopes. See pp. 162 and 189.

**Isthmian Games** were held in alternate years by the ancient Greeks on the Isthmus of Corinth, in honour of Neptune, and were of the same class as the Olympian Games. Wreaths were the only prizes.

**Istle**, a kind of fibre yielded by the *Bromelia sylvestris*, a Mexican tree that grows immense leaves, from which the fibrous material is obtained. For carpets, cordage, sacking, belting, nets, etc., this fibre is very extensively used.

**Itaka-wood**, often called tiger-wood because of its markings, is a hard and beautiful wood furnished by the *Machærium Schomburgkii* of British Guiana. For ornamental cabinet work it is highly prized.

**Itch-Mite**, a minute mite which burrows beneath the skin and produces scabies.

**Ivory**, the dentine substance of which the tusks of the elephant, hippopotamus, walrus, etc., are composed. The tusks of the African elephant

sometimes weigh as much as 100 lb., and reach a length of 8 or 9 ft.

**Ivory Black**, a species of bone-black, made by the calcination of ivory scraps and turnings, used as a pigment in the manufacture of printer's ink, paint, etc.

**Ivory Gull**, a small, beautifully shaped, sea-bird with striking all-white plumage and black legs which breeds on the rocky shores of the Arctic and occasionally wanders south in the winter.

**Ivy**, the well-known climbing shrub, chiefly evergreen; furnishing a sudorific, the berries having also emetic properties.

**Ixia**, a genus of *Cape Iridaceæ*, with beautiful flowers produced in considerable variety of coloration under culture.

**Izar**, a fixed star in the constellation Bootes.

## J

**Jabiru**, the Brazilian name for the giant stork of South America.

**Jacamar**, from *Jacameri*, the Brazilian name for a smallish bird with long, sharply pointed bill and brilliant plumage which inhabits the tropical regions of South America east of the Andes. These birds are seen sitting motionless on trees, darting off at intervals to catch insects on the wing.

**Jacana**, a tropical bird (the water-hen of Brazil and the warmer parts of America) of wide range, beautiful of plumage, with slim body and narrow wings, and long pointed beak. It feeds on seeds and insects, inhabits marshy lands, and is related to the plovers.

**Jack**, a small schooner-rigged vessel, used in the Newfoundland fisheries; a pike; an oscillating lever; a device used in roasting meat.

**Jackal**, a small wild dog related to the wolf and resembling a fox. The Common Jackal is found in S.E. Europe, India, and Ceylon; other species inhabit Africa and Egypt. The jackal is a well-known scavenger.

**Jackboot**, a leathern boot reaching above the knee; in common use during the 17th and 18th centuries, but in modern days surviving only as foot and leg gear for fishermen, ostlers, etc.

**Jackdaw**, one of the smaller members of the Crow family. This European bird is typically black with grey collar. It is easily tamed, makes an amusing pet, and delights in making off with and taking to its nest bright objects, such as silverware. (See p. 1004.)

**Jack Ketch**, a by-name for the common hangman, and said to have been the real name of the public executioner of the time of James II.

**Jacobins**, a French revolutionary club or party, formed in 1789, and accustomed to meet at a Jacobin convent, hence the name. It became a controlling force in the Revolution, especially in the movement which led to the Terror. Robespierre was its chief spokesman.

**Jacobites**, adherents of the Stuart cause after the abdication of James II. First James himself, then his son (the Old Pretender), and later his grandson (the Young Pretender) tried to fan the flame of rebellion in Scotland and Ireland, but after the defeat at Culloden in 1746 the cause was lost.

**Jacquerie**, a revolt of French peasants in 1358 against the tyranny of the nobles. So named from the contemptuous title, "Jacques Bonhomme," given by the nobles to the peasantry.

**Jade**, a green mineral found in China, America, and New Zealand, and used for making vases, bracelets, and other ornamental articles. There are many varieties, and there is evidence that the stone was in common use in prehistoric times for weapons and utensils.

**Jaggernaut**, or **Juggernaut**, the name of the great Indian idol at Puri, which once a year is brought forth from its temple, placed on an enormous car, and conveyed at the head of a mighty procession through the streets. Multitudes of pilgrims assemble on these occasions, and it used to be the practice for many fanatics to throw themselves beneath the wheels of the car and allow themselves to be crushed to death.

**Jaguar**, a South American carnivorous animal resembling the leopard, but much larger and more powerful.

**Jail or Gaol**, a place of confinement for persons charged with or convicted of criminal offences.

- Jains**, a religious community in India numbering about 1,500,000. Jainism, which arose rather earlier than Buddhism in revolt against Hinduism, is based on *ahimsa*, non-injury to all living things; wealth and possessions are discarded. The founder was Mahavira, born c. 599 B.C. The Jain temples are among the most beautiful in India.
- Jamb**, the upright sides of a door, window, fireplace, or other aperture, supporting the lintel, entablature, or mantel and shelf.
- Janeite**, a devotee of Jane Austen and her writings.
- Jangada**, a rude sort of boat or catamaran carrying a large sail, used off the coasts of South America.
- Janissaries**, a former band of Turkish foot soldiers who acted as the Sultan's bodyguard, and were noted for their turbulence and cruelty. They existed from the 14th century to 1826, when they were finally disbanded after the people had risen against them and massacred many thousands.
- Jansenists** were followers of Jansen, Bishop of Ypres, who denied "the freedom of the will and the possibility of resisting Divine grace." They were suppressed in France early in the 18th century; a few adherents went to the Netherlands.
- Janthina**, the "Ocean snail," occurs in the Atlantic. It has a purple shell, and floats at the surface of the sea by means of a float made of hardened slime secreted by the animal and buoyed up with enmeshed air bubbles.
- Jantu**, a water-raising contrivance, balanced on a bar. It is of considerable antiquity, still used in India and the East in irrigation operations.
- January**, the first month of the year, named after Janus, the two-faced god of the Romans. It was the *Wolf month* and *Aefter Yule* of the Saxons.
- Japanning**, the process of coating metal, wood, and other surfaces with the varnish called Japan, which produces a lacquered effect and is capable of receiving a high polish.
- Jarrah Wood**, the wood of the mahogany gum tree of Western Australia, one of the hardest of all woods.
- Jasmine**, a graceful climber belonging to the olive family with odoriferous blossom, originally a Persian plant, but now acclimatised in many varieties in almost all parts of the world. Two species of jasmine (the common jasmine and the Spanish jasmine) yield oils used in perfumery.
- Jasper**, a precious stone of the chalcedony variety, opaque, and coloured red, brown, yellow and sometimes green. It was greatly esteemed by the ancients, the Bible having numerous allusions to it.
- Jaunting Car** was a two-wheeled vehicle peculiar to Ireland, containing a lengthwise seat on each side and a seat in front for the driver.
- Javelin**, a spear thrown by hand and one of the common weapons of war from the days of ancient Rome to the Middle Ages. A rude form of javelin is still used by many savage tribes.
- Jay**, a gaily-coloured bird of the crow family, of many species—the Blue Jay of N. America, the Canada jay, sometimes called "whisky jack," the Siberian jay, and the British jay, fawn-coloured with black and whitish crest and bright blue feathers in the wings. It lives in woods and like the magpie, takes the eggs and young of small nesting birds. (See also p. 1004.)
- Jazerine**, an antique military or protective jacket, strengthened by small overlapping pieces of steel or other metal internally, worn generally by the Italian nobility during the Middle Ages.
- Jazz**, a rhythmical syncopated music probably originating among the Negro population of the Southern States of the U.S.A. It became popular during the first world war and, in a commercialised form, has held the popular field ever since. Modern dance music and popular songs are based on the jazz idiom, which has also had a profound effect upon contemporary music of a more serious kind.
- "Jeames,"** a name brought into familiar use by Thackeray in his "Yellowplush Papers," and since largely adopted in referring to footmen and flunkies.
- Jean**, a stout kind of twilled cotton cloth much worn in olden times, and resembling fustian. Blue *jeans*, adopted by American city youngsters from farmworkers, are now the fashion elsewhere and worn not only as overalls by workmen but by both sexes in leisure time.
- Jebusites**, are often referred to in the Old Testament. They were a Canaanite nation, who held Mount Zion, and were in frequent conflict with the Israelites, until finally defeated by David.
- Jehovah**, one of the Hebrew names of the Deity, the etymology of which is obscure. The English translators of the Old Testament rendered it "the Lord." The Jews, however, regard the word as too sacred for speech, and use the equivalents *Adonai* or *Elohim* instead of it.
- Jelly-fish**. The jelly-fishes, which have gelatinous bodies fringed at the margin with delicate tentacles, constitute the coelenterate order *Scyphozoa*. The mouth, with a squarish opening, is seen on the underside, and there are four horseshoe-shaped sex organs.
- Jenny**, the name given by James Hargreaves to the spinner frame invented by him in 1766, which greatly improved and extended cotton-spinning operations.
- Jeofail**, a law term, referring to the correction of some error in legal process.
- Jerboa**, small jumping mammals of the Rodent order. These mice-like animals have long tufted tails and very long hind legs, the front legs not being used for locomotion. The African jerboas have three toes, the Asiatic jerboas five.
- Jereed**, a wooden javelin, used in Turkey and Persia in tournaments and marksmanship competitions. It is about five feet long, and great skill may be attained in flinging it at a moving object or fixed target.
- Jeremiad**, any utterance or writing in which sorrow or complaint is the chief characteristic, so named as recalling the style of the "Lamentations of Jeremiah," in the Old Testament.
- Jerkin**, a short upper garment or jacket, made of leather or cloth, in common wear by men in the 16th and 17th centuries.
- Jersey**, the name given to a close-fitting garment of fine woollen yarn worn by men and women, and a common garment of athletes, cricketers, etc.
- Jerusalem Chamber**, a room in Westminster Abbey, deriving its name from the circumstance of its having originally been decorated with a view of Jerusalem. Henry IV. died in this chamber, and the Committee for the Revision of the Bible met there in 1870 and later.
- Jesuits**, members of the Roman Catholic teaching order founded by Ignatius Loyola in 1534. The education of the young and of society itself was an important part of their programme. A long and vigorous course of study is prescribed before they are admitted into the privileges of full membership. They are required to take the vows of voluntary poverty, perfect chastity, perfect obedience, and complete submission to the Pope. The Society played an important part in politics.
- Jet**, a deep black fossil substance admitting of a high polish and much used for jewellery, ornaments, and trimming. It is a form of lignite, the most important British deposit being found near Whitby, where jet manufacture has been an established industry for a long period.
- Jet Engine**, an aeroplane engine which derives its thrust from the high velocity of the gases it ejects. The essential units in a jet engine are a rotary compressor and a gas turbine, the latter driving the compressor. The first reliable, high-performance jet propulsion engine for aircraft was invented by Air Commodore Sir Frank Whittle.
- Jetton**, a kind of metal counter formerly used in card-playing. Monarchs, nobles, and abbays had their distinctive jettons, which were often as carefully devised and inscribed as if they had been pieces of coin. Examples survive in many museums.
- Jetty**, a construction of wood, masonry, or iron-work projecting into the sea, and serving as a wharf for shipping and merchandise, or as a mole for harbour protection.
- Jeunesse dorée**, gilded youth, a term applied to young men "about town" remarkable for their luxurious habits. The name was originally given to the young men of the upper classes who aided in suppressing the Jacobins after the Reign of Terror.
- Jewish**, a large fish of the *Serranidae* family, plentiful round the coast of America.

**Jewish Calendar** is supposed to date from the Creation, which according to their reckoning occurred on 7th Oct., 3761 B.C.

**Jews**, descendants of the ancient Hebrews or Israelites, who settled in what is now called Palestine about the 15th century B.C. Before the Nazi persecutions and massacres—the greatest tragedy of Jewish history—world Jewry numbered over 15 million. About 5 million lived in the United States and 10 million in Europe (Poland 3 million, Russia 3 million, Central Europe 2 million, Germany 500,000, England 300,000, France 170,000, Holland 120,000). Some 6 million Jews perished in the course of the Nazi persecutions. A movement to restore Jews to Palestine was founded in 1897, known as the Zionist movement (*q.v.*). From 1923, when the Treaty of Lausanne formally ended the war between the Allied Powers and the Ottoman Empire, until 1948, Palestine was administered by Great Britain under a mandate. Efforts to reconcile Jews and Arabs proved unsuccessful and Great Britain in 1946 decided to submit the problem to the United Nations for solution and terminated the mandate on May 13th, 1948, when the Jewish National Council proclaimed a Jewish State of Israel. When the Israeli state was created the population was about 650,000 Jews and 1,000,000 Arabs. In 1951 the population figure was 1,578,000 (80 per cent. Jews). (*See Anti-Semitism.*)

**Jew's Ear**, a fungus that grows in the shape of an ear and is common in England. At one time it was accounted of medicinal value, and in China is esteemed both as a medicine and as an article of diet.

**Jew's Harp**. The name is believed to be a corruption of "jaws harp." This instrument consists of a metal frame with a central tongue of spring steel. The frame is pressed against the teeth, and the tongue of the harp is twanged with the finger, the mouth acting as a resonating chamber. By altering the shape of the mouth the resonant frequency and therefore the note can be varied.

**Jewstone**, a pale grey egg-shaped fossil stone that was once highly prized.

**Jhumung**, the name of a method of cultivation adopted in the jungle parts of India, but only followed for a year or two after the forest has been cleared by felling and burning.

**Jib**, the front triangular sail of a ship, resting on a stay, and in large vessels projecting from the end of the jib-boom. There is also a flying jib outside this.

**Jig**, a rapid dance for one or more persons, much indulged in in Ireland and the English and Scottish provinces, a survival of old English days.

**Jigger**, **Jigger Flea** or **Chigoe**, a kind of flea common in the West Indies and some of the warmer parts of the United States. The female buries the hind part of her body in human skin, and causes great irritation.

**Jihad**, a religious war of Mohammedans against unbelievers. Fanatics attempted to set one on foot in India in 1877, and simultaneously another was proclaimed at Constantinople against the Russians, but it came to naught.

**Jimson Weed**, corruption of Jamestown Weed, a synonym for the Thorn Apple.

**Jingal**, the name of a swivel-musket largely used by the Chinese for shooting water-fowl and other birds.

"**Jingos**," an English political term which came into vogue in the "seventies" and "eighties," when Russia seemed to be threatening an advance on Constantinople. A music-hall song of the day, sung by Macdermott, the refrain of which was "We don't want to fight, but by *jingo* if we do," etc., emphasised the feeling of the party and gave the cue for their being called "Jingos."

**Jinnees** are supposed to be spirits of evil, assuming various shapes, human and animal, and exercising good or evil influence, according to their origin or mission. In the *Arabian Nights* and other Eastern literature Jinnees or genii are numerous.

**Jinrikisha**, a hooded, two-wheeled vehicle drawn by one or two men, and used in Japan, India, and other Eastern countries.

**Joachimites** were adherents of the Italian religionist Joachim, who was abbot of San Giovanni del Fiore at the beginning of the 13th century, and maintained that three reigns would complete the history of the earth; the first was the reign of the Father, from the Creation to the birth of Christ; the second that of the Son, from the birth of Christ to 1260; and the third that of the Holy Spirit, from 1260 to the end of the world.

**Jockey Club**, the governing body that, although possessing no legal status, frames rules and laws by which horse-racing and turf matters generally are regulated. The club-house is at Newmarket.

**Johannisberger**, a famous white wine produced from grapes grown in the Rheingau district near Wiesbaden.

**John Bull**, the typical figure of an Englishman, bluff, big, and burly. Arbuthnot's *History of John Bull* is supposed to have originated the character.

**John Company**, a familiar appellation of the East India Company.

**John Dory**, a well-known sea-fish of which there are six species. It is of a golden-yellow colour (*jaune doré*), has a high dorsal fin with long filaments projecting from the spines, and is much valued as a table fish. It is sometimes found in British waters, but the Mediterranean is its chief habitat.

**John o' Groats' House**, W. of Duncansby Head, Caithness, popularly named as the northernmost point of Scotland. According to legend the house, which has now disappeared, was built in octagonal form by a Dutchman Jan de Groot who came to live there in the 16th century. The site is marked and an inn was erected near it in 1876.

**Joiner**, a workman whose occupation is to construct articles in house-building by joining woodwork with framings, glue, screws, nails, etc.; a specific branch of the craft of carpentry.

**Joist**, a horizontal timber employed in the support of floors and ceilings in house-building; latterly iron joists have also been used in the construction of many important edifices.

**Jongleurs** were minstrels and jesters who wandered from town to town singing songs and giving entertainments in mediæval France and Norman England.

**Jordanite**, the name given to a native sulphide of arsenic and lead, found in orthorhombic crystals in the dolomite of the Binnenthal, in Switzerland.

**Joss**, the popular name of a Chinese idol, the place where it is kept being called a joss-house.

**Jougs**, an ancient Scottish instrument of punishment, in the form of an iron collar, which was fitted to the neck and held to the wall or to a tree by a chain; a variety of pillory of a barbarous character, employed at times in the repression of female recalcitrants.

**Joule**, a unit of energy equal to 10<sup>7</sup> ergs, or about  $\frac{1}{4}$  of a foot-pound. Named after the British scientist, J. P. Joule (1818-89). It may be defined as the work done in one second in maintaining a current of one ampere against a resistance of one ohm.

**Jousts** were military tiltings in the nature of tournaments, where the contestants strove against each other on horseback with blunted lances. It was the sport of nobles in feudal times.

**Jovinianists**, a sect founded in the 4th century by a Milanese monk named Jovinian, who contended for the equality of sins, rewards, and punishments, and denounced celibacy and other prevalent features of Church doctrine.

**Jowler**, a Cornish and West of England term for a fish-hawker who plies his trade on horseback.

**Jube**, in church architecture, the road-loor over the entrance to the choir from the chancel.

**Jubilee** (or **Jublie**), the year following the seventh seven-year period. A year of perfect rest (*Lev. xxv*). In the Roman Catholic Church the Jubilee Year is every 25th year from Christmas to Christmas (originally 100 years), during which time plenary indulgence is obtainable. Introduced by Boniface VIII. Feb. 22nd, 1300. In recent years the word Jubilee has been applied to any form of 50th year celebration.

**Judge Advocate General** is an officer whose duty

- it is to advise the Crown on Courts Martial and on subjects connected with military law.
- Julian Calendar**, named after Julius Cæsar, who in 46 B.C., finding the Roman year 90 days in advance of the real time, was the first to adopt the calculation of time by the solar year, the average length being fixed at 365½ days. There was still an overplus of a few minutes every year, and this was rectified by the Gregorian Calendar, introduced in Italy in 1582 and adopted in England in 1752, from which date what is called the "New Style" begins.
- Julianists**, a sect of Copts who believed the body of Christ to be incorruptible, in contravention of the doctrine of the Severians.
- Julus**, a genus of millipedes with cylindrical bodies and two pairs of legs to each segment, the latter being 40 to 50 in number. In South America specimens 5 or 6 inches long are frequent, but those found in England are small.
- July**, the seventh month of the year, named after Julius Cæsar. It was the *Maed monath* (Mead-month) of the Saxons.
- July Revolution**, the French revolution of 1830 whereby Charles X. was deposed and Louis Philippe made king. The latter was deposed by the revolution of 1848.
- Jumart**, a fabulous monster which often cropped up in early English literature, supposed to be the offspring of a bull and a mare, or of a horse and a cow.
- Junco**, the name given to a genus of snowbirds, confined to the American continent.
- June**, the sixth month of the year, containing 30 days and deriving its name from Juno. It was the *Sear* (Dry) *monath* of the Saxons.
- Jungle**, the Indian name for a forest or dense tract of undergrowth or desert land.
- Jungle-Fowl**, birds related to the peacocks and peacock-pheasants. At least four species are known from the jungles of India, Ceylon, and Java. The domestic chicken has been derived from the Red Jungle-Fowl (*Gallus bankiva*).
- Juniper**, the Nova Scotian name of the American larch; also all the trees of the *Juniperus* genus; from the unripe fruit of some species of which is distilled the stimulant and diuretic oil of juniper.
- Junk**, a flat-bottomed Chinese sea-going boat, carrying large masts, and employed on the coasts and seas of China and Japan.
- Junkers**, name of the ruling class of Prussia, military in spirit, who were the party of reaction and defenders of the landed interests. Supported Bismarck prior to the Franco-Prussian war and helped bring Hitler to power. They have been expropriated and broken.
- Junket**, a sort of sweetmeat, consisting sometimes (as in Devonshire) of curds and cream, sweetened and flavoured at will, made with rennet.
- Junta**, a Spanish word designating a legislative or other distinguished assembly entrusted with the passing of laws or the deciding of policy. A grand council of state.
- Jupiter**, the largest body of the planetary system except the sun, from which orb it is distant 483,000,000 miles. Its mass is over 300 times that of the earth, while in bulk it is 1,300 times as large. It has 4 major (discovered by Galileo in 1610) and 7 minor satellites, the former being visible with field glasses. Also the supreme deity of the Romans, identified with the Greek Zeus.
- Jurassic Formation**, a series of rocks (the evidences of which are most marked in the Jura Mountains) coming between the Cretaceous and Triassic groups and including the Oolite and the Lias. It is a formation rich in fauna, abounding in echinoids, lamellibranchs, ammonites, and belemnites; large reptiles, marine and land, are common, as are the plants called cycads. It extends through a great part of Europe and to America.
- Jury**, a body of men chosen and sworn to hear and pass verdict upon evidence brought forward at a trial, inquest, or inquiry. Its origin is obscure, but it was in existence in the 13th century. The trial jury consists of twelve jurors, except in the county court, where small civil cases are sometimes tried by the judge and a jury of five. The jurors are the judges of fact upon the evidence laid before them. Since the passing of the Sex Disqualification (Removal) Act, 1919, women may serve as jurors throughout the United Kingdom. (See *Compurgation*.)
- Jurymast**, a word of doubtful origin, but indicating an improvised mast put up in place of one lost or broken.
- Justice**, is defined as "a written or prescribed law, to which one is bound to conform and make it the rule of one's decisions."
- Jute**, the name given to the fibre of a plant grown largely in Pakistan in the Ganges delta and used for the manufacture of coarse cloths, cordage, etc. Calcutta is the biggest jute-manufacturing centre of the world, as Dundee was in the 19th century.
- Jutes**, a Low German race who in the 5th century invaded the south-eastern part of England, establishing themselves in Kent and making Canterbury their capital.
- Juvenalia**, games of young people instituted in Rome's imperial days by Nero.
- Juzail**, a heavy type of rifle used by the Afghans.

## K

- Kaaba**, the inner shrine of the Great Mosque at Mecca, only thrown open to the faithful three times a year. It contains in its south-eastern corner the famous sacred "black stone," said to have fallen from heaven with Adam.
- Kaffirs**, Bantu-speaking negro tribes of the Union of South Africa, whose occupations are cattle-raising, farming and hunting.
- Kago**, a rude Japanese palanquin suspended from a pole borne on the shoulders of two carriers, the person carried resting in a sort of bamboo hammock.
- Kagu**, native name for a curious bird related to the sun-bittern and the only member of the Rhinocetinae family, found inhabiting New Caledonia when that island was colonised by the French.
- Kaha**, the Dyak name for the Proboscis monkey of Borneo.
- Kain**, a tribute or duty formerly taken—in kind, as poultry, etc.—by landlords in Scotland and elsewhere as part of the rents due to them from their tenants.
- Kainite**, a mineral found in the Stassfurt salt mines, Magdeburg, Germany, forming a source of potassium compounds, and consisting of magnesium sulphate and potassium chloride.
- Kaiser**, the German form of the word Cæsar, emperor, borne up to 1918 by the then sovereigns of Germany and Austria. Charlemagne was the first prince to assume the title of Kaiser.
- Kakapo**, the Maori name for the New Zealand owl-parrot, a peculiar and interesting species, possessing wings but not able to use them for flight, of brown mottled plumage, nocturnal in its habits, and nesting in burrows. The bird, once abundant, is rapidly becoming extinct.
- Kalan**, a local name for the sea-otter which is only found in the seas of Kamchatka and North-West America. It is larger than the beaver, and weighs from 70 to 80 lb.
- Kalanchoë**, the genus of *Crassulaceæ*, the leaves of varieties of which are applied to medicinal uses in China, India, and South America.
- Kale**, a kind of cabbage with curly leaves; but also applied to cabbages in general.
- Kaleidoscope**, an optical instrument, the invention of Sir David Brewster (1781-1868) and consisting of a cylindrical tube containing two mirrors inclined to each other at an angle, which produce a symmetrical reflection of any transparent coloured substances placed between. An endless variety of beautiful patterns is obtained by turning the toy round.
- Kahnuks**, a branch of the Tartar or Mongol race who in the 17th century migrated to Europe. Many of them returned to China in 1771. The descendants of the last of these nomads to enter S.E. Russia are now organised as the Kalmyk Autonomous Soviet Socialist Republic.
- Kalpis**, an ancient three-handled Grecian water vase of large size, decorated with classical figures in red on a dark ground.
- Kami**, a Japanese title applied to gods and celestials and their descendants, the emperor, and members of the imperial family, and daimios and governors.
- Kamptulicon**, a floor-covering composed of a mixture of india-rubber, gutta-percha, and cork. It was invented by Elijah Galloway in 1843, and

- though at first only made in grey shades, is now produced in a variety of bright-coloured patterns.
- Kangaroo**, pouched (marsupial) mammals of Australia and adjacent islands. There are over 20 species, the smaller ones being known as "wallabies." Kangaroos leap in a succession of springy bounds 10-20 ft. long, the forefeet not touching the ground. They can reach a height of over 6 ft. and a weight of 200 lb. First seen by white men when Capt. Cook's expedition visited Australia in 1770. Related genera include the tree kangaroos, rat kangaroos, and the Tasmanian Jerboa kangaroo.
- Kantianism**, the philosophical principles propounded by Immanuel Kant, the 18th-century German metaphysician, which sought to restrict human knowledge to objects of possible experience, while admitting religious ideas as modifying influences.
- Kaolin** or **Kaolinite**, a fine clay much used in the manufacture of high-class pottery. It results from the decomposition of felspar, and is found in China, Japan, Devon, Cornwall, at Limoges, and in certain parts of the United States.
- Karaites**, a Jewish sect founded in the 8th century in Persia by Anan ben David, who adhered strictly to the Scriptural word and rejected the rabbinical traditions and the Talmud. Remnants of the sect still exist in parts of Eastern Europe.
- Karma**, the Hindu theory that a man's actions control his destiny after death, as the natural effect of a natural cause. The idea of successive existences is bound up with the doctrine, and forms a fruitful subject of ethical speculation.
- Katydid**, large long-horned insects of the grasshopper family, common throughout the United States east of the Rockies. Their name comes from the sound these insects make.
- Kauri Pine**, the large coniferous tree which yields Kauri gum or copal so largely used in varnish making, occurring in Australia and New Zealand. Some of the best Kauri copal comes from the fossilised pines and is dug out of the soil far from any living trees.
- Kava**, a refreshing drink made from the pounded root of the pepper plant (*Piper methysticum*) and the national drink of Tonga.
- Keble College**, an Oxford college founded and endowed in 1870 in memory of the Rev. John Keble, author of *The Christian Year*.
- Keep**, the central tower or chief stronghold of an ancient castle, sometimes called the donjon.
- Kellogg Pact**, was signed by fifteen principal nations at Paris on August 27th, 1928. The contracting parties agreed to "condemn recourse to war for the solution of international controversies and renounce it as an instrument of national policy in their relations with one another." It had no effect.
- Kelpie**, a water-sprite of Scottish fairy-lore, whose appearance assumed various forms, and foreboded drowning to the person who saw it.
- Kentish Fire**, a noisy long-continued kind of cheering and clapping of hands which originated in Kent at the Protestant meetings held in 1828-29 to oppose the Roman Catholic Relief Bill.
- Kentish Rag**, a kind of fossiliferous clayey limestone found in Kent. Used in building.
- Keratin**, a hard protein material of which horns, nails, claws, hoofs, and reptiles' scales are made.
- Kermes**, a crimson dyestuff, less brilliant than cochineal, but more lasting. It is made from the bodies of the females of a small oak-inhabiting insect (*Coccus*) found in immense numbers on the coasts of the Mediterranean. It was discovered before cochineal.
- Kermesite**, a somewhat scarce mineral, being a combination of oxide and sulphide of antimony, and of a red colour. Often called red antimony.
- Kerosene**, an illuminating oil distilled from petroleum and shale. Also called paraffin.
- Kersey**, a coarse kind of woollen cloth, originally made at Kersey, in Suffolk, and much used in the Middle Ages for ordinary men's clothing.
- Kestrel**, the most common British falcon, well known for its habit of hovering for minutes at a time with vibrating wings and then swooping down to attack mice and insects. The male has spotted chestnut-brown back, greyish head and tail, which has a broad black band near tip.
- Ketch**, a sailing vessel formerly in considerable vogue, with two tall masts fore and aft, and clear amidships.
- Jew Gardens**, officially known as the Royal Botanic Gardens, are amongst the most celebrated gardens in the world. They were established in 1759 by order of George III. Since 1841 the gardens have been open to the public, and form one of the most attractive resorts near London.
- Key**, the old English name for hemlock; so called because of the hollow stems of the plant.
- Key**, a musical term indicating the central dominating note that gives the melodic order in which the tones of a tune or composition are arranged. It is the starting-point, and different starting-points demand different scales. The natural key of C, for instance, requires no flats or sharps; all other keys require the use of sharps or flats to bring the notes of their scales into proper relation.
- Keys, House of**, is the Manx representative assembly. (See Tynwald.)
- Keystone**, the stone which occupies the centre and highest point of an arch and is usually the last to be inserted.
- Khair Tree**, a small prickly tree of the Acacia family, bearing white flowers on long axillary spikes, and common in Western India.
- Khaki**, a clay-coloured cloth adopted for uniforms in the British Army in the time of the war with the Boers, and used in the first and second world wars. First used by Indian regiments.
- Khan**, a title formerly of importance in Eastern countries, and given to princes and governors of states, but now of too common use to be much more than a mere courtesy designation. Also the name of a caravanserai.
- Khedive**, the title borne by the viceroys of Egypt from 1867, after Ismail Pasha's arrangements with the Sultan establishing hereditary succession in his family. It was abolished by the British in 1914.
- Khonds**, a race of aboriginal East Indians occupying the jungles and lower regions of Orissa, and formerly noted for their frequent human sacrifices, which, however, have been prohibited since 1842.
- Kikuyu** (Akiikuyu), the largest Bantu tribe in Kenya (estimated in 1952 at 1,060,000), the majority of whom live in the three Kikuyu reserves of Kiambu, Nyeri, and Fort Hall, an area of 2,000 square miles. They are chiefly peasant farmers and share the Bantu idea that cattle is a measure of wealth. They are passionately concerned to own at least some land which will provide security for old age. Many, however, work as casual labourers on European farms and in the towns. Few Kikuyu have any education beyond the primary stage and witchcraft and evil spirits are very real to them. (See Mau-Mau.)
- Kilderkin**, once a common liquid measure in England, representing 18 gallons.
- Kilogram**, a unit of mass equal to 2.2 lb. One kilogram equals 1,000 grams.
- Kilowatt**, a unit of electrical power; equals 1,000 watts, and is equivalent to about 1½ horsepower. An average electric fire "burns" 2 kilowatts of electricity. Electric power of 1 kilowatt used continuously for an hour represents an energy consumption of 1 kilowatt-hour; this is commonly called 1 "unit" of electricity.
- Kilt**, a short pleated plaid skirt-like garment forming part of the Highland costume, and reaching from the waist to the knees. In olden times it was simply the lower part of the belted plaid.
- Kilting**, a dressmaking term denoting an arrangement of flat single pleats, placed side by side.
- Kimmeridge Shale**, the name given to a peculiar geological formation most prominent at Kimmeridge in Dorsetshire, abounding in reptilian fossils, and forming the base of the Portland oolite group. Much of the shale is bituminous and can be burned as fuel.
- Kindergarten**, a system of infant education ("garden of children") invented by Friedrich Froebel in 1837 and introduced into England in 1854, based on the activity of the pupils themselves by means of toys, games, and singing—things in which children take delight naturally. The system is now well established in nearly all countries, having been developed on very

- successful lines in the primary schools of England.
- Kindred Table** was compiled in 1563, and is printed in the *Book of Common Prayer* of the Established Church.
- Kinetic Energy**, the energy possessed by a body by virtue of its motion.
- King Crab**, remarkable crustaceans inhabiting the sea coasts of America, Japan, India, and Malay Peninsula, carrying a shield-shaped shell, and having a long pointed spine projecting from the posterior. The body comprises three separate sections articulated together. These crabs—in America known commonly as the horseshoe crab because of their shape—are from 18 in. to 2 ft. in length. Fossil king-crabs are found as far back as the Silurian. There are about six living species.
- Kingfisher**, a well-known family of brilliant-plumaged birds, found in all continents, comprising some 250 species and sub-species. The British kingfisher, *Alcedo atthis*, haunts the rivers and streams, and is one of the most beautiful of native birds, having iridescent blue-green, salmon pink, and rich chestnut in its plumage and bright-red feet. All kingfishers have long, dagger-shaped bills. In the Malay region, New Guinea, the Moluccas, and Australia the varieties are very numerous. The quaint *Laughing Jackass* of Australia is among the largest of the kingfisher family. The European kingfisher is the bird of the Greek legend of the Halcyon.
- King-of-Arms**, the name of the chief officials of the Herald's College. There are several in England—the principal being those of the Garter, Norroy, and Clarenceux. (See Herald's College.)
- Kinkajou** or *Jupura*, a carnivorous animal of the raccoon family, having a yellow-brown fur. It is common in the forests of Central and South America, lives mostly in the trees, feeding on birds, fruit, insects, etc. Its tail is prehensile.
- Kiosk**, a word of Russian or Turkish origin meaning a small open pavilion of light construction much used in Eastern countries as a place of shade and rest. Similar structures are common in the streets of Paris as news and advertisement stands, and in London as telephone offices.
- Kirimon**, one of the two Japanese imperial crests, comprising the design of the flowers, leaves, and stems of three pawlonia plants. The *kikemon* is the other imperial crest.
- Kirk**, the Church of Scotland. Kirk-Session is a "court" of the Presbyterian churches, consisting of the ministers and elders.
- Kirschwasser**, a spirituous beverage distilled from the wild cherry, made chiefly in the Vosges and Black Forest.
- Kirtle**, the name given in the 16th and 17th centuries to a woman's garment, but not always to the same kind of garment. At one time it was an under-garment or petticoat, at another a gown or a cloak, and sometimes referred to men's garments. More generally a kirtle was a woman's outer skirt.
- Kish**, the impurities which float to the surface of molten lead in smelting.
- Kismet**, a word signifying fate, destiny, or doom, frequently employed (or its equivalent) in most Oriental countries, and also in considerable use in European literature and speech.
- Kit-Cat Club**, a famous club formed in the early part of the 18th century, and having among its members many notable people, including Addison and Steele. It derived its name from the pastrycook who served it with pies—Christopher Cat—and has had its existence commemorated in a special size of portrait called a "Kit-Cat," because of the fact that the portraits of the members of the club were all done (by Sir Godfrey Kneller) to this size—36 in. long by 28 in. wide. Its summer meetings were held at the Upper Flask Inn, Hampstead.
- Kitchen Middens**, the name designating certain large mounds, presumably the sites of prehistoric villages, distinctive features of which are stone-hearths. These mounds contain large quantities of fossil remains of edible molluscs, bones of birds, animals, and fishes, fragments of implements, etc. They exist in the largest numbers on the east coast of Denmark, and here and there on the coasts of Scotland, Ireland, Eng-
- land, and N. America, and belong, it is supposed, to the early Neolithic Age.
- Kite**, name of several birds of prey, widely distributed, related to the hawks and eagles, graceful in flight, and distinguished by their long wings and deeply forked tails. The red kite, light chestnut brown, once the most familiar bird of prey in Britain, seen scavenging the streets of London, is now the rarest, and found only in Wales. The Egyptian kite and the pariah kite of India, notorious for their daring thefts, are closely related to the black kite, a smaller European species, with less forked tail and blackish-brown plumage.
- Kittiwake**, a beautiful white and pearl-blue gull inhabiting the rocky coasts of the North Atlantic. It has a yellow bill and triangular black wing tips.
- Kiwi**, flightless, stoutly-built birds of New Zealand, now very rare and carefully protected by the Government. They are little larger than a domestic hen, and lay astonishingly large eggs for their size. Incubation and care of chicks falls to the male bird. They have rudimentary wings concealed by the plumage, and the feathers are hair-like. They are nocturnal in habit.
- Klipspringer**, a small South African antelope standing little more than 2 ft. high. It has long bristly hair, and the males have short slight horns. Its habitat is the rocky regions of the Cape.
- Klystron**, an electron tube used in ultra-short-wave circuits to generate oscillation power by velocity modulation.
- Knighthood** is a degree of honour or title common in Europe since the Middle Ages, and was at first exclusively a military order. In Great Britain the four main orders of knighthood are those of the Garter, the Bath, the Thistle, and St. Patrick; in addition to which there are several other orders, such as the Order of St. Michael and St. George, the Star of India, etc. There are also Knights Bachelors, such as are not associated with any special order. The title is not hereditary, and therefore ranks below that of a baronet, though both are entitled to the prefix "Sir" (See p. 737.)
- Knobstick**, a term of opprobrium much in use among the working-classes in England in the middle part of the last century, and applied to workmen who dissociate themselves from the majority, and either accept work while others are on strike, or otherwise decline to abide by the rules of trade unions or associations.
- Knot**, a nautical measure of speed (1 sea mile per hour), and formerly measured by a log-line, divided by knots at equal distances  $\frac{1}{10}$  of a geographical mile. The number of knots travelled by the ship in half a minute corresponded to the number of sea miles it travelled per hour. A sea mile is equal to about  $1\frac{1}{4}$  of a statute mile.
- Knout**, formerly a Russian instrument of punishment, consisting of a whip of many thongs, used upon Russian criminals since the 15th century. A hundred and twenty strokes were considered equivalent to a sentence of death, half that number sufficing to kill in many instances. Czar Nicholas I., however, changed the form of the knout, and made it a much milder instrument.
- Knuckle-duster**, a formidable apparatus contrived for the purpose of protecting the knuckles and to add force to their use; frequently employed by garroters and other lawless ruffians.
- Knurr and Spell**, an obsolete game played with a trap, bat, and ball.
- Koala**, the Australian arboreal marsupial mammal that looks like a toy teddy-bear, with ashy-grey fur, bushy ears, and rudimentary tail. It feeds on the leaves and shoots of certain eucalyptus trees, and is not more than 2 ft. in length.
- Kohl**, a powder prepared from antimony or burnt almond shells, and in common use by the women of the East for darkening the eyelids.
- Kopeh**, a Polynesian aroid, cultivated by the natives of the South Sea Islands for its large edible yam-like roots.
- Koran**, the Bible of the Mohammedans, founded by Mohammed in the 7th century, and supposed to be a transcript of a series of messages delivered to the prophet by the Angel Gabriel during a period of 23 years. It constitutes the law of life, civil, military, religious, and legal to Mohammedans. It recognises Christ and Moses as prophets of God, but gives the chief

place to Mohammed. The first English translation made direct from the Arabic was by George Sale, London, 1734.

**Koreish**, an ancient Arab tribe whose members kept guard over the sacred stone of Mecca before the rise of Mohammed. They opposed his view and compelled him to quit Mecca but they were ultimately defeated by Mohammed and his followers.

**Kos**, a Jewish measure of capacity, equivalent to about four cubic inches.

**Koto**, a musical instrument in general use in Japan consisting of a series of 13 silken strings stretched across a curved wooden surface, and played with the fingers. Each string is 5 ft. long, and has a separate bridge so fixed as to give the vibration necessary for the note it has to produce. It is a sort of horizontal harp, and in the hands of an expert player is capable of giving forth excellent music.

**Koumiss**, a beverage made from mare's milk fermented, and often served up with cooked grain; a common refreshment of the Arabs of Africa and some of the tribes of Asia, particularly the Tartars.

**Kraal**, a hut or collection of huts in an African village.

**Kraken**, a fabled Scandinavian sea monster, around which many legends and superstitions have been formed in Norway. It is generally described as a sort of sea-serpent, and was so large and weird of form as to be mistaken, so the tradition runs, by fishermen for an island.

**Kremlin**, a large fortified citadel in Moscow, containing the cathedral in which the Czars were crowned, an imperial palace, and important garrisons and arsenals. At the foot of the Ivan Tower rests, in a cracked condition, the famous great Ivan Bell, weighing 200 tons. The Kremlin is now the headquarters of the Soviet Russian Government.

**Krishna**, one of the Hindu deities, and a chief character in the Mahabharata epic.

**Krypton**, one of the rare gases, occurring in the air to the extent of 1 part in 20 million. It was discovered in 1898 by Ramsay and Travers.

**Ku-Klux-Klan**, a secret political organisation in the Southern States, active after the close of the Civil War and having for its chief aim the establishment of white control. Suppressed in 1871 by the Enforcement Act (popularly known as the Ku-Klux Act or Force Bill) after numerous outrages had been committed. Revived between the two world wars as a sadistic anti-Negro, anti-Jewish, anti-Catholic society, spreading to the North as well as the South.

**Kulin**, a Brahmin of high sacerdotal position, to whom the privilege of plurality of wives is permitted, with whom he gets liberal dowries, while each wife is maintained in the parental home.

**Kummel**, a German cordial, flavoured with cummin, caraway seeds, or fennel.

**Kunzite**, a transparent lilac to peach-pink spodumene (*vide*) gemstone with remarkable fluorescent properties.

**Kuomintang**, the Chinese "People's National Party," founded by Sun Yat-Sen in 1912 after the successful National Revolution of 1911. Sun Yat Sen sought to establish a democratic Republic modelled on western parliamentary democracy and in his famous "Testament" laid down the principles upon which the constitution of China was to be based. After his death in 1925 Chiang-Kai-shek emerged as leading man in China. Beginning as a Russian-inspired revolutionary movement, the Kuomintang developed into a reactionary oligarchy and collapsed in 1949 when the Nationalist forces suffered military defeat by the Communists.

**Kurds**, a native race inhabiting Kurdistan, a wandering people professing the Mohammedan faith and speaking an Iranic dialect.

**Kussier**, a Turkish musical instrument consisting of five strings stretched over a sort of kettle-drum.

**Kusti**, the sacred cord or girdle of the Parsees, consisting of 72 threads—the number of the chapters of the Izashue—and two branches, each branch containing six knots, together standing for the 12 months of the year.

**Kutch**, the packet of vellum leaves in which gold is placed for the first beating; the gold-beaters'

skin packet into which the leaf is placed for the second beating is known as the "shoder."

**Kutia**, a special Russian dish eaten after a funeral ceremony at church or cemetery, and composed of boiled rice or other cereal mixed with honey and raisins, the ingredients being supposed to possess some symbolical significance.

**Kvass**, a common Russian fermented beverage made from an infusion of flour or meal or dough of rye, wheat, or malt. A superior kind is made from fruits.

**Kyanite**. This mineral, commonly blue to white in colour, is an aluminium silicate.

**Kylix**, the name given in ancient Greece to a graceful double-handled drinking-cup, in general shape something like a modern champagne glass.

**Kymograph**, an instrument for recording the pressure of fluids, especially the blood in living beings, on a revolving cylinder covered with smoked paper.

**Kyrie Eleison** ("Lord, have mercy"), the name of a common form of prayer in the Anglican, Roman Catholic, and Greek Churches; also applied to the English Church responses after the recital of the commandments.

**Kyrie Society**, named after Pope's "Man of Ross," John Kyrie, founded by Miss Miranda and Miss Octavia Hill in 1875, and having for its object the decoration of workmen's clubs, hospitals, etc., and the promotion among the poor of a taste for literature, music, and outdoor recreation.

**Kyste**, a chest or coffin for the burial of the dead.

## L

**L.S.D.**, from the Latin *libra* (a pound), *solidus* (a shilling), and *denarius* (a penny), introduced by the Lombard merchants.

**Labadists** were a sect of Christian communists instituted by Jean de Labadie in France in the 17th century. They did not distinguish Sunday from other days, holding that life was all Sabbath.

**Labarum**, the standard of Constantine the Great, adopted after his conversion to Christianity, marked with his seal, and represented upon the coinage.

**La Belle Sauvage**, a site on the north side of Ludgate Hill, famous for the inn that stood there from the fifteenth century to the early nineteenth. The site was blitzed during the second world war.

**Labour Party**, The, is made up of 84 Trade Unions with a membership of 5,529,760, five Socialist and Co-operative Societies with a membership of 34,610, and 667 Constituency and Central Parties with an individual membership of 544,042 men and 389,615 women. The total membership is 6,498,027. The Party organisation is governed by a National Executive Committee elected annually by the Labour Party Conference, with Ald. E. G. Gooch, C.B.E., J.P., M.P. as Chairman (1955-56) and Mr. Morgan Phillips as Secretary. The Parliamentary Labour Party (1955-56) consists of 277 Members in the House of Commons, of whom the Rt. Hon. H. T. N. Gaiskell, C.B.E., M.P., is Leader; Rt. Hon. James Griffiths, M.P., Deputy Leader; Mr. H. W. Bowden, C.B.E., M.P., Chief Whip. The Parliamentary Committee (or Shadow Cabinet) consists of these three plus twelve elected Members and three Peers. Mr. Carol Johnson, C.B.E., is Secretary of the Parliamentary Party. In the House of Lords, the Party consists of 55 Peers of whom the Rt. Hon. Viscount Alexander of Hillsborough, C.H., is Leader and the Earl of Lucan, M.C., Chief Whip. The Deputy Leader of the Labour Peers is the Rt. Hon. Lord Silkin. Labourers, English Statute of, was passed 1350-51, with the object of compelling labourers to accept a certain rate of wages and not leave their employers' service, the Plague having rendered labourers so scarce that they were in great demand and had been insisting on higher pay. These enactments were bitterly opposed and led to the "Peasants' Revolt," headed by Wat Tyler.

**Labradorite**, a feldspar of a pearly lustre on cleavage, found in masses in igneous rocks, the best samples of which come from Labrador.

**Labyrinth**, or **Maze**, a combination of roads and passages so constructed as to render it difficult for anyone ignorant of the clue to trace the way to the central part. The Egyptian labyrinth near Lake Moeris had 3,000 rooms, half of them subterranean, and the remainder above ground. The labyrinth in Crete, according to Greek myth, was built by Dædalus to house the Minotaur. There was one at Lemnos, renowned for its stalactite columns; and another at Clusium constructed by Porsenna, King of Etruria, about 520 B.C. The labyrinth in which Fair Rosamond was concealed was at Woodstock. Hampton Court maze dates from the 16th century.

**Labyrinthodonts**, gigantic fossil amphibians which get their name from the curious labyrinthine structure of their teeth. They occur in the Red Sandstone formation, and remains have been found in Britain and other parts of Europe. Their heads were several feet long, and their footprints, by which they were discovered, closely resemble the prints of the human hand.

**Lac**, a resinous matter deposited on the branches of a number of tropical trees by the females of the lac insect, the exudation including eggs and a viscous covering. At the gathering time the twigs are broken off and dried in the sun, when the insects die, and the lac that remains is termed *stick-lac*. From this, by the removal of extraneous accretions and dissolving, *seed-lac* is produced. *Shell-lac* is seed-lac after it has been melted and otherwise prepared, and this is the best known of the lacs, being used in printing and the manufacture of varnishes and sealing-wax, and for other commercial purposes.

**Lac**, or **Lakh**, a Sanskrit word, meaning a mark, used in India to indicate a lac, i.e., 100,000 rupees.

**Lace**, a delicate fabric of linen, silk, or cotton threads, made by hand or machinery, and worked in various ornamental designs. The kinds of lace are many, deriving their distinctive names either from the method employed in production or from the place where any special variety was originally made. The best-known makes are pillow or bobbin-lace, woven and plaited by hand; needle-point lace, worked by the needle over a traced design; and machine lace, which practically dates from Heathcote's invention of the early part of the 19th century. Some of the most famed laces are the following: *Alencon*, a needle-point lace; *Brussels*, a very fine kind, with needle-point sprigs and flowers; *Chantilly*, a silk variety with flowers and openwork; *Chuny*, a netlace with darned stitch; *Hombton*, a delicate kind with dainty sprigs and figures; *Mechlin*, generally made in one piece and very varied in design; and *Valenciennes*, or bobbin lace, of great durability, the pattern and ground of which are made at the same time, being one of the best and most costly of laces, now manufactured mainly in Belgium.

**Lace-Wings**, insects with frail, transparent, and much-veined wings whose grubs eat large numbers of insect pests such as aphids. The eggs are borne at the ends of threads attached to plants.

**Lacerta**, the name of a group of long-tailed lizards inhabiting the warmer parts of Europe and Asia. Also the name of a constellation, lying south of Cepheus, its most important star being only of the fourth magnitude.

**Lachesis**, a genus of venomous snakes of the rattlesnake family confined to tropical countries, and including the "deadly bushmaster," of Surinam, and several *Crotalidæ* pit-vipers of Guiana and Brazil.

**Lacquer**, a varnish made from shellac and certain colouring matters, and utilised for imparting lustre to various surfaces of metal or wood. In China and Japan the production of lacquer ware of a decorative character has long been an important industry, bringing into use gold, coral, vermilion, sprinkled, and other lacquers, with pleasing effect.

**Lacrimoso**, a musical term denoting a mournful method of playing; sadly, with feeling.

**Lacrosse**, a ball game largely played in Canada, of Red Indian origin. (See "Sports Section.")

**Lacrymatory**, tube-like vessels of glass found in graves of the ancients of the urn-burial period, and supposed by some to have been the receptacles of the consecrated tears of lamenting

friends, but really used for holding ointments or perfumes.

**Lacs-d'Amour**, a cord of running knots worn on the arm at one time by widows and unmarried women to denote their condition.

**Lactic Acid**, an organic acid that may be obtained by fermenting milk sugar (lactose). It is formed in muscular tissue when this is active.

**Lactometer**, a tube or instrument for ascertaining the proportion of cream in a quantity of milk. Called also a galactometer.

**Ladder**, a framework of portable steps, made of wood or metal. There are innumerable varieties, according to their uses. Thus: the standing-ladder, the step-ladder, scaling ladder, companion ladder, collapsible ladder, etc.

**Ladybird**, the common name of a large family of beetles—the *Coccinellidæ*. The insect is usually of a red or yellow colour with small black or coloured spots. Ladybirds are of good service to the gardener because their larvæ feed on aphids. There are about 2,000 species.

**Lady-Day**, the day of the festival of the Annunciation of the Virgin Mary, Mar. 25th. One of the four English quarter days.

**Lagoon**, a stretch of shallow water opening out upon the sea. Venice is built on lagoons.

**Lake Dwelling**, certain prehistoric habitations originally built above the waters of lakes or rivers, evidences of which have been found in Switzerland, Britain, and other parts of the old and new worlds. They were erected on platforms supported by piles, the stumps of many of which still remain. The most valuable evidences in this connection, however, are the recovered fragments of pottery, bone, flint, bronze, and iron implements, as well as some few human skeletons, affording interesting testimony to the primitive existence led by the lake dwellers.

**Lakes** are bodies of water collected in depressions of the earth's surface. The most notable lakes are the Great Lake series of North America, including Lakes Superior, Michigan, Huron, Erie, and Ontario, all discharging into the St. Lawrence River. Africa has an enormous area of lakes, including the Albert Nyanza and the Victoria Nyanza, forming the sources of the White Nile, Lakes Tanganyika, Nyassa, Tchad, etc. Smaller lakes are numerous in other countries—Switzerland, Germany, Italy, England, Ireland, Scotland, all having their lake regions, where the scenery is invariably beautiful and romantic.

**Lake School**, the name given, at first in ridicule, to a distinguished trio of poets—Wordsworth, Coleridge, and Southey—who made their homes in the English Lake District.

**Lalo**, the leaves of the Baobab, dried and powdered; a favourite food of certain African tribes.

**Lama**, a priest of the Tibetan Buddhists. At the head of the hierarchy is the Grand or Dalai Lama. The priesthood constitutes the civil as well as the religious government of Tibet. When the Dalai Lama dies, his spirit is held to pass into a new-born infant; a royal search is instituted, and the child selected as the new Dalai Lama is recognised by certain bodily marks. Second in importance is the Tashi or Panchen Lama, regarded as an incarnation of Amitabha, a Buddha.

**Lamellibranchs** (Pelecypods), the class of molluscs to which the oysters, cockles, mussels, clams, and scallops belong. In these animals the body, which is compressed laterally, is enclosed in two hinged shells held together by muscle action. The gills are thin plates, hence the name "lamellibranch." All are aquatic molluscs.

**Lamellicornia**, a group of beetles, distinguishable because the antennæ are made up of a number of plates. The Lamellicorn beetles are herbivores and number several thousand species, the best-known being the stag-beetles, cockchafers, and scarabs.

**Laminarians**, seaweeds with long ribbon-like fronds.

**Lamination**, a geological term designating a class of rocks with thin cleavages, such as slate or shale.

**Lammas Day** is one of the oldest of the Church festivals, probably derived from the loaf-mass

(hlafræsse) of the Anglo-Saxons. It occurs on August 1st. In the olden times it was the day when loaves were given in place of first-fruit offerings.

**Lammerger, the bearded vulture** of alpine regions, resembling an eagle in appearance. It has a white head with black tufts at base of the bill, and its general plumage is dark brown, nearly black. It is found in the remote mountain ranges from Southern Spain to China, and is becoming scarce.

**Lampblack, a carboniferous pigment** obtained from flame-smoke, and now produced in specially constructed furnaces in which bodies rich in carbon, such as tar, resin, petroleum, etc., are burned. The smoke or soot resulting is collected from the sides of the furnace, and forms lampblack. It finds use in making printer's ink, black paint, etc. Being a very pure form of carbon, it is also utilised in the manufacture of dynamo brushes and arc-lamp carbons.

**Lamprey.** These fish differ from those with which most people are familiar in having no jaws, no paired fins, and no scales. Together with the hagfishes, the lampreys are placed in a special class—the Cyclostomes. There are three British lampreys: all are eel-like in form.

**Lamps** are vessels for holding an illuminating agent, and in modern times are of many kinds. In Anglo-Saxon times they were made of horn. The first public street lamps were oil lamps, London being lighted in this manner in 1681. Gas lamps were introduced in 1814. A great advance was made in domestic lamp illumination by Argand, a Frenchman, in 1787, who invented a lamp having a circular burner or wick. The flame was oxygenised by the admission of a current of air greatly increasing the brilliance of the light. Among the more distinctive lamps of later times are the various electric lamps, the incandescent gas lamps, the paraffin oil and naphtha spirit lamps, the submarine lamp for burning under water, and the Davy safety lamp for colliery use.

**Lance,** a military weapon which was up to 1927 carried by cavalry regiments, and consisted of a long spear for hurling at or charging an enemy with. The war lance of the Middle Ages was about 16 ft. long.

**Lancelet.** (See *Amphioxus*.)

**Lancers,** light cavalry soldiers. Most European armies had regiments of Lancers—the Russian Cossacks, the German Uhlans, etc.—but there were no regiments of Lancers in England before 1816. There were four regiments in 1939.

**"Lancet,"** the name of a noted English medical journal, established in 1823 by Dr. Wakley.

**Lancewood,** a hard, durable, and elastic kind of wood obtained from certain West Indian trees of the *Anonaceæ* order, and much used in coach-building; in Guiana, the wood is called Yari Yari.

**Landau,** a kind of carriage, originally made at Landau in Germany, its distinguishing feature being that the covered top is in two parts and can be let down or put up as required.

**Land Crab,** a family of crabs (*Gecarcinidae*) which live mainly on land, though migrating to the sea to deposit their eggs.

**Land League,** an association formed in 1879, with Parnell as president, for compelling a reduction in the rents of land and a reconstruction of the land laws in Ireland, and in case of non-compliance refusing to pay rent. For a time this League exercised great political influence and was an important aid to the Home Rule agitation.

**Landrail,** popularly known as the Corncrake, is a regular summer visitor to Britain, and is well known by its harsh and piercing note, so familiar in cornlands in the night time.

**Landslip, a breakage of a mass of soil or rock** away from a mountain, hill, or cliff, due to a variety of natural causes, such as the saturation of the earth by water or the decay or slipping of portions of rock. Many serious landslips have occurred from time to time. In 1618, an earthfall happened at Plurs, on Lake Como, involving the destruction of many buildings and the loss of numerous lives. In 1806 a portion of Rossberg mountain in Switzerland slipped from its position, and falling into the valley

below buried many villages and hamlets and over 800 people. A chalk cliff from 100 to 150 ft. high and three-quarters of a mile long fell at Lyme Regis, in Dorsetshire, in 1839, doing great damage. Over 200 people were killed by a landslip in Naini Tal, in India, in 1880; and at Quebec, in 1889, a rocky eminence called Cape Diamond gave way, many buildings being destroyed and lives lost. Notable landslips in recent times have occurred at Amalfi (Italy) in 1924, and at Murchiston (New Zealand) in 1929.

**Langue d'Oc,** an ancient French dialect—the language of the Troubadours—confined to the country south of the Loire. It derived its name from the fact that it used *oc* instead of *oui* for the affirmative.

**Langue d'Oui,** the old Northern French dialect, distinguished by the use of *oui* for the affirmative.

**Lantern,** a case for enclosing, holding, or carrying a light. In its earliest form it was made of horn, and called a lantern, but the name now covers a variety of forms, from the large stationary lantern of a lighthouse to a Chinese collapsible paper lantern. (See *Magic Lantern*, etc.)

**Lantern Fly,** bugs belonging to the family *Fulgoroide* in which the head is drawn out to form a lantern-like structure. In no instance is the "lantern" luminous, though naturalists used to think it was.

**"Lantern of England,"** Bath Abbey possesses so many windows that it is called sometimes the "Lantern of England." Among numerous interesting monuments Bath Abbey contains that of Malthus, author of *Essay on Population*.

**Lanthanum,** a metal belonging to the rare-earth group of metals, discovered by Mosander in 1839.

**Lapidary,** a cutter of, or dealer in, precious stones; also used in adjective form in regard to the working, engraving, or setting of stones.

**Lapis Lazuli,** an azure-blue mineral. The pigment ultramarine is made by grinding it, though artificial ultramarine has largely superseded it. The mineral (also called *lazurite*) has been used as a gemstone since ancient times.

**Laplanders,** inhabitants of Northern Europe.

**Lapwing or Green Plover,** familiar British bird on moors and marshlands with iridescent greenish-black plumage, white underparts, and black crest. Often called "peewit" from its cry.

**Starboard** is the old nautical term indicating the left-hand side of a ship, and changed by Admiralty order to "port" in 1844. Starboard is the right-hand side.

**Larch,** a familiar coniferous tree in the mountain regions of northern Europe, and though not native to Britain, the Common Larch is successfully cultivated in various parts of the kingdom. It is one of the best of all turpentine-yielding trees, and the bark is valued for tanning. The larch is an unusual conifer in being deciduous.

**Larceny** in its broad significance means the fraudulent taking away and appropriation of the personal goods of another. Larceny is of two kinds: *simple larceny*, which is theft apart from accompanying aggravation; and *compound larceny*, that which is rendered more serious by being combined with assault, or forced entrance into an enclosed place, such as a house or shop.

**Lares** were tutelary deities of the ancient Romans, and of two classes, *Lares domestici*, the household gods, and *Lares publici*, the gods of public places. Both classes were represented by images or statues.

**Laridae,** a family of web-footed swimming gulls, white and nearly blue in colour, very widely distributed over the sea coasts of the world and feeding mainly on fish.

**Lark,** a family of song birds (*Alaudidae*) of many species, some of which—notably the skylark—are famed for their habit of soaring into the air, singing all the while. They build their nests on the ground in the open country and, except for the black lark of Russia, have streaked brown plumage. The skylark and woodlark are the best known British species, while the crested lark and shore lark are among the occasional visitors. Africa has the greatest number of larks; America has only one species, the horned lark.

**Larkspur,** the common name of the genus *Del-*

**phivium**, a favourite flower introduced into British gardens from Switzerland in 1578.

**Larva**, the undeveloped form of any animal which, before maturity, undergoes metamorphosis.

**Lascar**, commonly an East Indian sailor engaged in British or foreign service. The name is also given to East Indian camp followers and regimental servants.

**Lastage**, a shipping term referring to the lading of a ship, and also formerly a duty for the right of conveying goods by ships.

**Lateen**, a triangular sail affixed to a tapering yard, used on light cargo vessels of the Mediterranean.

**Latent Heat** is the quantity of heat required to convert 1 gram of a substance from solid to liquid (latent heat of fusion) or from liquid to vapour (latent heat of vaporisation). Thus when a solid changes into a liquid or a liquid into a gas, the addition of heat to bring about the change produces no rise in temperature, the energy being absorbed in the form of latent heat. An equal amount is released when the process is reversed. The latent heat of fusion of ice is about 79.6 calories per gram and that of the vaporisation of water about 539 calories per gram.

**Lateran Councils** were the religious conventions held in the Lateran basilica at Rome for deciding important questions of Church doctrine. The most brilliant was that of 1215, which pronounced in favour of a Crusade. That of 1869-70 pronounced the infallibility of the Pope. (See **Ecumenical Councils**.)

**Laterite**, a ferruginous clay formed in tropical countries, e.g., India, Arabia, and the Sahara, by the weathering of igneous rocks. According to their content of the two metals, laterites are sometimes valuable iron- or aluminium-ores.

**Lateroflexion**, a scientific and pathological term signifying "a bending aside."

**Latex**, milky substance found in many plants, e.g., poppy, dandelion, spurge. Kinds of latex which are commercially important include rubber, chicle (base of chewing gum), and opium.

**Latitude** of a point on the earth's surface is its angular distance from the equator, measured on the surface of the earth in degrees, minutes, and seconds. Thus the equator is 0° Lat. and the poles 90° Lat. (N. or S.). First determined by Hipparchus of Nicea about 160 B.C.

**Latitudinarians**, a body of theologians whose object was to enlarge the scope of the Anglican Church so as to bring the Nonconformists within its fold, and included such eminent 17th-century divines as Burnet, Tillotson, Hales, and Chillingworth.

**Laughing Gas** is nitrous oxide, and received its name from the fact that the first effect to be noticed was that of producing exhilaration. One of the earliest anaesthetics, it is still much used in dentistry and for minor surgical operations.

**Laughing-stock**, a butt for ridicule, a person or an object provoking scornful hilarity.

**Laughter**, a convulsive action of the respiratory muscles, accompanied by a succession of short vocal sounds, induced by sudden joy or mirth.

**Lauance**, a family of eel-like sea fishes found in large numbers on the coasts of North America and Europe. There are two species common to British waters. These fishes are of a bright silvery hue, and live much in the sand under neath the water. They are prized as bait.

**Laurentian Shield** refers to a group of Pre-Cambrian rocks in the region of the Upper Lakes of Canada, nearly 2 million sq. m. in extent. Of enormous importance to Canada on account of the mineral wealth, forests yielding valuable timber and wood-pulp, and water-power.

**Lava**, the molten fluid rock which is ejected from a volcano while in eruption.

**Laver**, the popular name of certain edible seaweeds.

**Lawn**, very fine sun-bleached linen, in olden time called "cloth of Rheims."

**Lead**, a soft malleable metal, occurring in numerous ores, which are easily smelted. It is found in its native form in small quantities in Sweden. Lead is largely used in plumbing on account of its pliability, and as an alloy element it combines in the formation of type metal, stereo metal, shot metal, pewter, and many other compounds.

Lead mining is carried on in several of the northern counties of England and in Wales. The world output of lead ore before 1939 averaged 1,800,000 tons per annum, of which about one-fourth was raised within the British Empire, Australia being the chief British lead-producing region.

**Lead Insect**, a group of insects related to the locusts and grasshoppers which in colour and form closely resemble leaves.

**Leaf Miners**, larval insects which tunnel between the upper and lower skins of leaves. Most leaf miners are caterpillars of tiny moths; some sawfly larvae have the same habit.

**Leagues**, or combinations of kings, countries, communities, have been frequent since the kings of Canaan united against the Israelites. Among the most famous leagues may be mentioned the Holy or Catholic League, which prevented the accession of Henry IV. of France until he became a Roman Catholic; and the League of Augsburg against Louis XIV. of France in 1686.

**League of Nations**, was founded on Jan. 10th, 1920, with the object of promoting international peace and security. The original members were the signatories to the Peace Treaties at Versailles, and membership grew to fifty-three as new nations and ex-enemy States were admitted. Two notable absentees were the United States and Soviet Russia, the latter not being represented until 1934. Germany was a member from 1926 to 1933. The League had an Assembly which met at Geneva every year and a Council which met five or six times a year. The Permanent Court of International Justice sits at The Hague. The final Assembly of the League was held at Geneva between April 8th and 18th, 1946. Its place has been taken by the United Nations. The International Labour Organisation, set up by the League of Nations, met on April 20th, 1944, at Philadelphia and resumed its old quarters at Geneva under the new organisation in 1946.

**Leap Year or Bissextile**, was fixed by Julius Caesar, 45 B.C., the addition of one day in every four years bringing the measure of the calendar year even with the astronomical year, with three minutes per year over. The Gregorian Calendar corrected this by dropping leap year at the centuries not divisible by 400. For instance, 1700, 1800, and 1900 were not leap years.

**Leather** was made in ancient Egypt, Greece, and Rome, and has through succeeding centuries played an important part in the service of man. It consists of the dressed hides or skins of animals after the process of tanning has been gone through. Untanned skins are known as pelts. Leather is classed either according to the skins from which it is made or the system of preparation employed. The best-known kinds are morocco, kid, Russian, chamols, Cordovan, grained, patent, russet, tan, calf, Hungarian, etc.

**Leather-Jacket**, the larva of the Crane-fly (daddy-long-legs). Leather-jackets can prove serious pests of grassland.

**Leaven**, a mixture of flour and sour milk, formerly used in fermenting large quantities of fresh dough, a preparation now superseded by yeast.

**Lebensraum**, a German slogan for "living space."

**Leech**, an aquatic blood-sucking worm, mostly found in fresh-water ponds. Each end of the body is provided with a sucker, but that at the head end has jaws and teeth. The medicinal leech has three jaws. The leech attaches itself with avidity to animal bodies and sucks until glutted.

**Leeward**, a nautical term, meaning the sheltered side of a vessel—that is, the opposite side to that from which the wind is blowing.

**Legal Tender** of gold is good in this country to any amount; silver is legal tender up to 40s., bronze up to 1s., including farthings. Bank of England notes for £1 and 10s. are legal tender for the payment of any amount. (See p. 738.)

**Legend**, a story in which the marvellous, supernatural or mythical is a leading feature.

**Legerdemain**, sleight of hand, conjuring, juggling, a kind of performance in which trick and dexterity of hand deceive the eye and give

- the impression of feats that are naturally impossible.
- Legion**, a body of Roman troops, varying in numbers at different periods. A legion was divided into 10 cohorts, and every cohort into three maniples. Three legions composed the Roman army of occupation in Britain.
- Legion of Honour**, the French order for distinguished services, military or civil, was instituted by Napoleon I. in 1802, and confirmed and modified under later rules. There are five grades—Grands Croix, Grands Officiers, Commandeurs, Officiers, and Chevaliers.
- Legitimists**, supporters of the claims of the elder branch of the Bourbon family to the throne of France. The death of the Comte de Chambord in 1883 childless transferred the right of claim to the Comte de Paris, head of the younger Bourbon branch. Now applied to any supporter of monarchy by hereditary right as against a parliamentary or other title.
- Legume**, the fruit typical of the pea, bean family, or *Leguminosae*.
- Leipoa**, a kind of pheasant native to Australia, nesting in mounds. It has a crested head and dark plumage.
- Leitmotif**, a musical theme intended to represent a particular idea and introduced whenever the composer wishes that idea to be held in mind. Wagner made use of the leitmotif to such an extent that his enemies said that each of his characters presented a visiting-card.
- Lemming**, small light-brown rodents with dark spots, abounding in Scandinavian countries and in Siberia. The lemming is about 5 in. long, with a short stump of a tail. The migrations of the lemming are famous; so insistent is the urge to keep moving that these animals will march on into the sea in their thousands and be drowned.
- Lemur**, the most primitive member of the Primate order of mammals (to which man, apes, and monkeys also belong). They are noted for having strong plantar toes enabling them to use their feet as hands, and also well-developed thumbs on the hands. They have long squirrel-like tails, fox-shaped heads, and large staring eyes, and are distributed over the tropical parts of the Old World, being most abundant in Madagascar.
- Lend-Lease**, an arrangement made by the U.S.A. in Mar. 1941 to provide goods, services, and capital facilities to nations whose fighting contributed to her own defence. The principal beneficiaries were Great Britain and Soviet Russia. There was to be payment or repayment in kind, property, or other benefits to the U.S.A., but when the time of settlement came goods already consumed were written off the account and the recipient countries were asked to make some payment for what remained in existence. By the end of the war practically all the Allies were giving each other Mutual Aid, as it was called, making available their own resources for the use of others in the task of defeating the common enemy. It is estimated that Lend-Lease aid given by the U.S.A. amounted to over £12,000 million and Mutual Aid given by Great Britain to over £2,000 million.
- Lenses** are, broadly speaking, either *convex*, having the thickest part in the centre and magnifying objects, or *concave*, with the thinnest part in the centre and reducing the objects. Each kind has several varieties, peculiar from their proportions, arrangements, and specific effects.
- Lent**, the forty days' period of fasting that precedes Easter.
- Leo**, one of the twelve signs of the Zodiac, bounded on the west by Cancer, and on the east by the Virgin. The constellation consists of seventy-five stars, of which Regulus (a double star) is the brightest. The Leonids, the best-known of meteor showers, radiate from a point in this constellation.
- Lepidodendron**, a fossil plant of gigantic height (nearly 100 ft.) bearing a cone-like fruit, frequently met with in the coal strata.
- Lepidoptera**, the order of insects to which the 90,000 butterflies and moths belong.
- Lepidosiren**, a genus of S. American lung-fishes. In times of drought these fish burrow in the mud, and breathe by means of the air bladder which functions as a lung.
- Lepus**, the constellation of the Hare, situated under the Orion group, and one of the constellations with which the ancients were familiar.
- Lernæa**, a crustacean parasitic on fish. This "fish louse," after entering upon its parasitic stage, loses its external organs.
- Lettres de Cachet**, sealed letters which the kings of France issued to their agents to secure the imprisonment of distrusted or disliked persons without trial. Abolished in 1789.
- Leucine**, a crystalline, pulverulent substance produced by the decomposition of nitrogenous matter, otherwise known as amido-caproic acid, and called leucine because of its whiteness.
- Levée**, a State reception held by the Sovereign or his representative and attended by men only.
- Levellers**, an English military-political party prominent about 1647 in the Parliamentary army, which advocated the rights of the people.
- Lever**, a rigid bar of metal or wood used for raising heavy bodies, and worked by means of a support called the fulcrum placed underneath the lever.
- Lewis**, a contrivance of stone-lifting, the principle of which was known to the ancient Romans; it consists of two dovetail tenons of iron or other metal, expanded by an intervening key in a dovetail-shaped mortice in the stone, and shackled by a ringed bolt to the hoisting chain.
- Leyden Jar**, the earliest form of electrical condenser. Its invention is usually credited to Muschenbroeck of Leyden (1745). It consisted of a jar coated inside and out with tinfoil for about two-thirds of its height and having its inner coating connected with the top by a brass knob and chain. The jar was charged by connecting it to an electrostatic machine.
- Li**, a Chinese distance measure, about the third of an English mile. Also a Chinese weight, the thousandth part of an ounce, or liang.
- Lias**, a geological term referring to the lower section of the Jurassic group, and mainly comprising shales and limestones.
- Libel**, any writing, printed matter, picture, or illustration put forth with malicious intent for the purpose of bringing a person into public ridicule and contempt. An aggrieved person may proceed either by civil action or criminal indictment. A good defence is that the words complained of are true and to the public advantage to be made known. Since 1881 no newspaper proprietor can be criminally prosecuted for libel without the fiat of the Public Prosecutor. A spoken libel is *slander*.
- Liberalism** has grown historically from protest, political, economic, social or ethical, against what were regarded as the authoritarian aspects of the modern state. Its aim has been to remove obstacles blocking human progress, to gain personal liberty in all fields, and fiscal liberty in the form of free trade. It is the successor of the Whig Party, which in the 17th and 18th centuries stood for the limitation of royal power. From 1830 to 1885 the Whig, later the Liberal, was the dominant Party in parliament. In 1886 it split on the Irish Home Rule question. The close of the 19th century saw the fortunes of Liberalism at a low ebb, but at the election of 1906 the party was returned to power with an overwhelming majority. Up to the beginning of the First World War, the Liberal Government carried through a bold programme of social reform which laid the foundations of the Welfare State as we know it to-day. After the Coupon election of 1918, the Liberal Party gradually lost its hold on the electorate, and its forces were further decimated by the break-away of the National Liberals in early 1932. In the crisis of 1931 the Liberal Party had joined the National Government and had accepted tariffs under an agreement to differ, but in the following year Liberal Ministers resigned from the Government on account of their opposition to the Ottawa Agreements. Certain Liberal Ministers who remained in the Government formed the nucleus of the National Liberals, who from that period onwards have given general support to the Conservative Party. Modern Liberal policy calls for the protection of the rights of the individual; for the freeing of World Trade and the restoration

of the convertibility of sterling; for a system of profit-sharing to bring harmony into industry and create a property-owning democracy, and for full support for the United Nations. It supports social legislation and also private enterprise. On nationalisation, Liberal policy demands that no undertaking should be nationalised until it has been clearly shown by an impartial enquiry that State control and ownership is necessary in the interests of the community as a whole. Liberals supported the nationalisation of the coal-mines, the railways, gas and electricity on these grounds. They opposed the nationalisation of steel, and stated in the 1951 General Election that they were opposed to any further nationalisation.

**Libra**, the Scales, one of the twelve Signs of the Zodiac, lying east of the Scorpion.

**Libraries**, before the invention of printing, were few, and collected together at enormous cost. At Nineveh remains of libraries, consisting of tablets of baked clay, have been discovered. There were two libraries at Alexandria containing a vast collection of rolls or volumes, founded by Ptolemy I Soter (305-283 B.C.) and established by Ptolemy II Philadelphus (285-57 B.C.). Among the great libraries of later times may be mentioned the Vatican Library at Rome, moved to its present premises in 1588; the Royal Library in Paris which later became the Bibliothèque Nationale; The Astor Library, New York; and in England, the Bodleian Library, Oxford, and the British Museum Library at Bloomsbury. Since 1850 Public Libraries have been established in all the chief cities and towns of the kingdom, and Andrew Carnegie devoted several millions sterling to the building and endowment of such institutions in America and the British Empire. The first lending library was opened in Edinburgh in 1726. Mudie's circulating library was founded in 1852. (See Bodleian Library, British Museum, India Office Library and also "A Citizen's Guide.")

**Libration**, an astronomical term referring to an apparent irregularity in the moon's course, which may be libration in longitude or latitude, or diurnal, and due to a variety of causes.

**Libretto**, the word-book of an opera or oratorio. Usually the composer and the librettist collaborate in the writing of an opera, but several composers (e.g., Wagner) wrote their own libretti. Boito, librettist to Verdi for "Otello" and "Falstaff," himself composed two operas, "Mefistofele" and "Nerone."

**Licence**, special permission to do or sell certain specified things, usually such as are liable to excise duty. Licences are required for keeping motor vehicles, dogs, for shooting game, for hawking and peddling, for selling beer, ale, wines, and spirits, tobacco, patent medicines, etc.

**Licensing Hours** for the sale and supply of liquor are fixed by the Licensing Act, 1921, at 9 hours for London on weekdays and 8 hours for the provinces with 5 hours on Sundays. Local authorities have the power to modify these hours for various reasons (Market day, etc.).

**Lichens**. In every lichen, two plants are associated (a condition called symbiosis)—one being an alga and the other a fungus. The fungus derives its food from the alga; probably the alga gains too from the association, being protected against desiccation by the fungus. Lichens are the first plants to colonise on bare rocks.

**Lictor**, a public functionary of ancient Rome whose duty was to carry out the orders of the magistrates, punish offenders, and attend upon his superiors on all public occasions.

**Lieder**, the plural form of the German word *Lied* meaning song. It is applied particularly to poems set to music by the German romantic composers, Schubert, Schumann, Brahms, and Hugo Wolf.

**Lieutenant**, a title implying the holding of an office under or for a superior. Thus, a Lieutenant-General is next under the full General and takes his place in his absence, and so with Lieutenant-Colonel. When the title is held alone it ranks in the army next to the Captain, and in the navy next to a Lieutenant-Commander.

**Life-Boat** was invented by three men, Lionel Lukin, who converted a cable into a boat for saving life

in 1785; William Wouldhave, who discovered how to make a boat right herself if she capsized; and Henry Greadhead, who built a life-boat, partly from Wouldhave's model, in 1789. This boat was stationed at South Shields, which was the first permanent life-boat station to be established. It was not until 1851 that the first life-boat able to self-right was built, and a motor was first installed in a life-boat in 1904. Modern motor life-boats have engines of from twin-18 h.p. to twin-80 h.p., with a speed of nearly 10 knots. All coastal life-boats in this country are maintained by the Royal National Lifeboat Institution founded by Sir William Hillary in 1824. Over 76,000 lives have been saved including 6,376 during the last war. The life-boat service is maintained entirely by voluntary contributions and costs over £400,000 a year.

**Light**. The speed of light is one of the fundamental physical constants, and is basically involved in atomic theory and in astronomical measurements. Recent measurements carried out by Dr. L. Essen of the National Physical Laboratory have changed the hitherto accepted value of the speed of light in *vacuo* (186,271 miles per second). The revised value, now accepted, is 186,282 miles per second.

**Light Alloys**. Alloys of aluminium and magnesium.

**Light Year**. A measure of astronomical distance, equal to the distance light travels in the course of a year. A light year is thus 5·88 million million miles. (See also p. 152.)

**Lighthouses**, to warn ships of dangerous places and indicate coasts, points, harbours, etc., have existed since the building of the first Pharos, at Alexandria, 285 B.C. In early lighthouses the lights were simple fires. A coal-fire light was shown at Tynemouth Castle Lighthouse in 1638. There was no great advance made in lighthouse building until the first Eddystone erection was put up in 1759-60 (see Eddystone). The whole problem of lighthouse building and lighting, invested though it has been with tremendous difficulties, may be said to have been mastered within the last century; not only are the present structures impregnable to storm and tempest, but the light that they are supplied with is a thousand times more brilliant than under the older systems. The introduction of parabolic mirrors was a great improvement, providing a reflecting medium that carried to a great distance. Further improvements were made by Fresnel, Stevenson, and others, and now the electric light has been adopted to a large extent with ample success. The lighthouses of England and Wales are under the control of Trinity House; Commissioners of Northern Lighthouses control those of Scotland; and the Commissioners of Irish Lights control the coasts of Ireland.

**Lightning**, the flash of a discharge of electricity between two clouds, or between a cloud and the earth, when the strength of the electric fields becomes so great as to break down the resistance of the intervening air. With "forked" lightning the actual path, often branched, is visible, while with "sheet" lightning the flash is hidden by the clouds which themselves are illuminated. "Ball" lightning is the name given to the luminous balls which have been seen floating in the air during a thunderstorm. The Boys camera has provided much information regarding the sequence of events in a lightning discharge. It is found that a flash consists of a number of separate strokes, usually four or five, and that the discharge of electricity to earth begins with a faintly luminous "leader" moving downwards and branching at intervals. As the ground is approached a much brighter luminosity travels back along the conducting channels, lighting up the several branches. The multiple strokes which follow in fractions of a second have the same "return" nature and are rarely branched. Lightning flashes to earth damage structures, cause loss of life and endanger overhead power systems, often interrupting electricity supply. Such storms generally affect radio transmissions and present hazards to aircraft. Thunder-clouds may develop energy far exceeding the capacity of our largest power generating stations.

- Lightning Conductor**, a metal rod, the upper part of which is of copper with a conical point, the lower portion being iron, which extends into the earth. Its effect is to gather to itself the surrounding electricity and discharge it into the earth, thus preventing its falling upon the protected building. In ships, lightning conductors are fixed to the masts and carried down through the ship's keel-sheathing. Benjamin Franklin was the first to realise the possibilities of lightning protection and, in 1752, carried out his famous experiment of drawing electricity from thunder-clouds with the aid of a sharp-pointed conductor fixed to a kite.
- Lignin**, a substance found in the cell walls of plants, being particularly abundant in all woody fibres.
- Lignite or Brown Coal**, an intermediate substance between peat and coal; it is, in fact, undeveloped coal, and known as brown coal. The best-known deposits in Britain are the Bovey Tracey Beds in Devon.
- Lignum Vitæ**, heartwood of a tree (*Guaiacum*) native in the W. Indies. The heaviest commercial wood, a cubic foot weighs 76 lb.
- Lillibulero**, an old marching song composed by Purcell. With words by Wharton, it is said to have "sung James II. out of three kingdoms." During the second world war it was used by the B.B.C. as a station identification signal preceding news bulletins.
- Lily Family (Liliaceæ)**, one of the largest families of flowering plants, with 200 genera and 2,500 species. It includes the true lilies (*Lilium*), tulips and hyacinths. Useful vegetables belonging to the family are the onion and asparagus. Most members are herbaceous plants; shrubs or small trees occur in the genera *Aloe* (Yucca) and *Dracæna* (Dragon-tree).
- Limbουργ**, a specially strong kind of cheese made at Limburg, a province partly in Holland and partly in Belgium.
- Lime**, an alkaline earth obtained from kiln-heated limestone, and used in making mortars and cements; a valuable fertiliser, particularly on acid and clay soils.
- Limestone** is carbonate of calcium. It is found in every geological formation, and is often highly fossiliferous. Marble is limestone that will polish after cutting.
- Limnology**, the division of biology dealing with fresh-water organisms.
- Limonite**, a mineral; hydrated oxide of iron, of which it is an important ore in Luxembourg, Sweden, etc.
- Limpet**, a marine mollusc with a single-valved shell, generally found sticking close to seawashed rocks.
- Lincoln College**, one of Oxford University's Colleges, founded in 1427 by Richard Fleming, Bishop of Lincoln.
- Linen**, a textile fabric manufactured from flax fibre, known to the ancient Egyptians, and first manufactured in England under Henry III. by Flemish weavers. The chief seat of the manufacture is Ulster, with Belfast as the centre. Dunfermline (famous for its damasks) and Manchester are also large linen-producing towns.
- Ling**, a sea-fish common on the coasts of Britain, and abounding in more northern waters. It averages from 3 to 4 ft. in length, and is a voracious feeder, living chiefly on small fish. Ling is also the name applied to *Calluna vulgaris*, the plant which most people call "heather."
- Linseed**, the seed of the flax plant, containing, apart from its fibrous substance, certain oily and nitrogenous matter of considerable commercial value. This yields linseed oil, and what is left is converted into cattle food.
- Lion**, the most impressive of the Cat tribe (Felidæ) of the order Carnivora. It is chiefly found in Africa, being comparatively rare in Asia. Its large square head, its flowing mane (in the males only), and its tufted tail distinguish it. From tip to tip it can reach a length of 10 ft.: a weight of 500 lb.
- Lion and Unicorn**, the supporting figures of the royal arms of Great Britain, date from the union of Scotland with England at the accession of James I. (James VI. of Scotland), the lion representing England and the unicorn Scotland.
- Liqueurs** are essences combined with alcoholic liquid, and are of many kinds, named according to their flavourings or place of production, and include Maraschino, Chartreuse, Curacao, Benedictine, Noyau, Kummel, etc.
- Liquid**, the name given to matter in such state that it takes its shape from the containing vessel. The volume it occupies is independent of the container, however.
- Liquorice**, a juicy substance obtained from the root of the *Glycyrrhiza glabra*, and used in the making of sweetmeats and as a throat remedy.
- Litanies** were first used in church processions in the 5th century. The first English litany was commanded to be recited in the Reformed churches by Henry VIII. in 1545.
- Lithium**, a silver-white metallic element discovered by Arfvedson in 1817. It is softer than lead. Its main ores are lepidolite, spodumene, amblygonite.
- Lithography**, the art of drawing on stone and printing therefrom, was discovered by Alois Senefelder about 1796, and was introduced into England a few years later. Many improvements in the art have been made in recent years, especially in chromo-lithography and photolithography.
- Litmus**, a special kind of colouring matter produced from certain lichens. The resulting colour is violet; is turned red by acids and blue by alkalis.
- Litre**, a French measure both for liquids and dry articles. In the former measure it is equal to 1.76 imperial pints; in the latter to a cubic decimetre.
- Liturgy**, the name given to the Church ritual, though strictly applying only to the portion used in the celebration of the Eucharist. The present English liturgy dates from 1547-48, when it received the approval of Parliament.
- Liverworts (Hepatics)**, plants related to the mosses and belonging to the second most primitive subdivision of the Plant Kingdom. There is no differentiation into stem and leaves. Liverworts are most common in damp situations, such as the banks of ditches.
- Livre**, an old French coin, the equivalent of the present franc. Not current since the end of the 18th century.
- Lizard**, the name given to a diversified order of reptiles, of which there are about 1,600 species. Included among the lizards are the geckos, chameleons, glass snakes, skinks, and blind worms.
- Llama**, mammals related to the camels, from which they differ in small size, absence of humps, and more woolly coat. The domestic llama of S. America is used as a beast of burden, also providing wool, meat, and milk.
- Loach**, a fresh-water fish, a common inhabitant of British rivers and streams. It has several barbels around its mouth, and is of a darkish-green colour on the back, with darker stripes and spots.
- Loadstone or Lodestone**, an oxide of iron, found chiefly in Sweden and Norway. Its scientific name is magnetite. It has the power of attracting pieces of iron and served as the first magnets used in compasses.
- Loam**, soil composed of clay and sand in such proportions as to keep the ground porous.
- Lobby Correspondents** are political correspondents of newspapers who do not report the actual proceedings of Parliament—this is done by Parliamentary Correspondents—but interpret political news and events.
- Lobsters** are marine crustacean animals existing in large numbers in the northern seas of Europe and America, and in fair proportion on some parts of the British coasts, especially in the neighbourhood of the Channel Islands.
- Locarno, Treaty of**, 1925, whereby Germany, France, and Belgium undertook to maintain their present frontiers and to abstain from the use of force against each other. Hitler broke the pact by re-occupying the Rhineland, the demilitarisation of which had been recognised by Germany.
- Lock-out**, name given to a forced cessation of work caused by the action of an employer. The opposite of a strike, in which the men take the initiative. The best-known lock-outs in Great Britain have been in the engineering industry in 1922, boilermakers in 1923, shipyards in

1924, and the Rossendale slipper factory in 1927.

**Locust**, insects of the grasshopper family, but much more powerful. They are inhabitants of hot countries, and often make their appearance in untold millions, like clouds, devastating all the vegetation that comes within their course. The locust-tree (*Ceratonia siligua*) is supposed to have furnished food to St. John the Baptist in the wilderness, and its "beans" have accordingly been styled "St. John's Bread."

**Loess**, a deposit of silt or marl laid down by wind action. The biggest loess deposits are in Asia, the source of the dust of which they are composed probably being the deserts of Central Asia.

**Log**, a line used for reckoning the speed at which a ship is travelling. It was first used in the 16th century. The line is divided into spaces of 50 ft. marked off by knots and measured by a half-minute sand glass, bearing the same proportion to an hour as 50 ft. bear to a mile.

**Loganberry**, a hybrid between the raspberry and blackberry.

**Logarithms**, a system of calculation invented by John Napier in 1614, and developed by Henry Briggs a few years later. Thus if a number is expressed as the power of another number, i.e., if  $a = b^n$ , then  $n$  is said to be the logarithm of  $a$  to base  $b$ , written  $\log_b a$ . Common logs are to base 10 and Napierian to base 2.7182818 ..., expressed as  $e$ . Their use represent a great saving of time.

**Logical Positivism**, a school of philosophy founded in Vienna in the nineteen-twenties by a group known as the Vienna circle; their work was based on that of Ernst Mach, but dates in essentials as far back as Hume. Of the leaders of the group, Schlick was murdered by a student, Wittgenstein came to Britain, and Carnap to America following the entry of the Nazis. Briefly, the philosophy differs from all others in that, while most people have believed that a statement might be (a) true, or (b) false, Logical Positivists consider there to be a third category. A statement may be meaningless. There are only two types of statement which can be said to have meaning: (1) those which are tautological, i.e., those in which the statement is merely a definition of the subject, such as "a triangle is a three-sided plane figure" ("triangle" and "three-sided plane figure" are the same thing), and (2) those which can be tested by sense experience. This definition of meaningfulness excludes a great deal of what has previously been thought to be the field of philosophy; in particular, it excludes the possibility of metaphysics. Thus the question as to whether there is a God or whether free-will exists is strictly meaningless, for it is neither a tautological statement nor can it be tested by sense-experience.

**Logogram**, a phonogram or sign, briefly representing a syllable, word, or phrase; logographic printing was introduced in 1783 by Henry Johnson and Mr. Walter of *The Times*.

**Logwood or Hæmatoxylin**, a familiar dye-wood, obtained from a tree abundant in the West Indies and some parts of South America. It is red in colour, and is used for producing a variety of shades, from red to black.

**Lollards**, a body of Reformers who, under the leadership of Wyclif, were subjected to cruel persecution in the reign of Richard II. Sir John Oldcastle was a prominent Lollard, and was burned at the stake.

**Lombards**, the name given to a community of Italian merchants who settled in England in the 13th century and first became prominent as moneylenders and later as bankers. Lombard Street derives its name from them.

**London**, situated near the mouth of the river Thames, London is a world exchange for every commodity. It is a great centre of banking, insurance, news agencies, transport, and trade of all sorts. With an area of 693 square miles and 8½ million inhabitants, Greater London (the Metropolitan and City police areas combined) is the largest and most populous city in the world. The outer ring of suburbs is excluded from the *County of London*, which is administered in 29 divisions; the smallest of these, covering 678 acres, is the heart of the capital, the ancient *City*

of London, whose Corporation is older than Parliament. Elected by his fellow freemen of the City, the Lord Mayor is one of a line unbroken since Henry Fitzalan was elected the first Lord Mayor in 1189. Though evidence is to be found of settlements at the mouth of the Thames dating from the Stone Age, London did not rise from obscurity until the Roman occupation of Britain in the first century of the Christian era. The Romans built the city on two small hills divided by Wallbrook, and in A.D. 61 Tacitus mentioned Londinium (the name was not Roman but Celtic in origin), as a place "much frequented by merchants." In that year Boadicea's hordes sacked the city. The Romans restored order, but their withdrawal from this country early in the 5th century was followed by raids on London by Saxons, Franks, and Danes. In the 7th and 8th centuries the city was three times destroyed by fire, and it was again burnt in 982. It is not surprising, therefore, that, although the lie of the City streets is still determined by the line of the Roman walls and gates, very little of Roman London remains above ground and scarcely a trace of Saxon buildings. The growth of London has been continual but haphazard. The Keep of the Tower of London remains one of the most complete examples of Norman architecture in Britain. Reminders of the great religious orders of mediæval times are to be found in the bomb-scarred Temple, once the home of the Knights Templar, and in the names of Carmelite Street, where the White Friars founded a monastery, and Blackfriars Bridge, near which the offices of *The Times* stand on the site of the Black Friars' convent. London's West End originated with the establishment of Court and Parliament in the neighbourhood of the Abbey of St. Peter, predecessor to Westminster Abbey. The latter, a superb example of 13th-century architecture, was mostly built by Henry III. Near by in the Banqueting Hall in Whitehall, Inigo-Jones (1572-1652) left a fine memorial to his genius as a builder. Great opportunities came to Sir Christopher Wren in 1666, when half the City's buildings were destroyed in the Great Fire; 68,596 Londoners died in the Great Plague which preceded the fire. Wren left his mark all over the City, and in St. Paul's Cathedral he produced the finest Renaissance building in England. This is the third Christian church to stand on Ludgate Hill, first crowned by a Roman temple to Diana. Still greater opportunities for reconstruction came through the widespread destruction all over London by enemy action in 1940-45. By decentralising London's population and industries, post-war plans aim at the abolition of overcrowding, the relief of traffic congestion, and the provision of more open spaces. During recent years blocks of Government offices have been built on the site of Henry VIII's Whitehall Palace and on that of the old Westminster Hospital. During excavations in Walbrook in 1954 a Roman Mithræum (Temple of Mithras) was found dating from A.D. 90 to 350. The temple, 60 ft. long by 20 ft. broad, is to be preserved and has been moved to an open courtyard on an adjacent site.

**London Clay**, geological stratum which outcrops in various parts of London, notably at Highgate. It represents the lower stratum of the Eocene. Outside the metropolis, brickfields utilise the clay for brickmaking. Water held above this impervious stratum is tapped by a number of artesian wells in London. The tunnels of the Capital's underground railways run through the London Clay.

**Londonderry, Siege of**, by James II.'s army in 1689, lasted 105 days. The garrison and inhabitants were driven to famine, but held on until the siege was raised.

**London Fire Brigade**. The fire protection for the administrative county of London (area 117½ square miles and population 3,363,000) is controlled by the L.C.C. The staff consists of 2,400 officers and men. In 1955 there were 58 land stations in the area and 245 appliances and vehicles on the run. There were also three river stations, with a fire-boat at each. The most up-to-date fire-boat is the *James Braidwood*, commissioned in 1939. Received 23,197 calls during

1955 and dealt with 15,220 actual fires (including chimney fires), as well as responding to calls to lift accidents, persons pinned under vehicles, flooded basements, and other special services.

London Salvage Corps works in close co-operation with the London Fire Brigade, but it is controlled by a Committee appointed by the leading insurance companies and it is not part of the Brigade.

**London University** comprises nearly one-third of the academic activity of the United Kingdom, and is recognised as one of the great universities of the world. Originated in the foundation of a non-sectarian college in Gower Street in 1823. Among the chief colleges are: University, Kings, Imperial College of Science and Technology, London School of Economics, School of Oriental and African Studies, Queen Mary, Birkbeck, and the 3 women's colleges, Royal Holloway, Bedford, and Westfield. London University was the first to throw open all degrees to women (1878).

**Long Distance Routes.** The National Parks and Access to the Countryside Act 1949 provided for the establishment in England and Wales of Long Distance Routes for walkers and where possible for horse riders. The first routes chosen were the Pennine Way (a magnificent hill walk of 250 miles from Edale in Derbyshire along the Pennines over the Cheviots to the Scottish border); the Cornwall and Pembrokeshire coasts; and Offa's Dyke which runs some 168 miles along the marches of Wales. Surveys are also being made of a way from Beachy Head to Salisbury; the Pilgrim's Way; and a walk over the Chiltern and Berkshire Ridges, the Marlborough Downs and so to Seaton. (See also National Parks.)

**Longicornia**, a family of large horned beetles found only in warm countries, remarkable for their wood-boring capacity when in the larval state.

**Longitude** of a point on the earth's surface is the angle which the meridian through the poles and that point makes with some standard meridian. The meridian through Greenwich is usually accepted as the standard meridian and the longitude is measured east or west of that line. (As the earth revolves through  $360^\circ$  in 24 hrs.,  $15^\circ$  longitude represent 1 hour's difference in apparent time.

**Lord**, a title of honour held by such as are peers of the realm, and bestowed on persons who have achieved distinction or inherited by descent. It is also borne by Bishops, on spiritual and ecclesiastical grounds, and is accorded as a courtesy to the eldest sons of dukes, marquises, and earls, to the younger sons of dukes and marquises, and to Judges of the High Court in England and Scotland.

**Lord Lieutenant** is the Queen's representative in the county, and his office is now largely ceremonial. On his recommendation the magistrates or Justices of the Peace are appointed by the Lord Chancellor. The office was created by Henry VIII. in 1549 to take over the military duties of the sheriff.

**Lords, House of**, the Upper House of the British Parliament composed of Lords Spiritual and Lords Temporal. The former consist of the Archbishops and twenty-four English Bishops and the latter of Peers. The full membership is about 790. The right of the Lords to veto Bills passed by the Commons was restricted by the Parliament Act, 1911, by which Money Bills are enacted upon Royal Assent if not passed unamended by the Lords within one month. Moreover, even a non-money Bill, although vetoed by the Lords, becomes law, if passed by the Commons in three successive sessions provided one year lapses in the meantime. The Lord Chancellor presides over the House of Lords. (See "A Citizen's Guide.")

**Loris**, small lemurs found in S.E. Asia and East Indian islands. Because of their slow movements they are also called "slow lemurs."

**Lory**, a handsome family of parrots with deep scarlet plumage, green wing covers, purple head, and yellow breast line. They belong to the Malay Archipelago and live mainly on fruit juices.

**Long-speaker**, an instrument which transforms electric energy into sound energy; the sound can be heard at a distance. Much used in wireless, obviating the wearing of earphones and allowing several people to hear at once.

**Louis d'Or**, a French gold coin of the value of 24 francs, first issued by Louis XIII. in 1640, but superseded by the Napoleon, or 20-franc piece.

**Louse**, parasitic insects found on the skin of birds and mammals. The bird or biting louse make up one order (*Mallophaga*); the true or sucking louse belong to another order, called *Anoplura*. Two species of lice parasitise man, and one of these, the body louse, is a carrier of typhus.

**Louvre**, one of the old royal palaces of Paris, was built in its present form partly by Francis I., and added to by later monarchs, Louis XIV. completing the edifice. Napoleon I. turned it into a museum and enriched it with the plunder of many foreign art galleries. The great extension to the Louvre building begun by Napoleon I. was completed under Napoleon III. in 1857. Much injury was done to the building during the Commune of 1871. Amongst other famous treasures it houses the Venus de Milo and Leonardo da Vinci's masterpiece, "La Gioconda."

**Lovebird**, a vivid little bird native to Africa, resembling a parakeet but with a short, wide tail and short body. Lovebirds build nests, parakeets do not. (See also p. 1002.)

**Luddites**, a combination of workmen formed in 1811, in a period of great distress, with the object of destroying the new textile machinery then being largely adopted, which they regarded as the cause of their troubles. Their first outbreak was at Nottingham, and was stated to have been started by a young apprentice named Ned Ludd. Afterwards, serious Luddite riots occurred in various parts of the country, especially in the West Riding of Yorkshire, where many people were killed, mills were destroyed, and numbers of rioters were tried and executed. Charlotte Brontë used the period in her novel, *Shirley*.

**Lugworm**, a species of worm living on the seashores and burrowing in tunnels which it makes in the sand. It is much used for bait by fishermen.

**Lumpfish**, a carnivorous sea-fish which attaches itself to rocks and other firm substances, and lives on small fish and marine worms. It is mainly an inhabitant of northern seas, and has three species, one of which is found on our own coasts.

**Lunar Month**, the period in which the moon makes its revolution around the earth—about 29½ days.

**Lung Fishes or Dipnoi.** In these fishes an air bladder, which can be filled with air gulped in through the mouth, functions as a lung. This method of breathing enables them to survive in the muddy bottom of dried-up streams and swamps. They occur in Australia, Africa, and S. America.

**Lupercalia**, yearly festivals held in ancient Rome in honour of Pan.

**Lupus**, the constellation of the Wolf in the southern heavens, at the east side of the Centaur. It contains no star of more than the third magnitude.

**Lusida**, a famous Portuguese epic poem by Camoens, celebrating the establishment of Portuguese sway in India; first published in 1571.

**Lustrum**, a sacrificial celebration occurring every five years in ancient Rome after the taking of the census. From this each period of five years was called a lustrum.

**Lute**, a stringed instrument of the guitar type which was introduced into Europe in the 6th century and remained popular up to Elizabethan times.

**Lutecium**, element of the rare-earth metal group discovered in 1907 by Urbain.

**Lynch Law** is the dealing out of summary punishment to offenders by private individuals without appeal to the law. It is said to get its name from one Charles Lynch, a Virginian planter, who in the latter part of the 18th century was accustomed to take into his own hands the punishment of offenders. Instances of lynch-law have been frequent in the United States, and generally result in the carrying out of a rough and ready death sentence, negroes often having been the victims.

**Lynx**, cats of sturdy build, with tufted ears and

spotted fur, inhabiting many parts of the world, including Northern and Central Europe. They commit serious ravages among sheep and goats and are very fierce.

**Lyon King of Arms**, the President of the Scottish Lyon Court, and head of the heraldic organisation for Scotland.

**Lyra**, the constellation of the Harp, situated between Hercules and Cygnus, comprising twenty visible stars, the principal of which is Vega, one of the most brilliant of all the stars.

**Lyre**, an upright stringed instrument rather like a miniature harp. It was the universal musical instrument of classical Greece and Rome.

**Lyre-Bird**, a remarkable genus of Australian birds, the males of which possess a beautiful lyre-shaped tail. The bird is not more than 15 in. long, but its tail, which it displays to advantage during its remarkable courtship dance, is 23 in. in length.

**Lyrids**, meteor showers to be observed about Apr. 20th each year.

## M

**Macadamising**, the system of road-making invented by John Macadam (1756-1836). The road bed is laid with hard broken stones, of a nearly uniform size, which by the weight of the traffic alone soon assume firmness. Nearly all the main country roads are macadamised.

**Macaque**. These monkeys are related to the Mangabeys, but whereas the latter are restricted to Africa, only one species of macaque occurs in that continent, the others being Asiatic. Their muzzles are longer than those of mangabeys. The tail may be rudimentary (*e.g.*, Brown Macaque of Cochin China) or long (*e.g.*, Pig-tailed Macaque of Burma).

**Macaw**, a genus of large parrots with brilliant scarlet and sky-blue plumage, with interminglings of green. Native to South and Central America.

**Maccabees**, a patriotic Jewish family whose achievements in early history were very notable. The revolt of the Maccabees in the 2nd century B.C., in which Judas captured Jerusalem and purified the Temple, is the most famous exploit connected with this historic name. The feast of the Maccabees is celebrated with rejoicing in December.

**Mace**, originally a weapon of offence, now an ensign of authority borne before officers of state and other dignitaries. At the present day, among others, there are maces for the Speaker of the House of Commons, the Lord Mayor of London, and other mayors. The mace-bearer is the functionary who on ceremonial occasions carries the symbol of authority before judges and civic or state officials.

**Macedonians**, a sect formed by Macedonius, Bishop of Constantinople, in the 4th century, who denied the existence of the Holy Ghost. The Papal Council expelled the bishop and his followers from the Church in 360.

**Mach Number**. Unit of high-speed flight. The ratio of speed of flight to speed of sound under same conditions of pressure and density. Speed of sound at sea-level is 762 m.p.h., so flight speed of 381 m.p.h. is equivalent to a Mach Number of 1. At supersonic speeds the Mach Number is greater than 1; subsonic speeds, less than 1.

**Machine Organa**, defined in the 10th book of Vitruvius as "contrivances for the concentration and application of force," and known by the names of instruments, engines, and machines.

**Mackerel**, a familiar sea-fish existing in large numbers in the northern waters of both hemispheres. In May and June immense shoals are to be found round the British coasts.

**Madder**, one of the most important of dye-stuffs, largely used in producing Turkey-red dye, but now superseded by artificially prepared alizarin. Natural madder is the root of the *Rubia tinctorum*.

**Mad Parliament**, held in 1258 at Oxford to settle the differences between Henry III. and his barons. It resulted in the Provisions of Oxford, which provided for an advisory council of fifteen for the king that was to meet twelve

representatives of the barons three times a year for consultation. The plan was operative until the rising of the barons under Simon de Montfort in 1263.

**Madrepore**, a white coral-like substance consisting of carbonate of lime, formed by the gradual growth of polyp deposits, and abounding in tropical seas.

**Madrier**, a term in military engineering denoting a beam laid in a ditch to support a wall, or in a mine to hold up the sides or roof; also an armoured plank affording protection against hostile fire, or fitted to receive the mouth of a petard in attacks upon obstacles.

**Madrigal**, a style of unaccompanied composition for three or more voices. Developed in the Netherlands, it reached perfection in 13th-century Italy. Brought to England during the Renaissance it achieved great popularity and many English composers became famous for their madrigals.

**Madwort**, a common name of the botanical genus *alyssum*.

**Maelstrom**, a great whirlpool. The most famous is that off the coast of Norway, between the islands of Moskenes and Mosken, of the Lofoten group, the power of which has been much exaggerated.

**Mafia**, a secret Sicilian society formed for purposes of vengeance, private and public, prominent about 1860, and again after the second world war.

**Magenta**, an aniline dye discovered in 1859 by Sir W. H. Perkin, and named after the great battle of that year between the French and Austrians.

**Maggot**, the larva of many species of two-winged flies; a term commonly applied to that of the common fly, which feeds upon putrid matters, animal and vegetable.

**Magi**, priests of the Persian fire-worshippers. Their sacred fires blazed in the open air, and around them they performed their mystic rites. Zoroaster, their great reformer, flourished about 615 B.C. It was not till thirteen centuries later that Parseeism in Persia was superseded by Mohammedanism, and the only representatives of the old worship now left are the Parsees of India.

**Magic**, a term applied to the pretended art of influencing the course of events by supernatural means. According to some a primitive stage of belief in magic precedes the establishment of religion. Magic has been practised in all countries and in all ages. The priesthood of ancient Egypt was notably proficient in these arts, and much early ritual seems to have been magical in intent, including the rite of sacrifice. The powers of the gods themselves are often attributed to magic in Egyptian, Babylonian, Vedic, and other mythologies. The practice of magic continued in Europe during the Middle Ages in spite of the efforts of the Church. Magic took various forms—the cure of disease, predictions, and the gratification of personal desires. Thus, there was *black magic*, which communed with evil spirits; *white magic*, dealing with good spirits; and *natural magic*, the science of the occult; while *astrology* and *alchemy* were the advanced outcome of these superstitions. In a primitive state of culture when conditions are difficult and knowledge limited, man in his despair resorts to magical practices to bring about his desires.

**Magic Lantern**, an apparatus for throwing pictures on a screen, invented by Kircher in the 17th century, and consisting of a lantern, behind the light of which is a reflector, while in front is a tube carrying a condensing lens, this being supplemented by a double convex lens which enlarges the object to be shown.

**Magistrates or Justices of the Peace** preside over courts of petty sessions, and are appointed by the Lord Chancellor on the recommendation of the Lord Lieutenant of the County. There are some 25,000 magistrates in Britain, of whom about 1,000 are women. They are unpaid. Mayors during their time of office are J.P.s *ex officio*. In certain big towns a barrister known as a stipendiary magistrate is appointed to act as full-time salaried magistrate. There are 28 stipendiaries in London known as Metropolitan Police Magistrates. (*See p.* 129.)

**Magna Carta** was sealed by King John at Runnymede on June 15th, 1215, in obedience to the insistent demands of the barons, and has

been confirmed many times by later monarchs. It was not a revolutionary document. It laid down what the barons took to be the recognised and fundamental principles for the government of the realm and bound king and barons alike to maintain them. Its main provisions were that no man should be punished without fair trial, that ancient liberties generally should be preserved, and that no demands should be made by an overlord to his vassal (other than those recognised) without the sanction of the great council of the realm.

**Magna Græcia** were independent states established by Greek colonists in South Italy about 720-650 B.C. They had been decadent long before the Romans appeared in 282 B.C.

**Magnesia** is the oxide of the metal magnesium, and is in the form of a white powder.

**Magnesium**, a metallic element, first isolated in 1808 by Sir Humphry Davy, who prepared it by electrolysis of the chloride. Its chief ores are magnesite and dolomite. Industrially it is obtained by electrolysis. Many important light alloys contain magnesium. The metal burns with a very bright light, and for this reason it is used in photographers' flash bulbs and also in fireworks manufacture.

**Magnetic Poles** are at a considerable distance, of the order of 1,000 miles, from the geographical poles, and are not antipodal to one another. The poles do not remain fixed, and the North pole wanders more than the South. The present position of the North magnetic pole is in the region of lat. 74° N.; long. 100° W., considerably north of Amundsen's observations of 1904. The South magnetic pole is not far from lat. 70° S.; long. 150° E.

**Magnetic Storms**, large irregular disturbances superimposed upon the normal magnetic field of the earth. They may occur at any time, but are most frequent during equinoctial months and in years of sunspot maxima. World-wide in extent, magnetic storms are most pronounced in the polar regions, being due apparently to intense electric currents located in the upper atmosphere near to the zones of greatest auroral frequency. One theory attributes the high ionisation of these belts to solar radiation. Magnetic storms cause radio fade-outs and interfere with telegraphic communication.

**Magnetism**, the quality of attraction for iron possessed by the lodestone or magnet-stone, was known to the ancient Greeks, Chinese, and Arabians. Later, perhaps about the time of the Norman Conquest, it was discovered that lodestone or magnetised iron, if freely suspended, sets itself north and south. This discovery led to the invention of the mariner's compass. Basic law of magnetism is "like poles repel, unlike poles attract," and this was formulated by Peter the Pilgrim in 1269. The earth acts like a huge magnet with its axis inclined at about 10° to the axis of rotation, the magnetic poles being on the Boothia Peninsula (North Canada) and South Victoria Land (Antarctica). The magnetic field at the surface consists of the regular field of a magnetised sphere with an irregular field superimposed upon it. Variation in the magnetic forces occurs from place to place and from time to time, and maps showing the distribution over the globe of points of the same declination (i.e., the angle which the magnetic meridian makes with the geographical one) are of the utmost importance in navigation. In the south-east of the British Isles, at present, a magnetic needle points 9° and in the north-west 14° west of true north. Little is known regarding the origin of the main (regular) field of the earth, but it is believed that most of the irregularities are due to the presence of intense electric currents in the upper atmospheres. (See p. 158.)

**Magneto**, a device for producing high-voltage alternating currents: it is in effect a very compact electric generator, used for providing the ignition in internal-combustion engines (though the coil-and-battery system is more common than magnetos in motor-cars).

**Magnetron**, a vacuum tube (valve) in which the electrons travelling between the electrodes are deflected by an externally applied magnetic field. The centimetre waves which brought

great advances in radar (*vide*) were generated by magnetron valves.

**Magnets** are usually magnetised bars of steel with two opposite poles (N. and S.) one at or near each end, containing tungsten, cobalt, or chromium, etc. These magnets are called permanent magnets in contrast to electro-magnets.

**Magnificat**, the hymn of the Virgin Mary, given in Luke 1, 46 beginning in the Vulgate with the words "Magnificat anima mea Dominum" ("My soul doth magnify the Lord"), and used in the services of all Christian Churches.

**Magnitude** in astronomy is a measure of the apparent brightness of a star, which is inversely proportional to the square of its distance. A low number indicates a bright star, and a high one a faint star. The *absolute magnitude* is a measure of *real* brightness, i.e., the brightness a star would have at a standard distance away of 32.6 light years. The distance can be calculated if the apparent and absolute magnitudes are known. (See reference to Cepheid variables on p. 154.)

**Magnolia**, the type of the botanical family *Magnoliaceae*, comprising many beautiful trees and shrubs with large and fragrant flowers, and chiefly native to North America and Asia.

**Maggie**, a well-known bird of the crow family, of glossy black and white plumage, famed for its mischievous propensities. (See also p. 1004.)

**Magyars**, the Hungarian race who came to eastern Europe from S.W. Asia and settled in Hungary in the 10th century. Their language belongs to the Finno-Ugrian group.

**Mahdi**, an Arab leader of great influence, invested with powers akin to those of a Messiah in the Mohammedan mind. The title was taken by Mohammed Armed, who overran the Egyptian Sudan, and in 1885 captured Khartoum.

**Mahogany**, a fine hard wood susceptible of a very high polish, and distinguished for the beauty of its colour and markings. The tree which produces this wood (*Swietenia mahogany*) is a native of the West Indies and tropical America. Mahogany is said to have been first brought to England by Raleigh in 1595.

**Mahrattas**, a warlike people strongly opposed to the East India Company in the 18th and early part of the 19th centuries, but subdued in 1818.

**Maidenhair Tree or Ginkgo**. This tree takes its name from the shape of its leaves, which resemble those of the maidenhair fern. Widely cultivated in China and Japan. It is the only survivor of an order of gymnosperms which flourished in Mesozoic times. Botanically remarkable in that the pollen tube contains two sperms which are motile.

**Mail-Coaches**, which are usually regarded as things of a very distant past, did not come into existence till 1784, when Mr. John Palmer, of Bath, put the first mail-coach on the road between Bath and Bristol. They were soon afterwards adopted in other parts of the kingdom, and were employed in carrying the mails until superseded, in great part, by railways. The present mail vans carry no passengers.

**Maize**, an important cereal largely grown in U.S.A., Argentine, Rumania, China, India, and Union of S. Africa, commonly known as Indian corn in the U.S.A.

**Majolica**, a kind of pottery carrying a highly coloured glaze or enamel, supposed to have been introduced into Europe by the Moors from Majorca, in the 15th century, and brought to a high degree of artistic beauty in those days. Raphael and other great artists made designs for the ware. After the 16th century majolica production practically ceased, though in recent times some clever imitations of the old ware have been manufactured.

**Major**, in the British Army, ranks next below a Lieutenant-Colonel. A Major-General ranks beneath a Lieutenant-General.

**Major Scale**. (See Diatonic Scale.)

**Malachite**, a bright-green variety of copper ore,  $\text{CuCO}_3 \cdot \text{Cu(OH)}_2$ .

**Malacostraca**, the sub-class of the Crustacea to which the lobsters, crayfish, shrimps, belong.

**Malays**, a race of people with oblique eyes, high cheek bones, and brown skin, whose native countries are Malaya, Polynesia, the Philippines, and Madagascar.

**Malic Acid**, a substance obtained from unripe fruit,

- and present in the largest quantities in rhubarb and mountain-ash berries; its salts are called malates.
- Mallophaga**, the bird lice or biting lice which constitute one of the insect orders.
- Malmaison** derives its name from having been inhabited in the 11th century by the Norman brigand Odon, and afterwards, according to the tradition, by evil spirits, exorcised by the monks of St. Denis. Little was known of it, however, until its purchase, for 160,000 fr., by the Empress Josephine, who died there in 1814 as the result of a chill caught while showing the Russian Emperor round the grounds. After the Second Restoration, Prince Eugene sold Malmaison, removing its gallery of pictures to Munich. In later years it was for some time the residence of ex-Queen Christina of Spain. In 1900 it was given to the nation.
- Malmsey**, a strong, sweet wine originally made in Greece, but now also in Spain, Madeira, and the Azores; known also as Malvoisie.
- Malt** is barley grain which has gone through a steeping and preparing process to render it suitable for brewing purposes. It was for a couple of centuries subjected to a fluctuating duty, producing in 1863 a sum of £6,273,727. The tax was abolished in 1880.
- Maltese Dog**, one of the smallest of dogs, with long, silky white hair and pendulous ears; much appreciated as a drawing-room pet.
- Maltose**, a sugar formed in cereal grains during germination. It is produced by hydrolysis of starch, and further hydrolysis converts the maltose into glucose.
- Mamluks**, commonly known as Mameluks, were originally—in the 13th century—a bodyguard of Turkish and Circassian slaves in the service of the Sultan of Egypt, and attained such influence that in 1250 they were strong enough to appoint one of their own body to the throne of Egypt. After that a succession of Mamluk Sultans reigned down to 1517. Then the Turks annexed Egypt, and the Mamluks were taken into the service of the Beys. They again came to the front after Napoleon's conquest of Egypt, and for a time resumed governmental sway; but in 1811 they were decoyed into the citadel of Cairo and massacred by order of Mehemet Ali.
- Mammalia**, a zoological term covering all that portion of the animal kingdom, the females of which are provided with mammary glands for suckling their young. A further characteristic is the double articulation of the skull with the vertebral column.
- Mammoth**, extinct elephants of gigantic size. In 1799 the first perfectly preserved specimen was found in Siberia in a block of ice. It was in prehistoric times an inhabitant of Britain and other parts of Europe, as well as of Asia and America.
- Mammoth Cave of Kentucky**, about 10 miles long, is one of a series of spacious caverns formed in the limestone rock formation, and is from 40 to 300 ft. wide and at one point 300 ft. high. Stalactites and stalagmites abound.
- Manatee**, an aquatic mammal of the sea cow (Sirenia) order of mammals, averaging when full grown from 10 to 12 ft. in length, with shovel-shaped tail, and four limbs and nails which almost give the appearance of arms and hands. In spite of their ungainly aspect, these creatures are believed to have given rise to the legend of mermaids.
- Manchus**, the original nomadic race inhabiting northern Manchuria who invaded China early in the 17th century. A Manchu dynasty occupied the imperial throne of China from 1644 to 1911.
- Mandamus**, a writ of command issued from the Queen's Bench Division of the High Court addressed to any person, corporation, or inferior court requiring them to do something which appertains to their office.
- Mandarin**, the name given to a powerful Chinese official, civil or military under the old régime, whose rank was shown by the wearing of a button on the cap. In Chinese the name is Kwan.
- Mandible**, the lower jaw in human anatomy. The two parts of a bird's beak are known as the upper and lower mandible. The term is also used for biting jaws in arthropods.
- Mandilion**, a form of upper garment, worn by soldiers and servants in the 17th century, confined mostly to France.
- Mandoline**, an Italian fretted guitar, so called from its almond conformation.
- Mandrel**, a cylindrical bar or spindle used for a variety of purposes in engineering.
- Manes**, the ancient Roman name for the shades of the dead, who were regarded as tutelary divinities, and worshipped.
- Manganese**, a metallic element discovered by Scheele in 1774. It is silver-white, not very hard (it forms a hard alloy with carbon), brittle, and tarnishes when exposed to air. Its chief ore is pyrolusite (manganese dioxide). Steels containing manganese are very tough, and used for making machine parts.
- Mangel or Mangel-wurzel**, a variety of beet, used as food for stock animals.
- Mango**, a tree extensively cultivated in the tropics for its fruit, which has orange-coloured flesh.
- Manicheans**, a sect founded by the philosopher Mani in Persia about A.D. 261, which spread into Egypt and Arabia. Mani called himself "the Envoy of Christ," rejected the Old Testament, and propounded a system of his own based partly on Christianity and partly on the dogmas of the ancient fire-worshippers.
- Manikin**, a dwarf or pigmy; an artificial figure employed in anatomical demonstrations, made sometimes of papier-mâché.
- Maniple**, eucharistic vestment worn over left arm.
- Manna**, a tree of the ash genus growing in the South of Europe and in the East, and exuding a sweet substance which is gathered, boiled, and eaten.
- Manometer**, instrument used to measure gas pressure. Usually a U-tube containing water or mercury, one end open to the atmosphere, the other to the gas whose pressure is to be measured. More sensitive for small pressures than the Bourdon gauge.
- Manors** were estates originally granted in Anglo-Saxon times as rewards for knight service, and included the privilege of a special court with jurisdiction, criminal and civil, within the manorial territory. In recent times the ancient privileges of the manorial system have almost passed out of existence. (See Court-Leet.)
- Mansfield College**, Oxford, for the education of students for the Nonconformist ministry, was established in 1886, and opened in 1889. It is a Non-University College, and is devoted solely to the study of Theology.
- Mansion House**, the official residence of the Lord Mayor of London, stands opposite to the Bank of England, and was erected in 1739-53 from the designs of George Dance.
- Manslaughter** is the unlawful killing of another without malice or premeditation, and is classed as voluntary, as when done under a sudden provocation, or involuntary, when it is the result of some unlawful act. Culpable homicide also comes within the term of manslaughter.
- Mantis**. Large insects belonging to the same order as the locusts and grasshoppers. The manner in which the forelegs are held, as though in supplication, has gained for these insects the common name of "praying mantis." They are distributed throughout the warmer countries of the world.
- Manuals**, the keyboards of an organ which are operated by the hands as apart from the pedals which are worked by the feet. In a large organ there may be four manuals, each controlling a group of stops. These groups are called great organ, swell organ, choir organ, solo organ.
- Manx**, the original Celtic inhabitants of the Isle of Man, where a Celtic dialect still lingers.
- Maoris**, one of the native races of New Zealand who migrated to the island originally from one of the Polynesian group about the year 1350. They number about eighty-two thousand, and being very intelligent people have adapted themselves with considerable success to the conditions of civilised life. Until 1870 they were frequently in arms against the Government, but since then have settled down with the Whites as equal citizens.
- Maple**, trees native to the northern hemisphere. There are over 100 species. The sycamore is the best-known species growing in Britain.

The sugar maple abounds in Canada and the eastern parts of the United States. The sugar is tapped by boring holes in the tree in Feb. and Mar., and the juice that escapes is collected and evaporated. The maple-leaf is the Canadian national emblem.

**Maquis**, name of the dense scrub in Mediterranean France and Corsica, providing good cover for bandits and outlaws. The French resistance movement adopted the name Maquis during the German Occupation, 1940-45.

**Marabouts**, Mohammedan hermits or monks, especially amongst the Moors and Berbers of N.W. Africa. They live in monasteries or attached to mosques and are held in great veneration by the Berbers.

**Marble** is limestone in its hardest and most crystalline form. There are many varieties—33 were used in the building of the Paris Opera House—but white is the purest and rarest. From about 568 B.C. white marble was used by the Grecian sculptors for their statues. Rome was rich in marble buildings and monuments, and Palmyra was mainly built of white marble. Devonshire and Derbyshire yield the best English marbles, and several localities in Ireland furnish particular kinds. Vermont, Massachusetts, and Tennessee are the chief marble-producing States of America. The American marbles are mostly light grey. The Marble Arch, at the northern entrance to Hyde Park, was originally built for the front of Buckingham Palace.

**March**, the third month of the year, and the first of the old Roman Calendar. It was named after the god Mars, and was the *Hlyd* (storm) *monath* of the Anglo-Saxons.

**Mardi Gras**, the last day of the Carnival in France, Shrove Tuesday.

**Mares' Tails**, term popularly applied to high (cirrus) cloud when it appears in tufts or feather-like plumes.

**Margarine**, invented in 1869 by the French chemist Mège Mouriès, who, at a time of acute food shortage, had been commissioned by Napoleon III to find an alternative to butter. His invention was pioneered by two families of Dutch merchants who lived in the village of Oss in Holland. Originally made from beef fat, milk and water, margarine is now made chiefly from vegetable oils and fats, including groundnut, coconut, palm, palm-kernel, soya and sunflower, and also some marine and animal fats. Research on the vitaminisation of margarine was first undertaken by Lever Brothers, Ltd., and the first margarine to contain a suitable concentrate of vitamins A and D was made in Britain in 1927.

**Mariner's Compass**. (See Magnetism.)

**Marliolatriy**, a term applied by non-Catholics to the worship (hyperdulia) of the Virgin Mary, began in the 4th century, and still a prominent part of Roman Catholic religious observances.

**Marionettes** are puppets moved by strings. They originated in the *Fantoccini* of the 15th century which had such vogue in Italy and are still popular, being adopted in Germany and England later. Our *Punch and Judy* is a version of Punchinello.

**Marl**, a rock composed partly of clay and partly of carbonate of lime or magnesia. Usually grey in colour.

**Marlinspike**, a pointed iron tool used by sailors to splice wire. The instrument used when rope splicing is called a fid.

**Marmoset**, small monkeys confined to the New World. Very squirrel-like in appearance, with long bushy tails, and thick woolly fur, they are pretty little animals and the smallest of all monkeys. There are claws, not nails, on their digits, the big toe excepted.

**Maronites**, a sect founded by a monk named John Maro in the 7th century, in Syria, and still existing in the Lebanon regions. They differ from the Roman Catholics (to whose Church they are allied and report themselves) in certain points of doctrine concerning Christ. In 1860 they suffered severe persecutions at the hands of the Druses, some 1,300 being massacred and 100,000 driven from their homes.

**Marprelate Tracts**, seditious pamphlets written with great maliciousness by a group of Elizabethan puritans about 1586, and intended to discredit the episcopacy, caused a great sensa-

tion in their time, and led to the execution of their supposed author, John Penry.

**Marquess or Marquis**, the title next in precedence to that of duke. The first English marquess was Robert de Vere, Earl of Oxford, who had the honour conferred upon him by Richard II. in 1385.

**Marquetry**, a kind of inlaying in which thin layers of coloured woods are wrought into a design, and mainly used in ornamental floors.

**Mars**, the fourth nearest planet to the sun, being 141,500,000 miles distant. Its diameter is 4,215 miles as against the earth's 7,920. There has been much speculation about certain dark lines which some observers have seen on the surface of Mars; photographs give no support to the theory of an artificially constructed network of canals, but it is possible they represent areas covered by some simple form of vegetation of the lichenous type. The temperature of the planet's surface would allow living organisms as we know them to exist, but the quantity of oxygen in the atmosphere would be almost certainly too little to support animal life.

**Marseillaise**, the French national hymn, written and composed by Rouget de L'Isle, a French engineer officer, who was inspired to write it in 1792 to encourage the Strasburg conscripts. It immediately became popular, and received its name from the fact that it was sung by the Marseillaise troops while marching into Paris.

**Marshalsea Prison**, a once well-known house of detention in Southwark. It stood near St. George's Church, and was originally a prison for royal servants convicted of offences, but from 1842 to 1849 was a debtors' prison. It was abolished in 1849. Dickens described it in *Little Dorrit*.

**Marsh Gas**. (See Methane.)

**Marsh Tortoise**, an amphibious animal of the order *Chelonii*, spread over many countries and inhabiting ponds and small rivers. There are 42 species, and they are all carnivorous.

**Marston Moor**, near York, was the scene of the famous battle between Prince Rupert and his forces against Cromwell and his troops on July 2nd, 1644. Cromwell was victorious, and this formed the turning-point in the Civil War.

**Marsupials**, mammals having a marsupium or pouch; the young are born of comparatively small size and imperfectly developed, but are transferred to the maternal pouch. Except for the opossums of America, all marsupials occur in Australasia. Well-known marsupials are the kangaroos, wallabies, and wombats.

**Martello Towers**, circular forts erected on the coasts of England early in the 19th century as defences against the threatened Napoleonic invasion. So called from the circular fort at Mortella (Corsica), which resisted an English fleet in 1794.

**Marten**, carnivorous animals of the weasel family, one species of which was once common in Britain but now seldom met with. Many valuable furs come from martens, e.g., the sable of N. Asia and the marten of N. America.

**Martial Law** is a term loosely employed to indicate the suspension of the administration of normal civil law and its replacement by military authority when this is rendered desirable by such circumstances as war or rebellion.

**Martin**, a well-known bird-visitor to Britain. It belongs to the swallow family, and the two species that spend their summers here are the house-martin, which makes its nest of mud under the eaves of houses, and the sand martin, which builds in sandy banks.

**Martingale**, a long strap or thong of leather, one end of which is fastened to the girth of a horse, between the fore legs, and the other to the bit, or to a thin mouthpiece of its own.

**Martinmas or St. Martin's Day**, falls on Nov. 11th, and is one of the Scottish quarter days. St. Martin was a popular Saint with our ancestors, and Martinmas was a busy time for the mediæval housewife. It was the date when "Martlemas Beef" was dried in the chimney, and enough bacon and mutton cured to last until the spring, because, owing to the scarcity of winter fodder, fresh meat could seldom be obtained. This diet of dried meat without vegetables caused scurvy, King's evil, leprosy, and other maladies. Originally the goose be-

longed to Martinmas, not to Michaelmas, the legend being that when Martin was elected Bishop of Tours he hid himself, but was betrayed by the cackling of geese. He died in the 4th century. The spell of fine weather sometimes occurring at Martinmas is called St. Martin's Summer.

**Martyrs.** People who suffer death in testimony to their faith. Stephen was the first Christian martyr in 39. The first English martyr was St. Alban, 286, and in Tudor times many eminent churchmen went to the stake at West Smithfield, in London, and at Oxford, where now exists the "Martyrs' Memorial." There is a Martyrs' Memorial Church in St. John St., Clerkenwell, not far away from the scene of the Smithfield fires.

**Marxism.** The doctrine formulated by Karl Marx and Friedrich Engels about the middle of the 19th century and the basis of modern Communist theory (with the new addition of the works of Lenin and Stalin). Marxist thought was strongly influenced by that of Hegel, but the Idealism of Hegel was transformed into the Materialism of Marx and Engels. The most important aspect of Marxism is its interpretation of history, which is seen as the history of class struggles according to the law of the dialectic described by Hegel. (See Idealism.) Thus the Feudal System with its land-owning aristocracy was thesis to the antithesis of the rising merchant class, and the result (synthesis) was the modern capitalist system, which in its turn will be thesis to the working-class's antithesis leading to the classless society. Differing ideologies and, in fact, differing cultures, all are produced by the economic relations within a society; thus all ideologies are a form of propaganda for the ruling class. (E.g., Darwin's theory of the struggle for existence was a justification of the capitalist's attitude to the working-class.) Marxism also implies an economic theory based on the concept of surplus value, and is applied to physics, biology, and all other sciences in the form of dialectical materialism. Although the work of Marx has led to a greater understanding of society and contains much truth, few other than Communists accept the theory wholeheartedly. Anthropologists accept that the material and technological structure of a society influences the ideologies and the way of life of the individuals within it, but they would not agree that it completely determines them. Furthermore, they point out, most societies have not been arranged on a class basis.

**Mason and Dixon's Line** is the boundary line separating the old Slave States of America from the Free State of Pennsylvania. It was drawn by two English surveyors, Charles Mason and Jeremiah Dixon, between 1763 and 1767.

**Masquerades** are balls or dances at which those who take part appear masked or in character. Edward III. was fond of this type of entertainment. Pepys and Evelyn mention a masquerade held at Whitehall on Feb. 2nd, 1665. This form of revel became a craze in London at the beginning of the 18th century. In modern times it survives in the fancy dress ball.

**Masques** were light dramatic compositions set to music and performed on special occasions. One of the best-known examples is Milton's "Comus," which was given at Ludlow Castle in 1634.

**Mass**, the service in the Roman Catholic Church in which are enacted and enshrined Christ's words and actions at the Last Supper. It is high or low, i.e., performed with full choral service, or merely by the rehearsal of prayers without singing. Mass was first celebrated in Latin in the 4th century, and was introduced into England in the 7th century.

**Mass Spectrograph**, an instrument for separating isotopes. It works by sorting electrified particles according to their masses; the particles stream through a magnetic field, and the lightest particles undergo the greatest deflection.

**Massorah**, a collection of criticisms on the Hebrew text of the Scriptures, and rules for its correct interpretation.

**Mast**, a long round piece of timber or tubular steel or iron, standing upright in a vessel, and supporting the yards, sails, and rigging in general.

The earliest ships had only one mast, carrying a simple sail. The number increased until there were 4 or 5, or even more. Above the lower mast of a sailing-ship comes the topmast, and above that, the topgallantmast and royalmast. The position of each mast is indicated by a prefix, as foremast, foretopmast, foretopgallantmast, foreroyalmast, mainmast, maintopmast, etc. The foremast is in the fore of the ship, the mainmast in the centre, and the mizzen nearest the stern. In large vessels nowadays the mast does not extend to the keel, as it formerly did, but is usually stopped at the second deck.

**Master of the Revels** was an important Court official upon whom devolved the arrangement of Court festivities. The office is at least as old as the time of Edward III. By 1737 it seems to have died.

**Master of the Rolls**, one of the English judges, formerly a judge of Chancery, but since 1881 a judge of the Court of Appeal only. In addition he has charge of the rolls or records of Chancery and ranks next to the Lord Chancellor and Lord Chief Justice.

**Mastiff**, a domestic dog said to be an original British breed. A large massive animal with pendulous ears, it is a formidable watch dog.

**Mastodon**, an extinct order of quadruped closely resembling the elephant in structure, but much larger.

**Materialism** is the philosophical belief that the basic stuff of which the universe is made is matter, and that everything in the universe is either matter or derived from matter. The earliest materialists were the Greek philosophers of the Ionian School in Asia Minor—Thales of Miletus, Anaximander, and Anaximenes (c. 600–550 B.C.). After Plato, the philosophy of materialism seemed to be discredited and was little heard of until the 19th century, when advances in physical science seemed to make the theory more plausible. It is now generally thought that, with further discoveries, the position is once more untenable. But it must be remembered that there are two forms of materialism—the atomistic-mechanistic type and the organismic type. The former somewhat crude belief is, it may safely be said, untenable. It held, for example, that man and other living things are mere machines, and that concepts such as mind, beauty, truth are meaningless. Organismic theory holds that all things, living or otherwise, are systems of energy—that one must consider not merely structure but also relations and process. Mind in this theory is not a thing but a process occurring at a particular level of development, beauty is a particular relationship between object and observer, truth similarly is a relationship. Since the body, for example, consists of relationships between organs as well as the organs themselves, it cannot be explained as the mere sum of its parts. "The whole is more than the sum of its parts." In this form the theory of materialism is much more tenable and cannot be said to be outdated.

**Mathematics** is the language of physics, and uses symbols for expressing measurement, theories, and laws. Mathematical formulæ summarise and condense in exquisite simplicity the results of vast numbers of observations and experiments.

**Matins**, an early morning church service. The service includes, in the Roman communion, the Lord's Prayer, the Angelic Salutation, the Creed, and certain Psalms. The name was also given to the early morning massacres (a) of St. Bartholomew, Aug. 24th, 1572, called the "French Matins," and (b) the massacre of Prince Demetrius and his Polish adherents, May 27th, 1606, the "Matins of Moscow."

**Matriarchate**, an ancient theory that the mother was the source of authority and not the father, and that in the "golden age" women exercised supreme control.

**Mau-Mau**, a secret, anti-European, terrorist movement which has been agitating the Kikuyu tribe of Kenya. The initiation ceremony is conducted with great ritual and its members are bound by oath. (See Kikuyu.)

**Maundy Thursday**, the day before Good Friday, commemorates the Last Supper. "Maundy" derives from Christ's command (mandatum) to his disciples on that day to love one another.

It was the custom in the monasteries for the monks to wash the feet of the poor on this day, and for many centuries the sovereigns of England, through their almoners, have distributed money, food, and clothing to "as many old men and as many old women as the Sovereign is years of age." The Royal Maundy ceremony is still observed, special silver money granted by the Royal Almoner is coined for the occasion and the distribution takes place in Westminster Abbey. (See also p. 738.)

**Mausoleum**, a special place of sepulture, generally for the reception of the remains of members of a royal or other family of distinction. The name is derived from the tomb of King Mausolus at Halicarnassus, erected about 350 B.C., and forming one of the seven wonders of the world. The royal mausoleum at Frogmore was founded by Queen Victoria, where she was buried, together with the Prince Consort and other members of the Royal Family since deceased.

**Mauve**, a colouring matter produced from lichens by Dr. Stenhouse in 1848, but in 1856 obtained from aniline by Perkins, and forming the first of the aniline dyes to be prepared on a large scale. The term mauve, however, was used to designate a purple shade of colour in the 18th century in France.

**May**, the fifth month of the year, but the third of the ancient Roman calendar. Supposed to be named after Maia, the mother of Mercury, to whom sacrifices were offered on the first day of this month. In England in former days May Day was made the occasion of many festivities, including the crowning of the May Queen, dancing round the Maypole, etc.

"**Mayflower**," the name of the ship which in 1620 conveyed the Pilgrim Fathers, 101 in number, from England to America. (See Pilgrim Fathers.)

**May Fly**, sluggish insects abundant over streams and rivers. The larvæ, which are aquatic, live several years, but the adults die a day or so after emerging and laying their eggs.

**Maynooth College**, near Dublin, was founded by Parliament in 1795, and possesses a large permanent endowment. It accommodates 500 students, who are trained for the Roman Catholic priesthood.

**Mayor**. In Great Britain various authorities share the work of local government. The village has three authorities, the parish council, rural district council, and county council; the small town has two, the urban district council and county council; the medium-sized town has two, the borough council and county council; the large-sized town has only one, the county borough council. Only the boroughs and county boroughs have a mayor and corporation. A mayor is *ex officio* a justice of the peace during his term of office. He represents the borough on all formal occasions, and has precedence (subject to Royal prerogative) over everyone else in the borough. Some cities, notably London and Birmingham, have a Lord Mayor. The chief Scottish cities have their Lords Provost. (See Local Government, pp. 122-33.)

**Mayors of the Palace** were functionaries of great influence under the later Merovingian kings; indeed, they exercised so much power that they ruled while the kings were mere puppets.

**Mazarine Bible**, an edition of the Latin Vulgate discovered in the library of Cardinal Mazarin; from which Gutenberg between 1450 and 1455 printed the first book for which the metal types were used.

**Mazurka**, a Polish dance in 3-beat time. Chopin wrote many Mazurkas as concert-pieces for the pianoforte.

**Meal-Tub Plot** was a pretended conspiracy in 1679 against the Duke of York, afterwards James II., concocted by an informer named Dangerfield, who sought to incriminate the Earls of Halifax, Essex, and Shaftesbury. Evidence of the fictitious nature of the plot was subsequently discovered in a meal-tub belonging to a woman with whom he had lived, and he was publicly whipped and put in the pillory. A man named Francis struck him a blow which caused his death, for which the assailant was hanged.

**Meal-Worm** is the larva of a beetle—*Tenebrio molitor*—and is found in corn mills, granaries, and bakeries, where it does considerable damage.

**Mean**, The, in mathematics, of two or more quantities is an intermediate quantity determined by certain rules. The arithmetic mean is the average value of the quantities, and the geometric mean is the square root of the product of the quantities.

**Mechanics**, the science dealing with the effects of forces upon bodies at rest or in motion.

**Meco-Moore**, a cutter-loader now used in considerable numbers in British coal-mines, capable of cutting and loading up to 500 tons a shift.

**Medals**, as decorations for military service, were first issued in this country by Charles I., who ordered medals for gallantry to be distributed to certain soldiers in 1643. Medals were also issued to officers and men who were victorious against the Dutch fleet in 1653. After Lord Howe's victory in 1794 a naval medal was instituted. Medals were also struck for the victory of Waterloo, and since that time special medals have been issued in connection with all our wars. The Victoria Cross, a special reward for personal gallantry in the Navy, Army, and Air Force, was instituted in 1856. The George Cross for gallantry instituted in 1940 ranks next to the Victoria Cross. The Military Cross was instituted in 1914. (See Back Endpaper.)

**Medlar**, a tree of which the fruit is about 1 in. in diameter and hard fleshed when gathered, but after being stored for a few weeks it softens. It has a peculiar flavour. Its large white flowers give it a decorative appearance.

**Meerschau**, a white or yellow-white earthy mineral, found in beds in Asia Minor, Greece, and other places, is a silicate of magnesium allied with water. Its chief use is in making pipe-bowls, though in Spain it is used for building purposes.

**Megalith**, a prehistoric monument, consisting of a large single stone or a group of such stones, in a circle as at Stonehenge or in burial chambers as at New Grange, Ireland. Megalithic monuments have been constructed by different peoples in different parts of the world since the third millennium B.C.

**Megalosaurus**, an extinct reptile of enormous proportions, having a length of from 30 to 40 ft. Fossil remains of this monster have been found in Oolitic Slate and Weald Clay.

**Meiosis**, a process of plant or animal cell division, in which the number of chromosomes is halved.

**Melinite**, a crystalline solid explosive of tremendous power, whose chief ingredient is picric acid.

**Melody**, a succession of single notes forming a pattern around which the rest of the composition (harmony, counterpoint) is woven. The theme (of a fugue, for instance) is a short melody.

**Melon**, a well-known tropical fruit, of which there are numerous varieties, cultivated since the days of Ancient Egypt.

**Mendelian Law**. The first statistical rules of inheritance, determining the ratio of variation of characteristics in the offspring of differing individuals, and the classification of characters discontinuously inherited, were first formulated by the Austrian monk Gregor Mendel (See "Prom. People" and also p. 173.) The results of his most important experiments in the crossing of peas were published in 1866, and showed that when two races are crossed, the resultant hybrids will exhibit the dominant features of one parent, but the offspring of the second generation will show those of both grandparents.

**Mendicant Friars**, certain religious orders which spread over Europe in the 13th century, and comprised the Franciscans, Dominicans, Augustines, and Carmelites. Originally they depended entirely on alms.

**Meniscus**, the curved surface of a liquid in a tube.

**Mennonites**, a protestant sect, an offshoot of the Anabaptists, which broke away in 1525 and adopted the doctrines of Menno Simons, a Dutch reformer. At first known as the "Swiss Brethren". There are several communities still existing. (See Anabaptists.)

**Mercator's Projection**, a method of indicating meridians and parallels of latitudes on maps, introduced by Mercator in the 16th century, and still universally used in navigator's charts.

**Mercers' Company**, the wealthiest and one of the

oldest of the London Livery Companies. It governs St. Paul's School and the Mercers' School and administers many important charities.

**Merchant Adventurers' Company**, a famous chartered regulated trading company which operated from the 14th century to near the end of the 18th century. It had a monopoly of the export trade in cloth.

**Merciless Parliament**, the name given to the parliament of 1388 summoned by Richard II., which decreed the execution of several of the king's ministers and the outlawry of the Duke of Suffolk.

**Mercury**, one of the smaller planets and the nearest to the sun, being 36 million miles distant. It has no satellite.

**Mercury or Quicksilver**, is one of the oldest-known metals, whose chief ore is the sulphide, cinnabar, found in certain parts of Spain, China, Japan, Mexico, and South America. It is liquid at ordinary temperature. It is largely used in the construction of barometers and thermometers. Alloys of mercury are called amalgams. It is also of great value in medicine.

**Meridian**, an imaginary circle extending through the North and South Poles and any given place. When the sun is at its midday height at any place it is "on the meridian"; hence the terms ante-meridian (a.m.) and post-meridian (p.m.).

**Merino Sheep** were imported into England from Spain in 1788, and had great influence in improving native breeds, especially in regard to the quality of the wool.

**Merit**, Order of, founded by King Edward VII in 1902 as a special distinction for eminent men and women without conferring a knighthood upon them. The Order has twenty-four British companions in addition to foreign honorary members limited in number, as the choice of members is, by the Sovereign's pleasure. Lord Kelvin was the founder companion. The only honorary members still alive are General Eisenhower (1945) and Dr. Schweitzer (1955). Florence Nightingale is the only woman to have received this coveted decoration.

**Merovingians**, the name given to the family that ruled over France from about 500 to about 750. Clovis was first of the line and Chilperic the last.

**Meson (Mesotron)**. Particles which are believed to be important in the interaction of protons and neutrons in atomic nuclei. The existence of mesons was predicted by the Japanese scientist Yukawa in 1935 on theoretical grounds, and was established the following year by the American scientists Anderson and Neddermeyer, who observed them to be thrown out by matter bombarded with cosmic rays. The charge on the meson is equal in size to that on the electron and the proton; the mass is about 200 times that of the electron. It is a very short-lived particle, with a free existence to be measured in millionths of a second. The first "man-made" mesons were produced in 1948, by bombarding carbon nuclei with alpha particles accelerated in E. O. Lawrence's new cyclotron at Berkeley, California, then the biggest in existence. A new kind of meson has since been discovered; the neutral *pion*, sometimes called the *neutretto*.

**Mesozoic**. The geological era which includes the Triassic, Jurassic, and Cretaceous. It began about 200 million years ago and lasted about 140 million.

**Metal Spraying**. The technique of spraying molten metal with a special spray gun. It can be used to deposit a protective coating (e.g., zinc on steel), or to build up worn surfaces of machine parts.

**Metamorphic Rocks** are such geological deposits as have undergone alterations of structure and composition. The most active agents in producing these metamorphic changes are heat, water, and pressure.

**Metayer System**, a land cultivation method prevalent in Italy and France, whereby the landlord provides the land and materials and the tenant the labour, the produce being evenly divided between them.

**Meteorites**. The word meteor originally signified any natural phenomenon, but in modern usage meteors are small bodies coming from inter-

planetary space which become luminous by friction on entering the earth's atmosphere. Popularly called "Shooting Stars." Larger meteors are known as fireballs. Some of these reach the ground. The object which has been a meteor in flight then becomes a meteorite. In some meteorites iron is the predominating element, others are like rock. The iron meteorites are more common amongst those which have been preserved, but falls of rock-like meteorites occur more frequently. At l'Aigle in France in 1803 from 2000 to 3000 meteorite stones fell; this fall is famous because it convinced scientists that meteorites really came from outside our atmosphere. (The largest meteorite stone actually known to have fallen to earth is one which descended in Emmett County, Iowa, in 1870, weighing 437 pounds.) A meteorite weighing no less than 36½ tons found in Greenland is now in New York. On June 30th, 1908, an enormous meteor fell in Siberia in a sparsely-inhabited region. A hot blast destroyed all trees within a radius of about 5-10 miles, the explosion waves being recorded by barographs as far distant as London, Washington, and Batavia. For the next few nights there was in Europe in the northern sky brilliant illumination due to sunlight falling on clouds of dust at a great height in the atmosphere. Whether this dust had accompanied the meteor in its journey through space like the tail of a comet or whether the dust had come from Siberia is unknown. When the place where the meteor fell was visited in 1927 some 200 craters were found, but no considerable meteorite has been recovered.

**Meteorograph**, a collection of instruments for recording continuous fluctuations in temperature, pressure, and humidity of the atmosphere.

**Meteorology**, the science of the atmosphere considered as a heat engine. Deals with weather, climate, optical phenomena, atmospheric electricity, physical processes such as radiation and precipitation, the dynamics and structure of cyclones, anticyclones, etc. Wide application to problems of aviation, agriculture, commerce and shipping. Meteorological observing stations are in operation all over the world, and on the simultaneous or synoptic reports of their instrument readings and estimates of pressure, temperature, humidity, speed and direction of wind, rain, character and amount of cloud, visibility, etc., forecasts, gale, snow and frost warnings are based. The Meteorological Office is part of the Air Ministry, whose Director is appointed by the Air Council. (See Weather.)

**Methane**. This gas occurs over marshes and swamps, where it is liberated in the decay of vegetable matter. It is the main constituent of natural gas, and also occurs in coal-mines, where it is called "fire-damp" because of the explosive character of its mixture with air.

**Methodists**, a term designating the religious organisation founded by John Wesley in 1739, after a long course of successful preaching by him in all parts of the kingdom, as well as in America. It professed to have but one aim, "to spread scriptural holiness over the land." The itinerant system of the ministry is a prominent feature of the organisation. Since Wesley's day, some off-shoots of Methodism have arisen and flourished. A scheme of union was consummated in Sept. 1932 at a United Conference in the Albert Hall, London, whereby the Wesleyan Methodist, the Primitive Methodist, and the United Methodist Churches became one Church, now known as The Methodist Church.

**Methuen Treaty**, a treaty of commerce between Great Britain and Portugal, concluded by Paul Methuen, British Ambassador at Lisbon, in 1703. Provided for the importation of port wine at reduced rates and a corresponding advantage to English wool in the Portuguese markets and brought Portugal into the war of Spanish Succession as a member of the Grand Alliance.

**Methylated Spirit**, a mixture of 90 parts by volume ethyl alcohol, 9½ parts wood naphtha (methyl alcohol), ½ part crude pyridine, together with small amounts of petroleum oil and methyl violet dye. Industrial methylated spirit consists of a mixture of 95 parts by volume ethyl alcohol and 5 parts wood naphtha.

**Metre**, unit of length in centimetre-gram-sec. system = 39.37 in.

**Metre** is the form of poetic rhythm, or the way words are arranged in a rhythmic pattern to make verse, and may be determined by: (a) length of time taken in pronouncing the syllables, as in classical Greek, Latin, and Persian verse; (b) stress with which the syllables are pronounced, as in modern English verse; (c) tone or pitch, as in Chinese verse. The repeated rhythmic unit of a group of syllables is called a *foot*, the principal being: *dactyl* (long-short), used in Greek and Latin verse, *anapaest* (short-short-long), *spondee* (long-long), *pyrrhic* (short-short), *iamb* (short-long), the commonest foot of English verse, *trochee* (long-short). The measure most used by the ancient Greek poets was the dactylic hexameter or heroic line, consisting basically of six dactyls, any of the first four of which could be replaced by a spondee, and the last always a trochee. The principal English rhythms are the 5-foot Iambic or English heroic line, initiated by Chaucer, Blank Verse (unrhymed 5-foot line, the standard measure for dramatic and epic verse), Heroic Couplet (5-foot iambic lines in couplet rhyme), and stanza. Individual poets have invented many different arrangements of rhymes and grouping of lines of all lengths to suit the poetic material. Free verse is without any obvious rhythmical basis.

**Metric System** is the system of weights and measures based on the gram and the metre, smaller units and larger units being decimal subdivisions or multiples of the primary units respectively. It came into force in France in 1801, and has since been adopted in most of the continental countries and is used universally in scientific work. There have been many attempts to get the system adopted in this country, and there is now reason to hope that others will follow the enterprising example of the pharmaceutical industry which adopted metric weights and measures in wholesale trading in July 1953. (See pp. 740-41.)

**Metronome**, an instrument for beating time during the performance of a musical composition. It has a double pendulum, and is wound up like a clock.

**Metropolitan Water Board**, a body constituted by special Act in 1902, consisting of 66 members, and controlling the water supply of London. £42,000,000 was paid as compensation to the water companies absorbed.

**Mezzotint**, an engraving from copper or steel produced by instruments which burnish and scrape away portions of the surface, and yield an impression effectually graded in light and shade.

**Mica**. The mica of commerce is a nearly transparent mineral, which has great heat-resisting power, and can be split into thin plates. The most important micas are muscovite (potassium mica), the commoner variety, and phlogopite (magnesium mica).

**Michael, St., and George, St.**, an order of knighthood originally founded for the Ionian Isles and Malta in 1818, and reorganised in 1869, so as to admit Crown servants connected with the Colonies. The Earl of Derby, Earl Russell, and Earl Grey were the first of the new knights.

**Michaelmas Day**, the festival day of St. Michael and All Angels, Sept. 29th, one of the English quarter days.

**Microbe**, a term proposed by Sédillot in 1878 to denote any minute organism, vegetable or animal, or found on the borderland between the two great natural kingdoms. The term is commonly used, but not by scientists.

**Micrometer**, an instrument for measuring minute distances; usually attached to the eye-pieces of a microscope or telescope, and consisting of two very fine hairs or wires stretched across the field of view, one fixed, the other movable. It was invented by William Gascoigne in the 17th century and improved by later inventors. Sir Joseph Whitworth made one in 1858 to measure the millionth of an inch.

**Microphone**, an instrument for converting sound waves into electrical variations. The first microphone was invented by Prof. David Edward Hughes, in 1878. It is used for telephone communications, in broadcasting, in gramophone recording, etc.

**Microscope**, invented about 1590 by Janssen, and

improved by Galileo, Fontana, and others, is an instrument which by a lens system magnifies minute objects. Microscopes are simple, compound, and binocular. The more powerful instruments have a magnifying capacity of as much as 10,000 diameters. (See *Electron Microscope*.)

**Middle Ages**, usually considered to comprise the 1000 years from the fall of the Western Roman Empire in the 5th century to the Renaissance in the 15th. The period was essentially the age of faith and we owe it many churches of incredible beauty. It was dominated by the Roman Church, while the monasteries were the storehouse of learning until the rise of universities in the 13th century. Feudal ideas and practices became very widespread, their later decline being hastened by the Black Death.

**Midge**, the common name of small two-winged flies of the genus *Culicoides*. The term "gnat" is sometimes applied to midges, though in Britain it is more commonly a synonym for the mosquito, clouds of which appear on summer nights in country places.

**Midrash**, the explanation of the Jewish Scriptures, dating from the interpretation originated by Ezra after the Captivity and continued by later Rabbis.

**Milan Decree**. (See *Berlin Decree*.)

**Millenary Petition** was presented to James I. in 1603, on behalf of nearly 1,000 Puritan Ministers against certain of the rites and ceremonies of the Church of England. The Hampton Court Conference was the outcome of this petition.

**Millenium**, a period of a thousand years. The term is specifically used of the period of a thousand years during which, according to Rev. xx. 1-5, Christ will reign in person on earth. The Millenarians are a sect that interprets the "Millennium" as beginning with the commencement of the 6001st year from the Creation, which according to Archbishop Ussher (1581-1650) was in 4004 B.C.

**Millipede**. Arthropods allied to the centipedes, from which they differ in having two pairs of legs to each body segment instead of one pair. Worm-like in shape but with a pair of antennae on the head, they are vegetarians and can do much harm to garden plants.

**Millstone-Grit**, a bed or rock of the Carboniferous group underlying the Coal Measures, and attaining in England a thickness in parts of 5,000 ft. It is from this rock that millstones have been made from time immemorial.

**Mimicry**, the resemblance of an animal to another animal or to inanimate objects. Examples of the former are the hover flies, which mimic wasps and bees; of the latter, leaf insects, stick insects, and caterpillars that look like dead twigs.

**Mind**. The nature of mind has for the most part been thought of as a philosophical problem, and historically has been described in terms of three main theories: those of materialism, idealism, and dualism. Materialism implies that mind does not, in fact, exist—it is merely an illusion, since the whole universe is composed of matter and matter alone. This belief, held by the Ionian school of Ancient Greece, has been held by few other philosophers. Idealism, on the other hand, takes the opposite point of view: it considers that matter is an illusion and that the whole universe is composed of the same stuff as mind. Sometimes, as in the philosophy of Berkeley, this belief takes the form of a theory that the universe is a thought in the mind of God. Dualism, the third viewpoint, insists that both matter and mind are fundamental—that neither can be reduced to the other. Most philosophers have held some form of this theory. The difficulty about dualism is that, if both mind and matter exist, it is very difficult to see how they interact—how thought is translated into action and how physical states of the body can (as they obviously do) influence the mind. Three further theories have been devised to explain how, if we accept dualism, interaction takes place. These are: (1) interactionism, which simply insists that interaction does take place; (2) psychophysical parallelism, which states that mind and body are parallel processes which coincide by the will of God but never really act one on the other; and (3) epiphenomenalism, the theory

- that mind is simply an appearance given off by matter as a flame is produced by a candle. In recent times, however, psychology has had something to say about the problem. Most psychologists consider that mind is a process, not a "thing." We do not, for example, ask to see what a "digestion" is or what it looks like—we accept the obvious fact that digestion is a reality but that it is a process going on in the stomach. In much the same way, the psychologist says, mind is a process going on in the brain. (See "The World of Science.")
- Mineralogy**, the science of minerals. The British Mineralogical Society was established in 1800.
- Minim**, a musical term denoting a note equal to two crochets, or half the value of the semibreve; also pharmaceutical term for  $\frac{1}{16}$ th part of a fluid ounce.
- Mink**. Semi-aquatic mammals closely related to polecats. There is one American species and one European. The fur, which varies light to dark brown, is soft and thick, and is among the most valuable of commercial furs.
- Minnesingers** were minstrel poets of Germany who, during the 12th and 13th centuries, composed and sang love ballads to amuse the knights and barons of the time.
- Minnow**, a small fresh-water fish of the carp family, abounding in all the waters of Europe; it has a mottled back and silvery belly, and forms a popular bait for trout.
- Minor Scale**. (See Diatonic Scale.)
- Minstrels** were originally specially appointed instrumentalists and singers—pipers, harpers, and gleemen—engaged by barons and manorial lords to amuse their tenants. Later, minstrels assumed nomadic habits, made their way into the houses of the great, and were generally welcome. By Elizabeth's time, however, they were too numerous, and they were classed as "rogues and vagabonds," along with actors.
- Minuet**, a composition in 3-beat time and in the rhythm of the minuet dance. A movement of a sonata or symphony may be in minuet form.
- Miracle Plays**, which were very popular in England in the 15th century, were usually religious in character, representing some of the dramatic incidents of the Bible. Staging of plays was one of the many activities of the Gilds of those days.
- Mirage**, an optical illusion often observed in desert regions when the objects on the surface of the earth often some distance away appear as if reflected in a surface of water. Mirage is due to the unequal heating of the different parts of the atmosphere, which bends the light rays, and so produces distorted images.
- Mirrors** were made of burnished metal in ancient times, brass usually. Silver mirrors were introduced by Praxiteles, 328 B.C. The Venetians made the first mirrors of glass, in the 14th century, but they were not made in England until the 17th century.
- Mishna**, the first part of the Talmud, setting forth the "Oral Law" of the Jews.
- Misprision**, a legal term, signifying an offence which may border on a capital charge. Misprision of treason indicates a knowledge of treason without participation in the treasonable act.
- Missal**, the name of the mass-book of the Roman Church compiled 492-96 by Pope Gelasius I., and revised by Gregory I., 590-604. The present Roman Missal was sanctioned by the Council of Trent 1545-63. In the Anglican Communion the Book of Common Prayer superseded the Missal in 1549.
- Missel-thrush** receives its name from its partiality to the mistletoe-berry. Larger than the song-thrush, with spotted breast rather than speckled.
- Mistletoe**, a parasitic evergreen with white berries used as a decoration at Christmas-time. The familiar mistletoe of Europe is the *Viscum album*, which grows on the boughs of lime, willow, apple, poplar, maple, ash, hawthorn, but seldom on oak-trees. It was sacred to the Druids, and in Norse mythology it was a mistletoe dart that killed the god Baldur.
- Mistral**, a cold dry northerly wind peculiar to the French coast of the Mediterranean.
- Mites**, minute animals related to spiders, but without the well-marked division of the body exhibited by the latter. Some are parasites, e.g., the scab mite and mange mite. The garden pest called the "red spider" is really a mite.
- Mitrailleuse**, a breech-loading machine gun adopted by the French army previous to the Franco-German War of 1870.
- Mitre**, the twofold pointed head-dress of bishops and certain abbots of the Western Church, and occasionally of other ecclesiastics.
- Moa**, the name for several species of ostrich-like extinct birds related to the New Zealand kiwi. One species stood 10-12 ft. high. The Moas became extinct about 500 years ago.
- Moabites**, a race of Judæa, descendants of Lot. They were often in conflict with the Israelites, but were finally subdued by Jehoshaphat, 895 B.C.
- Moabite Stone**, a stone of the 9th century B.C. containing the earliest known inscription in Phœnician characters, and discovered in the highlands of Moab in 1868. It is now in the Louvre, Paris. It records the campaign between Moab and Israel, a different account of which is given in the Old Testament.
- Mocking Bird**, an American bird of the thrush family, widely distributed over the north and south of the western hemisphere. It is renowned as a beautiful songster, and has remarkable mimicking powers.
- Moderator**, a material used to slow down neutrons in an atomic pile. Examples of moderators are pure graphite and heavy water.
- Mohair** is the wool of the Angora goat and used very largely in the worsted trade for the manufacture of dress fabrics.
- Mohammedanism**, the Moslem religion set forth by Mohammed (569?-632) and embodied in the Koran (q.v.). The doctrine includes the unity of God, the immortality of the soul, predestination, a last judgment, and a sensual paradise. It is professed by some 300 million people, mainly in India, Pakistan, Persia, and the Near East. There are 5 millions in Europe. Since the reforms of Kemal Ataturk the Mohammedans of Turkey are no longer orthodox, and polygamy and the segregation of women has been forbidden.
- Molasses**, sugar-cane juice in its uncrystallised form after boiling. The crystallised part is the raw sugar.
- Mole** a small burrowing animal about the size of a small rat, with short legs and forefeet armed with strong claws for digging in the earth. Their subterranean dwellings are of curiously ingenious construction, and they do not often leave them except to make raids on mice, frogs, snails, etc. The earth-worm, however, is the mole's chief item of food.
- Molecule**, the smallest mass of any substance, whether an element or a compound, capable of independent existence, and still retaining the properties of the substance. There are  $27 \text{ by } 10^{23}$  molecules in a cubic centimetre of a gas at ordinary temperatures and pressure.
- Mollusca** designates the soft-bodied invertebrate animals, most of which are protected by a shell. These shells are univalve—that is, of one piece, as in the case of snails; bivalve, as in the oyster; or multivalve, in the mail shells (*Chiton*). The squids, octopus, and nautilus are also molluscs, belonging to the class called Cephalopoda, the distinctive feature of its members being possession of tentacles.
- "**Molly Maguires**," the name of a secret society organised in Ireland in 1843 for revolutionary purposes; also of an American association formed in Pennsylvania about 1854 against mine-owners and their agents. The members of these bands wore women's clothes.
- Molybdenum**, a fairly hard white metal with properties resembling those of chromium. Its commonest ore is the sulphide, molybdenite. The chief use of the metal is in the manufacture of alloy steels; high-speeding cutting steels can contain about 10 per cent. of molybdenum.
- Monazite**, a cerium mineral containing some thorium. Occurs as grains, often as sand ("monazite sands"). Deposits occur in India (Travancore), Russia, Norway, Madagascar, S. Africa, Brazil, U.S.A.
- Mongols**, a yellow race of Central Asia, largely nomadic. In the 13th century, they conquered large portions of Asia, including China, Persia, and India. They founded the Mogul

dynasty in India in 1525, and ruled up to the end of the 18th century, when their empire came under British control.

**Mongoose**, species of mammals related to the civets, feeding on vermin and reptiles. These animals, which have long tails and short legs, occur in Africa and Asia (especially India). The biggest mongoose is the Egyptian ichneumon, and tiffs has been introduced into the W. Indies because of its ability to kill large poisonous snakes.

**Monitor**, a family of lizards noted for their great size. There are about 30 species widely distributed over the tropical parts of Asia, Australia, and Africa. The monitor, which lives on Komodo and other E. Indian islands, is 7 ft. long and known as the "Komodo Dragon."

**Monmouth's Rebellion** was headed by James, Duke of Monmouth, a natural son of Charles II. (1649-1685). He was sent to Scotland to quell the Covenanters in 1675, and succeeded in winning the Battle of Bothwell Bridge 1679; but was banished for aspiring to the throne to the exclusion of the Duke of York, afterwards James II. In 1685 he landed at Lyme Regis, and assumed the title of king, but was defeated at Sedgemoor, and executed on Tower Hill. Judge Jeffreys stamped out the remnant of the rebellion in the "Bloody Assize."

**Monocotyledons**. One of the two sub-classes into which the Flowering Plants (or Angiosperms) are divided. Distinguishing features are: the veins of the leaves run parallel to each other, and the parts of the flower are arranged in multiples of three. Most monocotyledons are herbs; many are cultivated for their beautiful flowers, e.g., lilies, tulip, daffodil, iris, orchids, and cannas. A few are tree-like, e.g., bananas, pineapples, bamboo, and palms. (See p. 167.)

**Monolith**, a column or shaft comprising a single stone. "Cleopatra's Needle," now on the Thames Embankment in London, is an example.

**Monotheism**, the doctrine that there exists but one God. The chief monotheistic religion is Christianity.

**Monotremata**, the name of the order of mammalia comprising the most primitive mammals, which lay eggs. There are only two genera in this order: the Duck-billed Platypus (*Ornithorhynchus*), the Spiny Ant-Eaters or Echidnas.

**Monroe Doctrine**, a principle of American policy declining any European intervention in political affairs of the American continent, outlined by President Monroe in 1823. At the same time interference was disclaimed with existing European colonies in the Western Hemisphere. The American Civil War hampered the application of the doctrine for some time, but afterwards the United States firmly insisted on it. The Doctrine is not international law, but a national policy of the U.S.A.

**Monsoons**, regular persistent winds which blow at certain seasons in middle latitudes, mainly in South and East Asia. Their occurrence is related to the great changes of pressure which take place between summer and winter over the land mass. In India the south-west monsoon (June-Oct.) is moisture-laden from its long passage over the sea and in the higher regions, especially, there is heavy rainfall. Sudden reversal of the wind results in the cold north-east monsoon (Oct.-Mar.) which is dry on account of the shelter afforded by the mountain ranges to the north. Frequently the term "monsoon" is applied to denote the associated rainfall without reference to the actual winds.

**Monstrance**, an ornamental transparent receptacle in which the Sacred Host is carried in procession or exposed for adoration.

**Montessori System** of education was worked out by Dr. Maria Montessori (1869-1952) in the early 20th century. She first experimented on defective children (aged 3-8) in the slum districts of Rome. Her results were so amazing that she began work on normal children. The *Casadei Bambini* (rooms set apart for children in the court-yards of a tenement block) became world famous. Her system is based on free discipline and free movement and not on the annihilation of a child's individuality and its immobility on a bench in a classroom. Dr. Montessori invented apparatus for her pupils which stimulates interest and creates attention. Children in her

schools can learn to read, write, count, and do simple arithmetic before the age of 6. Her method has revolutionised infant education, and it is being used in many countries.

**Month**, the 12th part of the calendar year. A lunar month is the interval of new moon to new moon or full moon to full moon; mean length, 29 days, 12 hours, 44 minutes, 2.87 seconds. A sidereal month represents the time of the moon's revolution from a given star back to the same again, 27 days, 7 hours, 43 minutes, 11.5 seconds. Unless otherwise expressed, a month, in English law, is a lunar month of 28 days.

**Monts-de-Piet **, Government institutions for advancing money for goods left in pledge, were first established in France in 1462. Similar institutions in France in 1777 were suppressed by the Revolution, but restored by Napoleon, and have since been expressly regulated by law.

**Monument of London**, erected in 1671-77 by Wren in commemoration of the Great Fire, is 200 ft. high and cost £14,500. The original inscription upon it ascribed the fire to "the treachery and malice of the popish faction," which stood down to 1831, when the words were erased as objectionable. The black marble staircase consists of 345 steps.

**Moon**, the earth's satellite, is distant from us 238,857 miles. It is a globe of 2,160 miles in diameter and the period from one full moon to another is 29 days, 12 hours, and 44.04 minutes.

**Moorhen**, a bird of the crane family, familiar on the borders of British ponds, rivers, and lakes. Dark-grey plumage, with olive-brown wings edged with white; yellow-tipped red bill.

**Moors**, the name given to the Moslems who live in N.W. Africa and to those who once lived in Spain. In 711 Moorish Arabs invaded Spain and spread beyond the Pyrenees into France, where they were driven back by the end of the century. Spain, however, remained virtually under Moorish domination until the 11th century, and during that period was the most civilised and prosperous part of Western Europe. In the arts and sciences the impact of Moorish culture was profound and lasting. Examples of the brilliant splendour of Moorish architecture are still to be seen in Toledo, Cordoba, Seville, and Granada. During the long struggle for the Christian reconquest thousands were killed and expelled, and in 1492 Granada, their last remaining kingdom, was forced to surrender. They were virtually exterminated by the Inquisition, and the last were expelled in 1609.

**Moose**, the largest members of the deer family. The N. American Moose stands 5½-6½ ft. high, and has huge palmate antlers. There is another New World species, occurring in Alaska. The European species is known as the elk.

**Morganatic Marriage**, a form of marriage, formerly peculiar to Germany but also found in the royal families of other countries, where the contracting parties are of unequal rank. In such marriages the left hand is given instead of the right, and it is stipulated that the children of the marriage are not to enjoy the rank or inherit the possessions of the parent, though such children are legitimate. Morganatic marriage is unknown in English law.

**Morgue**, a repository for dead bodies awaiting identification, the best-known morgue being that of Paris, which was formerly open to the general public.

**Mormons, or Latter-Day Saints**, a religious sect founded in 1830 under the title of the Church of Jesus Christ of Latter-Day Saints by Joseph Smith. The *Book of Mormon*, which with the Bible, the Doctrine and Covenants, and the Pearl of Great Price constitute the standard works of the Church, is alleged to be an inspired translation of sacred records of ancient American history. The Church encountered opposition and persecution, and finally established itself in Salt Lake City in Utah, where it has grown and prospered. Polygamy, introduced by Brigham Young, who succeeded Smith in 1847, was repudiated by the Mormon community in 1890. Utah was recognised as a State of the Union in 1896.

**Morpunkiee**, an Indian pleasure-boat, long and narrow, of considerable capacity, with a high peacock-shape decoration at the stern.

**Morris Dance**, an old English country dance of the reel order.

**Morse Alphabet**, a system of dots and dashes, intended to be used in combination with the indicator in telegraphy; but usually read by sound, the receiving operator writing down the words in the system as transmitted. This system of signals was invented by the American inventor and artist Samuel Finley Breese Morse (1791-1872) of Charlestown, Massachusetts.

**Mortars** are short guns with a large bore and close chamber for throwing bombs. They are said to have been first used in the 15th century at Naples, but were not introduced into England until a century later. The mortars made at the present time are so powerful they can throw shells of nearly 2,000 lb. weight a distance of over five miles.

**Mosaic**, a joining together of small pieces of coloured glass, marble, or other materials in designs to imitate painting. The ancient Greeks and Romans were skilled in this art; it was revived in Italy in the Middle Ages with considerable success, many eminent painters designing subjects for mosaic. It still flourishes, and notable examples occur in some of the principal modern buildings.

**Moscow, the Retreat from**, was one of the most disastrous events in the career of Napoleon I. He entered Moscow on Sept. 14th, 1812, and the next day the Russians set fire to the city, practically burning it down. The French were forced to evacuate, and in the retreat to France Napoleon lost the greater part of his army.

**Moslems**, the European term for Mohammedans. **Mosque**, a Mohammedan church, the greatest being that of St. Sophia at Istanbul, now converted into a museum of Byzantine art.

**Mosquito**, small two-winged flies with long legs and slender body. Their larvae are aquatic. The females of some species are blood-suckers, and thus come to transmit the blood parasites which cause malaria and yellow fever, for example.

**Mosses**. Most mosses live in moist habitats, but there are some species that can withstand desiccation and are adapted to live on rocks and tree-trunks.

**Moss-agate**, a kind of agate characterised by minute grains of oxide of iron or chlorite, forming a moss-like pattern which is very ornamental.

**Moss-troopers** were bands of Scottish marauders who used the mossy regions of the Scotch and English borders as hiding-places, and thence made frequent plundering expeditions, keeping that part of the country in constant unrest. They were put down in the 18th century.

**Motet**, an unaccompanied anthem of the Catholic and Lutheran Churches. Many fine motets which were settings of sacred writings or paraphrases and which were written mostly in the 15th century still survive.

**Moth**. Together with the butterflies, the moths make up the insect order *Lepidoptera*, in which the wings are scaly. In most moths the antennæ taper to a point, and are not clubbed as in butterflies. The majority are nocturnal, and pupate in a cocoon, whereas the pupa of butterflies is naked and usually bright-coloured.

**Motion, Laws of**. According to Newton: (1) A body continues in its state of rest or uniform motion in a straight line except in so far as it is compelled by external forces to change that state. (2) Rate of change of momentum is proportional to the applied force, and takes place in the direction in which the force acts. (3) To every action there is an equal and opposite reaction.

**Movement**, one of the contrasting pieces which together make up a Sonata, Symphony, or Concerto. A typical sonata has three movements, while a typical symphony has four.

**Mule**, a hybrid between horse and ass. Also the name of the spinning machine invented by Crompton in 1779, and so called from its combining the principle of Hargreaves' spinning jenny with the machine invented by Arkwright.

**Mullet**, species of fishes belonging to several different families, and including the red, grey, and striped mullets.

**Mullions** are projecting windows with vertical divisions—forming a highly decorative feature

in Gothic architecture. The horizontal stones forming the crossing divisions between the lights of this class of window of the Elizabethan or Tudor period of Gothic are styled transoms.

**Mummies** are embalmed bodies, found mostly in Egypt, supposed to be those of distinguished people who lived thousands of years ago. Mummies have also been found in Peru, Mexico, and Persia. The embalming process which has enabled the bodies to be preserved can only be conjectured, though it is known that various aromatic substances were used after the viscera and other vital organs had been removed, the cavities being filled with absorbent dust, chip-pings, and cedar wood. A splendidly preserved and magnificently decorated mummy of the Pharaoh Tutankhamen (1350 B.C.) was found and minutely described in 1925.

**Munich Agreement**. In Sept., 1938, Mr. Neville Chamberlain and M. Daladier, British and French Premiers, reached agreement with Hitler at Munich for the dismemberment of Czechoslovakia, primarily for the benefit of Germany. Czechoslovakia itself was not consulted, nor Russia which with Britain and France had jointly pledged themselves to uphold the independence of Czechoslovakia. Hitler had been threatening that country for some time, but every concession had been met by further demands. After three visits to Germany, during which Hitler raised his demands, the British and French statesmen gave way. Mr. Chamberlain declared on return that he had secured "Peace in our Time." The Agreement was the subject of much controversy. Hitler seized Czechoslovakia in Mar., 1939.

**Murder** is the unlawful killing of a human being, "with malice aforethought." In England it is punishable with death. During the passage of the Criminal Justice Bill through Parliament in Apr., 1948, the Commons voted for a suspension of the death penalty for an experimental period of five years. This was rejected by the Lords and the clause was finally dropped. Constitutional responsibility to recommend reprieve rests with the Home Secretary.

**Musk Deer**, a small deer of the Himalayas, standing about 20 in. high. It is grey in colour, slightly brindled, and carries a small pouch in the abdominal region, containing what is commercially known as musk, an article which is of great value in the manufacture of various perfumes.

**Musk Ox**, an animal with characteristics of both sheep and ox, and having a musk odour. It is a native of Northern Canada.

**Muslin**, a fine cotton fabric first made at Mosul, in Mesopotamia, and introduced into England from India about the middle of the 17th century.

**Mussel**, a well-known bivalve mollusc found in great abundance on the rocks of the sea-shores. The freshwater mussels of streams and ponds do not belong to the same genus.

**Mute**, an old legal term signifying that a prisoner on being asked to plead remains mute, that is, makes no answer to the charge, or some answer that is irrelevant. Originally standing mute was equivalent to conviction. In modern times if a prisoner stands mute, a plea of "Not Guilty" is entered. Also a term in music for a pad or specially shaped metal device placed in the bell of a trumpet or horn to soften and modify the tone.

**Mutiny Act**, which provides for the discipline, regulation, and payment of the Army, was passed in 1689, and was re-enacted practically every year until 1878. Its provisions were embodied in the Army Discipline and Regulation Act of 1879.

**Myriapoda**, the class of invertebrate animals including centipedes, millipedes, and many others. They are widely distributed, but the largest species are found in the tropics.

**Myrrh**, a resinous substance obtained from a tree of the natural order *Amyridaceae*, growing plentifully in Abyssinia and Arabia. Its use for embalming, medical, and aromatic purposes may be traced back to the most remote times.

**Mysteries**, Greek, secret mystic ceremonies of the ancient Greeks, religious drama accompanied by dancing, the most well known being the Eleusinian and Orphic ceremonies.

**Mystery Plays** were the mediæval religious dramas performed by the priests at great ecclesiastical festivals, particularly in France and Bavaria, staging the Nativity, Passion, and Resurrection.

**Mythology**, the name given to any collection of traditions and fables concerning gods and goddesses.

**Myxomatosis** is a virus disease that affects only the rabbit family. It was first reported in 1895 from Montevideo, Uruguay, where a stock of laboratory rabbits—a domestic form of the wild European rabbit (*Oryctolagus cuniculus*)—was almost wiped out by it. It is now known that myxomatosis exists as a mild or sub-clinical infection in the native wild rabbits or tapetis (*Sylvilagus brasiliensis*) of Brazil and possibly other parts of South America. In the European rabbit myxomatosis causes almost 100 per cent. mortality, the symptoms including intense swelling and inflammation of the eyelids, which spreads towards the forehead and ears, and may also affect the genital region. Although the appearance is distressing, it is by no means certain that suffering is severe. Many attempts have been made to introduce myxomatosis as a means of controlling rabbit numbers, but these were unsuccessful until January, 1951, when it was reported that the infection was spreading rapidly in parts of Australia. In 1952 it was introduced into France, and caused a marked reduction in the rabbit population. In the autumn of 1953 it reached Great Britain. At the time of writing the final effect cannot be estimated, but it seems likely that the total wild-rabbit population will be reduced, at least temporarily. Domestic rabbits can be given a fair degree of protection through the use of a vaccine which is available at a low cost through veterinary surgeons and pharmacists.

## N

**Naafi**, the name by which the Navy, Army and Air Force Institutes is known to the Services, is the official Canteen Organisation for H.M. Forces at home and overseas and in H.M. Ships. Naafi provides many of the items required for the messing of H.M. Forces at home, and conducts permanent Clubs, some of which are residential in traditional Service centres. It exists for the exclusive benefit of the Serving man and woman, and distributes its profits to the three Services. Its motto is *Servitor Servientium* (the servant of those who serve).

**Nadir**, one of the two poles of the horizon, the other being the zenith. The nadir is the pole vertically below the observer's feet.

**Nagana**, a trypanosome disease of animals which occurs in Africa. It is transmitted by the tsetse fly.

**Nahum Festival**, in commemoration of Nahum, the 7th of the 12 minor Hebrew prophets. It is held on Dec. 24th. Nahum flourished about 713 B.C., during the reign of Hezekiah, and wrote his prophecies a short time after Sennacherib's invasion.

**Naiad**, a water-nymph of classic mythology, beautiful and mystic; celebrated by Virgil, Ovid, Homer, and other ancient writers.

**Nantes, Edict of**, was a decree promulgated by Henry IV. of France in 1598, giving full freedom of worship to the Protestants of the country. It was the revocation of this edict in 1685 by Louis XIV. that drove hundreds of thousands of French Huguenots to this country.

**Naphtha**, a liquid combustible believed to have been one of the ingredients of "Greek fire." Naphtha is a light, highly inflammable oil obtained by distilling petroleum, shale oil, or coal tar. The petroleum naphtha consists of a mixture of paraffins; that from shale contains olefines as well as paraffins. Coal-tar naphtha contains xylol.

**Naphthalene** is procured from coal tar, and its derivatives are much used in the manufacture of colours for dyers and printers. "Moth balls" are made of naphthalene.

**Nardus**, a genus of coarse grasses, growing on bleak upland heaths and hill slopes. *Nardus stricta*, known as "mat-weed," is a British species.

**Narghile**, an oriental tobacco pipe so constructed that the smoke passes through water and up

a long flexible tube before reaching the lips of the smoker.

**Naseby, Battle of**, was fought on June 14th, 1645, between the Royalists under the command of Prince Rupert and the King, and the Parliamentarians under Fairfax and Cromwell. It resulted in a complete defeat for Charles.

**National Anthem**, a musical composition with words, officially adopted for ceremonial use as an expression of patriotism and loyalty to a national cause. The national anthem of the United Kingdom is "God Save the Queen" which has been in use since about the middle of the 18th century. There is some doubt about its origin. It has been variously attributed to Dr. John Bull, Henry Carey, and James Oswald.

**National Assembly**, the name taken by the body responsible for the opening stages of the French Revolution and subsequently by other Sovereign bodies in France and elsewhere.

**National Covenant**, an oath and declaration subscribed to by the Scottish Presbyterians in 1638 to maintain their religion against Charles I.'s Episcopalianising designs.

**National Debt**. (See "Business Dictionary.")

**National Gallery**, established in 1834 at Pall Mall, London, with the Angerstein Collection of 38 pictures, purchased for £57,000 as a nucleus. The existing building was opened in 1838. It has been enlarged several times and was added to and repaired in 1930. The National Gallery at Millbank, known as the Tate Gallery, was given to the nation by Sir Henry Tate in 1897. About £35,000 is spent annually on their upkeep.

**National Guard of France**, a body of citizen soldiers first instituted on the day before the destruction of the Bastille in 1789, and ceased under the Consulate and Empire. It was revived in 1830, but was disbanded after fighting in the Franco-Prussian War.

**National Parks**. Under the National Parks Act 1949 a National Parks Commission was set up to create National Parks in England and Wales. Twelve areas had been recommended in the Hobbhouse Report, and of these several have already been designated. The areas named in the Report were the Lake District, Snowdonia, the Peak District, Dartmoor, the N. Yorkshire Moors, the Pembrokeshire Coast, Exmoor, the Yorkshire Dales, the South Downs, the Roman Wall, the Broads, and the Brecon Beacons and Black Mountains. It is not intended to change the character of these territories but to control their development so as to harmonise with the two dominant principles: (a) that the characteristic beauty of the landscape within the Park area shall be preserved and (b) that the visiting public shall have ample access and facilities for recreation and enjoyment. (See also Long Distance Routes.)

**National Physical Laboratory**, situated at Teddington, is one of the world's largest and best-equipped laboratories. It was first established in 1900, and functions as a central bureau of physical standards and as a research laboratory of industrial physics. In 1918 it became part of the Department of Scientific and Industrial Research and has ten Divisions; Aerodynamics, Electricity, Engineering, Light, Mathematics, Metallurgy, Metrology, Physics, Radio and Ship.

**National Portrait Gallery**, established in 1856, and now located in a building in St. Martin's Lane adjoining the National Gallery. Contains portraits of eminent people in history, literature, art, etc., and a valuable collection of medals and autographs.

**National Service**. (See "A Citizen's Guide.")

**National Trust**, founded in 1895. "A non-profit-making organisation incorporated by Act of Parliament for the purposes of promoting the permanent preservation of lands and buildings of historic interest or natural beauty for the benefit and access of the people." As a consequence of gifts of public-spirited individuals the Trust now owns many acres of magnificent scenery and property, including mediæval castles, bird sanctuaries, ancient monuments, birthplaces and homes of famous men, and classic examples of domestic architecture, preserved for the enjoyment of present and future generations. Since 1946 lands and houses of

interest to the nation may be given to the National Trust in lieu of death duties. (See also pp. 707-8.)

**Nativity.** There are three Nativity-Festivals in the Christian Churches, the Nativity of Christ on Dec. 25th, the Virgin Mary on Sept. 8th, and John the Baptist on June 24th.

**Natterjack**, a curious warty, prominent-eyed, brown toad (*Bufo calamita*), having a bright yellow line down the middle of its back. It utters a muttering sort of croak, hence its name.

**Naturalisation.** (See "Business Dictionary.")

**Nautch Girl**, a native East Indian dancing girl of the professional class.

**"Nautical Almanac,"** published under the authority of the Admiralty, is always issued four years in advance, and contains information specially prepared for the use of navigators and astronomers. It first appeared in 1767.

**Nautilus**, a term now applied only to the pearly-shelled nautilus, the sole surviving example of the four-gilled section of the *Cephalopoda*. Its fossil relatives are called Ammonites. The spiral shell is divided into a number of compartments, the animal living in the last and largest chamber. There are three or four species, all living in tropical seas. The Paper Nautilus is not related to the Pearly Nautilus, belonging to the same order as the octopus.

**Nave** is the body or main open portion of a cathedral or church, and extends from the chief entrance to the choir, or chancel, and is usually flanked by aisles. A nave, in mechanics, indicates the "hub" or central part of a wheel.

**Navigation Laws**, for the protection and encouragement of native shipping, have been passed frequently in England. The first English navigation law of any note was enacted in the reign of Richard II., its leading provision being that merchandise should not be imported into or exported from England except in English ships. This law fell into desuetude, and in 1651 fresh Navigation Acts were passed in favour of English ships, the carrying trade having fallen into the hands of the Dutch. The old Navigation Laws, however, were totally repealed in 1849.

**Navy, The Royal.** On the outbreak of the second world war there were in the Royal Navy 161,000 personnel and slightly more than 700 ships of all types. Steady expansion during the war increased these figures, until, on Aug. 31st, 1945, there were a total of 839,000 personnel (including 65,000 W.R.N.S.); and, 2,965 ships, including 1,155 motor launches, motor torpedo boats, and minesweepers, but excluding minor landing craft. The war losses of the Royal Navy were 51,018 killed and missing, 14,678 wounded, and 730 ships of all types sunk. Two chief developments in naval warfare during the second world war were the extensive use of carrier-borne aircraft, and the perfection of combined operations and invasion technique. The invention of Radar greatly simplified the use of naval aircraft both offensively as well as defensively, and by the end of the war carrier-borne aircraft were able to attack and conquer the metropolitan air force of Japan. The development of combined operations led to the construction of special landing craft, floating harbours, and new assault weapons, culminating in the invasion of Europe, where over 4,000 vessels were used. Principal naval actions in the second world war were: Battle of the River Plate (engagement of German battleship *Admiral Graf Spee* by H.M. cruisers *Exeter*, *Ajax*, and *Achilles*)—13.12.39; First Battle of Narvik—10.4.40; Second Battle of Narvik—13.4.40; French naval squadron at Oran immobilised—3.7.40; H.M.S. *Jervis Bay* lost defending Atlantic convoy from German battleship *Admiral Scheer*—5.11.40; Italian Fleet at Taranto crippled by Fleet Air Arm—11.11.40; Raid on Lofoten Islands—4.3.41; Battle of Cape Matapan—28.3.41; Sinking of German Battleship *Bismarck* and loss of H.M.S. *Hood*—24-27.5.41; Japanese attack on Pearl Harbour—7.12.41; loss of H.M.S. *Prince of Wales* and *Repulse*—10.12.41; Escape through English Channel of German ships *Scharnhorst*, *Gneisenau*, and *Prinz Eugen*—12.2.42; Battle of Java Seas—27.2.42; Battle of Coral Sea—4-8.5.42; Invasion of Madagascar—7.5.42;

Battle of Midway Island—3-7.6.42; Malta convoy action (loss of H.M.S. *Eagle*, *Manchester*, *Cairo*, and one destroyer)—11.8.42; Raid on Dieppe—19.8.42; Battle of Solomons—23-25.8.42; invasion of North Africa—8.11.42; Battle of Bismarck Sea—1-3.3.43; invasion of Sicily—10.7.43; invasion of Italy—3.9.43; landings at Salerno—8.9.43; Second Battle of Solomons—26.11.43; Sinking of German battleship *Scharnhorst*—26.12.43; landings at Anzio—23.1.44; Invasion of Europe (over 4,000 ships in invasion fleet)—6.6.44; Guam captured—21.7.44; First Battle of Philippines—22.9.44; Second Battle of Philippines—28.10.44; invasion of Luzon—11.1.45; invasion of Okinawa—1.4.45; naval air attacks on Japan—28.5.45 and from 10.7.45-9.8.45; Atomic bomb dropped on Hiroshima—5.8.45; Atomic bomb dropped on Nagasaki—9.8.45.

**Nebulae**, luminous celestial masses of gaseous matter enveloping star-like bodies. Some nebulae lie within the Galactic system; the extra-galactic nebulae (e.g., the Great Nebula in Andromeda) are probably universes similar to the Galactic universe of which the solar system is a part. (See p. 154.)

**Necromancy**, "the black art," was in olden times much believed in, and supposed to be an occult power by which its practitioners could converse with the spirits of the dead and learn the future.

**Needles**, according to Stow, were first made in England in the reign of Elizabeth, and in Mary's time "there was a negro made fine Spanish needles in Cheapside, but would never teach his art to any." In modern times the manufacture of this useful article has been vastly improved, and immense numbers are made at Redditch, Birmingham, and West Bromwich.

**Negroes** are the dark-skinned, woolly-headed races, natives of tropical Africa, or descendants of such natives. There are many different racial types, but the most typical Negroes are found in W. Africa—the Ashanti of the Gold Coast, and the Yoruba of Nigeria. There are the Pygmies living in the forests north and south of the equator, the Bushmen of the Kalahari Desert, the Hottentots of South Africa, who however have largely lost their identity, the Bantu peoples, and many others. Their culture is rich in folk-lore, and they have a great gift for music and dancing. About 25 million people of Negro descent are in N. and S. America, the European slave trade having taken them there from their homes in W. Africa.

**Negus**, the name given to any mixture of wine and water, and said to have been named after Colonel Francis Negus about 1714. The sovereign of Abyssinia is styled the Negus.

**Nekton**, term used to differentiate actively swimming aquatic organisms (e.g., fishes) from the "drifters" or plankton.

**Nelson Column**, in Trafalgar Square, London, designed by Mr. William Railton, was chosen from among a number of designs—temples, obelisks and various sculptural groups—sent in as a result of a competition held in 1839. The erection of the column was begun in 1840. Twenty-six years later the lions designed by Landseer were set up at the foot of the completed column. The statue of Nelson himself was made by E. H. Bailey and the bronze reliefs at the base executed by Carew, Woodington, Ternouth, and Watson, representing the Battles of the Nile, St. Vincent, Copenhagen, and Trafalgar. Height 170 ft., executed in Portland stone instead of granite, as originally planned, at a cost of £46,000.

**Nematodes**, the roundworms or threadworms. Some parasitise man and domestic animals.

**Nemean Games** were instituted at Nemea in honour of Archemorus, and revived in 1226 B.C. They were celebrated every third year, and were finally given up in A.D. 396. The conqueror in contests of strength and agility was rewarded first with a crown of olives, and later with wreathed chaplets of parsley leaves.

**Neodymium**, an element belonging to the rare-earth metal group. Discovered by Welsbach in 1885.

**Neogene**, a geological term referring to the later Tertiary formation in contradistinction to the older strata (Palaeogene). The Neogene comprises the Pliocene and Miocene.

**Neon**, inert gas present in air to the extent of about 1 part in 65,000. The crimson glow produced when an electric discharge passes through the gas is familiar in advertising signs.

**Neoplatonism**, a philosophical system current from c. A.D. 190 until 529, and considerably developed in succeeding centuries by Plotinus, Proclus, Hypatia, and others, the first-named being its most famous exponent. In its later phases was largely influenced by Christianity. The Neoplatonists contended that by concentrating the mind exclusively on higher speculations it was possible to achieve a condition of ecstasy in which the Infinite would be revealed.

**Neoprene**, generic name for a class of synthetic rubbers derived from butadiene.

**Nepotism**, is the bestowal of patronage by reason of relationship rather than of merit. It had its origin in the custom of certain Popes to enrich their families out of the offices of the Church.

**Neptune**. Apart from Pluto this is the most distant of the planets, estimated to be about 2,793 millions of miles from the sun, and taking about 165 years to make a revolution round that luminary. Discovered by the German astronomer Galle on Sept. 23rd, 1846, after its existence had been predicted by Leverrier and Adams.

**Neptunium**, element 93, one of the four new elements discovered during the progress of the atomic bomb project in the second world war. Neptunium is formed when a neutron enters a nucleus of Uranium 238, and it decays radioactively to yield plutonium.

**Nests** are, strictly, habitations formed by birds for the reception of their eggs and the hatching and rearing of their young. They are of the most varied character, some being mere resting-places on the ground, while others display a remarkable skill in construction. Thus, the bower-bird and other species show very distinctive peculiarities. The most usual materials for bird-nest building are leaves, twigs, moss, wool, feathers, mud, clay, etc. Some birds burrow in sand-hills. Certain mammals and fishes also build nest-like structures for breeding in.

**Neuroptera**, an order of insects which includes lacewings, alder-flies, ant-lion flies, etc.

**Neutrino**, a particle which is supposed to enter into the constitution of atomic nuclei. This hypothetical particle is considered to have a mass equal to that of an electron, but as its name suggests it carries no electric charge.

**Neutron**, a particle with no electric charge, present in the nuclei of all atoms except hydrogen—the hydrogen nucleus consists of only one particle, a proton. The neutron weighs the same as a proton. (See "Atomic Nuclei," p. 161.)

**New Deal**. The measures taken by President Roosevelt in U.S.A. in 1933 to overcome the great economic crisis which broke out at the end of 1929 and to restore the social security threatened by it. The measures were drawn up by a group of experts called a Brains Trust and they provided for recovery by a programme of public works, including large-scale construction of houses and large-scale assistance to farmers. Loans were granted and authorities formed to stimulate activities which reduced the workless from 17 millions to between 7-10 millions. Unemployment relief was regulated and enlarged; and social insurance (which for decades had been a subject of dispute, being held to be contrary to American principles of self help) was introduced. The President claimed at the beginning of 1939 that the New Deal programme had been successful. The outbreak of the war prevented this being tested. But many of its changes will become a permanent part of American legislation. Certain parts were repealed by the U.S. Supreme Court as being unconstitutional.

**Newgate Prison**, now pulled down and replaced by the Central Criminal Court, opened in 1907, was situated near the point where once stood one of the old London city gates. There is a record of a prison upon this spot in the 13th century. Later a new one was built by the executors of Richard Whittington, but this was destroyed by the Great Fire in 1666. Still another new prison on this site was erected between 1778 and 1780. In the Gordon Riots of the latter

year it was destroyed by fire and re-erected. It was not used as a prison after 1880.

**News Letters** were an early form of newspaper, popular in the time of Charles II. They consisted of items of news and gossip collected at the various coffee-houses and other places of public resort. They often included blank pages on which readers wrote their private letters.

**Newspapers**. The first news-books to be published at regular intervals in Britain appeared in 1662 with news of what was going on abroad translated from German and Italian news-sheets. Licence to print was obtained from the Star Chamber, which until its abolition in 1641 allowed only the printing of foreign news. With the lifting of the ban on domestic news the Press became free. In the reign of Queen Anne English newspapers employed writers of great intellectual power and versatility. Despite the newspaper tax introduced in 1712, the number of newspapers published in London in 1776 had increased to 53, though the standard of writing was below that of earlier times. The development of the Press was greatly assisted in the 19th century by the abolition of the "taxes on knowledge," by the introduction of the cheap postal system, and by improvements in printing, distribution, collection of news, and advertising. The *London Gazette*, founded in 1665 and still appearing twice weekly as the official organ of the Government, is the oldest newspaper living. The *Times*, known throughout the world, began as the *London Universal Register* in 1785, and adopted its present title in 1788. The *Manchester Guardian*, once a provincial but now a national newspaper with a world-wide reputation, began as a weekly in 1821, and became a daily in 1855. The *Scotsman*, founded as a weekly in 1817 and established as a daily in 1855, and the *Glasgow Herald*, which began as the *Glasgow Advertiser* in 1783, are the leading Scottish newspapers. The *London Press*, which is national, publishes 10 daily morning, 3 evening, and 9 Sunday newspapers.

**Newt**, amphibians of lizard shape and mottled markings. There are three British species, the largest being the Great Crested Newt (*Triton cristatus*), which attains a length of 6 in.

**Newton's Rings**. Concentric circular rings, due to the phenomenon of interference, which are seen around the point of contact of a slightly convex lens on a flat plate of glass.

**New Year's Day**, Jan. 1st. The first New Year's festival of which we have record is that constituted by Numa 713 B.C., and dedicated to Janus.

**Nibelungenlied**, the German epic of the 12th century comprising numerous mythical poems or sagas of which several English translations exist. These poems have been utilised with great effect as foundations for Wagner's famous series of operas comprised under the general title *Ring des Nibelungen*.

**Nicene Creed**, a summary of the principles of Christian faith, was first issued in 325 after being drawn up by the Council of Nicea, and was meant to thwart the Arians and assert the god-head of Christ.

**Niche**, a recess or nook constructed for a statue or other special ornament. Such niches are numerous in the older ecclesiastical buildings, and usually contain the figures of saints or historic personages.

**Nickel**, silver-coloured metal, fairly soft though harder than iron. Chief source of the metal is the nickel sulphide in iron-copper pyrites deposits in Ontario. Chief uses are: in electroplating, in coins, as an element in alloy steels.

**Nicol Prism**, a device for producing plane-polarised light. It consists of two pieces of Iceland spar cut and cemented together in a special way.

**Nicolo**, a large brass reed instrument, common in the 17th century, but now superseded by the bassoon.

**Nicotine**, an alkaloid substance contained in the tobacco plant. It is a clear, colourless oil and highly poisonous, paralysing the nerves. In the act of smoking tobacco, however, only an infinitesimal quantity is absorbed in the smoke.

**Niello Work** was in considerable vogue in the Middle Ages, and is said to have suggested the idea of engraving upon copper. It was pro-

duced by rubbing a mixture of silver, lead, copper, sulphur, and borax into engravings on silver, and some highly decorative results were obtained. The process is still largely practised in Russia.

**Night-heron**, a stocky, short-legged heron of black and white plumage, red eyes, and yellowish legs, crepuscular except in breeding season, and an occasional visitor to Britain.

**Nightingale**, a familiar singing bird which visits the southern counties of England every summer, and is sometimes found as far north as Yorkshire. It is a shy bird, not often seen, but the song of the male, usually heard in the late evening or at early morn, is of remarkable sweetness and variety. After its wooing period is over its song ceases.

**Night-jar**, nocturnal insectivorous bird, owl-like in appearance, with mottled brown plumage of "dead leaf" pattern. (See *Goatsucker*.)

**Nihilism**, the name commonly given to the earliest Russian form of revolutionary anarchism. It originated in the early years of the reign of Alexander II. The term was first used by Turgenev in his novel *Fathers and Children* published in 1862.

**Nile**, Battle of the, fought in 798 between the English and French fleets in Aboukir Bay. Nelson annihilated Napoleon's fleet and the latter and his army were stranded in Egypt.

**Nilgau**, or *Nylgau*, an Indian antelope of a blue-grey colour and slightly humped.

**Nimbus**, a circlet of light depicted round the heads of saints or divine personages in ancient art; also name of dense dark "rainy" cloud.

**Nirvana**, in Buddhism, is the condition of supreme attainment, and involves the extinction of every form of desire, ambition, or unrest. It is the holy state. (See *Buddhism*.)

**Nitre** or *Saltpetre*, is now mostly manufactured by the double decomposition of sodium nitrate and potassium chloride. Its chief use is the manufacture of gunpowder and fireworks. It has been manufactured in England since 1625.

**Nitric Acid** or *Aqua fortis*, is a compound of nitrogen, hydrogen, and oxygen, and was first separated by Geber about A.D. 778. It is a ready solvent of many metals.

**Nitriding**, a technique for hardening the surface of steels by heating them in an atmosphere of ammonia. Nitrided steel has improved resistance to corrosion.

**Nitrogen**, a non-combustible gas devoid of taste or smell, and constituting nearly four-fifths of the atmospheric air.

**Nitro-Glycerine**, an explosive yellow fluid produced by mixing small quantities of glycerine with a combination of one part of nitric acid and two parts of sulphuric acid. By itself it is a dangerously explosive substance to handle. In 1867 Nobel produced dynamite, a safe explosive made by absorbing nitro-glycerine in kieselguhr.

**Nitrous Oxide**, a compound of nitrogen and oxygen possessing mild anæsthetic power. It was the first of the inhalation anæsthetics to be used.

**Nobel Prizes**, see pp. 705-6.

**Noble**, an old English gold coin current in the 14th century, and of the value of 6s. 8d.

**Nocturne**, a short piece of music, romantic in character, generally for the pianoforte. The nocturne was invented by John Field, from whom Chopin borrowed the idea. After this the nocturne became popular all over Europe, being known in Italy as "notturmo" and in Germany as "nacht-musik."

**Nominalists**, a sect founded by Jean Roscellinus, Canon of Compiègne, in the 11th century, who maintained the doctrine that general ideas only exist by the names we give them, in opposition to the "Realists," who contended that general ideas are real things with positive existence.

**Nonconformists** or *Dissenters*, are all such religionists as do not conform to the doctrine of the Church of England. Up to the passing of the Act of Uniformity in 1662 they were called "Puritans." At various times the Nonconformists have been rigorously persecuted, but in later times the utmost toleration has been granted to them. The oldest bodies of Nonconformists are the Presbyterians, Baptists, and Independents. The Methodists date from 1739. (See also *Baptists and Methodists*.)

**Nones** were dates of the Roman calendar which fell on the 5th of each month, excepting Mar., May, July, and Oct., when they fell on the 7th.

**Nonet**, a musical composition for nine voices or instruments.

**Nonjurors** were High Church bishops who refused to swear allegiance to William III. in 1689, contending that James II. had been unjustly deposed.

**Non Nobis, Domine!** ("Not unto us, O Lord!"), a musical canon, sung as a grace at public feasts, an old setting (by Birdie, 1618) of part of Psalm cxv.

**Northmen** were the early inhabitants of Scandinavia, famous as sea adventurers and pirates. Their attacks on Britain and other parts of northern Europe prior to the 11th century were often successful, and they established settlements in the islands off the Scottish coasts, and in the north of France, where they founded the duchy of Normandy, from whence came the Normans who conquered England in the 11th century.

**North-East Passage**, from the North Atlantic to Bering Strait has been rapidly developed by the U.S.S.R. in recent years as a northern sea route to render accessible vast areas of northern Siberia. Attempts to find a north-east passage were made by Englishmen and Dutchmen in the 16th century but they were always defeated by the ice, for the sea is completely frozen for some 3,000 miles for 9 months of the year. A Swede succeeded in sailing from Europe to Japan via the Arctic in the late 19th century and several Russian expeditions have been made. (See also *Arctic Exploration*.)

**North-West Passage**, from the Atlantic to the Pacific through the Arctic Seas, has been the dream of navigators for centuries. Attempts to find it were made in the 16th and early 17th centuries by John and Sebastian Cabot, Fro-bisher, Gilbert, Davis, Hudson, and Baffin. Two centuries later Ross, Parry, Franklin, and others made the attempt; but it was not until 1903-5 that Amundsen, discoverer of the South Pole, made the complete voyage. (See also *Arctic Exploration*.)

**"Not Proven,"** a verdict peculiar to Scottish law under which, in criminal cases where, the evidence not being sufficient to fully demonstrate the charge made, a prisoner is given the benefit of the doubt and set free, and cannot be retried even if later evidence of his guilt be discovered.

**Notre Dame**, the famous Paris cathedral, was founded in 1163, and is one of the finest specimens of Gothic architecture in Europe. The best descriptions of the building are to be found in Victor Hugo's "Hunchback of Notre Dame."

**November**, the 9th month of the year originally, but from 713 B.C., when Numa added Jan. and Feb., it became the 11th month.

**Noyade**, a mode of execution by drowning practised during the Reign of Terror in France at Nantes. The victims were set afloat in a boat with a movable bottom.

**Nucleus**, in physics, the central and heavy part of an atom. Its most important component particles are the neutrons and protons. In biology, the nucleus is the chief organ of the cell.

**Numismatics**, the science of coins and medals, has proved a fascinating study to many, and has resulted in the discovery of valuable historic evidence at various times. The difference between a coin and a medal is that the former is a piece of money, while the latter commemorates some person or event. The Royal Numismatic Society, founded in 1838, publishes the *Numismatic Chronicle*, and the British Numismatic Society, founded in 1904 to deal specially with the history of British coins, publishes a *Journal*.

**Nummulites** are fossil foraminifera, coin-shaped, and belonging to the Eocene formation. Nummulitic limestone is the commonest of all the Tertiary rocks in Europe, Asia, and N. Africa. Some of this rock was used to build the Pyramids.

**Nunc Dimittis**, a familiar hymn ("Now lettest thou thy servant depart in peace") forming part of the Evening Service in the various Christian Churches. (Luke ii. 29.)

**Nuncio**, a representative of the Pope sent on diplomatic missions. Nuncios were permanently established during the 16th century.

**Nunneries**, convents for the exclusive residence of

women living under vows a life of religious observance. They are common in Roman Catholic countries, and there are still a few in Britain. The first English nunnery was founded at Folkestone in 830, and up to the dissolution of the monasteries such institutions were numerous.

**Nuremberg Trial.** On Nov. 21st, 1945, an International Military Tribunal, consisting of one American, one British, one Russian, and one French member, began the trial of twenty-four Nazi leaders. There were four counts: the conspiracy of Nazism; wars of aggression; war crimes; and crimes against humanity. Twelve were condemned to hanging of whom ten were hanged on Oct. 16th, 1946. Goering committed suicide and Bormann has never been found. Papen, Schacht, and Fritzsche were acquitted. The rest received varying terms of imprisonment.

**Nuthatch,** name of a number of tree-creeping birds, plump, with short tail, bluish-grey plumage, and black stripe under eye. Nest in holes and wedge nuts in bark of trees, hammering them to get at kernel. One species resident in England.

**Nutmeg,** the kernel of the stone of a tropical fruit, used as a spice and highly aromatic.

**Nyctea,** a kind of snow-owl of large size and white plumage found in the Arctic and Sub-Arctic latitudes of Europe, America, and Asia.

**Nylon,** a generic term for the synthetic chemical compounds called polyamides from which textile fibres can be drawn. The first nylon of commercial interest was discovered in 1935, and the world's first nylon factory—in the United States—began production in 1940.

**Nymphaea,** the white water-lily, dedicated by the Greeks to the water nymphs.

**Nyssa,** the black gum, or pepper-ridge tree of America, possessing a tough, almost unsplitable wood. The sub-acid fruit of one variety, *N. candicans*, is sometimes called the "Ogechee Lime," and used as a substitute for ordinary limes or lemons.

## O

**Oak,** the most valuable of European timbers, remarkable for its strength and durability. Was used for building ships of the British fleet from the days of Charles II. to its supersession by iron. Has always been extensively used in furniture construction and cabinet work. There are about 300 species of oak, two species being native to Britain.

**Oak Boy,** a member of a body of Irish insurgents (who wore oak sprigs in their hats) who rose in 1764 against forced labour on the roads and a stricter exaction of tithes.

**"Oaks,"** the name of a famous race for three-year-old fillies run at Epsom two days after the "Derby."

**Oakum,** loose hemp and untwisted ropes, in the preparation of which prison labour used to be largely used in England.

**Oasis,** the name given to any fertile spot in a desert region. Such spots are fairly numerous on the Sahara and Libyan deserts, and some of them are extensively peopled and successfully cultivated.

**Oates' Plots.** (See Oates, Titus, *Prominent People Section*.)

**Oats,** a well-known cereal product, probably native to Asia, but cultivated with considerable success for many centuries in Scotland and England. The United States also produces large quantities. Cakes and porridge of oatmeal are common articles of food in many countries, especially in Scotland.

**Obligato,** originally, as the name suggests, a part which must be played (= obligatory). Now, by a curious misuse of the word, a part which need not be played, e.g., a "violin obligato"—additional to the pianoforte accompaniment and may be omitted if desired.

**Obelisk,** a tapering monolithic column, square at the base and pyramidal at the top, regarded by the ancient Egyptians as a sacred stone and usually found at the entrance to the sun temples. Twelve were transported from Egypt to Rome and set up at various times; there is one in the Place de la Concorde in Paris, and one on the Thames Embankment in London—Cleopatra's Needle—originally erected at Helio-

polis, centre of the sun-cult, by Tuthmosis III about 1500 B.C.

**Obi,** the Japanese name for a coloured sash commonly worn by Japanese women, and tied with a large bow at the back of the waist.

**Obit,** the date or the anniversary of a person's demise; the term is used also in reference to a service of religious character celebrated on such an occasion.

**Oblation,** a gift offered in worship, referring especially to the bread and wine given by the laity for the Eucharist.

**Oblivion, Act of,** was the act of "free pardon and oblivion" in respect of "all treasons and state offences" committed between 1637 and 1660 (the Civil War and Commonwealth period), excepting from it the "regicides" and certain priests.

**Oboe,** (old spelling: hautbois). A reed woodwind instrument rather similar to the clarinet in appearance, but having a double reed. The tone of the oboe is more thin and penetrating than that of the clarinet. The tenor oboe is called the Cor Anglais, while the bass oboe is the Bassoon. There is also a "double-bass" oboe called the contra-bassoon.

**Obolus,** a silver coin of ancient Athens worth about a penny farthing in English. The name was also adopted for small coins in different parts of Europe in the 14th and 15th centuries; besides being applied to a small weight, equivalent to the sixth part of an Attic drachma. In palaeontology an obolus is a fossil *Limulidae* of the Silurian period.

**Obscurantists,** a term applied to persons who are adverse to the extension of knowledge and view with distrust all measures of reform and the opening up of new lines of thought.

**Observants** were certain members of the Franciscan order who in the 15th century adopted a modified form of monasticism and ultimately were approved by the papal authorities.

**Observatories** existed in ancient Babylon and Egypt. They were erected on tombs and temples. The most famous observatory of Egypt was that of Alexandria, erected by Ptolemy Soter, 300 B.C. It was not until the 16th century, however, that an observatory adequately equipped for astronomical investigations was built. This was at Cassel. Tycho Brahe's observatory at Uraniburg was erected in 1576. The Royal Observatory at Greenwich was completed in 1675. Mount Wilson Observatory in California has had a 100-in. reflector telescope working since 1917 but Mount Palomar Observatory, also in California, has a 200-in. reflector—the largest in the world, completed in 1949—which can reveal remote galaxies out to a limiting distance of 2,000 million light years. It is known as the *Hale* telescope in memory of Dr. George Ellery Hale, the founder of the Mount Wilson Observatory. A 98-in. telescope, the *Isaac Newton*, is being installed at the new Royal Greenwich Observatory at Herstmonceux Castle. A number of observatories are devoted to meteorological and geophysical work, the most important in the British Isles being those at Eskdalemuir (Dumfries), Kew, Lerwick, and Valencia (Eire). (See also *Astronomy and Telescopes*.)

**Obsidian,** a form of volcanic rock of vitreous structure, and usually a silicate of aluminium, lime, magnesium, etc. Produced when acid lavas are rapidly congealed, it is usually black and fractures like pitch.

**Ocarina,** a simple kind of musical instrument usually made of terra-cotta. The whistle mouthpiece is at right angles to the bulbous body, in which are a number of finger-holes. The tone resembles that of a mellow flageolet.

**Occultation,** in astronomy, refers to the concealment of a celestial body by the passing before it of some other heavenly body. The most frequent occultation is that of a fixed star by the moon.

**Occultism,** originally the practice or study of the occult or secret sciences, including alchemy, astrology, magic, necromancy, etc.; but in recent times referring also to theosophy, spiritualism, palmistry, and so forth.

**Ocean** comprises the great body of water which covers five-eighths of the surface of the earth, and has an average depth of two miles. The

principal oceans are the Pacific, Atlantic, Indian, and Arctic. (*See p. 156.*)

**Ocean Currents** are well-defined streams running over certain portions of the ocean and caused mainly by wind-friction, slope of the sea surface and differences in density of the water, all movements being influenced by the deflective forces due to the earth's rotation. The climatic importance of the great ocean currents is that they constitute one of the means whereby heat is transferred from lower to higher latitudes.

**Ocelot**, usually called the leopard cat, is found in S. America. It is about 4 ft. in length, including tail, and of a grey or tawny colour and spotted.

**Ochres**, the name of a number of natural earths impregnated with mineral colourings, chiefly silica and alumina. They include iron ochre, yellow ochre, and plumbic ochre, being respectively oxides of iron and lead. Ochres are largely used in the making of paints.

**Octagon**, in geometry, is a plane of eight angles and eight sides, and is a regular octagon when all the sides and angles are equal.

**Octahedron**, in geometry, consists of a solid figure bounded by eight triangular faces.

**Octane Number**, the index of the knock-rating of petrol.

**Octarch**, the kings of the English heptarchy, Hengist (455) being the first, and Egbert (800) the last.

**Octastyle**, in architecture, is a term applied to an eight-columned portico such as that of the Parthenon of Rome.

**Octateuch**, meaning a collection of eight books, is a term generally applied to the first eight books of the Old Testament.

**Octave**, an interval of an eighth (*see Interval*). The interval between one note and the same note pitched higher. A pure note is an air vibration of fixed frequency. Middle C is thus 256 vibrations per second. The note an octave above middle C is exactly twice this frequency, i.e., 512 vibrations per second.

**Octet**, a musical composition for eight voices or instruments.

**October**, the 10th month, but the 8th in the old Roman calendar. It was held sacred to Mars.

**Octopus**, a genus of marine molluscs with eight tentacles that bear suckers.

**Octrois** are special taxes levied on articles of food before entering a city. They have been established in France from early times, and still exist, though at various periods they have been suspended.

**Odes** were originally extempore compositions sung in honour of the gods by the ancient Greeks and Romans. They were divided into three sections: strophe, antistrophe, and epode. All the most famous ancient odes—of Anacreon, Pindar, Horace—were composed before the Christian era. Among the best-known English odes are those of Milton, Dryden, Collins, Gray, Wordsworth, and Keats.

**Odeum**, a small theatre for the recitation of musical compositions, generally contiguous to a larger public theatre; thus the odeum of Athens in classic days adjoined the theatre of Bacchus.

**Odontograph**, an instrument enabling engineers to derive the shape of gear-wheel teeth.

**Odour of Sanctity**, a phrase which originally expressed the belief that the corpse of a holy person emitted a sweet odour, while that of an unbaptised person gave forth an evil odour; the term is now employed figuratively of the reputation.

**Odyssey**, Homer's famous epic poem setting forth the incidents of the wanderings of Ulysses on his way back to Ithaca after the Siege of Troy.

**Œcumenical Council**, a general council of the Christian Church summoned when important questions of Church doctrine and polity are to be decided. The early councils were predominantly Greek and convoked by the emperor. Those summoned by the Pope are called Lateran Councils and their decisions are not binding on the rest of Christendom. Of the twenty-six councils held in the past, only six are recognised by the Church of England, viz.: Nicea 325, Constantinople 381, Ephesus 431, Chalcedon 451, Constantinople 553, and Constantinople 680-81.

**Œil-de-Bœuf**, a term in architecture denoting openings, usually round or oval, in friezes, roofs, or domes of buildings, designed for the admission of light.

**Ogham**, an ancient style of Irish or Celtic writing, not used later than the 9th or 10th century.

**Ogulian Law**, the passing of which was secured by the two Tribunes Ogulnius, 300 B.C., had the effect of increasing the number of the Pontiffs and Augurs, and conceded eligibility for those offices to Plebeians.

**Ogygian Deluge**, occurred under King Ogyges, the first king of Thebes. It was a great flood by which Zeus was supposed to have tried to destroy mankind.

**Ohm's Law**, was propounded by Dr. G. S. Ohm in 1827 and now usually expressed in the equation: voltage = current (in amps.) × resistance (in ohms). The *ohm* is the practical unit of electrical resistance. (*See also p. 742.*)

**Oidium**, the botanical name for a fungus, a species of which is found on the grape-vine, causing what is known as the "vine disease."

**Oil Cake** is used as food for cattle. It is made from linseed, rape, and cottonseed, after the oils have been extracted, and is very fattening.

**Oil Gas**, a combustible gas obtained by the decomposition of oil, yielding a brilliant light, and largely employed for illuminating purposes.

**Olbers' Comet** was discovered in 1815 by Olbers the German astronomer. Olbers also discovered the asteroids Pallas and Vesta (1802-07).

**Old Red Sandstone**, a synonym for the Devonian system (*vide*).

**Olefines**, a series of hydrocarbons, in which the hydrogen atoms are double the number of those of carbon. The first member of the series is ethylene.

**Oleic Acid**, an important fatty acid present in lard and olive- and cotton-seed oils. Used in soap-making. Olein is the ester formed by the reaction of oleic acid and glycerine.

**Oleographs**, the name given to reproductions of paintings in oils, the colours of the original being more or less faithfully copied. The process is one that closely resembles chromolithography.

**Oleometer**, an instrument for ascertaining the specific gravity of oil. (*See Hydrometer.*)

**Oléron Laws or Judgments**, were a code of maritime laws, introduced into England in the reign of Richard I. in the 12th century. Oléron is an island off the west coast of France, opposite the mouth of the Charente.

**Olibanum**, a resinous gum obtained from trees grown in Somaliland and India.

**Olive**. This small tree, whose fruit yields olive oil, is a native of the eastern Mediterranean countries, but has been introduced into cultivation elsewhere. Its oil is used for cooking, in packing sardines, and in soap making; the green unripe fruit is pickled for table olives.

**Olivenite**, a mineral of an olive-green colour. Scientifically it is an arsenate of copper.

**Olivine**, a chrysolite, is a mineral of a pale green colour, found in volcanic rocks and meteorites. It is essentially a double silicate of iron and magnesium.

**Olla Podrida**, a sort of Spanish "haggis," combining in a stew a number of meats and vegetables.

**Olympiads** were periods of four years which elapsed between each celebration of the Olympic games, instituted in honour of Zeus by the Greeks, and held at Olympus in the Peloponnese. These festivals included competitions in literature, art, drama, rhetoric, music, and gymnastics, and they were continued, with intervals, from 776 B.C. to A.D. 394. Athletic revivals have taken place at Athens 1896, Paris 1900, St. Louis 1904, London 1908, Stockholm 1912, Antwerp 1920, Paris 1924, Amsterdam 1928, Los Angeles 1932, Berlin 1936, London 1948, Helsinki 1952, and it is planned to hold the 1956 Olympiad in Melbourne. (*See p. 966 for "Olympic Results, 1952."*)

**Omega**, the last letter of the Greek alphabet, and widely adopted in literature in its figurative sense as indicating the end of anything.

**Omens** are auguries or presentiments of some coming event, usually something evil. In olden times omens, portents, and signs were seriously regarded, and among the Greeks and

- Romans emanated chiefly from the priests or augurs, who were supposed to be the recipients of the warnings of the gods.
- Ommimeter**, an invention for superseding chain measuring and combining the theodolite and level. It was introduced in 1869, and is the invention of a German engineer named Eckhold.
- Onager**, the wild ass of Central Asia.
- Onus Probandi**, a legal term signifying that the onus of proof rests on the party making the assertion or claim.
- Onyx**, a kind of silica built up of different coloured layers, which are parallel and straight (not curved as in agate).
- Oolite**, a geological term for the Jurassic oolitic limestones existing through a long stretch of country extending from Yorkshire to Dorsetshire. It abounds in fossils of molluscs and reptiles. The term "oolite" derives from the fact that these rocks are made of egg-shaped particles of calcium carbonate.
- Opal**, a mineral consisting of hydrous silica, occurring in numerous varieties and colours. Precious opal displays a beautiful internal opalescence, the result of the interference of light waves on the surfaces of layers differing in their water-content. Opal miners are called gougers. Chief source, the Andamooka and Coober Pedy fields of South Australia.
- Opera** derives, like Drama, from the religious plays of mediæval times. These plays were always accompanied by music, but, whereas Drama has relegated music to the entr'acte, Opera has developed it to the point of being the most important feature of the performance. The first true opera was produced at Florence in 1597. It was written by Rinuccini and composed mainly by Peri and called *La Dafne*. Rinuccini and Peri followed this in 1600 with *Euridice*—the earliest opera of which we have a complete record. The first opera house was opened in Venice by Caralli in 1637. Cardinal Mazarin tried to introduce Italian opera into France, bringing in Caralli in 1660, but the experiment was a failure. Native French opera began in 1672 under the patronage of Louis XIV. with Lulli's *Les Fêtes de l'Amour et de Bacchus*. In England musical plays were being performed at this time, but the first real opera was Purcell's *Dido and Æneas* written in 1689. At this time Scarlatti was writing operas in Naples and shaping the Italian opera into the form in which we know it to-day. Handel produced nearly forty operas in thirty years, his first being *Rinaldo* at the Haymarket, London, in 1711. The comic opera seems to have originated in Naples. The first English comic opera, the *Beggar's Opera* by Gay, was given in London in 1727. Mozart, after producing his magnificent *Idomeneo* at the age of 25, wrote a succession of comic operas: *Seraglio* (1782), *Figaro* (1786), *Don Giovanni* (1788), *Così fan tutte* (1790). These laid the foundations for all future comic opera. *The Magic Flute* (1791) was the first of what might be called "opera for the people." Beethoven made a single excursion into opera: *Fidelio* (1805). Rossini is best known for *The Barber of Seville* (1816), a comic opera, although his reputation was made with a serious opera *Tamcredi* (1813). The operas of Bellini are rarely performed outside Italy, but these had considerable influence on the work of Chopin and Liszt. Bellini's successor Donizetti is best known for his comic operas *Don Pasquale* and *L'Elisir d'Amore*. This period in French opera is best represented by Auber's *Fra Diavolo*. German opera, slow to take root, developed at this time through Weber and Meyerbeer to Wagner, whose first important opera, *Rienzi*, was performed in 1842. The complete *Ring* was first given at Bayreuth in 1876 and Wagner's last opera, *Parsifal*, in 1882. The most successful exponent of comic opera at this time was Offenbach, although Strauss in Vienna and Sullivan in England enjoyed considerable local success. Italian opera underwent a revival with the advent of Verdi. Of his earlier operas, *Rigoletto* (1851), *Il Trovatore* (1853) and *La Traviata* (1853) alone have retained their popularity. *Aida* (1871) is a more mature work, while *Otello* (1887), and *Falstaff* (1893), for which Boito wrote the libretti, are works of high merit. Several French operas of this period retain their popularity: Gounod's *Faust* (1859), Bizet's *Carmen* (1875), Massenet's *Manon* (1884), Saint-Saëns *Samson et Dalila* (1877). In 1890 Mascagni achieved startling success with *Cavalleria Rusticana*. This was followed almost immediately by Leoncavallo's *I Pagliacci* and the two are now inseparable. Of the operas produced in the 20th century, the most popular have been Puccini's *La Bohème* (1896), *Tosca* (1900), *Madame Butterfly* (1904), Richard Strauss's *Der Rosenkavalier* (1911) and Debussy's *Pelléas et Mélisande* (1902).
- Opicleide**, a brass instrument invented in the 19th century. Mendelssohn and Berlioz wrote scores for the opicleide, but the instrument has fallen out of general use.
- Ophidia**, the sub-order of reptiles comprising the snakes.
- Ophiuroid**, an ophiuroid or brittle-star is a member of the *Ophiuroidea*, a class of echinoderms with slender arms.
- Opium** was known to the ancients, and used by them as a medicine. It is obtained from the white poppy, the unripe "head" or seed capsule of that flower yielding a juice which when dried becomes the opium of commerce. The poppy is largely cultivated in India, Persia, Turkey, Macedonia, and China for the sake of this juice, which yields various alkaloids, such as morphine, narcotine, thebaine, etc. Laudanum is a tincture of opium.
- Opium War**, a war (1839-42) between Great Britain and China, due to the dissatisfaction of the former with the treatment of British subjects in China. The immediate cause was the attempt of China to stop the importation of opium. It was concluded by the treaty of Nanking, which established the "treaty ports" of China. Hong Kong was ceded to Great Britain.
- Opossum**, marsupial mammals found in the more southerly of the United States, South America, and Australia. They are arboreal except for the water-opossum, which eats fish.
- Opportunist**, a term which first came into use politically in France after the Franco-German War, and referred to a section of the Republican party of which Gambetta was the leader, who held that the true political policy was not to force opinions upon the people but to wait until circumstances favoured their advocacy.
- Optics**, the branch of physics which investigates the nature and properties of light and the phenomena of colour. Burning lenses were known to the ancient Greeks and Ptolemy wrote a treatise on optics A.D. 150. Lenses as visual aids were known in ancient China but eyeglasses were not in use until the 13th century. Spectacles were in more general use after the invention of printing in the 15th century. The camera obscura was invented in the 16th century and the telescope and microscope at the beginning of the 17th century.
- Optimism**, the theory that everything happens for the best, has been propounded by many fathers of the Church and philosophers from Plato to Rousseau. It is the opposite of pessimism.
- Optophone**, invented in 1914 by E. Fournier d'Albe, is an instrument whereby the blind can read ordinary letterpress. This dispenses with Braille (q.v.). By means of this instrument, in which the light-sensitive element selenium plays the important part, the letters are transposed into sounds, the alphabet of which the blind reader soon learns, and the positions and speed of the instrument can be regulated by him.
- Opus**, a single work of serious music. Most serious composers list their works in this way: e.g., Opus 1, Opus 2, etc. If several pieces are included in a single opus they are listed as follows: Opus 1, No. 1.
- Oracles** were in ancient times supposed to be words spoken by the gods, and it was the custom on important occasions to consult them about the future. The Greeks had the Oracles of Zeus at Dodona, and Apollo at Delphi, while the Romans consulted the Oracles of Mars, Fortune, and others.
- Orange**, a fruit growing in most sub-tropical climates and in universal demand. It is grown on an evergreen tree that attains a height of about 20 ft. at maturity.

**Orangemen**, members of an Irish society formed in Ulster in 1795 to uphold Protestantism. Their name is taken from King William III (Prince of Orange) who defeated James II at the Boyne in 1690. The society has branches in most English-speaking countries but flourishes chiefly in Ulster.

**Orang-utan**, one of the largest of the anthropoid apes, found only in Borneo and Sumatra. When full-grown it stands over 4 ft. in height and weighs about 150 lb.

**Oratorians** were an order of priests founded by St. Philip Neri, about 1564, and received their name from the Oratory of St. Jerome, where they worshipped. They also established themselves in France in the 17th century, and in England the Oratory at Brompton founded by F. W. Faber (d. 1863), commemorates the earlier order.

**Oratorio**, a sacred work for solo voices, chorus, and orchestra. The word applies to a special composition and not to a musical setting for a normal part of the church service.

**Orbit** indicates the course of a planet round the sun. All the planetary orbits are elliptical.

**Orchestra**, a group of instruments and instrumentalists whose playing is under the direction of a conductor. The composition of a typical symphony orchestra is as follows: **STRINGS**: 1st Violin (16), 2nd Violin (16), Viola (12), Violoncello (12), Double Bass (8). **WOOD-WIND**: Flute (3-4), Piccolo (1), Oboe (3), Cor Anglais (1), Bass Oboe (1), Clarinet (3), Bass Clarinet (1), Bassoon (3), Contra-bassoon (1). **BRASS**: Horn (6), Trumpet (3), Trombone (3-4), Tuba (2). **PERCUSSION**: Timpani (3-6), Side Drum (1), Bass Drum (1), Cymbals (1), Harp (2).

**Ordeals**, or Trials by Ordeal, were known in England in the time of the Saxons, and existed down to 1218, when they were abolished. The ordeals were usually of fire, water, or poison. The accused would be set to handle red-hot iron, be cast into water, or made to partake of poison, and unless he could withstand these tests he was condemned as guilty.

**Orders, Holy**, in the Roman Catholic Church are of seven kinds, extending from door-keepers, exorcists, readers, and acolytes, in the minor class, to deacons, priests, and bishops of major rank; while in the Anglican Churches there are only three—deacons, priests, and bishops.

**Orders in Council** are issued by the sovereign on the advice of a few selected members of the Privy Council. They must not seriously alter the law of the land. Another class of Orders in Council are issued by authority of an Act of Parliament for the carrying out of its provisions.

**Ordination**, the ceremony of installing ministers or clergymen in clerical offices, has existed from the earliest times. In the Anglican and Roman Catholic Churches the rites of Ordination are performed by bishops; among Nonconformists the power of ordination rests with the governing bodies of the different Churches.

**Ordinance Office** was an old Government department entrusted with the supply of weapons and materials of war from the time of the archers to the days of guns and explosives. After the Crimean campaign, when the administration of the Ordinance Board was shown to be very defective, the office was abolished, and its duties vested in the War Minister.

**Ordinance Survey**, an authorised survey of Great Britain entrusted to a special body of Royal Engineers and civilian experts, by whom maps and charts are from time to time produced, showing the full details of the geographical, geological, and industrial condition of the country. The scale adopted for counties is 6 in. to 1 mile, and 1 in. to 1 mile for the general map of the kingdom. The Ordinance Survey Department now comes under the Ministry of Agriculture.

**Ordonnances** were special laws enacted by the French kings prior to 1789. They were issued in the name of the king, and had the effect of Acts of Parliament. It was the revival of ordinances by Charles X. that led to the Revolution of 1830.

**Ores** are minerals which are mined for their content of metallic compounds.

**Organ** is a musical wind instrument of ancient

origin whose tones are produced by the vibrations of air in pipes of varying length. Basically, an organ consists of a number of pipes grouped in rows or ranks according to their special tone-character. The air is fed by bellows or, in modern organs, by a rotary fan, electrically driven. Each rank is controlled by a slider, and the knob that controls the slider is called a stop. The organist pulls out the stops to give the tones he wants, the other pipes being kept out of action by the slider. When a particular note on the keyboard is depressed the player may hear, by pulling out the appropriate stop, not only the normal pitch but the note in several octaves. A stop of which the notes are of normal pitch is called an 8-foot stop, a 16-foot stop would give an octave lower, a 4-foot stop an octave higher, and a 2-foot stop two octaves higher. The hand keyboard is called a manual, and the foot keyboard the pedal board. The basic tone of an organ is its diapason tone, and is normally of 8-foot length and pitch. Most large organs have four manual keyboards and one pedal board. The most important manual is the great organ which comprises the majority of basic stops. The next in importance is the swell organ, so called because the pipes are enclosed in a box fitted with movable shutters operated by a swell-pedal. The effect provides a controlled crescendo or diminuendo. The tone of a typical English swell has a reedy character. The third manual controls the choir organ—a collection of stops suitable for vocal accompaniment. The fourth manual controls the solo organ—a group of stops which, singly or in combination, may provide a solo melody which the remainder of the organ accompanies. The pedal keyboard controls most of the bass stops. In some very large organs there is a fifth manual controlling the echo organ. This is a small group of stops usually set high in the roof of the building to give the effect of distant music. Most church organs have two or three manuals. Modern cinema organs may have some normal stops but rely chiefly on a number of effects unknown to the straight organ.

**Orgies** were originally secret celebrations in honour of Bacchus, and noted for the wild licence displayed by the celebrants.

**OrguINETTE**, a musical instrument composed of reeds which are played upon by a bellows. A strip of paper passes over the holes of the reeds, moved by a crank, and the paper is cut into holes to represent the required sounds. As the rollers turn the bellows the melody is "ground out."

**Oriel College, Oxford**, derives its name from a building called "l'Oriole" which stood on its site; was founded by Archdeacon Adam de Brome in 1326.

**Oriel Window** is a window projected from the front of a building, rectangular, triangular, or pentagonal. The ordinary bay window and bow window are varieties of Oriel. When an Oriel window does not reach to the ground it usually rests upon moulded sills supported by corbels.

**Oriflamme**, the name of the original banner of the abbey of St. Denis, and adopted by Louis VI. as his standard. It remained the national emblem of France for three centuries. The flag was of red silk, the outer edge being cut in the form of flames.

**Origenists**, a sect of religionists who were followers of Origen, who lived in the 3rd century. They believed that men's souls were created before their bodies, that the celestial bodies had souls, and that Christ was the Son of God only by adoption and grace. The Council of Constantinople in 553 condemned Origen's doctrines.

**Original Sin**, according to Christian doctrine the corruption that is born with us, as a result of Adam's fall.

**"Origin of Species"** (1859), the title of Darwin's famous work—by many considered to be the most important book of the 19th century.

**Orioles**, brilliantly coloured birds, members of the passerine family *Oriolidae*, found in the tropical regions of Asia, Africa, and Australia. The golden oriole, perhaps the most beautiful of them all, with brilliant yellow plumage, black wings and tail, winters in Africa, visits England, and is known to have nested here.

**Orion**, a famous constellation of the heavens, comprising nearly a hundred stars, all visible to the naked eye. It contains three stars of the second magnitude in a line, and these are called "Orion's Belt."

**"Orlando Furioso,"** the title of Ariosto's 16th-century epic poem, describing the doughty deeds of Orlando and other knights of the Charlemagne period.

**Orleanists**, members and supporters of the House of Orleans (1773-1850), of which King Louis Philippe was a member.

**Ormulum**, a version of the Gospels and Acts made by Orm, an ecclesiastic of the 12th century. It is metrical and exists in manuscript in the Bodleian Library.

**Ormuzd**, the spirit of good according to the Zoroastrian religion, represented as eternally warring against evil and personating purity of life.

**Ornithology**, the branch of Zoology which treats of the structure and habits of birds.

**Ornithorhynchus.** (See Duck-bill.)

**Orphrey**, the name of an ornamental border of gold and silver embroidered on ecclesiastical vestments.

**Orpiment**, arsenic sulphide, a mineral yielding the colour known as "king's yellow."

**Orrery**, an instrument used in the 18th and early 19th centuries which showed the motions of the planets round the sun and the satellites round their primaries. The first orrery made was named after Charles Boyle, Earl of Orrery.

**Orris Root**, the dried root or stem of a species of iris cultivated in Italy. Used in perfumery and dry toilet preparations.

**Orthoptera.** The large order of insects including grasshoppers, crickets, locusts, mantises, stick insects, cockroaches, etc. These insects have biting mouth parts, and wings, if present, are in two pairs, the front pair being thickened to protect the membranous hind wings which are folded under the front ones when at rest.

**Orthotomus**, a genus of warblers including the tailor-birds inhabiting S.E. Asia.

**Osborne House**, near Cowes, in the Isle of Wight. Queen Victoria's favourite winter-residence, and where she died. It was given to the nation by Edward VII., and is now a convalescent home for Service officers. The grounds and State apartments are open to the public on certain days.

**Oscar**, the name of the gold-plated statuette awarded by the Academy of Motion Picture Arts and Sciences, of Hollywood, U.S.A., for the highest achievement of the year in film production.

**Osella or Osela**, a medal yearly struck and distributed by the Doges of Venice from early in the 16th century to the close of the Republic. It was of gold or silver and was a substitute for a present of wild fowl formerly sent to each of the noble families of the Republic on New Year's Day.

**Osier**, a species of willow growing in damp soils and yielding branches utilised in basket-making.

**Osmium**, a very hard, bluish-white metal of the platinum group and one of the heaviest of known metals. It is obtained from certain sands of South America, California, Australia, and Russia. The alloy of osmium and iridium (osmiridium) provides long-wearing tips for gold fountain-pen nibs.

**Osmosis**, the term applied to the diffusion of a solvent through a semi-permeable membrane from a solution containing a low concentration of solute to one with a high concentration of solute. The entry of water into the roots of plants depends on osmosis.

**Osprey**, a bird of prey widely distributed over all northern latitudes and a common visitor to the lakes of Scotland, where it used to build and breed. It is commonly known as the fish-hawk, and feeds almost entirely on fish.

**Ostracism**, a method of proscription adopted by the ancient Greeks, whereby sentences of banishment for ten years were voted. The names of objectionable persons were written on small fragments of pottery and collected in an urn. Ostracism did not take effect unless 10,000 votes were recorded. It was intended to remove anyone who threatened the body politic. The ostracised person was not regarded as a criminal and, on his return, resumed

possession of his property, while his civic status was unimpaired.

**Ostrich**, the largest living bird, related to the rhea, emu, and extinct moa, now found only on the sandy plains of Africa and parts of S.W. Asia. The male has beautiful white plumes on wings and tail. The wings are useless in flight, but the birds have a fleetness of foot exceeding that of the swiftest horse. An ostrich's egg weighs 3 lb.

**Otary**, any seal which has external ears (as opposed to the *true seals* which lack them.) The eared seals make up the family *Otariidae*, which includes the Sea-Lion and the Fur-seal of the N. Pacific.

**Otter**, an aquatic carnivorous mammal widely distributed over Europe, and at one time very common in England and Wales. Otter hunting, indeed, is still a country sport in some districts, and a breed of dogs called otter-hounds is kept for the purpose. The otter averages about 2 ft. in length, exclusive of tail, has web-feet, and is a very expert swimmer.

**Oublette**, secret dungeon with an opening only at the top, as was found in the old baronial castles of the Middle Ages.

**Ounce**, a carnivorous member of the cat family, spotted like a leopard and having a long bushy tail. It is only found at high altitudes on the Himalayas, and is often called the "snow leopard."

**Outcrop**. Where a seam of rock appears at the surface of the ground, there is an outcrop of the particular rock. Outcrop coal is surface coal; the mining of such coal is called open-cast mining.

**Outlawry**, the process of putting a person out of the protection of the law. It existed early in England and was the punishment of those who could not pay the "were" or blood-money to the relatives of the deceased. Abolished in civil proceedings in 1879, and has gradually become obsolete in criminal proceedings.

**Overlord**, a member of the House of Lords appointed to supervise and co-ordinate two or more ministries in the Churchill Government of 1951-53.

**Overture**, introductory piece to an opera or oratorio, often including the main themes to be elaborated later. Many so-called overtures have been composed as separate concert pieces.

**Oviparous**, a zoological term referring to such mammals, birds, reptiles, and fishes as bring forth eggs to be hatched outside the body of the parent.

**Ovipositor**, the organ by means of which the females of certain arthropods deposit their eggs.

**Ovoviviparous**, a zoological term applied to such animals as produce eggs which are hatched in the body of the parent; an example is the viper.

**Owens College**, Manchester, was founded by means of a bequest of £100,000 by John Owens, a Manchester merchant, who died in 1846. The college began in 1851, and formed the nucleus for the Victoria University of Manchester, established in 1880.

**Owls**, nocturnal birds of prey, distributed over the greater part of the world. Their forward-looking eyes, embedded in rings of feathers, give them a characteristic "owl-like" appearance, and their plumage, usually a mottled blend of browns and greys, is so soft that their flight is almost noiseless. Owls live on small mammals, reptiles, birds, insects, and fish, and are very valuable birds to the farmer. British owls include the barn owl (screech owl), short-eared owl, long-eared owl, tawny owl.

**Ox**, the popular name of the mammals included in the genus *Bos*. They are hollow-horned ruminants and hoofed quadrupeds, and include the various classes of domestic cattle as well as the different wild species. The adult male is called a bull, the female a cow, and the young a calf. The best-known breeds of domesticated cattle are the Durham or Shorthorn, the Angus, the Jersey, Ayrshire, Suffolk, and Hereford.

**Oxalic Acid**, an organic acid obtained from numerous plants, such as sorrel and rhubarb, and produced artificially for commercial purposes from sawdust, treated with caustic potash or caustic soda. It combines with metals to form oxalates.

**Oxford Clay**, a geological formation consisting of a bed of blue clay hundreds of feet thick, and

forming the lower portion of the Middle Oolite series of the Jurassic. It makes good bricks.

**Oxford University.** The first indication of organised teaching at Oxford was in 1133 when Robert Pullen, the theologian from Paris, lectured there. Allusions to Oxford as a fully equipped university only occur after 1163. The earliest colleges to be founded were University College (1249), Balliol (about 1263), Merton (1264). In 1571 the university was reorganised and granted a Charter of Incorporation by an Act of Elizabeth. Other colleges with their dates of foundation are: All Souls (1437), Brasenose (1509), Christ Church (1546), Corpus Christi (1516), Exeter (1314), Hertford (1874), Jesus (1571), Lincoln (1429), Magdalen (1458), New College (1379), Oriel (1326), Pembroke (1624), Queen's (1340), St. John's (1555), Trinity (1554), Wadham (1610), Worcester (1714), St. Edmund's Hall (1265), as well as private Halls, Keble (1871), St. Peter's (1947), St. Catherine's Society. The women's colleges are:—Lady Margaret Hall (1878), Somerville (1879), St. Hugh's (1886), St. Hilda's (1893) and St. Anne's Society.

**Oxygen** is the most abundant of all elements. In combination, this gaseous element forms about 46 per cent. of the earth's crust; one-fifth of the atmosphere, eight-ninths by weight of all water. Dr. Priestley in 1774 was the first to separate it from red oxide of mercury. It is colourless, tasteless, and odourless, and forms the chief life-supporting element of animal and vegetable life.

**"Oyer and Terminer,"** a legal term designating a commission directed to the judges of the Supreme Courts, empowering them to hear and determine charges of treasons, felonies, and misdemeanours in the counties to which they are proceeding. Courts of Assize are known as Courts of Oyer and Terminer.

**Oyez!** a phrase used by the ushers of Courts of Justice to proclaim silence. It is the Norman-French word "Oyez" ("Hear ye.").

**Oyster,** a bivalve mollusc, of the genus *Ostrea*, having very numerous species and abounding in nearly all seas. The shell is rough and irregular. Oysters are exceedingly prolific, spawning in May and June. In England and Scotland deep-sea oysters are not allowed to be sold between June 15th and Aug. 4th, and others kinds between May 14th and Aug. 4th. In Ireland, no oysters may be taken between May 1st and Sept. 1st, except in certain waters. The Whitstable oyster beds have existed since pre-Roman times. The first grade is the Whitstable Royal; "clocks" are dead oysters. **Oystercatcher,** a large wading bird with black-and-white plumage and long, orange bill, inhabiting estuaries and sea-shores. Feeds on mussels, shell fish, etc., but not oysters.

**Ozone,** a modified form of oxygen, containing three atoms of oxygen per molecule instead of two. It is prepared by passing oxygen through a silent electric discharge. When present in air to the extent of 1 part in 4 million parts of air it kills bacteria, and has been used for this purpose in ventilating systems, e.g., that of underground railways. It is present in extremely small quantities in the lower atmosphere but is comparatively plentiful at heights of about 20 miles. The belief widely held that seaside air is particularly rich in ozone is untrue. As ozone absorbs ultra-violet light of certain wavelengths spectroscopic methods, involving the analysis of sunlight, are chiefly used in ozone determinations.

## P

**Paca,** a genus of large rodents found in Central and South America, and resembling the guinea-pig. It is of nocturnal habits, has a streaked and spotted fur, and lives on fruits and plants.

**Pacific Ocean.** The first European to recognise the Pacific as distinct from the Atlantic was the Spanish explorer, Vasco Nuñez de Balboa, who discovered its eastern shore from a peak in Panama in 1513. The first European to sail upon it was Magellan, who entered it by the strait that bears his name in 1520. Sir Francis

Drake was the first Englishman to sail upon it in 1577. The world's greatest ocean depth is in the Pacific. (See "Gazetteer," pp. 318, 384.)

**Pæan,** the song of praise or triumph sung by the Greeks on the occasion of great celebrations.

**Pæon,** a foot, in ancient prosody, consisting of one long syllable and three short, the positions of the long syllable being variable.

**Pagans** are heathens or idolaters, people who do not worship God. The word is from Latin, *paganus*, a countryman, an uncultivated person, a savage. In the Middle Ages the term was used largely to describe Mohammedans (Moors, Saracens, etc.).

**Pagoda,** the name given in China, India, and other Asiatic countries to a high pyramidal tower, usually, but not necessarily, connected with a temple.

**Palæontology,** the science which is devoted to the investigation of fossils, animal (palæozoology) and plants (palæobotany). By studying the markings and fossils of living things in the stratified rocks, palæontologists have been able to establish with astonishing accuracy a record of the evolution of life through geological time. The geologist at the same time with the evidence of the fossils has been able to work out the order and the age of the rocks. (See p. 162 *et seq.*)

**Palæotherium,** a genus of extinct tapir-like animals of large size, discovered in the Paris basin and elsewhere, of the Upper Eocene Age.

**Palæozoic,** a geological term indicating the most ancient division of the strata formation of the earth's crust. To this division belong the Cambrian, Ordovician, Silurian, Devonian, Carboniferous, and Permian Periods (though some authorities include the last-named in the Mesozoic). (See p. 164.)

**Palanquin,** an East Indian covered vehicle fastened to a pole and carried on the shoulders of four or six natives, now falling into disuse because of improved methods of conveyance.

**Palatinate,** a term formerly applied to two German electorates or provinces, the Upper and Lower Palatinates. They are now provinces of Bavaria.

**Pale,** the name given to the part of Ireland colonised by the English and comprising portions of the counties of Louth, Dublin, Meath, and Kildare. The Anglo-Saxon rulers were styled "Lords of the Pale."

**Palimpsests** are ancient MSS. or parchments which have been partly effaced and used for fresh writings. Many valuable MSS. were thus lost, but sometimes the second writing has been washed out, enabling the original writings to be deciphered. Among such restorations are a dialogue of Cicero's, a portion of a book of Livy, etc.

**Pallium,** a vestmental ornamentation of white wool presented by the Pope to archbishops on their appointment, and the sign of Papal confirmation.

**Palm,** a large straight-trunked plant or tree common to tropical countries, and usually fruit-yielding, such as dates, coconuts, etc. Many commodities useful to man are obtained from plants of the Palm family (*Palmaceæ*).

**Palmitic Acid** is present in spermaceti, and most oils and fats (vegetable and animal). It is a white tasteless and odourless substance. In combination with glycerine it forms "palmitin." With caustic soda it forms a soap.

**Palm Sunday,** the Sunday before Easter, upon which occasion it is customary to carry palms to the churches in some countries, in commemoration of Christ's entry into Jerusalem for the Feast of the Passover, when the people went forth to greet Him with palm branches.

**Palolo Worm,** a marine worm which swarms in huge numbers at certain fixed times of the year off Samoa and neighbouring islands, where the natives collect it in nets and use it as food.

**Panama Canal.** In 1904 the United States signed a treaty with Panama (which had previously seceded from Colombia) by which rights of sovereignty over a strip of land ten miles in width, extending across the isthmus, were ceded to the U.S. The canal connects the Atlantic and Pacific Oceans, is just over fifty miles long (with sea approaches), and the width of channel varies from 300 to 1,000 ft. at bottom. Transit from sea to sea occupies about eight hours.

The depth varies from 41 to 85 ft. It is constructed above sea-level, with locks. It has been available for commercial shipping since Aug. 3rd, 1914.

**Panda, or Cat-Bear**, is related to the Raccoon and to the Bear. There are two kinds, the Red or True Panda, resembling a large domestic cat, which lives in the eastern Himalayas and S.W. China, and the Giant Panda, which is more like a bear in appearance and inhabits the mountains of western China. Both frequent the dense bamboo forests of these regions.

**Pandean Pipes**, supposed to have been invented or played upon by the god Pan, consist of seven reeds tuned to scale and blown into by breath from the lips of the performer.

**Pandex or Pandects**, a summary of the Roman civil law, prepared by order of the Emperor Justinian in the 6th century A.D. (530-33).

**Pangolin**, the scientific name of the "scaly anteater," a member of the armadillo family, found in Africa and Southern Asia. It has an extensive tongue, covered with glutinous matter, which it uses in catching ants, its chief food. When once caught on the tongue, the insects cannot escape. When attacked, the pangolin rolls itself into a ball, and its scales assume the form of sharp spikes.

**Panorama**, a name given to almost any series of continuous scene pictures exhibited, but strictly pertaining to such scenes when arranged round the inner walls of a circular building and viewed from the centre. Mr. Robert Barker, an Edinburgh artist, was the first to give a panoramic exhibition in 1788, and its success induced him in the following year to show a panorama in London.

**Pantagruel**, the leading character in one of the satires of Rabelais.

**Pantheon**, the famous temple in Rome, built about 25 B.C. by Agrippa and consecrated to the gods, its splendid dome and portico making it one of the most interesting architectural monuments of ancient days. Since the 7th century it has been used as a Christian church. The Pantheon at Paris, built in 1764, is modelled upon it.

**Panther**, a large carnivorous quadruped, akin to the leopard, native to India and other parts of Asia, and found also in Africa.

**Pantomimes** were originally stage representations in which speech was not permitted, all the action being carried on by gesture and movement. The ancient Greeks and Romans favoured them. Later on pantomime became popular throughout Europe, and in the 18th century, with the harlequinade, was adopted as a form of theatrical Christmas entertainment in England. The most famous English pantomime clown of the early 19th century was Joseph Grimaldi.

**Papal Infallibility**, a dogma which was finally promulgated by the Twentieth General Council in 1870. It states that the Pope, speaking *ex cathedra*, possesses infallibility for decisions on doctrines affecting faith or morals, in virtue of his supreme apostolic power. The strongest opposition to the doctrine existed among the followers of Dollinger in Germany.

**Paper** has been known in one form or another from very early times. The papyrus reeds of the Nile swamps served the ancient Egyptians for sheets upon which to inscribe their records. The Chinese and Japanese, centuries later, were using something more akin to modern paper in substance, an Asiatic paper-mulberry, yielding a smooth fibrous material, being utilised. With the spread of learning in Western Europe the necessity of a reader medium made itself felt and paper began to be manufactured from pulped rags and other substances. The first known English paper-mill was Sele mill near Stevenage, built about 1490, which produced the paper for an edition of Chaucer in 1498. Other mills were set up under Elizabeth, using linen and cotton as raw material. Other papermaking staples were later introduced, such as surat, esparto grass, and wood-pulp. The chief raw material in the world paper industry is wood-pulp, the main exporters being the timber-growing countries of Canada, Sweden, and Finland. Canada is the world's chief producer of newsprint and supplies a large proportion of U.S. requirements.

**Papier-mâché** means pulped-paper and is a com-

position of paper pulp and other substances, to which, when moulded into form, coatings of japan, with gilt and coloured inlayings, are added. Elegant and decorative objects are made of papier-mâché. A ceramic papier-mâché is very durable.

**Papyrus**, the earliest known paper made in Egypt at a very remote period from a large species of reed, *Cyperus papyrus*. This plant is to be found all over tropical Africa, especially in the "sudd" region of the White Nile.

**Parachute**, the umbrella-shaped safety device used in emergency by the crew and passengers of aircraft. The first parachute descent was made in 1797 by André Garnerin from a balloon. In 1947 three Russian parachutists beat the international record by jumping from the stratosphere at a height of over 8 miles.

**Parade** (the Holy Ghost, or Comforter), the name used in the English translations of St. John's Gospel, and adopted by Abelard to designate the convent in Champagne founded by him, and of which Heloise became the abbess.

**Paradise**, a Persian word used by the translators of the Old Testament to designate the Garden of Eden, and since meaning any place of happiness.

**Paraffin** was first obtained by distillation of coal, the process being discovered about 1830. About 1848, Mr. James Young procured it from mineral oil, and Irish peat also yielded it. The main source of paraffin supply to-day is crude petroleum. It is largely used in the manufacture of candles, for waterproofing, and numerous other purposes.

**Parcel Post** was established in England in 1883 for inland parcels up to 7 lb. in weight, the maximum being raised to 15 lb. in 1935. The system has since been extended to practically all countries of the world. The British Postal authorities carry about 250 million parcels annually.

**Parchment**, made chiefly from the skins of animals, usually of goats and sheep, was employed in olden times before printing was invented and superseded papyrus as writing material. Vegetable parchment, invented by W. E. Gaine in 1853, though not equal in strength and durability to skin parchment, is about five times stronger than ordinary paper. Vellum is parchment made from the skins of young calves or lambs.

**Parhelia** is the term applied to the very peculiar phenomena known as "mock-suns" seen sometimes in the higher Arctic regions. The sun is then attended by a number of halos crossing each other in various geometrical forms, and said to be due to the refraction of light caused by ice crystals in the upper air.

**Pariah**, a word meaning "social outcast" from the word *Paraiyan*, a very low caste of Hindu, outside the pale of regular castes, and avoided as something unclean.

**Paris University**, also known as the Sorbonne, was founded in 1256 and is one of the greatest educational institutions of Europe.

**Parliament**, is the name given to the supreme legislature of the United Kingdom. It consists of the Queen, the Lords spiritual and temporal, and the Commons. It meets in two houses: the House of Lords (the Upper or Second Chamber) and the House of Commons. It derives from the Anglo-Saxon *Witanas* (see *Witan*). The Statute of Westminster (1275) first uses "parlement" of the Great Council in England, which comes from the French word meaning discourse. (See pp. 125-27.)

**Parliamentary Correspondents** sit in the Press Gallery of the House of Commons and describe its proceedings for newspapers either by impressions or a summary of the debate.

**Parquetry**, the name of a style of flooring consisting of small rectangular wooden blocks laid down according to geometrical pattern.

**Parrakeets**, various small parrots of vivid plumage native to Australia, Polynesia, Asia, and Africa. One of the loveliest of the parrakeets is the Budgerigar of Australia. (See p. 1002).

**Parrot**, the popular name of a widely distributed family of tropical birds, including the African grey parrot, the green parrot of South America—both familiar cage pets in this country—and the various parrakeets, cockatoos, macaws, lorries, etc. Many of these birds possess a re-

- markable gift of imitating sound, especially that of the human voice. (See also p. 1002.)
- Parsec**, unit of distance used by astronomers for expressing distances between stars. It is equivalent to about three and a quarter light-years.
- Parsees**, descendants of the Zoroastrians, or Fire-worshippers of Persia, are now more numerous in India than in the land of the Shah. They are born traders, and many of them not only possess great wealth but are renowned for their charities.
- Parthenogenesis**. The development of animals from unfertilised eggs. The drones of the honey bee are parthenogenetic, and the phenomenon is also common among aphids.
- Partheon**, the famous Temple of Minerva on the Acropolis at Athens, erected about 442 B.C. under the superintendence of Phidias, who there-in placed his renowned statue of the Greek goddess. The Partheon was 227 ft. long by 101 ft. broad, and was in the pure Doric style. The ruins still existing are of considerable extent. The famous sculptured friezes, known as the Elgin Marbles, are now in the British Museum.
- Partridge**, a well-known British game bird the shooting of which forms a considerable attraction to sportsmen in the season, which opens on Sept. 1st. Two species are common in Britain.
- Passionists**, a priestly order founded in the 18th century in Italy by St. Paul of the Cross (1694-1775). In 1842 some Passionists established themselves in England, and the order has now several houses in this country, the leading one being at Highgate; the late Cardinal Manning solemnly blessed this monastery at its institution in 1876.
- Passover**, the Jewish festival commemorating the departure from Egypt and the passing of the Angel of Death over the houses of the Israelites.
- Passport** is an official document issued to a person by his own government, certifying to his citizenship and permitting him to travel abroad. Passports to British subjects are granted by the Foreign Office, authorise bearer to leave the country and guarantee him the state's protection. Valid for 5 years.
- Paten**, the dish used for holding the consecrated bread in the Eucharistic service.
- Patricians**, the aristocracy of ancient Rome.
- Paul's Cathedral, St.**, is the third cathedral church to be built on the site. It was preceded by a Norman building which was practically destroyed by the Great Fire in 1666. This followed a Saxon church which was burnt in 1086. The present building was designed by Sir Christopher Wren. The foundation stone was laid in 1675 and the structure was completed in 1710. It cost a little under £748,000. Its central feature is the dome, crowned by its cupola and lantern with the golden ball and cross. It escaped serious damage during the air raids of the second world war, but many of the surrounding buildings were laid waste.
- PAYE**, a system of income tax collection (Pay As You Earn), introduced in 1944, whereby most wage earners have income tax deducted week by week from their wages.
- Peacock**, a bird of large size and beautiful plumage, its characteristic feature being a tail of brilliant "eyed" feathers, which it has the power of erecting and spreading out, the males possessing resplendent feathering to a much greater extent than the females. It is related to the pheasant; one species is found wild in the forests of India, and another inhabits Burma and the Malayan regions.
- Pea**, a term in heraldry indicating one of the furs borne in coat armour, the ground of which is black, with ermine spots of gold.
- Peanut, Ground Nut or Monkey Nut**. A member of the pea family native to S. America, but now cultivated in many parts of the world. After pollination, the flower stalk bends down and buries the pod containing the peas ("nuts") in the ground. The oil from these "nuts" can be used for margarine manufacture.
- Pearl** is produced by certain shelled molluscs, chiefly the oyster. The inner surface of the shells of the pearl oyster yield "mother-of-pearl," and distinct pearls are believed to be morbid secretions, caused by some external irritation. Many fine pearls are found in the actual body of the oyster. The Persian Gulf, Ceylon, the north-west coast of Western Australia, many Pacific islands, and the Gulf of Mexico are among the most productive pearl-fishing grounds. In ancient times Britain was renowned for its pearl fisheries, the pearls being obtained from a species of fresh-water mussel. Western Australia has produced a 40-grain pearl, the finest the world has seen. The largest pearl ever found was the "Beresford-Hope Pearl," which weighed 1,800 grains, over six times as much as the oyster that produced it.
- Peat**, decayed vegetable matter found mostly in marshy positions, and common in Ireland and Scotland. Peat is coal in its first stage of development. It is burnt for fuel in many cottage homes.
- Peccary**, an animal of the Ungulata order related to the Old World pigs but found only in America. There are two species: the collared peccary and the white-lipped peccary, the latter being a vicious and dangerous animal.
- Pedal**. The pedal keyboard of an organ. (See Organ.)
- Peel Tower**, the name applied to the numerous fortified towers or strongholds which are to be found along the Scottish Border.
- Peep o' Day Boys**, the Irish Protestant insurgents of 1784-95, so-called because they visited the houses of their antagonists at daybreak in search of arms.
- Pelagians** were a sect of the 5th century, founded by a Briton named Pelagius, who was preaching in Rome circa 400. A bitter controversy was aroused over the Pelagian doctrine, which maintained, among other things, that the consequences of Adam's sin did not go beyond himself, and that the general resurrection of the dead was not due to the resurrection of Christ. Pelagianism was condemned by the councils of Jerusalem and Carthage.
- Pelagians**, legendary peoples of ancient Greece who were the first to invade the mainland; settled in northern Greece and moved southward. Most prosperous in the 18th and 12th centuries B.C.
- Pelican**, a genus of bird with long depressed bills pouched underneath so that the bird can hold a number of fish in reserve for future consumption. They have immense wings and webbed feet.
- Pemmican**, venison or other meat, sliced, dried, pounded and made into cakes, used by explorers and others when out of reach of fresh meat.
- Penal Laws** are such enactments as impose a penalty for certain acts of omission or commission.
- Penance**, a punishment prescribed or voluntarily accepted as an atonement for a sin or offence. Public penance was largely exacted in olden times, and in the Roman Catholic Church to-day penance appointed to the sin is imposed at confession.
- Penguin**, a genus of large birds with small wings and webbed feet, existing in enormous numbers in the Southern Ocean and Antarctic Sea. They breed on the rocky coast, and in the season are to be seen in vast numbers standing erect over their eggs. They are facile swimmers, and live on fish.
- Penicillin**. An antibiotic drug produced by the mould *Penicillium notatum*, and discovered by Sir Alexander Fleming in 1928. It has been described as the most effective chemotherapeutic agent known. Bacteria which it kills include the staphylococci, streptococci, pneumococci, gonococci, meningococci.
- Peninsular War** lasted from 1808 to 1814. Fought in Spain and Portugal (the Iberian peninsula) by the British, Spanish, and Portuguese forces, chiefly under Wellington, against the French. The latter were defeated.
- Penitentiaries** are special prisons where convicts are confined and put through a course of training intended to reform and make useful citizens of them. The term is now used to designate places where criminals serve sentences of penal servitude.
- Pentagon**, government office in Washington (the largest in the world), housing many thousands of military and civilian workers in the War Department of the United States (Army, Navy, and Air Force).

- Pentateuch**, the first five books of the Old Testament—Genesis, Exodus, Leviticus, Numbers, and Deuteronomy.
- Pentatonic Scale**, the scale of five notes prevalent in Chinese, Japanese, Javanese, and some Negro music. Music based on the pentatonic scale is almost incomprehensible to an ear accustomed to the diatonic scale.
- Pentecost**, in the Christian Church, the Whitsunday festival in commemoration of the descent of the Holy Ghost upon the apostles during the feast of the Pentecost; to the Jews it is a time of solemn celebration—"the feast of weeks," celebrated on the 50th day, or seven weeks, after the Passover.
- "Pepys' Diary,"** by Samuel Pepys, was first published in 1825. The original MS. is deposited at Magdalene College, Cambridge. The "Diary" gives a picture of the social life of the period between Jan. 1st, 1660, and May 31st, 1669.
- Perch**, a well-known family of sea and fresh-water fish, with dark striped sides. The common perch of British rivers and lakes falls an easy prey to the angler because of its voracity.
- Percussion Instruments**, a collective term covering the instruments of an orchestra that give forth sound when struck, e.g., timpani, drums, cymbals, tambourine, triangle, glockenspiel. In some modern orchestral works the pianoforte is used as a percussion instrument instead of in its usual role as a solo instrument.
- Perfumes** are essences or odours obtained from floral and other substances. The chief flower perfumes are those obtained from rose, jasmine, orange flower, violet, and acacia. Heliotrope perfume is largely obtained from vanilla and almonds. Among the aromatic herbs which yield attractive perfumes are the rosemary, thyme, geranium, lavender, etc., while orange peel, citron peel, musk, sandalwood, patchouli, and other vegetable products are largely drawn upon. In recent times chemistry has been called into play in aid of the perfumer, and many of the popular perfumes of to-day are chemically prepared in simulation of the scents of the flowers or other natural substances the names of which they bear.
- Periclase**, a mineral form of magnesium oxide.
- Perigee**. The moon or the sun is said to be in perigee when it is at its least distance from the earth. The opposite of apogee (which see).
- Perihelion**. That point in a planet's orbit when it is nearest to the sun. The opposite of aphelion.
- Peripatetics** were followers of Aristotle, the name arising from the philosopher's habit of walking up and down while he expounded his theories.
- Peripatus**, an animal which stands as a link between the annelid worms and the arthropods. In appearance it resembles a caterpillar, and it respire by a system of air tubes like those in insects. Certain other points of internal structure point to a relationship with annelid worms. There are some fifty species, the best known being the S. African *Peripatus capensis*.
- Periscope**, an optical instrument which enables the user to observe objects on the other side of an obstacle without exposing himself. In trench warfare the periscope has been invaluable. Another form of periscope is used in submerged submarines to keep watch on surface vessels.
- Periwig**. (See *Peruke*.)
- Perjury**, the offence of giving false evidence. The ancient Romans threw the perjurer from the Tarpeian Rock, and after the Empire was Christianised, those who swore falsely upon the Gospel had their tongues cut out. The usual punishment in England from the 16th to the 19th century was the pillory, fine, and imprisonment. It is now punishable by imprisonment.
- Permian Formation**, a group of rocks lying between the Trias and the Carboniferous strata. It has three subdivisions, Upper, Middle and Lower Permian, all of which are rich in fossil deposits.
- Persels**, meteor showers which are to be seen every August. The first recorded observation of the Persels dates back to A.D. 830.
- Peruke**, the name given to the wigs worn by men in the latter half of the 18th century. The custom of wearing wigs was gradually superseded by powdering the natural hair. Wigs are still worn by the Speaker of the House of Commons, judges, and barristers.
- Peruvian Bark**. (See *Cinchona*.)
- Pessimism**, the theory, as taught by Schopenhauer, that this is the worst of all worlds, that it is better to sleep than to wake, to die than to sleep. The term is also used to express a tendency to look upon the dark side of things.
- Petard**, an instrument of war, invented in the 16th century, consisting of a metal cylinder which was filled with gunpowder, and fired at gates or barriers to blow them up. It is now obsolete.
- Peterloo Massacre**, a result of a conflict between the military and a large concourse of people assembled at a Parliamentary Reform meeting held on Aug. 16th, 1819, on St. Peter's Field, Manchester, involving the loss of many lives.
- Peter's Pence**, the tax levied in England by the Pope from the 8th or 9th century, and subsequently extended to other countries. It amounted to a silver penny per hearth. It was withheld by England in 1366 in order to bring pressure to bear on the Pope to agree to the statute of praemunire, and was abolished by Henry VIII. in 1534, though it has since been revived as a voluntary contribution by Roman Catholics.
- Peter's, St.**, at Rome, as it at present exists, was built in the 16th and 17th centuries, the first stone being laid by Pope Julius II. in 1506, and it was not completed until 1660. The dome was designed by Michelangelo, and Raphael was employed for a time in decorating the building. It is the chief church of Roman Catholic Christendom and in it the Popes are crowned.
- Petition of Right**, passed in 1628, defined unconstitutional taxation, billeting, arbitrary imprisonment, and martial law over civilians as illegal. It was conceded by Charles I. to his Parliament in return for a vote of five subsidies.
- Petrel**, ocean birds of great power of wing, belonging to the order of tube-nosed swimmers, found more especially in the Southern Ocean. They are tireless fliers and return to land only to breed. The storm petrel, called by sailors Mother Carey's chicken, breeds in islands off the British coasts, and its habit of patting the water with its feet while searching for food gives the appearance of walking on water—hence the name petrel (little St. Peter). Related to the petrel are the albatross, shearwater, fulmar, and the mutton-bird of Australia.
- Petroleum**, a mineral oil composed of a very complex mixture of hydrocarbons, occurring naturally in the earth and recovered by pumping or drilling under great pressure. The composition of the crude oil varies according to source and may be divided roughly into two types: paraffinous and naphthenic. The crude oil is subjected to fractional distillation which separates out the various grades of petroleum with their different boiling points. "Cracking" converts, by heating under pressure, oils of high boiling point into more volatile oils suitable for petrol engines. A great industry has grown up around petroleum, and the by-products, which used to be regarded as waste, form the basis of the modern synthetic-chemical industry (rubber, plastics, etc.). Chief sources are: U.S.A., Mexico, Venezuela, Soviet Russia, Persia, Rumania, and Poland. The oil is carried in pipe lines sometimes for hundreds of miles from oilfield to port.
- Pewter**, alloy of tin and lead formerly much used for making household utensils and ornaments.
- pH Value**. Measure of the hydrogen-ion concentration and hence of the acidity or alkalinity of aqueous solutions expressed on a logarithmic scale. Acids: 0-7; alkalis: 7-14. The pH of a solution is defined as the logarithm to the base 10 of the reciprocal of the hydrogen-ion concentration in gram molecules per litre.
- Phalanger**, pouched marsupial mammals. They are arboreal and superficially resemble squirrels. There are two genera of flying phalangers or flying squirrels, which have a remarkable membrane along each side of the body enabling the animals to glide through the air. The members of the phalanger family are confined to the Australasian and oriental regions.
- Phalangid**, a member of the arachnid order Phalangida: popularly known as "harvesters."
- Phalanx**, a name applied by the ancient Greeks to

a body of troops drawn up in close array, with overlapping shields, and eight, ten, or more rows deep. The Macedonians stood sixteen deep. A Greek phalanx consisted of 8,000 men.

**Pharmacopœia**, an official publication containing information on the recognised drugs used in medicine. Each country has its own pharmacopœia. The British Pharmacopœia (B.P.) is published under the direction of the General Medical Council. The Pharmaceutical Society issues the British Pharmacopœia Codex (B.P.C.). **Pharos**, the name of the first lighthouse, built by Ptolemy II. about 280 B.C., on the Isle of Pharos, at the entrance to the harbour of Alexandria. It was about 460 ft. high, and one of the "seven wonders."

**Pheasant**, game-birds allied to the partridges, quails, peacocks and turkeys, distinguished by their brilliant plumage and long tapering tail. First found by the Greeks in Georgia where the River Phasis flows through to the Black Sea.

**Phenol or Carboic Acid**. A colourless solid with a characteristic odour. It is poisonous, and an effective disinfectant.

**Phenology** is the study of the time of occurrence of recurring natural phenomena, such as the flowering of plants and the first appearances of birds, as related to weather conditions.

**Philippics**, the orations delivered by Demosthenes, 352-341 B.C., against Philip of Macedon—remarkable for their acrimonious invective. The word was also used for Cicero's speeches against Antony. In modern use, any impassioned invective.

**Philology**, the study of the literary memorials of different nations. Comparative Philology is more strictly the science of language in its various forms; origins, laws, and alliances.

**Philosopher's Stone**. (See Alchemy.)

**Philosophy** is concerned primarily with the nature of reality (metaphysics) and seeks to determine also the nature of human knowledge with its limitations. It has been described as a sort of "clearing house" of mankind's experience, assessing and evaluating its meaning and significance while examining the beliefs derived therefrom. Enquiry into the nature of "good" and "right"—for the individual (ethics) and for the community (political philosophy)—as well as the nature of beauty (aesthetics) are other branches of the subject. Philosophy has been likened by the great contemporary philosopher, Bertrand Russell, to a No-Man's Land—"something intermediate between theology and science"—since it is concerned with speculations on questions which neither science nor dogma can convincingly answer.

**Phlogiston**. The phlogiston theory of Becher and Stahl postulated that there was a material substance (phlogiston) in all combustible bodies, and that combustion was a release of phlogiston. It was overthrown at the end of the 18th century following the discovery of oxygen, and Lavoisier's conclusive proof that the products of combustion weigh more than the original combustible substance, whereas according to the phlogiston theory they should weigh less.

**Phoenix**, a fabled bird of Egyptian mythology. **Phoenix Park**, the great public park of Dublin, 1,800 acres in extent and containing the Vice-Regal Lodge. It was in this park that Lord Frederick Cavendish, Secretary for Ireland, and Under-Secretary Thomas Burke were assassinated in 1882.

**Phonograph**, an instrument for reproducing sounds and consisting of a wax cylinder, rotated by clockwork or by a handle, and having a mouth-piece into which a person speaks. As the voice reaches the cylinder the vibrations are recorded on the wax, from which what has been spoken into the mouthpiece can be afterwards reproduced as required. Invented in 1877 by Edison, and developed into the gramophone.

**Phosphorus** was discovered by Brandt in urine in 1669. It is found in most animal and vegetable tissues. It is an essential element of all plants and of the bones of animals. In combination with various metals it forms different phosphates, which are largely utilised as manures. The chief commercial use of phosphorus is in the preparation of matches.

**Photo-electric cell or Electric Eye**, an instrument which registers light intensities. Its uses are

numerous, and include measurement of stellar light, daylight illumination, the density of photographic plates, and for converting light waves into sound waves as in the talking pictures.

**Photogrammetry**, the science of measurement from photographs taken from an aircraft. Aerial photography has many uses and is of great value to military intelligence and for map-making.

**Photometer**, an instrument, of which there are various forms, for measuring the intensity of light.

**Photomicrography**, the taking of photographs through a microscope.

**Photosynthesis** is the process by which plants build up food by means of light. The carbon dioxide and water absorbed by plants are converted by photosynthesis into complex food substances, such as sugar and starch, by the green colouring matter *chlorophyll*, helped by the radiant energy of the sun. (See pp. 171-72.)

**Phylloxera**, a kind of plant lice related to aphids, which attack the grape vine, and in some years cause great devastation in the vineyards.

**Physicians, Royal College of**, was constituted in London in 1518, Dr. Linacre, physician to Henry VIII., and the projector of the College, being its first president. The present College in Trafalgar Square was erected about 1825 from designs by Sir R. Smirke.

**Piano-Accordion**, a small, portable reed-organ whose melody is played by the right hand on a short piano-type keyboard. The left hand operates up to 120 stud-like bass keys, each of which produces a standard chord. The instrument is slung from a strap across the shoulders and wind for the reeds is provided by a central bellows operated by the movement of the left arm. The piano-accordion is an Italian development of the older accordion or concertina.

**Pianoforte**. Fundamentally a mechanical dulcimer whose hammers are operated from a keyboard, just as the harpsichord is a mechanical harp whose strings are plucked by quills operated from a keyboard. Historically, however, the pianoforte followed the harpsichord, on which it was regarded as an improvement. The name itself (piano-forte = soft-loud) was chosen to point out that the new instrument gave a much wider control of volume than did the harpsichord. The pianoforte first appeared in the 18th century and its invention is generally attributed to an Italian, Cristofori, who produced an instrument called the "piano e forte" in 1711. England first saw the pianoforte in the 1760's. The pianoforte soon came to be recognised as the ideal instrument for the amateur musician—a fact which nearly led to its undoing. First there arose the atrocious "cabinet-piano" in which an inferior pianoforte movement was incorporated in a piece of furniture designed to fulfil some other purpose. Later, in Victorian times, when no middle-class home was complete without a "piano," the market became flooded with cheap and nasty instruments in whose design size and price were the only considerations. Fortunately, however, the great composers of the 18th and 19th centuries realised the possibilities of the pianoforte and wrote pieces for it that taxed the powers of both performer and instrument. This put a constant pressure upon pianoforte manufacturers to improve their instruments so that these difficult pieces could be played by less expert musicians. The modern pianoforte appears in two main forms: the "grand" in which the frame bearing the strings is horizontal, and the "upright" in which the frame is vertical. The frame is a very heavy iron casting capable of withstanding a string tension of many tons. In older wooden-framed pianos the string tension is lower and the tone consequently less brilliant. The "check action" in which the hammers pivot freely has superseded the "sticker action" in which the hammer is pushed forward by a system of levers. Most pianos are provided with two pedals. The "soft" pedal should move the hammers a little to one side so that they strike only one string instead of two or three, but it may work by shortening the travel of the

- hammers or, in cheap actions, by the application of a light damper to the strings. The "loud" or sustaining pedal removes the main dampers so that a note continues to sound after the key has been released. Probably the most famous makers of pianofortes are Pleyel (France) and Blüthner and Bechstein (Germany). Good English pianos have been made by Broadwood, Collard, etc.
- Plastre**, once a common Spanish silver coin worth 4s. 3d. English. The name of plastre only applies to-day to certain coins of low denomination in Turkey, Egypt, and Cyprus.
- Pibroch**, a type of Scottish bagpipe music consisting of variations on an air.
- Piccolo**, a small flute with a high, piercing note. When required, the piccolo is usually played by one of the flautists in an orchestra.
- Picts**, inhabitants of Scotland in pre-Roman times, are held by some historians to be a branch of the old Celtic race, by others to have been of Scythian origin. They occupied the lowland portion of Scotland, and were subdued by the Scots in the 9th century, Kenneth II. becoming king of the whole of Scotland.
- Pietists** were a body of religious reformers, who, under the leadership of Spener, a Leipzig professor, spread themselves over Germany in the 17th and 18th centuries. Although guilty of some extravagances they were zealous in their aims, and did good work in promoting the practical side of religion.
- Pig**, the popular name for a hog or swine, applied to both sexes, though, when making distinctions, the mature male is styled a boar and the female a sow.
- Pigeon**. See Ring Dove, Rock Dove, and p. 979.
- Pike**, a familiar fresh-water fish abundant in the temperate regions of both hemispheres. It forms good sport for the angler in our rivers and lakes, and sometimes attains a weight of from 20 to 30 lb. It is extremely voracious. Its covered with small scales, and has a ferocious-looking head.
- Pilchard**, a fish of the herring family, but with smaller scales and more rounded body. It appears off the Cornish coasts in vast shoals every summer.
- Pilgrimage**, the undertaking of a journey to a distant place or shrine to satisfy a religious vow or secure spiritual benefit, was resorted to in early Christian times. The first recorded pilgrimage is that of the Empress Helena to Jerusalem in 326. In the Middle Ages pilgrimages became common, and were undertaken by monarchs and people of rank in all Christian countries. The Mohammedans have been making pilgrimages to Mecca since the death of the Prophet, such duty being enjoined by the Koran. Among the great centres of Christian pilgrimages are Jerusalem, Rome, the tomb of Becket at Canterbury, and the holy places of Lourdes and La Salette in France.
- Pilgrim Fathers**, the 101 English Puritans, who, after living some years in exile in Holland, to escape persecution in their own country, set sail in Sept., 1620, for America, landing at Plymouth on Dec. 4th of that year. They founded the settlement of Plymouth, and are regarded as the pioneers of American colonisation although 13 years earlier a small Virginian colony had been established.
- "Pilgrim's Progress,"** Bunyan's famous allegory, written in Bedford gaol. The first part was issued in 1678. It is the greatest work of its kind.
- Pilgrim Trust**, The, was established in 1930 through the generosity of an American, the late E. S. Harkness, who "had many ties of affection with the land (England) from which he draws his descent." A sum, approximately £2,000,000, was placed in the hands of trustees for distribution in Great Britain. The terms of the deed are sufficiently wide to cover charitable, educational, and national institutions, and the disbursements are made at the discretion of the trustees. This generous benefaction is due to the donor's admiration of the part Great Britain played in the first world war, and the financial burden she has since sustained.
- Pillory**, a wooden instrument of punishment in use in England until 1837. It consisted of a pair of movable boards with holes through which the culprit's head and hands were put, and was usually erected on a scaffold. While a person was undergoing this punishment the mob generally pelted him with stones and rubbish, sometimes to his serious injury. People convicted of forgery, perjury, or libel were often condemned to the pillory, but from 1816 to 1837 the only offence for which it could be inflicted was perjury.
- Pinchbeck**, an alloy (5 parts of copper to 1 of zinc) introduced by a London toy-seller named Pinchbeck in the 18th century, and largely used for the making of watch cases and other articles where cheapness was desired. It was intended to imitate gold.
- Pine**, a coniferous tree that flourishes in most northern latitudes, and including about seventy species, which afford valuable timber, and yield turpentine and tar. The "Scotch fir" is the only species native to Britain.
- Pinnacle**, a pointed, spire-shaped structure rising above the roof of a building, serving mainly as ornament, but also of use in giving firmness to the part it rests on. Pinnacles are found in nearly all styles of architecture.
- Pins** were in existence, no doubt, in prehistoric times, and have been unearthed in British barrows. Brass pins were introduced to England from France in 1543. They were manufactured by machinery in England in 1824.
- Pipa**, a species of toad inhabiting Guiana, and not found elsewhere. It is of considerable size, and is remarkable for the fact that the female carries its eggs on its back until they are hatched, herself depositing them in that position. Generally known as the "Surinam toad."
- Pipe-fish**, an eel-like fish with an elongated snout resembling a pipe. It is common in British waters, and there is an American species. It is related to the Sea-horse.
- Pistole**, the name originally given to a Spanish gold coin, worth about 16s. sterling. Other countries—France, Italy, Germany—also adopted the name and altered the value.
- Pistols**, small firearms, were invented at Pistoia in Italy, and adopted by the English cavalry in 1544. To-day pistols are mostly of the revolver pattern.
- Pitcairn Islanders** were originally the mutineers of the *Bounty*. They took possession of the island in 1790, and it was not until 1814 that their whereabouts was ascertained, accidentally, by a passing ship. The mutineers, under their leader, Adams, had settled down to a communal existence, married Tahitian women, and increased so in numbers that in the course of years they were too many for the island to support, and in 1856 they were removed by the British Government to Norfolk Island. A small number returned to Pitcairn.
- Pitchblende** or **Uraninite**, a relatively scarce mineral. It is nearly all uranium oxide, but lead, thorium, etc., are also present. Pitchblende from Joachimstal in Czechoslovakia was the material in which radium was discovered by the Curies. Pitchblende also occurs in Saxony, Rumania, Norway, Cornwall, the Belgian Congo, and at Great Bear Lake in Canada.
- Plague**, a fatal epidemic which spread over Europe and devastated England at different periods between the 10th and the 19th centuries. In the 14th century the devastating outbreak known as the Black Death swept over Europe. The Great Plague of London occurred from 1664-65.
- Plaice**, a familiar British sea-fish, of the flounder family, characterised by the red spots on the upper surface.
- Plaid**, a comprehensive garment of tartan or woollen material checked and coloured in distinctive markings for different Scottish clans and worn by women as well as men.
- Plainsong**, a style of musical composition sung in unison (all voices singing the same tune without harmony), familiar in the Western Church from very early times and still performed, principally in the Roman Catholic Church. Though restrained and contemplative in spirit, it is capable of expressing deep emotion.
- Planets**, the name given to such celestial bodies as revolve round the sun in elliptical orbits. The name was first used by the Greeks to indicate

their difference from the fixed stars. There are nine planets, Mercury, Venus, the Earth, Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto. See p. 155.

**Plankton**, a word which first came into biological use in 1836 to describe the usually microscopic plants and animals floating, swimming, and drifting in the surface waters of the sea. To be distinguished from *nekton* (swimming animals like fishes and squids) and *benthos* (plants and animals living on the sea bottom, like fixed algae, sponges, oysters, crabs, etc.).

**Plantagenets**, the kings who reigned in England between 1154 and 1485 and included the Houses of Lancaster and York. More correctly they are styled Angevins, from Anjou, of which Geoffrey, father of Henry II., was Count, and whose badge was a sprig of broom (*planta genista*).

**Plassey**, Battle of, was fought between the British under Clive and the Indians under Suraj-ud-Daula on June 23rd, 1757. The British gained a decisive victory over much larger forces.

**Plastics**, a broad term covering those substances which become plastic when subjected to increased temperatures or pressures. The Plastics Industry is based on synthetic organic examples of this group. There are two classes of plastics: the *thermoplastic*, which become plastic every time they are heated (e.g. cellulose plastics) and *thermosetting*, which undergo chemical change when heated, so that once set they cannot be rendered plastic again (e.g. Bakelite).

**Plate**, the term applied to gold, silver, or plated-ware, such as spoons, knives, forks, dishes, cups, etc. (See Goldsmiths Company.) In recent times it has been the custom to include under the term articles of the baser metals covered with a thin coating of silver and differentiated as "electro-plate."

**Platinum**, a scarce white metal generally allied with iridium, osmium, ruthenium, and palladium. It can only be melted in an oxyhydrogen or electric furnace, but can be rolled out into a film-like sheet, or drawn out to the finest wire.

**Platyhelminths or Flat-worms**, the phylum of the animal kingdom to which the parasitic flukes and tapeworms and the free-living planarians belong.

**Plebeians** were the ordinary citizens of Rome as distinct from the patricians. There was a long struggle between the two orders for political equality.

**Pleiades**, famous cluster of stars in the constellation of Taurus. Of the seven principal stars in the group, one is rather faint, and many myths have sprung up about this "lost pleiad" as it is called.

**Pleistocene**, the geological period that succeeded the Pliocene. It is supposed to have begun more than half a million years ago. During the Pleistocene, also known as the *Great Ice Age*, there were four cold periods, when the ice sheets covered northern Europe and N. America, separated by warm periods when the glaciers drew back into the mountains.

**Pliocene**, the geological period preceding the Pleistocene, and the last major division of the Tertiary strata. It began about fifteen million years ago.

**Plough Monday**, the first Monday after the Epiphany, when in olden times the rustic population returned to work after the Christmas festivities.

**Plover**, wading birds, widely distributed over marshy places of Europe. Several species occur in Britain, including the Golden-plover, which breeds on the moors of Devon, Somerset, Wales, N.E. Yorkshire, and is widely distributed over Scotland.

**"Plug"** Riots were frequent in the manufacturing districts of the North of England about 1842, when there was great distress among factory workers. The rioters attacked mills and, by drawing the plugs from the boilers, stopped the machinery.

**Pluto**, the last planet to be discovered. Its existence was established by C. W. Tombaugh at the Flagstaff Observatory in Arizona in Jan., 1930, from reckonings made by P. Lowell in 1914. It is the most distant of all the known planets; diameter about 3,650 miles. Its mean distance from the sun is estimated at 3,671 million miles.

**Plutonium**, a chemical element capable of nuclear fission in the same way as Uranium 235. Not until after it had been synthesised in atomic piles during the second world war was it shown to occur in infinitesimally small traces in nature. Its synthesis in the atomic pile depends on the capture by Uranium 238 nuclei of neutrons; immediate product of this reaction is the element neptunium, but this undergoes rapid radioactive disintegration to plutonium.

**Plymouth Brethren**, a Nonconformist sect founded about 1830 by J. N. Darby. They are not at great variance with other Protestant Churches, recognise no order of ministers, and receive into communion all who acknowledge Christ.

**Poet Laureate** is the poet attached to the royal household, an office officially established in 1668, though its origins go back to the early Middle Ages, when minstrels were employed at the courts of English kings. Chaucer, Skelton, and Spenser, though not court poets, were all unofficial poets laureate. Ben Jonson has been described as the first "official laureate," but the office was not officially recognised until 1688, when Dryden was formally granted the office of P.L. It is customary for the Poet Laureate to write verse in celebration of events of national importance. John Masefield succeeded Robert Bridges as P.L. in 1930.

**Pogrom**. Russian word meaning "destruction." First used to describe the Czarist attacks on the Jews in 1881 in Russia (where they have vanished since the Revolution). In 1938 Hitler ordered a general pogrom in Germany. All synagogues were destroyed and nearly all Jewish shops and homes, Jewish hospitals and children's homes suffered. During the subsequent war Jews of central Europe were systematically exterminated in cold blood by the Nazis.

**Poitiers, Battle of**, was fought on Sept. 19th, 1356, during the Hundred Years' War, when Edward the Black Prince gained a complete victory over John, King of France, who was taken prisoner and brought to London.

**Pole-Cat**, an animal of a dark-brown colour, about 18 in. in length, exclusive of tail; the ears and face-markings are white or light brown. It is carnivorous and belongs to the weasel family. Like the skunk, it emits an offensive colour.

**Pole-Star** is of the second magnitude, and the last in the tail of the Little Bear constellation. Being near the North pole of the heavens—never more than about one degree from due north—it always remains visible in the Northern hemisphere; hence its use as a guide to seamen.

**Police**, a regular force established for the preservation of law and order and the prevention and detection of crime. The powers they have vary from country to country and with the type of government; the more civilised and democratic the state, the less police intervention. England, compared with countries abroad, was slow to develop a police force, and it was not until 1829 that Sir Robert Peel's Metropolitan Police Act established a regular force for the metropolis, later legislation establishing county and borough forces maintained by local police authorities throughout England and Wales. Up to that time police duties were discharged by individual constables and watchmen appointed by local areas in England and Wales. The efficiency of the Police is the concern of the Home Office, and in Scotland of the Scottish Office. At 31st December 1955, the total establishment of the regular police in England and Wales numbered 75,802 (including 2,379 women); the strength was 65,776 (including 2,060 women). The Metropolitan Police Force had an establishment of 19,967 (including 523 women) and a strength of 15,925 (including 499 women). The Metropolitan Police has approximately 200 horses.

**Polka**, a dance introduced into England from Bohemia in 1843; it won great popularity, but is now seldom danced.

**Poll Tax**, a tax levied on every adult—every head or poll—was first imposed in England in 1380, and led to the "Peasants' Revolt," headed by Wat Tyler. It was reimposed at intervals, notably in 1513 and in the reign of Charles II. The poll tax of 1698 was the last of its kind.

**Pollution of the atmosphere** is due chiefly to the

- incomplete combustion of fuels, especially coal, large particles of soot being deposited fairly quickly close to their place of origin and smaller particles (including smoke) remaining suspended in the air for a long time. Corrosion of exposed objects and damage to buildings result from the production of sulphuric acid. The introduction of more efficient furnaces and the washing of fume gases have assisted in the abatement of smoke and other forms of pollution. Estimation of polluting substances is carried out systematically in Great Britain by the Department of Scientific and Industrial Research, the dust and matter brought down with the rain being collected in large deposit gauges; automatic filters provide continuous records of the variation of the floating solid impurities; and apparatus is employed to measure the concentration of sulphur dioxide. "Smog" (smoke-laden fog), which reduces visibility to zero and affects the respiratory organs, is liable to occur when the air near the earth is cooled below its dew-point temperature by radiation on a still, cloudless night, when an accumulation of smoke over a large city cuts off daylight and produces gloom, and absence of wind or vertical currents prevents the lower layers of the air from getting away. Such conditions are associated with the smoke-laden atmosphere of large industrial towns during a winter anticyclone.
- Polonaise or Polacca**, a musical composition in the style of a traditional Polish dance. Chopin is the best-known composer of Polonaises.
- Polonium**, a radioactive element discovered by Madame Curie in 1898, and named after her native land of Poland.
- Polytheism**, the doctrine of plurality of god-heads.
- Polyzoa or Bryozoa**, the name given to a phylum of invertebrate animals which live in colonies which have the appearance of moss. Hence the name "Bryozoa," or "moss animals."
- Pomander**, the name given to a small ball or box which was formerly carried suspended from the neck or girdle, and contained perfumes and spices which were supposed to be a protection against infection.
- Pomology**, the science of fruit-growing.
- Ponard**, a stabbing weapon somewhat larger than a dagger; very commonly carried about the person by Spaniards and Italians of the 16th and 17th centuries, but never much in vogue in England.
- Pontifex**, the title assigned in ancient Rome to members of the chief College of Priests, whose duties were of a general kind. The "pontifex maximus" was the chief religious official of the State.
- Pontoon**, any temporary floating structure that forms part of a bridge across a river. Pontoons are in various forms, mostly cylindrical and hollow, others take the shape of deck-boats locked together. Pontoon bridges capable of supporting railways are a feature of modern military equipment.
- Poodle**, a well-known variety of domestic dog having a thick curly coat which in France it is the custom to cut close on the lower part of the body. It is an exceptionally intelligent animal, capable of being taught many tricks.
- Pope**, The, the head of the Roman Catholic Church and successor of St. Peter. He is elected by the body of Cardinals; since 1870 when the King of Italy deposed the holder of the office from temporal power, no Pope had left the Vatican between appointment and death until 1929, when peace was made between the Church and State in Italy and compensation was paid to the Holy See for the loss of temporal power.
- Poplin**, a favourite fabric composed of silk and worsted. The industry was introduced into this country from France by Huguenot refugees in 1693.
- Poppy Oil**, a fixed oil obtained from the seeds of the opium-poppy, and used as a food, for illumination, and in a certain class of soapmaking.
- Porcelain**. There are three kinds of pottery: earthenware, stoneware, and porcelain; the marks shown on pp. 746-47 are restricted to those used on porcelain, a word thought to be derived from the Italian *porcellana*, indicating the texture of a piglet. The majority of porcelain made on the continent was of "hard-paste," or true porcelain, similar to that discovered by the Chinese as early as the T'ang Dynasty (A.D. 618-907); it was composed of kaolin (china-clay) and petuntse (china-stone) which when fired at a high temperature formed an extremely hard and translucent material. The recipe of "hard-paste" porcelain remained a secret of the Chinese until 1708, when it was re-discovered in Europe by Johann Böttger of the Meissen factory (popularly known as Dresden). Aided by runaway Meissen workmen factories were soon established at Vienna, Venice and later in many other parts of Germany. During the middle of the 18th century Plymouth and Bristol were the only English factories to make this type of porcelain, elsewhere both in England and France the material used was known as "soft-paste" or artificial porcelain which was made by blending varying ingredients together with the materials of glass. By the nineteenth century hard-paste porcelain was used throughout practically the whole of the continent, but in England a hybrid-paste containing bone-ash was introduced and is still the material used to-day.
- Porcupine**, a rodent whose back is covered with long, sharp, black and white spikes, which form a powerful means of defence. There are two families of porcupines; one is confined to the Old World and the other contains the American porcupines.
- Porphyry**, a form of crystalline rock of many varieties that in ancient Egypt was quarried and used for the decorative portions of buildings and vessels. The term is applied generally to the eruptive rocks of the porphyritic class.
- Porpoise**, a marine mammal of the dolphin family, and a common inhabitant of northern seas. Porpoises travel in shoals, their progression being marked by constant leaping and plungings. Their average length is from 4 to 5 ft. There are several species, nearly all being confined to northern oceans.
- Port**, a special kind of red Portuguese wine, taking its name from Oporto. It was little known in England until the Methuen Treaty of 1703, when it was permitted to be imported at a low duty.
- Portcullis**, a strong, movable timber or iron grating let into the wall of the gateway to a feudal castle, and capable of being lowered or raised at will. It formed an effective protection against attack in the days before firearms.
- Porter** received its name from the fact that it was first drunk by porters in London. (See Beer.)
- Portland Cement** is a mixture of about 20 parts of clay with 80 parts of chalk, specially prepared in kilns, and forming a substance which, after admixture with water, will set hard and solid.
- Portland Vase**, one of the most renowned specimens of Greek Art, long in the possession of the Portland family. In 1810 it was placed on loan in the British Museum, and in 1845 was smashed to pieces with a stone by a maniac; but, having been cleverly restored, it was exhibited in the Jewel room. It was discovered in the 17th century near Rome in a marble sarcophagus, and is supposed to have been the cinerary urn of the Emperor Severus. It was purchased from the Barberini family in 1770 by Sir Wm. Hamilton, subsequently sold to the Duchess of Portland. The vase which is actually a two-handled urn, stands about 10 ins. high, is of transparent dark blue glass, ornamented with figures in relief in white enamel. The vase was removed by the owner from the British Museum in 1929 and sent to Christie's but withdrawn at 29,000 guineas. It was finally purchased by the British Museum in 1945, and restored in 1949.
- Portreeve** in olden times was an official appointed to superintend a port or harbour, and before the name of mayor was used the chief magistrate of London was styled the Portreeve.
- Positivism**, a system of philosophy propounded by Auguste Comte (1798-1857), rejecting all metaphysical conceptions; a species of utilitarianism.
- Positron**, the "positive electron," an atomic particle having the same mass but an electric charge equal but opposite to that of an electron. It was discovered in 1932.
- Post Office**. The mail-carrying system of the British Post Office developed out of the organisation for the conveyance of State despatches by

**Royal messengers.** The first Master of the Post was in office as a Court Official by 1516. In 1635 the State service was extended by Royal proclamation to cater for the conveyance of public correspondence on payment of fixed rates of postage, but the intervention of Civil War delayed the development of the scheme. In 1657, however, Cromwell created the Post Office under the control of a Postmaster-General responsible to Parliament, and Charles II. confirmed this arrangement. Since then the General Post Office has constituted one of the three great revenue-earning Departments. The modern conception of letter post with a uniform rate of postage by weight and irrespective of distance, and prepayment by means of adhesive stamps, dates from 1840, as the result of the great postal reforms of Sir Rowland Hill. The Money Order service was inaugurated in 1792, the Post Office Savings Bank in 1861, the Postal Order service in 1881, and Parcel Post services in 1883. The Telegraph system was taken over and extended in 1870, whilst the Telephone system, apart from the local services still operated under Crown licence by the Hull Corporation and in Jersey and Guernsey, was taken over completely by the Post Office in 1912. The growth of the work of the Post Office since the introduction of Uniform Penny Postage has been phenomenal and has amply justified the measure. The following statistics are the latest available (1954-55):—

Letters etc., posted . . . . .	9,500,000,000
Parcels handled . . . . .	242,796,000
Air Services to 200 countries.	
Telegrams handled . . . . .	47,987,000
Telephones rented . . . . .	6,372,000
Telephone Exchanges (77% automatic) . . . . .	5,927
Telephone calls per annum . . . . .	3,925,115,000
Mileage of wire (mostly underground) . . . . .	32,982,000
Due to Savings Bank depositors (including interest) at December 31st, 1954 . . . . .	£1,727,380,000
Savings certificates—amount remaining invested (excluding interest) at March 31st, 1955 . . . . .	£1,813,577,000
Value of transactions with the public . . . . .	£3,976,878,000
Surplus of income over expenditure . . . . .	£5,156,000

(For London Postal Districts, see "General Compendium.")

**Potassium**, a metal discovered by Sir Humphry Davy in 1807, and now generally obtained by the electrolysis of fused potassium hydroxide or chloride/fluoride mixture. Its principal minerals are carnallite and kainite, and is relatively common in rocks, accounting for about 2½% of the earth's crust. An essential element for healthy plant growth, the ashes of plants are relatively rich in potassium.

**Potoroo**, a marsupial animal so like the kangaroo in shape as to be called the kangaroo rat. Found only in West Australia and Tasmania.

**Potsdam Agreement** was signed by President Truman, Generalissimo Stalin, and Mr. C. R. Attlee in Aug., 1945. By this Agreement a Council of Foreign Ministers was established, representing the five principal Powers: China, France, Soviet Russia, the United Kingdom, and United States of America, with the task of drawing up the peace treaties for submission to the United Nations. It laid down, *inter alia*, that German militarism and Hitlerism should be destroyed; that industrial power should be so reduced that Germany would never again be in a position to wage aggressive war; that surplus equipment should be destroyed or transferred to replace wrecked plant in allied territories: that Germany should be treated as an economic whole; and that local self-government should be restored on democratic lines as rapidly as was consistent with military security.

**Pot-Wallopers**, the name applied to certain electors who, prior to the Reform Act of 1832, were permitted to receive the franchise on producing proof that they had, as the phrase went, "boiled their own pot" (were householders in the constituency).

**Poultry Compter** was one of the old London City

prisons, and stood in what is now called the Poultry. The Poultry Chapel was built on the site of the Old Compter in 1819.

**Prado Gallery**, the great public picture collection of Madrid, containing a superb collection of paintings by Velasquez, Murillo, Raphael, Titian, Dürer, Van Dyck, Rubens, Holbein, etc.

**Præmunire**, a legal term applied to any offence calculated to interfere with, or cast contempt upon, the prerogative of the Crown. One of the chief statutes of this name, intended to prevent the encroachments of papal power in England, was that of Richard II. (1392).

**Prætorian Guards**, a personal bodyguard established by the Emperor Augustus, and employed down to the time of Constantine.

**Pragmatism** is the philosophical school of thought which believes that the test of any theory or belief should be its practical consequences. The American philosopher and psychologist William James (1842-1910) was one of the first Pragmatists. He believed that it was impossible to discover the "real" world outside our senses, and we must therefore concern ourselves primarily with human experience. Since the universe would be a worse place without a belief in human responsibility, morals, and the freedom of the will, it was necessary, he considered, to believe in these concepts. Pragmatism is essentially an American school of thought and has had few supporters elsewhere. John Dewey (1859-1952) has had a great influence on American education and political thought. Dewey believed that we can never know the answer to the fundamental questions of the universe or discover anything outside our immediate experience. Such problems are, therefore, of no importance to us; our main concern must be the practical problems of living.

**Prairie Dogs** are common rodents in Western America and very like the marmot in general structure. They live in communities in burrows.

**Prawns**, crustaceans allied to lobsters, shrimps, and cray fishes.

**Prebendary**, a clergyman who receives a prebend or stipend because of his special connection with a cathedral or cathedral church.

**Predestination**, the Calvinistic doctrine that God from and to all eternity predestined everything to happen as it does and must happen, even to the fixing of the souls to be rewarded and punished.

**Prefect**, chief magistrates in ancient Rome. The title is now applied to the chiefs of administration of the departments of France.

**Prelude**, a piece of music intended to precede another piece, e.g., Prelude and Fugue. The name has been used by many composers (e.g., J. S. Bach, Chopin) to describe short compositions for which no following piece was written.

**Pre-Raphaelites**, a school of artists formed about 1843, and including among its exponents Millais, Rossetti, Holman Hunt, and others, whose ideal was absolute fidelity to Nature. For a time the school kept well together, and exercised much influence upon art developments; but although much of their work still pleases, the movement was out of date by the end of the century. Ruskin in his writings defended their work.

**Press-Gang**, a body of sailors employed to impress men into naval service, frequently resorted to in England, especially during the war with France in the early 19th century. Press gangs were not used after that.

**Primogeniture**, the right of the first-born male child to inherit the real estate of his father in the absence of direction by will or deed to the contrary.

**Primrose League**, founded in 1883 to commemorate Lord Beaconsfield's (Disraeli) political work and to promote the principles he advocated. The anniversary of his death, Apr. 19th, is called Primrose Day.

**Prinos**, the evergreen oak, or Winterberry, a bush the leaves of which are sometimes used in America as a substitute for tea.

**Printing** by movable types was first used by Johann Gutenberg, a citizen of Mainz about 1440. The invention is also claimed for Laurens Koster of Haarlem. It was introduced into England by Caxton, who set up a printing press in Westminster in 1476. Gothic characters

were first used, being superseded by Roman letters in 1518. In 1798 Earl Stanhope replaced the wood printing press by one of iron. In 1814 Friedrich Koenig applied the principle of steam power to the press. Mr. John Walter, of *The Times* newspaper, was the first to use the steam press which printed 1,100 sheets per hour. Improvements were introduced by Applegath and Cowper in 1828 and great strides were made in 1858 when the Hoe machine, which turned out 20,000 impressions an hour, was put on the market. Then came the Walter press in 1866 which printed on continuous rolls of paper from curved stereotyped plates. Modern Hoe machines can print a 43-page paper at 23,000 copies an hour (max. speed 50,000). The Monotype machine casts single letters and the Linotype whole lines. Priors existed in this country from the 8th century to the 15th, and were dependent upon the Abbeys.

**Privateers** were ships of private individuals licensed in time of war to seize and plunder the ships of the enemy. Privateering was abolished by the Declaration of Paris in 1856.

**Privy Council.** (See "A Citizen's Guide.")

**Programme Music.** In Tschakowsky's definition "... such symphonic music, or such instrumental music generally, as illustrates a definite subject placed before the public in a programme and as bears the title of the subject." Thus Beethoven's Pastoral Symphony, Tschakowsky's Romeo and Juliet and his 1812 Overture rank as programme music.

**Proportional Representation (P.R.).** An electoral system devised to make minority votes effective. Candidates are elected according to party lists and votes given to a party in any constituency which prove insufficient to elect a candidate are reserved for a second scrutiny. If the total of these votes are sufficient for the election of one or more candidates they are taken from the national list and become members of parliament without a constituency. The supporters claim that P.R. more exactly reflects the will of the people; its opponents fear the domination of the party machine and the loss of personal contact with constituencies.

**Protestant,** as a denominational term, was first applied to the Lutherans, who, in 1529, protested against the encroaching power of papacy.

**Protocol,** diplomatic term denoting the first draft of any important document to be used for political purposes.

**Protoplasm,** the jelly-like mixture of compounds of which living matter is formed. The elements present in protoplasm in the greatest amounts are carbon, oxygen, hydrogen, and nitrogen. No attempt to make protoplasm synthetically has succeeded. (See *The Cell Theory*, p. 167.)

**Provost,** a Scottish official similar in rank to an English mayor. The Provosts of Edinburgh, Glasgow, Aberdeen, Perth, and Dundee are styled Lords Provost. The title of provost is also given to the heads of various English colleges.

**Prozymite,** a term used in the 11th century to indicate such as used leavened bread in the Eucharist.

**Prud'hommes (Prudent Men), Councils of,** were French trade tribunals, of masters and workmen, formed to decide on disputes. Originally a mediæval institution, they were revived by Napoleon in 1806, and were carried on by the Third Republic.

**Prunella,** a kind of material once largely used for gowns of peasant women, and shoe linings.

**Prussic Acid or Hydrocyanic Acid** is a compound of nitrogen, carbon, and hydrogen, and obtained by distillation of cyanide of potassium with sulphuric acid. It is a rapid poison because of its effect on the central nervous system, and has a sickly almond smell.

**Psalms, Book of,** for many years attributed to David, but present-day scholars are of opinion that the psalms were written by a series of authors at different times and for different purposes, and that few, if any, were written by David. The Holy Scriptures contain 150

**Psychical Research.** It need hardly be said that occult happenings and mysteries have been described from the earliest times. But modern

spiritualism has a much shorter history, dating, to be precise, from Mar. 31st, 1848, when the two Fox sisters of Hydesville, New York, began to produce mysterious rappings which were interpreted as spirit messages. The rapping movement spread like wildfire, and seances became popular, culminating in those of the medium Daniel Dunglas Home (1833-86), who impressed such famous men as Sir William Crookes and Alfred Russel Wallace and so unfavourably impressed the poet Browning. In 1882 the Society for Psychical Research was founded to study the phenomena of spiritualism scientifically, and counted among its members Sir Oliver Lodge, Barrett, Andrew Lang, Myers, and Sidgwick. Many phenomena have been investigated: apparitions, poltergeists, materialisations, telepathy, and precognition, but it is fair to say that no positive proofs of the existence of ghosts or of survival of bodily death have yet been found. Many mediums have been caught out cheating at one time or another—but this does not mean to say that they always cheat. Most moderate enquirers would take the view that many of the phenomena described do occur, but would deny that they are necessarily due to disembodied spirits. (See also *Telepathy*.)

**Psycho-analysis** is the name of the system of psychology devised by Sigmund Freud (1856-1939). Primarily intended as a means of treating neurosis, it resulted in theories as to the nature of mental processes which have, in part, at least, been accepted by the science in general. The basic thesis of the system is that the primitive mind of the child becomes differentiated into three aspects: the unconscious, a reservoir of the instincts and those thoughts and emotions which are unacceptable to the individual or society; the conscious mind or ego, in immediate contact with the world of reality; the superego, which represents the moral traits impressed on the child by its parents in early life. The unconscious is the source of all mental energy, which must, however, be modified in various ways before reaching consciousness by the superego (censor). Thus aggressive desires may be: (1) *expressed*, i.e., allowed expression in their crude form, but on a socially recognised occasion (war, boxing, etc.); (2) *sublimated*, i.e., made "sublime" by expression in a more highly developed form (competition in games, business, etc.); (3) *suppressed*, i.e., held down consciously as being inappropriate; (4) *repressed*, i.e., held down and refused recognition unconsciously. In the latter case the desires are liable to lead to neurotic symptoms, since they will find their way into awareness in a less obvious manner (e.g., a morbid interest in cruelty, murders, etc., or an excessive fear of losing one's temper). Neurosis is due to conflict between the superego and the unconscious. (See also *Neurosis in "Medical Section,"* and *Freudian Theory*, p. 179.)

**Psychology,** usually defined as "the study of the mind," has more recently been described as "the study of behaviour," since the term "mind" is somewhat ambiguous. (See *Mind*.) The first important psychologists (as distinct from philosophers) were the Germans Wundt and Herbart in the 19th century; the science is, therefore, a comparatively new one. Three phases have been evident from quite early days: (1) An Associationist phase during which an effort was made to isolate the units of mental life: at first these were described as "ideas," but later the Behaviourist school made the reflex its fundamental unit. The Associationists and Behaviourists regarded the mind in a somewhat mechanistic way in terms of stimulus and response, rather like a penny-in-the-slot machine. In fact, the Behaviourists denied the existence, or at any rate the value, of subjective data—they considered that psychology should concentrate on the observation of behaviour. Leading members of this school were Pavlov and J. B. Watson. (2) With Freud and, earlier, Herbart, emphasis was on the dynamic aspects of mind. The mind, it was supposed, must have some driving force behind it—the instincts. The Freudian system is based on this concept. (See *Psycho-analysis*.) McDougall was another leader of the dynamic

school with views otherwise widely divergent from Freud. Some of the fundamentals of both these views have been discarded by the most recent school of thought represented by: (3) Field theory. This scheme is based on the denial of the Behaviourists' thesis that the mind can be divided up into units—behaviour, it is claimed, can be understood only in its whole social context. This also brings Field theorists into conflict with the Freudians and their belief that all behaviour comes from within—from the unconscious. The most radical form of this approach is Situationism, which holds, more or less, that an individual is nothing but the social roles he plays; his actions are the resultant of many and perhaps conflicting roles as father, son, Protestant or Catholic, employer or employee. But the views of this typically American school are not generally accepted in their entirety elsewhere. It must be remembered, in face of all these conflicting views, that there are very large areas of agreement between all psychologists, and much of the apparent confusion is due not to disagreement over facts but in the fitting of facts into coherent schemes. (See also "The World of Science," Part III.)

**Parmigan**, birds of the grouse family, one species of which occurs in Britain, inhabiting the Scottish Highlands. In the winter assumes a white plumage.

**Potamines**, organic compounds produced during the putrefaction of proteins of animal origin. Not a cause of food poisoning, as was once generally supposed, which is almost invariably due to certain specific bacteria.

**Publicans**, under the Roman Empire, were people who farmed the public taxes. It is this class of officials that is alluded to in the "publicans and sinners" phrase in the New Testament.

**Public Corporations**. A method of operating large-scale industries transferred from private to public operation. Thus the Port of London Authority is an independent corporation governed by users of the port and representatives of municipal interests and labour. The Forestry Commission, the British Electricity Authority, the British Transport Commission, the National Coal Board, the Gas Council, and the B.B.C. follow a varied pattern.

**Public Schools**. The Public Schools Act of 1864 named nine "public" schools: Eton, Harrow, Rugby, Winchester, Westminster, Shrewsbury, Charterhouse, St. Paul's, and Merchant Taylors. Today the term embraces many more, and can be applied to all those schools which are financed by bodies other than the State and whose headmasters belong to the Headmasters' Conference as distinct from the Headmasters' Association. There are about 200 such schools in Britain, including among others: Bedford Grammar School (founded 1552); Birmingham, King Edward School (1552); Brighton College (1845); Charterhouse School, Godalming (1611); Cheltenham College (1841); Christ's Hospital, West Horsham (1552); City of London School (1442); Clifton College, Bristol (1862); Dulwich College (1619); Eton College (1440); Felsted School (1584); Haileybury College (1862); Harrow School (1571); Malvern College (1865); Manchester Grammar School (1515); Marlborough College (1843); Merchant Taylors' School (1561); Mill Hill School (1807); Radley (1847); Repton School, Derbyshire (1557); Rugby School (1567); St. Paul's School (1509); Sherborne School (1550); Shrewsbury School (1552); Stonyhurst College (1594); Tonbridge School (1553); Uppingham School (1584); Wellington College (1859); Westminster School (1339); Winchester College (1387); and Warwick (1123). Public schools for girls include: Christ's Hospital, Hertford (1552); Cheltenham Ladies College (founded by Miss Beale in 1853); North London Collegiate School (founded by Miss Buss in 1850); Roedean (1885); Wycombe Abbey (1896).

**Puma**, a carnivorous quadruped of N. America, where it is called the "American lion," though smaller than the lion, seldom attaining a greater length than 40 in., exclusive of tail, and a height of 2 ft.

**Pumice**, a light stone of variable substance, utilised for cleaning purposes, for polishing, and for smoothing surfaces and edges of pasteboard

and surfaces of wood, metal, and other material. It is imported from the Lipari Isles.

**"Punch,"** the leading English humorous publication, was established in 1841, and has had among its editors, Mark Lemon (1842-70), Shirley Brooks (1871-74), Tom Taylor (1874-80), Sir F. Burnand (1880-1906), Sir Owen Seaman (1906-32), E. V. Knox (1932-48), C. Kenneth Bird ("Fougasse"), (1949-52). Among its contributors it has numbered Thackeray, Douglas Jerrold, Tom Hood, Gilbert a'Beckett, E. V. Lucas, A. P. Herbert, and its artists have included Richard Doyle, John Leech, Sir John Tenniel, Charles Keene, Sir G. du Maurier, Phil May, Linley Sambourne, Sir Bernard Partridge, E. J. Reed, Harry Furniss, L. Raven Hill, and its late editor C. Kenneth Bird. Malcolm Muggeridge was appointed editor in Dec. 1952.

**Purgatory**, the place where, according to the Roman Catholic doctrine, the souls of the dead find temporary habitation while undergoing purification.

**Puritans**, the name originally given to the followers of Calvin in England in the time of Elizabeth. As a political party they were in the ascendant during the Commonwealth period (1649-59).

**Pylon**, the huge monumental gateways erected in front of ancient temples or other buildings.

**Pyramids of Egypt**, on the west bank of the Nile, are vast stone or brick-built structures with inner chambers and subterranean entrances, built by the Pharaohs as royal tombs and dating from about 3000 B.C. The most celebrated are at Giza built during the 4th dynasty. The largest, originally 481 ft. high, is called the Great Pyramid, one of the seven wonders of the world, built by the Pharaoh Khufu, better known as Cheops, and there he was buried, 300,000 men, according to Herodotus, being employed for 20 years upon it. Chephren, successor of Cheops, erected the second pyramid, and the third was built by Mycerinus, a son of Cheops. The pyramid at Meidum built by King Snefru, founder of the 4th dynasty, is the most imposing of all.

**Pythian Games** were one of the four great Greek festivals in honour of Apollo and Diana, when many contests were held and laurels distributed as prizes. These games took place every fourth year near the temple of Delphi.

**Pythons**, large snakes, non-poisonous, and destroying their prey by crushing it. Some species average 30 ft. in length, and prey upon deer and other small mammals. Found in Asia, Africa, and Australia.

**Quadragesima Sunday** is the first Sunday in Lent, the fortieth day before Easter.

**Quadrant**, an astronomical instrument for measuring altitudes, superseded for navigational purposes in modern times by the sextant. It consists of a graduated arc of 90° with a movable radius for measuring angles on it.

**Quadrille**, adapted from an old French country dance, became fashionable throughout Europe in the early part of the 19th century, but seldom danced now.

**Quadruple Agreement**, an agreement made at the Washington Conference in 1921 between the United States, Great Britain, France, and Japan for the preservation of peace in the Pacific for ten years. (See also Washington Conference.)

**Quadruple Alliance**. The most noted have been that of England, France, Austria, and Holland in 1718, to maintain the Treaty of Utrecht; that of 1814, under which England, Austria, Prussia, and Russia combined against Napoleon; that of 1834 by Great Britain, France, Spain, and Portugal, supporting Maria in Portugal and Isabella in Spain against claimants to their thrones, and those in the first world war between Germany, Austria-Hungary, Turkey, and Bulgaria on the one hand and Great Britain, France, Russia, and Italy on the other hand.

**Quæstor**, a Roman magistrate whose duties were mainly financial, although he was originally concerned with criminal jurisdiction. At first two Quæstors sufficed; then the number was successively increased until under Julius Cæsar

there were forty. Under the Empire there were usually twenty.

**Qual d'Orsay.** An embankment in Paris where the French Foreign Office is situated.

**Quail,** an edible bird of the partridge family, of which only one species, the Common Quail, is found in England. It is not more than 8 in. long. It is found in most of the warmer regions of the world. In England and Wales the Quail is covered by the Wild Bird Protection Acts.

**Quair,** an old name for a pamphlet or little book.

**Quakers,** the popular name for members of the Society of Friends, a religious sect founded by George Fox in the 17th century. In matters of belief they do not differ materially from other Protestant bodies; the chief difference is in worship, Quakers having no prescribed formulas. They assemble in their Meeting Houses, and any one in the congregation speaks when individually prompted, "as the Spirit moves them." Silent meetings are not infrequent. The ordinances of baptism and the Lord's Supper they reject. They object to swear upon oath, and up to 1833 were punishable by law for this refusal; since then they have been permitted to affirm. Until recent times they adopted great simplicity of attire, and in addressing people used the second person singular, but gradually have conformed more to common usage. Many Friends have attained distinction both in public life and in business, and as a body they are highly respected for their honourable dealings. William Penn was one of the most prominent of the early Quakers, and introduced the religion into America. The term Quaker was first applied to the sect because of the founder's frequent use of the word "Tremble" in his exhortations.

**Quantum Theory.** By the end of the 19th century the electrical nature of the atom was being realised and, also, it was accepted that radiations of light and heat both consisted of electromagnetic waves. However, it was impossible, using existing theories, to reconcile the expected uniform frequency distribution of energy radiated from a heated body with the uneven one observed in practice. In 1900 Prof. Max Planck, a German physicist, in attacking this problem, postulated that the energy emitted by the vibrating electrical charges of the atom was transferred not continuously, but in separate units or *quanta* of energy. It was generally assumed that some mechanism within the atom governed the discontinuous nature of the emissions. In 1905, however, Prof. Einstein, in explaining the photoelectric effect, extended the quantum theory by suggesting that radiation is not merely absorbed or emitted but also transmitted in quanta. Light quanta he termed *photons*. The quanta possessed both mass and impulse, a fact eventually demonstrated by experiment. Since 1925 work has tended to relate the "wave" and corpuscular properties of the electron, *e.g.*, by the wave mechanics of Schrödinger (which associates the electron with a packet of waves); and the quantum mechanics of Heisenberg. These theories have revolutionised the approach to interpreting the structure and energy content of the atom, as well as the entire philosophy of natural science. (See "The World of Science.")

**Quare Impedit** ("Why he hinders"), the title of a writ calling upon any person interfering with the rights of the owner of a presentation to a benefice to show cause why he impedes.

**Quarrel,** the old name for a dart or bolt, shot from a crossbow or catapult in war, before the employment of firearms.

**Quarter-Days.** (See p. 750.)

**Quartering,** in heraldry, is the disposition of various escutcheons or coats of arms in their proper "quarters" of the family shield, in such order as indicates the alliances with other families.

**"Quarterly Review,"** the great Tory quarterly was started in 1809, in opposition to the *Edinburgh Review*, the Whig organ, est. in 1802.

**Quartermaster,** a military officer charged with the provisioning and superintendence of soldiers in camp or barracks, and holding the equivalent rank to a lieutenant. The Quartermaster-General is an officer who presides over the provisioning department of the whole army. A Quartermaster in the Navy is a petty officer

responsible to the Officer of the Watch, at sea for the correct steering of the ship and in harbour for the running of the ship's routine.

**Quarter Sessions.** (See "A Citizen's Guide.")

**Quarter-staff,** an old English weapon, consisting of a stout pole some 6½ ft. long, which was grasped in the middle and could be swung with telling force in defence or attack.

**Quartet,** a musical composition for four voices or instruments. If for stringed instruments (*e.g.*, first and second violin, viola, violoncello) it is called a string quartet. If for three strings and another instrument it is called by the name of the fourth instrument, *e.g.*, piano quartet. The name is often misapplied to the musicians instead of to the music. Thus a four-piece string orchestra will be called a string quartet. This misuse is also found with quintet, sextet, etc.

**Quarto,** a sheet of paper folded to make four leaves, or eight pages; usually abbreviated to "4to."

**Quartodecimani,** an early Christian community who celebrated the Paschal festival on the 14th day of the month, when the Jews celebrated their Passover. In consequence of the confusion caused, the practice of the Quartodecimani was condemned by the Council of Nicea in 325.

**Quartz** is a common and usually colourless mineral abundantly diffused, and occurring crystallised and massive. In the first form it is in hexagonal prisms, terminating in pyramids. When pure its specific gravity is 2.66. It is one of the constituents of granite, gneiss, etc. Among the quartz varieties are *rock crystal* (colourless), *smoky quartz* (tinged, as *yellow topaz*, *amethyst*, and *sapphire*), ordinary or false, *milky quartz*, and *rose quartz*. Quartz veins in metamorphic rocks often yield rich deposits of gold. Mining for gold in the rock is termed *quartz-mining*.

**Quasi,** a Latin prefix to other words implying a somewhat false resemblance.

**Quassia,** a genus of plants of the *Simarubaceae* order, with five-lobed calyx. There are two species, the most commonly known being a native of tropical America, the other of Africa. It yields a drug called bitterwood, much valued as a medicine. The negroes use it as a fever remedy. In commerce the product of the bitter-ash and other allied trees is generally substituted for quassia.

**Quaternary Deposits or Post-Tertiary,** are the latest stratified rocks of the earth's crust, and include the Pleistocene ("Great Ice Age") and recent systems.

**Quatrefoil,** in architecture an ornament, piercing, or panel, resembling the four petals of a cruciform flower, largely used in the English Perpendicular style, and less frequently in the Decorated.

**Quaver,** a note of music, equal to one-eighth of a semibreve and one-fourth of a minim.

**Queen,** the title of the wife of the sovereign ("queen consort"), or of a woman who is herself the sovereign ruler of a state ("queen regnant"). The ruling queens of England have been Mary I., who reigned four years; Elizabeth I. (forty-five years); Mary II. (jointly with William III.) (six years); Anne (twelve years); Victoria (sixty-three years), and Elizabeth II., who came to the throne in 1952.

**Queen Anne's Bounty,** established by Queen Anne in 1704 for the augmentation of the maintenance of the poor clergy. Since Apr. 1st, 1948, Queen Anne's Bounty and the Ecclesiastical Commissioners ceased to exist and became embodied in the Church Commissioners for England.

**Queen's (or King's) Speech** is the speech prepared by the Government in consultation with the Queen and delivered by Her Majesty in person or by her deputy, at the opening or closing of a Parliamentary session.

**Quelea,** a name given to the crimson-beaked weaver bird of Africa.

**Quercitron,** the bark of a species of American oak, from which a yellow colouring matter is obtained. It is also used in tanning.

**Quern,** a form of stone hand mill for grinding corn, in use in early times. It consisted of two flat stones, the upper revolving on a pin inserted in the lower.

**Quicksilver.** (See *Mercury*.)

**Quills** for writing with were first used in the 6th century, and superseded by steel pens in the 19th.

**Quince,** a well-known hardy orchard tree of the

pear family, bearing fragrant, yellow, pear-shaped fruit, largely used for preserves. A mucilage is made from the seeds, which also possess medicinal virtues.

**Quindecimvir**, one of the fifteen ancient Roman magistrates appointed to keep charge of the Sibylline books, and called priests of Apollo.

**Quinine**, a vegetable alkaloid obtained from the bark of several trees of the *Cinchona* genus. It is colourless and extremely bitter. The drug, sulphate of quinine, is one of the most valuable medicines, forming a powerful tonic. It is antiperiodic, antipyretic, and antineuralgic. In cases of malaria it is the most efficacious remedy of natural origin known.

**Quintain**, a tilting post, from the top of which a board was suspended horizontally for the tilters to strike at with their lances.

**Quintal Metrique**, a French weight of 100 kilogrammes, or 220 lb. avoirdupois.

**Quintet**, a musical composition for five voices or instruments. If all five instruments are strings the piece is a string quintet. A clarinet quintet, for example, is a piece scored for "four strings" and a clarinet.

**Quintilians**, the name given to certain heretics of the 2nd century, who used bread and cheese for the Eucharist and permitted women to be priests. Their leader was a Roman woman named Quintilia.

**Quirinal**, one of the seven hills of Rome.

**Quisling**, term which came into use during the second world war to denote traitor, collaborator, or fifth-columnist. After Vidkun Quisling, who became head of the puppet government after the German invasion of Norway in 1940.

**Quiver**, a leather receptacle for arrows.

**Quorum**, the number of members of any body or company necessary to be present at any meeting or commission before business can be transacted. Forty form a quorum in the House of Commons. (See also "A Citizen's Guide".)

**Quo Warranto** ("By what authority"), a form of writ which has existed in England since 1278, and is a direction to the proper authorities to inquire into the circumstances under which any office or franchise is held.

## R

**Rabbi**, a Jewish term applied to specially ordained officials who pronounce upon questions of legal form and ritual, and also generally accorded to any Jewish scholar of eminence.

**Rabbit**, a rodent burrowing mammal, a native of Europe, but now common in other countries—where it has been introduced and has multiplied enormously, especially in Australia. (See *Myxomatosis*, p. 648.) In its wild state it has a brownish fur, while in its domesticated varieties it is of many colours—grey, white, black, and pied. Wild rabbits have erect ears, but in some domestic breeds the ears are long and droop, hence the term lop-eared. They breed rapidly, rearing several litters a year. The fur is utilised for clothing and other purposes, and the flesh is a popular article of food. (See *Domestic Pets* Section.)

**Racahout**, a substance made from the acorn of the belote or Barbary oak, and much used as a food and medicament by Arabs. An admixture of the same name, with various added ingredients, is sold in France.

**Race**. In the old text-books anthropologists were much concerned with the differences between the various races of Man: they described the Black Man (Negro), the Yellow Man (Mongol), the Red Man (American Indian), the Brown Man (Indian), and the White Man (European). Those who study Man from this point of view further subdivide each group into others. Thus White Man may be divided into Nordic, Alpine, and Mediterranean; Black Man into Hamitic, Bushman, and so on. Each of these groups tends to have physical traits which its members hold in common, although, of course, there are no pure racial types. All existing races have been fairly thoroughly mixed. What, in view of recent experience, is really important, is that races or even nations do not have psychological traits—at least not innate traits. The man who says that all Indians are stupid or liars or worse forgets that

Indians were highly civilised when our ancestors were dressed in skins and painted blue. Such a man might read with profit what Cicero wrote to a friend in the first century B.C.: "Do not obtain your slaves from Britain, because they are so stupid and so utterly incapable of being taught." Anthropology dismisses all theories of a superior race as unscientific: there is not the slightest evidence that one race differs in any way from another in its psychological potentialities. Jews, Irish, Scots, Italians do differ (so do the inhabitants of Edinburgh and London); but their differences are due to their situation and not to anything inborn. (See *Physical Environment*, p. 175.)

**Raceme**, a botanical term indicating a cluster of flowers, the individual blossoms being borne on simple stalks arranged round a single common axis. The youngest flowers are at the tip of this axis.

**Rack**, an ancient instrument of torture, consisting of a platform fitted with bars, one of which was movable. The feet of the victim were fastened to one bar and the hands to the other; then by means of the movable bar the limbs were stretched to great tension until the tortured one "confessed" or became senseless.

**Rack-work**, a piece of mechanism in which a rack is used; a rack-and-pinion arrangement or the like. A rack in this sense is a toothed-bar, adapted to work into the wheel teeth.

**Raccoon**, plantigrade carnivorous mammals common to the American continent. There are several species. The common Raccoon (*Procyon lotor*) is about 2 ft. long, with a bushy ringed tail and sharp snout. Its skin is valuable.

**Radar or Radiolocation**. A system of locating objects by means of radio signals, brought to perfection in the second world war. As early as May, 1935, a British team of scientists led by Sir Robert Watson-Watt succeeded in tracking aircraft up to about 30 miles distance with an early radar system. By the outbreak of war a chain of radar stations, to give early warning of enemy aircraft, had been built along the East Coast of Britain, and by 1941 this had been extended to embrace nearly the whole of the coastline of England, Wales, and Scotland. Radar was also used to detect submarines from the air, to range searchlights and A.A. guns, etc. It also made blind-bombing possible. Radar techniques developed during and since the war are advancing radio-astronomy and a new radio-telescope is being built in England. (See also *Radio, Television, and Radar* Section.)

**Radcliffe Library**, Oxford, was founded under the will of Dr. John Radcliffe, who died in 1714, leaving £40,000 for that purpose. The Library was opened in 1749.

**Radiation**, transfer of energy by electromagnetic waves, the rate of emission by a body depending upon its temperature and surface. The sun radiates energy in the form of short visible waves of light and longer invisible waves of heat. The principal gases of the atmosphere are transparent to practically all of the solar and sky radiation and also that which the earth re-transmits to space. Carbon dioxide and water vapour, however, strongly absorb certain types, the latter, as clouds, playing an important rôle in regulating the temperature of the globe. The cooling of the ground on a clear night is a result of the outgoing long-wave radiation exceeding that coming down from the sky; at sunrise cooling ceases as the incoming radiation becomes sufficient to compensate for the loss of heat.

**Radioactivity**, a phenomenon exhibited by certain elements of high atomic weight, a discovery made by Henri Becquerel in 1896. The nuclei of the atoms are unstable and disintegrate spontaneously shooting off alpha particles (nuclei of helium atoms), beta particles (electrons), and gamma (electromagnetic) waves at very high speed. A piece of uranium will gradually change into a piece of radium, and finally into lead, taking millions of years to do so. (See also p. 161.)

**Radiosonde**, a weather station in miniature carried aloft by a free balloon to heights normally in the neighbourhood of 10 miles. Signals representative of values of atmospheric pressure, temperature and humidity

- are transmitted simultaneously by radio to receiving apparatus on the ground. The position of the balloon at any instant can be determined by radar, enabling the speed and direction of the upper winds to be deduced.
- Radium**, a radioactive metal discovered by Marie and Pierre Curie in 1898. Atomic weight 226. The Radium Institute, founded and equipped by Lord Iveagh and Sir Ernest Cassel, was opened in Aug., 1911, for the treatment of patients and the prosecution of researches into the effect of radium on the human system.
- Radiu**, in geometry, is the measurement of a straight line marked from the centre to the circumference of a circle or curve.
- Radon**, a colourless radioactive gas formed when radium atoms disintegrate radioactively.
- Rail**, a well-known genus of the *Rallidae* family—one species of which—the Water Rail—is common in various parts of Continental Europe, and also in the fen districts of England.
- Rain**. When moist air rises into lower temperatures and becomes saturated, condensation takes place on the numerous hygroscopic particles present in the atmosphere. If the temperature is above freezing a cloud of small droplets is formed, and as the air continues to rise they grow in size until the weight is great enough to make them fall to the earth as rain. The formation of large raindrops has been attributed to coagulation of smaller drops of different sizes, while another mechanism depends upon the presence in the cloud of ice crystals as well as water drops. In temperate latitudes snowflakes falling from the freezing level melt in the warmer air below, producing large raindrops which grow in their flight through the lower part of the cloud.
- Rainbow**, a beautiful colour effect visible to observer with back to the sun and facing a rain shower, caused by the refraction and reflection of sunlight in minute water-droplets in the air. From high in the air it would be possible to see a rainbow as a complete circle, but from the ground the most that can be seen is a semi-circle when the sun is just on the horizon; the higher the sun is, the smaller the arc of the rainbow. When conditions are suitable two bows are seen, the secondary with the colours of the spectrum reversed.
- Rain gauge**, an instrument consisting of a deep metal funnel whose stem dips into a graduated glass jar from which the depth of the rain water collected can be read. Continuous records of rainfall are provided by self-registering instruments.
- Ramadan**, the time of the Mohammedan Lent, the 9th month of the Moslem year, a movable period fixed according to lunar calculations. It lasts for thirty days, and all good Mohammedans fast in Ramadan from sunrise to sunset each day. During the interval from sunset to sunrise they are at liberty to eat, drink, and make merry.
- "Rambler, The,"** published by Dr. Johnson twice a week between 1750 and 1752.
- Rambouillet**, a royal French chateau (14th cent., rebuilt 18th cent.), near Paris, and the official summer residence of the President of the French Republic. Also the name of the famous literary salon of the Marquise de Rambouillet (1588-1665).
- Rampant**, in heraldry, is a term applied to the figure of an animal with forelegs elevated, the dexter uppermost. When the animal is shown side-faced it is *rampant displayed*, when full-face, *rampant guardant*; when looking back, *rampant regardant*; and when in sitting position *rampant sejant*.
- Rampion**, the common name for plants of the bell-flower family.
- Rampur Chudder**, a kind of fine woollen shawl made at Rampur in India.
- Ranelagh Gardens** was a fashionable public garden at Chelsea for concerts and dancing in the 18th century, and existed down to 1804.
- Ranz des Vaches**, a Swiss herdsman's melody, played on the alpenhorn, as a call to the cows.
- Rape**, a cruciferous plant yielding coleseed or rape-seed, extensively grown in all parts of Europe and India. Rape oil or colza is made from the seeds, and the leaves and refuse are used for sheep-food. Rape oil is a yellow, thick oil, of considerable commercial importance as a lubricant and for other purposes. It was at one time much used as an illuminant.
- Raphides**, crystals of calcium oxalate, found in the cells of many plants.
- Raptore**, an order of birds of prey, of which there are upwards of 500 species, divisible into two main sections, *Falconidae* and *Strigidae*.
- Rastadt Treaty of Peace**, between the French and Germans, signed on Mar. 7th, 1714, closed the War of the Spanish Succession and was a preliminary to the Treaty of Utrecht.
- Rat**, a well-known order of rodent embracing many species. The *brown rat* appeared in Europe early in the 18th century, coming from the East and entering by way of Russia; now it is widespread and met with in Britain and all parts of the Continent. The *black rat*, which was the common rat before the arrival of the brown species, is a smaller animal and now comparatively scarce. There are numerous other kinds, all of them gross feeders, and existing in such numbers in many places as to constitute a pest.
- Ratel**, a carnivorous animal of the badger family, having the lower part of the body black, and the upper part a light grey. It is found in India and at the Cape, and is often styled the "honey-badger" because of its honey-eating propensities.
- Rationalism**. The belief that all matters of fact and all beliefs concerning personal conduct should be founded on reason; that reason should be the guiding factor in life. An apparently simple creed, which, unfortunately, is not so simple. Roman Catholics, for example, who are certainly not rationalists in the ordinary sense of the term, claim to be able to base their religion on rational grounds; indeed, there must be very few people who do not consider their beliefs to be entirely reasonable. The rationalist would say that by "reason" he means the criteria ordinarily accepted as scientific evidence, but he is then faced by the problem whether moral conduct can be based entirely on logic. The most important attempt to do so (Bentham's theory that morals should be based on "the greatest good of the greatest number") has been rather severely dealt with by philosophers in general. Rationalism has something important to contribute to human well-being provided it realises that human beings are not ordinarily rational, and one must be tolerant of what seems illogical in their conduct before beginning (very slowly) to alter their beliefs. Our irrational dreams are, after all, an attempt to make a difficult world easier to live in, and the man in the street may be excused if he says, in effect, to the rationalist, "be careful, you are treading on my dreams." Only by making the world a better place to live in can one begin to convert the superstitious and illogical. The main rationalist body in this country is the Rationalist Press Association, Johnson's Court, Fleet Street, London, E.C.4.
- Ratite**, a bird classification which includes ostriches, cassowaries, and other flightless, flat-breasted birds.
- Rattening**, the act of concealing or taking away workmen's tools to prevent them being used during trade disputes. The word came into use at Sheffield during labour disputes in 1867.
- Rattlesnake**, venomous snakes which obtain their name from the possession of a rattle in the end of their tail, consisting of horny pieces so arranged that when vibrated they make a rattling sound. They are only found in N. and S. America.
- Ravelin**, a detached fortification of triangular shape, with two embankments forming a projecting angle.
- Raven**, a black-plumaged bird of the crow family, with raucous voice and massive bill. Occurs in many parts of Europe, Asia, and America. Ravens are easily domesticated and form interesting pets. Dickens had one which he described in "Barnaby Rudge."
- Ray**, fish with a very flat body and broad and fleshy pectoral fins, related to the sharks. There are about 140 species. In Britain they are generally called *skate*.
- Razorbill**, a sea-bird of the auk family, having a high, furrowed bill and black-and-white plumage. It inhabits rocky cliffs during the breeding season, and at other times is mostly out on the open sea. Razorbills pair for life and return to last year's nesting-place.

**Realgar**, a mineral of a reddish colour formed in crystals and also granular, in China, Mexico, and some parts of central Europe, and is a compound of arsenic and sulphur.

**Rebeccaitees** were a secret Welsh organisation, existing in 1843, whose object was to destroy toll-gates, which were so numerous as to be a burden to the people. They dressed in women's clothes, and called themselves "Rebecca's daughters," with particular reference to the passage, "And they blessed Rebecca, and said unto her, Let thy seed possess the gate of those which hate them." They went abroad in the night-time and caused much destruction. A general relief from highway tolls followed after a commission of inquiry.

**Rechabites**, members of a society of total abstinents from intoxicating drinks. Rechab, father of Jonadab, refused to drink wine, build or live in houses, sow seeds, or plant or own vine-yards. The modern Rechabites do not carry their abstinence further than refraining from intoxicants.

**Recitative**, a style of singing only slightly removed from ordinary speaking, used in the narrative portions of operas and oratorios. In older operas "recitativo secco" (dry recitative) was used, the voice being accompanied by the harpsichord alone. After Scarlatti the orchestra was used to give a more dramatic touch to the recitative, while Verdi introduced a type of recitative that was half-way to an aria.

**Recorder**, a judge of a city or borough having a court of quarter-sessions. The Recorder of the City of London is elected by the Lord Mayor and Aldermen, but other recorders are barristers of eminence appointed by the Crown.

**Record Office**, in Chancery Lane, London, the place where the Public Records of England are now preserved, including Domesday Book, the various Rolls of Charters, and important historical documents from a remote period.

**Rector**, in England an ecclesiastical title of the incumbent of a parish where the tithes are not inappropriate; also the head officer of some of the Universities and Colleges.

**Recusants**, people who refused to attend the Anglican Church or to acknowledge the ecclesiastical supremacy of the Crown in the 16th and 17th centuries.

**Redan**, a fortification consisting of two parapets or mounds of earth in angle form, the apex pointing outward.

**Red Army**. The Army of the Soviet Union, so-called because it bears the red flag of the Soviet revolution. Its official title is the Red Army of Workers and Peasants.

**Redbrick**, a term used to denote a university of modern foundation whose buildings are conceived as being built of red brick in contrast to the stone of the ancient universities.

**Red Crag**, the name given to a strata of gravel or sand, containing certain fossil mollusc deposits, found on the Suffolk and Norfolk coasts.

**Red Cross**. (See Geneva Convention.)

**Rede Lecture**, at Cambridge University, was instituted and endowed in 1524 by Sir Robert Rede, Chief Justice of Common Pleas. These lectures were superseded by an annual oration, which is usually given by an eminent scientist.

**Red-Letter Day**, a Church festival day indicated in the Prayer Book by red letters, now a popular term for any day of special significance.

**Redoubt**, a term applied to enclosed fortified work, especially to a small area temporarily fortified as a place of retreat for a defending force.

**Red Sandstone**, the general name for red sandstone geological formations, chiefly produced by the disintegration of ordinary crystalline or metamorphic schists, oxide of iron forming the colouring factor.

**Redstart**, a small bird of the Thrush family of handsome plumage and striking song. Two species visit Great Britain. The Common Redstart, with bright chestnut rump and tail, white forehead, and black cheeks, favours wooded country, and the Black Redstart, with black breast and throat, chestnut tail and white wing bars, prefers rocky ground or bombed buildings, and has recently begun to breed in S. England.

**Redwing**, a bird of the Thrush family which finds its way to this country for the winter. Re-

sembles the song thrush, but distinguished by smaller size and chestnut flanks and underwings.

**Redwood or Sequoia**. This genus of coniferous tree comprises two species of Redwoods occurring in N.W. America. Specimens of one species, the Giant Redwood, reach a height of over 300 ft. and a thickness of 36 ft. The age of the largest, the General Sherman tree, is put at 3,500 years.

**Reed Instrument**, a musical instrument whose sound is produced by blowing air over a thin reed or wooden or metal plate which is thereby caused to vibrate.

**Refectory**, a dining-hall; usually a dining-hall in a monastery or a convent.

**Referendum and Initiative**, two methods by which the wishes of the general body of electors may be expressed with regard to proposed legislation. It is developed to the highest extent in Switzerland. In a referendum some specific matter is referred to the electors. The Initiative is the means by which the electors can compel their elected representatives to consider a specific matter. When it has been considered by the legislature it must then be submitted to the electorate for approval (i.e., a referendum).

**Reformation**, the great religious movement of the 16th century, which resulted in the establishment of Protestantism. In the previous century Wyclif, Huss, and others had sounded the warning note, and when later on Luther took up the cause in Germany, and Zwingli in Switzerland, adherents soon became numerous. The wholesale vending of indulgences by the Papal agents had incensed the people, and when Luther denounced these things he spoke to willing ears. After much controversy, the Reformers boldly propounded the principles of the new doctrine, and the struggle for religious supremacy grew bitter. They claimed justification by faith, and the use as well as the authority of the Scriptures, rejecting the doctrine of transubstantiation, the adoration of the Virgin and Saints, and the headship of the Pope. Luther was excommunicated. But the Reformation principles spread, and ultimately a great part of Germany, as well as Switzerland, the Low Countries, Scandinavia, England, and Scotland were won over to the new faith. In England Henry VIII. readily espoused the cause of the Reformation, his own personal quarrel with the Pope acting as an incentive. Under Mary there was a brief and sanguinary reaction, but Elizabeth gave completeness to the work which her father had initiated.

**Reformatory Schools**, for the reclamation of juvenile offenders, originated in France in 1839. The Philanthropic Society of London founded such an institution at Redhill in Surrey in 1850. Since then many other schools of this class have been opened, under government authority and inspection. The Borstal System for industrial training and reclamation of prisoners between 16 and 23 was begun at Borstal near Rochester in 1902. These Institutions deal with many cases of juvenile delinquency.

**Reform Bills**. The principal Bills have been passed for the reform of the Parliamentary franchise. The first was that of 1832, which in addition to a sweeping redistribution of seats, granted the franchise to borough householders paying a £10 rental, and in counties to those with a rental of £50. The second Bill was passed in 1867, conferring the franchise on all borough householders paying poor rates, on lodgers paying £10 a year, and to tenants in counties paying £12. A third Bill, passed in 1884, practically gave household suffrage and effected a large measure of redistribution of seats. The Representation of the People (Equal Franchise) Act, 1928, gave women of 21 years of age the right to be registered as Parliamentary electors, thus adding several million names to the register.

**Refraction**. The change of direction which light rays and other rays undergo when passing from one medium to another. The phenomenon is due to the fact that in different media light (and other forms of radiation) has different speeds.

**Regalia**, the ensigns of royalty, such as the crown, sceptre, swords of State, etc., which, in the case of the British insignia, are kept in the Tower of

London. In its stricter sense it means the prerogatives of royalty.

**Regattas**, boat or yacht races, were introduced into this country in 1775, when the Thames was the scene of one of these competitions. Since then they have become popular on the river and round the coast. Henley every year has a fashionable Regatta.

**Regency Acts** were Acts of Parliament passed in the reign of George III., appointing the Prince of Wales (afterwards George IV.) to the Regency during his father's mental incapacity.

**Regicides**, the commissioners who tried and condemned Charles I. They were 135 in number; 59 only could be induced to sign the death warrant.

**Regium Donum**, or royal gift, an annual grant formerly made from the public funds to Presbyterian and other Nonconformist ministers in Great Britain and Ireland. It was withdrawn in 1857.

**Reichsrath**, the name given to the Austrian Parliament until 1918. It comprised an Upper House of princes, nobles, and prelates and a Lower House of elected representatives.

**Reichstag** or **Diet**, the name given to the meeting summoned by the rulers of the mediæval Empire. After the unification of Germany the name given to the popularly elected house of the German parliament. The Reichstag building was destroyed by fire in 1933 by the Nazis.

**Reign of Terror**, a period of anarchy and bloodshed in the French Revolution which began in the spring of 1793 and practically ended with the fall of Robespierre in July, 1794.

**Reindeer**, a genus of deer horned in both sexes, occurring only in northerly regions. It has an average height of 4 ft. 6 in., is very fleet of foot, and the Laplanders utilise it for draught purposes.

**Relativity**, the theory in physics associated with the name of Professor Albert Einstein. The theory was published in two parts—the *Restricted Theory* in 1905 and the *General Theory* in 1915. It is based on the hypotheses that (i) space and time are closely connected and dependent on each other, (ii) the interval of space between two objects and the interval of time between two events are not absolute but relative, changing according to the circumstances of the observer, (iii) matter and energy are fundamentally the same, it being possible to convert one into the other. The laws of relativity have been substantially proved and have revolutionised our ideas as to the nature of space, time, matter, and energy and forced us to think along new lines. In 1949 a new theory by Professor Einstein was announced which sets forth in a series of equations the laws governing both gravitation and electromagnetism, which is said to bridge the gap that separates the infinite universe of the stars and galaxies and the equally infinite universe of the atom. At present the one is explained by relativity, and the other rests on the quantum theory. (See "The World of Science," p. 159.)

**Relief** in sculpture is of three kinds—high relief (*alto-relievo*), in which the figures stand out to the extent of one-half of their natural proportions, low-relief (*basso-relievo*) when the figures project but slightly; and middle-relief (*mezzo-relievo*), when the projection is intermediate.

**Remainder**, a legal term signifying a future condition of an estate, taking effect after its enjoyment by the present tenant is terminated. It does not "vest" until the event which will put an end to the precedent estate is certain of happening.

**Renaissance**, new birth or revival. It was a transitional movement in Europe between the mediæval and the modern which was exemplified by a return to classic ideals in literature, painting, and architecture. It was stimulated by the fall of Constantinople, the invention of printing, and the discovery of America. It took place in the 15th and 16th centuries, beginning in Italy and sweeping over Western Europe. In England the movement was most notable in literature (Colet, More, Erasmus).

**Rennet**, a substance obtained from the fourth stomach of a calf or other suckling quadruped, and used for curdling milk, making junkets, etc.

**Reparations**. The indemnities payable by coun-

tries defeated in war. The Treaty of Versailles did not fix the total damage caused in the first world war and a Reparations Commission was set up to assess it. Failure of Germany to meet demands led to the occupation of the Ruhr by France against the wishes of Great Britain. Thereafter the Dawes Committee set up upon American initiative produced a new scheme which worked well for some years. Mortgages were raised on German railways and industries and there was a certain control of German finance. But the total sum Germany would have to pay was left to the Young Commission (1929-30). Germany ceased payment in 1931 owing to the economic crisis and the Lausanne Conference 1932 abolished reparations altogether. As regards the second world war the Council of Foreign Ministers broke down in London in December, 1947, on the subject of reparations. The Soviet Government proposed that a total sum to be paid by Germany should be decided and that the Soviet share be fixed at 10,000 million dollars to be taken by capital removals to be completed by the end of 1948, with annual deliveries from current production over 20 years.

**Repeater**, the name applied to a watch that will strike the hour, quarters, and minutes last past on the pressure of a spring.

**Representative Peers** are peers elected by their fellow peers to sit in the House of Lords—Scotland has 16, elected or re-elected for each Parliament. The number of Irish representative peers at the date of the establishment of the Irish Free State (1922) was 28. Through deaths this has been reduced to five (1956) and the twenty-three vacancies are unlikely to be filled.

**Reptilia**, the class of vertebrate animals including tortoises, lizards, snakes, crocodiles, etc.

**Republican Party of the United States**, one of the two great parties in U.S.A., the other being the Democratic Party. Sometimes regarded as the more right wing of the two parties but this view must be treated with caution as the parties do not fit a left and right wing pattern. The party before the second world war was predominantly isolationist. Pres. Eisenhower is a Republican and until his election as President in 1952, the Republican Party had not held power for 20 years.

**Requiem**. Properly a mass for the dead, the term is extended to cover musical settings by Palestrina, Mozart, Verdi, and others.

**Reredos**, the ornamental screen at the back of the altar or Communion table. It is often of a highly decorative character and is an architectural feature in many churches in Spain. Other examples are to be found in the following cathedrals in England: St. Paul's, St. Albans, Salisbury, Winchester, Durham, and Liverpool. In All Souls College, Oxford, one is to be seen actually attached to the wall.

**Resins**, natural resins are vegetable compounds largely employed in the industrial arts. They comprise india-rubber, amber, mastic, copal, etc. "Synthetic resins" is a term sometimes used as a synonym for "plastics."

**Rest**, a musical term denoting silence or cessation from playing for the period represented by the character of the rest. Thus there are minim, semibreve, quaver, and other rests, which represent the same lengths of silence as the notes themselves would represent in sound.

**Retina**, the layer of the eye which is sensitive to light.

**Retriever**, a gun-dog primarily, but much in favour as a domestic pet.

**Reuter**, the chief British and international news agency, founded by Baron J. de Reuter in 1849.

**Revolver**, a revolving pistol provided with a number of chambers (six being the usual number), each of which can be fired in succession by the pulling of the trigger. A weapon of this kind existed in the 17th century, but it was not until 1851, when Colt's revolver was introduced, that a really serviceable small arm of this class was available. The principle of the revolver has been adapted to breech-loading guns, as in the mitrailleuse and the mauser.

**Rhætic Beds**, term applied to certain strata which connect the Lias and Trias formations. They abound in fish fossils, and occur at Penarth in Wales and in certain parts of the Alps.

**Rhapsody**, an instrumental composition, not in symphonic form, which suggests that it was composed to express some powerful emotion or ecstasy. Liszt's "Hungarian Rhapsodies" are based on old folk tunes, while it is believed that Gershwin's "Rhapsody in Blue" is intended to express the mood of America at the time it was written.

**Rhea**, a large flightless bird, the "ostrich" of S. America, distinguished from the ostrich proper by smaller size, longer beak, larger wings, no tail and 3 toes instead of 2. There are 2 species.

**Rhenium**, a metallic element discovered in 1925. It occurs in molybdenum.

**Rheostat**, a variable resistance used to control electrical equipment.

**Rhinoceros**, a large hoofed quadruped, of which there are nine existing species; native to the river and marsh regions of Africa, India, Borneo, and Java. It is remarkable for its thick hide and upturned snout, from which springs a long horn. The white rhinoceros, which is scarce, is the biggest species, attaining a length of 10 to 12 ft. and a height of from 5 to 6 ft. The black rhinoceros is the most familiar.

**Rhodium**, a metallic element, discovered by Wollaston in 1804. It is found in platinum ores in small amounts, generally less than 2 per cent. With platinum it gives a very hard and durable alloy. It is also used, instead of silver, in putting the reflecting layer on a mirror.

**Rialto**, a famous bridge that crosses the Grand Canal at Venice, and dates from 1591.

**Ribbon Fish**, is a deep-sea fish, deriving its name from the ribbon-like shape. Though many feet in length, it is only an inch or two thick. By reason of its keeping to the ocean depths, the ribbon fish is rarely met with, most of what is known about it having been learnt from specimens occasionally cast ashore during storms.

**Ribbon Seal**, a kind of seal found in the North Pacific, remarkable for being ornamented with an almost white broad band along its back and around its neck.

**Rice**, a grain-yielding grass, of which thousands of strains are known today, extensively cultivated in China, India, and certain parts of America, and forming the main food of the peoples of China, Japan, India, and the Malayan regions. Some 95 per cent. of the world's rice is produced and consumed in the Orient. The grain in the husk is known as "paddy." Arrack, an alcoholic liquor, is made from fermented rice seeds.

**Richtfest**, a traditional German ceremony held when the framework of a new building is completed; a large crown made of pine branches is decorated with coloured streamers and hoisted to the roof, where it remains until the last tile is laid. Afterwards all the workers employed on the site are invited to a feast.

**Rider**, the popular name of a Dutch gold coin first put into circulation in the 16th century, but not now in use. Its name was derived from its having engraved upon its obverse the figure of a horseman. It weighed about 50 grains. A coin of the same name was issued by James VI. of Scotland, afterwards James I. of England.

**"Rights of Man"**, the title of the declaration of the French National Assembly in 1789, proclaiming that all men have equal rights. Also the title of a famous book by Tom Paine, justifying the Revolution.

**Rinderpest or Cattle Plague**, is a highly contagious disease affecting cattle, sheep, and other ruminants. In Europe the disease has been eradicated, but it was formerly very widespread and caused great loss of life amongst cattle. The disease is caused by a filtrable virus, and is attended by fever and congestion of the mucous membranes.

**Rime**, a crystalline deposit of ice formed on objects exposed to wet fog at the same time as frost.

**Ring Dove or Wood Pigeon**, a blue-grey bird, distinguished from other pigeons by larger size (16 in.), white wing-bar, glossy green-and-purple neck, and white half-collar. It is very common in Britain.

**Riot Act**, The, was passed in 1714, its object being to prevent riotous assemblies. In times of disturbance when a breach of the peace is threatened, if a magistrate, justice of the peace, sheriff, or mayor reads a proclamation commanding a crowd of twelve or more persons to

disperse, anyone refusing is liable to arrest and a term of imprisonment under this Act.

**Ritualists**, the term used to designate an extreme High Church section of the Church of England, who brought into the ceremony of public worship coloured vestments, lighted candles, incense, and other features of Romanist worship, and excited much opposition and contention. A Ritual Commission was appointed in 1904 to receive evidence in regard to ceremonial excesses, and attempts have been made to arrive at a basis by which both High Church and Low Church adherents can agree upon the subject of ceremonial. The report of the Ritual Commission, published in 1906, concluded that the law of public worship in the Church of England had become too narrow for the present generation's religious life, and that the machinery for discipline had broken down. The Commissioners favoured the giving of greater power to Bishops for the suppression of objectionable practices.

**Roach**, a well-known small fresh-water fish of the carp family.

**Roaring Forties**, name applied to the prevailing westerly winds over the oceans in the temperate latitudes of the Southern Hemisphere.

**Rock Dove**, the grey Asiatic pigeon *Columba livia*, ancestor of the domestic pigeons.

**Rockets** for use in war were invented by Sir William Congreve early in the 19th century, and proved very destructive in siege operations. Rocket propulsion was much developed during the second world war. Rockets were used as weapons by aircraft, infantry, etc., and the Germans devised the huge V2, carrying a ton of explosive, which was used near the end of the war to bombard London.

**Rockling**, a marine fish of the cod family, distributed over the coasts of Europe, Iceland, Japan, South Africa, and New Zealand. There are eight known species, five of which are found on the British coast. This fish carries a number of barbels around its mouth.

**Rod**, a measure of length equalling  $5\frac{1}{2}$  yd., also called a pole or a perch. 40 sq. rods equal 1 rood.

**Rodentia**, an order of gnawing mammals, and including rats, mice, squirrels, etc.

**Roe**, the parts of fishes which extend on each side of the ribs in lobes next to the intestines. "Hard roe" is that of the female and consists of eggs; that of the male is the soft roe or milt.

**Roebuck**, a deer that was formerly common in the forests and parks of Britain, but is now only found at large in the northern parts of Scotland. It is met with in many of the temperate regions of northern Europe and Asia.

**Rogation Week** begins with Rogation Sunday, the Sunday before Ascension Day, when extra prayers and supplications are offered as a preparation for the Ascension.

**Rois Fainéants (King Do-Nothings)** were the last seven Frankish kings of the Merovingian dynasty. They were so called because the officials known as Mayors of the Palace assumed all the power.

**Roller**, a tropical Old World bird of the *Coraciidae* family, allied to the hoopoe and bee-eater, of strikingly brilliant blue, chestnut, greenish-blue plumage. There are fifteen species, one of which breeds in the far north and visits the British Isles on its migrations to and from its winter quarters in Africa.

**Roman Catholic Church** is the Christian Church whose head is the bishop of Rome, lawful successor of St. Peter, who was appointed by Christ as head of the Church. Its Creed comprises twelve articles, the seven sacraments of Baptism, Confirmation, Eucharist, Penance, Extreme Unction, Orders, and Matrimony; the doctrines include those of Original Sin and Justification, sanctioned by the Council of Trent; the Mass, as a propitiatory sacrifice; Purgatory; Papal Supremacy, etc. It was the established Church of England until the Reformation, after which many disabilities were imposed upon Roman Catholics, and continued in a more or less severe form until the passing of the Emancipation Act of 1829. There are four Roman Catholic Archbishops in England (Westminster, Birmingham, Liverpool, and Cardiff), two in Scotland (St. Andrews and Edinburgh, and Glasgow), and four in Ireland (Armagh, Dublin, Cashel, and Tuam).

**Romanesque Architecture**, the style of Western European architecture which came into being at the end of the Roman Empire, the outcome of the earlier and simple Basilican form and leading to the later graceful and more complex Gothic. Notable in Romanesque style were the rounded arch and masonry vaulting.

**Roman Roads**, highways constructed by the Romans. They were of great durability. The best known British roads were Ermine Street (London, Lincoln, York), Fosse Way (Lincoln through Leicester, Cirencester, Bath, Exeter), Watling Street (London to Shropshire).

**Roman Walls** were built as frontier barriers under the Emperors Hadrian (76-138) and Antoninus Pius (86-161). Hadrian's works, linking Wall-SEND-ON-TYNE with BOWNESS-ON-SOLWAY, comprised a twenty-foot stone wall, ditches, turrets, "milecastles," fortresses, and a double earthen mound, or "Vallum." Impressive ruins are still visible at Chesters and Housesteads. Antoninus Pius, Hadrian's successor, made a further advance, but the turf wall which he built between FORTH and CLYDE was soon abandoned. Septimius Severus (146-211) restored Hadrian's wall after the assassination of Commodus and the subsequent civil wars. It was finally abandoned between 380 and 390.

**Rondo**, a piece of music in which three distinct airs or melodies occur in a certain order. In the typical Rondo of Beethoven (e.g., third movement of Sonata Pathétique) the order is 1, 2, 1—3—1, 2, 1.

**Röntgen Rays.** (See X-Rays.)

**Roodbok**, a reddish-brown member of the deer family, with large ears and pointed horns, abounding in the forests of southern Africa.

**Rood Screen**, an ornamental partition, separating the choir from the nave in a church, and fronting the rood or crucifix.

**Rook**, a very common bird of the crow family abounding in all parts of Britain. (See p. 1004.)

**Rorqual**, a marine mammal of the whale order. There are several species. The Common Rorqual is a large animal, reaching a length of 80 ft. or more.

**Rosary**, a circular chain of beads, used by Catholics when reciting a particular form of sustained prayer. Each bead represents an entire prayer, and the combined prayers constitute the Rosary.

**Roses, Wars of the** (1455-85), between the rival houses of York and Lancaster, for the possession of the English crown, began in the reign of Henry VI. and ended with the death of Richard III. on Bosworth Field. The emblem or badge of the Lancastrians was the red rose and of the Yorkists the white rose. All rivalry between the Roses ended by the marriage of Henry VII., the Lancastrian, with the Princess Elizabeth, daughter of Edward IV., the Yorkist.

**Rosetta Stone**, discovered in 1799 by the French at Rosetta in Egypt, and deposited in the British Museum. It is a piece of black basalt about 3 ft. long, and contains a decree of the Egyptian priests of Ptolemy V. Epiphanes (205-181 B.C.) in (1) hieroglyphics, (2) demotic, and (3) Greek characters. It was by means of the three different inscriptions on the same stone that hieroglyphic writing was first able to be deciphered.

**Rosewood**, the name given to the timber of various South American trees of the *Leguminosae* order. Its colour is dark brown with red streakings.

**Rotary Clubs**, local clubs of business and professional men, first started in Chicago, 1905, to foster social relations, encourage high ethical standards in business, and advance international understanding, goodwill, and peace. The meetings take place at the headquarters of each club at luncheon, after which an address on a subject relative to the objects of the movement is given. In 1912 the organisation became an International Association.

**Rotifera**, the class of animals known as "wheel-animalcules," microscopic in size, but possessing highly organised structures.

**Rotten Row**, a corruption of *route de roi* (king's drive), the famous riding resort in Hyde Park.

**Rottenstone**, a siliceous limestone made porous by the action of water. In a pulverised form it is used for polishing soft metals.

**Rouble**, a Russian silver coin of the nominal value of about 2s. English.

**Rouge**, a substance obtained by heating copperas to the point of decomposition. This form of rouge is utilised both for polishing purposes and as a pigment. Another rouge used as an artificial colouring matter is obtained from the dried flowers of *Carthamus tinctorius*, mixed with powdered French chalk.

**Rouge et Noir**, a well-known gambling card game played on a table divided into two sections and marked with two black and two red lozenges. Any number of players can take part, and the money is staked on the red or black spaces. The cards are dealt out, first to Noir, until the pips aggregate more than 30; then in like manner to the Rouge, and the packet coming nearest to 31 wins the stakes.

**Roulette**, a gambling game played on a table carrying a revolving wheel divided into 37 compartments. Each compartment bears a number, 0 (zero) and 1 to 36. The numbers are mixed and do not follow any particular order. Of these 37 numbers 18 are black and 18 are red, whereas zero is green. The players stake their money on any compartment colour, or combination of numbers they please. The wheel is whirled round and a ball is set rolling in the opposite direction, dropping finally into one of the compartments, thus deciding the winning number and colour.

**Round**, a musical composition in several parts, taken up by each participator at a different point from the other, and effecting a harmonious combination throughout. A Catch is similar in form, but usually allied to humorous words.

**Roundhead**. In the reign of Charles I. and later, a Puritan or member of the Parliamentary party who wore his hair cut short. It was originally a term of derision applied by the Royalists, who usually wore ringlets.

**Round Towers** are conical erections of considerable height, dating, probably, from some period between the 9th and 13th centuries. These buildings are numerous in Ireland, and three remain in Scotland. It is supposed they were built for ecclesiastical purposes, but there is no direct evidence of this existing.

**Rove Beetles**, beetles with long narrow bodies, and a habit of suddenly curving up their tails when surprised. They are a numerous family.

**Royal Academy** was founded in London in 1768, under the patronage of George III. The early exhibitions of the Academy were held first in Pall Mall, and later in Somerset House, where the exhibitions continued to be held until 1836, when the National Gallery being built, the Academy moved its quarters to that building. In 1869 the present Royal Academy at Burlington House was opened. The Academy numbers 53 R.A.s and about 30 A.R.A.s. List of presidents: Sir Joshua Reynolds (1768), Benjamin West (1792), James Wyatt (1805), B. West (1806), Sir Thomas Lawrence (1820), Sir M. A. Shee (1830), Sir C. Eastlake (1850), Sir F. Grant (1866), Lord Leighton (1878), Sir J. E. Millais (1896), Sir E. J. Poynter (1896), Sir Aston Webb (1919), Sir F. Dicksee (1924), Sir William Llewellyn (1928), Sir E. Lutyens (1938), Sir A. J. Munnings (1944), Sir Gerald F. Kelly (1949) and Sir A. E. Richardson (1954). The Academy holds an exhibition of pictures, statuary, and architectural designs every summer, to which non-members can, subject to selection, send their work.

**Royal Academy of Music**, founded in 1823, has enjoyed a Royal Charter since 1830, and an annual Government grant since 1868. Every form of music is taught there, as well as modern languages. It has valuable scholarships, and has produced many eminent musicians.

**Royal Agricultural Society** was founded in 1838 and incorporated in 1840. It holds an annual show, at which valuable prizes are offered for the best stock and the most important inventions in agricultural implements. These shows were held at different places each year from 1839 until London was fixed upon as what was hoped would be a permanent show place, and a large tract of ground was secured at Park Royal for that purpose. The shows held at the latter place, however, failed to attract the public, and a reversion was made to the old system in 1906.

**Royal College of Music**, at South Kensington, was incorporated in 1883. It has a large number of free scholarships for young musicians of outstanding merit. In association with the Royal Academy of Music it holds annual examinations in several grades all over the country, awarding certificates of proficiency to successful candidates.

**Royal Geographical Society**, with headquarters in Kensington, supports geographical research in all parts of the world.

**Royal Horticultural Society**, established 1804; holds exhibitions in Vincent Square, Westminster, the annual flower display at Chelsea, and has gardens at Wisley in Surrey.

**Royal Hospital, Chelsea**, built by Wren, was opened in 1694 as an institution for invalid soldiers.

**Royal Institution**, established 1799, and incorporated by Royal Charter in 1800 for "the promotion, extension, and diffusion of Science and of Useful Knowledge." It was in the building of the Institution that Faraday conducted his experiments. It supports four professors: natural philosophy, astronomy, chemistry, and physiology. Famous also for its Christmas lectures designed for a juvenile audience.

**Royal Society** was founded by Royal Charter in 1662, Viscount Brouncker being the first president. Its *Philosophical Transactions* date from 1665. The meetings are held in Burlington House. Among the presidents have been Sir Christopher Wren, Pepys, Sir Isaac Newton, Sir Joseph Banks, Sir Humphry Davy, Prof. T. H. Huxley, Lord Rayleigh, Sir Archibald Geikie, Sir J. J. Thomson, O.M., Prof. Sir C. S. Sherrington, O.M., G.B.E., Lord Rutherford, O.M., Sir William Henry Bragg, O.M., Sir Henry Dale, O.M., Sir Robert Robinson, O.M., Lord Adrian, O.M., and Sir Cyril Hinshelwood.

**Rubber**, produced from the juice of certain trees and shrubs of tropical countries, is in such extensive demand now for tyres and other purposes that rubber plantations have been established in almost every part of the world where rubber can be grown, particularly in Malaya and Indonesia. The best kinds come from the Amazon valley. Great advances were made in the production of synthetic rubber during the second world war.

**Rubicon**, a small river falling into the Adriatic, and forming one of the Italian boundaries, the crossing of which anciently involved decisive action and constituted a declaration of war. Thus the phrase "crossing the Rubicon" came into general use, denoting an act from which there is no withdrawal.

**Rubidium**, a metallic element most closely resembling potassium. It is silver-white and very soft, and was discovered in 1861 by Bunsen and Kirchhoff, using the spectroscope. It is rare, occurring in small amounts in the mica called lepidolite and in potash salts of the Stassfurt deposits in Germany.

**Rubrics** are instructions in regard to the ceremonies of the Church, appearing in red in the Prayer Book.

**Ruby** is a deep red kind of Corundum (aluminium oxide); one of the most valued of precious stones. Burma yields some of the finest, and rubies of inferior colour are found in Siam, Ceylon, South Africa, and Brazil.

**Rudd**, a fresh-water fish of wide distribution, plentiful in the rivers of Britain, and found in most other parts of Europe, also in Asia Minor. It is of a reddish-gold colour, with a greenish-blue beard.

**Rudesheimer**, a noted brand of white wine made from grapes grown in the district of Rudesheim on the right bank of the Rhine.

**Ruff**, a bird related to the common sandpiper, at one time very common in the Fen districts. The males have a ruff of feathers round the neck.

**Ruffe or Pope**, a small fresh-water fish common in most parts of central Europe, and similar in appearance to the ordinary perch. It is found in British rivers.

**Rumes**, the name given to a pleated strip of fine linen worn by men in the breast of the shirt, and fashionable down to the early part of the 19th century.

"**Rule, Britannia!**" the national sea-song of England, was written by James Thomson (1700-48), the author of the "Seasons," and set to music by

Dr. Arne about 1740. The poet's words were "Britannia, rule the waves!" but it is usually rendered "Britannia rules the waves."

**Rum**, an ardent spirit distilled from molasses, and containing from 40 to 50 per cent. of alcohol. It is chiefly manufactured in the West Indies, and derives its special flavour from a volatile oil.

**Ruminants**, animals that chew the cud, being provided with a compartmented stomach, enabling them to swallow food, and later to bring it back to the mouth for mastication; e.g., sheep, goats, oxen, etc.

**Runcible spoon**, a kind of fork used for pickles having three broad prongs. The word was used by Edward Lear about 1870 as a nonsense word and may be derived from *Rouncival* meaning large or huge from the bones said to have been dug up at *Roncesvalles* where Roland fell. *Rouncival* peas are the large peas called "marrowfats."

**Runes or Runic Inscriptions**, the description applied to certain characters discovered cut upon stone monuments and implements found in many parts of Europe, including England. In only a very few instances has it been possible to put any distinct and conclusive interpretation upon them.

**Rural Dean**, an ecclesiastical officer whose chief duty is to assist the Bishop in the duties of his diocese.

**Ruskin College, Oxford**, a unique institution founded by Mr. Walter Vrooman, an American, in 1899 to exist for all working men and women.

**Rusts**, parasitic fungi, some common species of which have reddish spores which in a mass have a rusty appearance. A well-known species is the Wheat Rust (*Puccinia graminis*), which has an alternative host in the barberry.

**Ruthenium**, a greyish-white metallic element discovered by Claus in 1845. It is harder and more brittle than platinum, in whose ores it occurs.

**Rutile**, mineral titanium dioxide. It is found in many igneous rocks, and in gneisses and schists. Its commonest colour is reddish-brown.

**Rye House Plot**, formed in 1683 with the object of assassinating Charles II. and the Duke of York (afterwards James II.), in order to secure the succession of the Duke of Monmouth. The plot was frustrated.

## S

**Sabaoth**, a Hebrew word, meaning an army or host, and applied sometimes to the Supreme Being, e.g., "the Lord of Hosts" (Rom. ix. 29).

**Sabbath**, the Bible name for the seventh day of the week, designated as the day of rest in the fourth commandment. It corresponds with Saturday in the modern calendar. The Christian "Sunday" is the first day of the week. It is nowhere in Scripture called the Sabbath, though this name is sometimes erroneously applied to it.

**Sabbatical Year** was instituted by the Jews in ancient times for the purpose of giving the soil a rest from cultivation. This was every seventh year.

**Sabines** were a brave race inhabiting a territory near Rome in early times. The Sabines were absorbed in the Roman people about 290 B.C.

**Sable**, a furred mammal of the weasel family mainly inhabiting Siberia. It is bright brown in colour, and has a long, bushy tail. American sable is a marten.

**Saccharin**, a white crystalline solid manufactured from toluene, 550 times as sweet as cane sugar. It is used as a sweetening agent; as a substitute for sugar when sugar is forbidden, as in certain diseases, or when there is a shortage. It has no value as a food.

**Saccharimeter**, an instrument for determining the amount of sugar in solution by means of polarised light. Used in breweries and distilleries for estimating the specific gravity of worts, etc.

**Sack**, the white dry wines of Spain and Madeira, canary being the most popular.

**Sacrament**, according to the Protestant Church, includes Baptism and the Lord's Supper. In the Roman Catholic Church there are seven Sacraments. (See also Roman Catholic Church.)

**Sacrifice**, the offering up to a deity of some object as an expression of thanksgiving or penitence. The first sacrifice we read of in the Bible was

- that offered to God by Abel. The ancient Greeks and the Romans practised sacrifice.
- Sacrilege** is the breaking into a place of worship and stealing articles therefrom. In olden times this offence was punishable with death, but by Acts passed in the last century it was generally treated as an ordinary burglarious offence. By the Larceny Act, 1916, breaking and entering any place of divine worship and committing a felony therein is punishable by penal servitude.
- Saddles** were used by the ancient Greeks and Romans, and were not known in England probably before the 6th century.
- Sadducees**, a Jewish sect of unbelievers, who held that the soul was mortal, and that there was no hereafter. Alluded to in the New Testament.
- Safety Lamp**, as used in coal mines, was invented by Sir Humphry Davy in 1816. The flame is enclosed in a cage of fine-meshed wire which allows air to enter and promote burning, but conducts away the heat generated in combustion so that no product of combustion escapes at a temperature high enough to ignite explosive gases in the mine.
- Sagittarius or "the Archer,"** one of the celestial constellations situated between Cygnus and Aquila. Sagittarius is another of the zodiacal constellations of sixty-nine stars, which ancient astronomers worked into the representation of an archer. It lies between Scorpio and Capricornus.
- Saiga**, an antelope of Tartary. Western Asia, and Eastern Europe, tawny yellow.
- Sainfoin**, a widely cultivated forage plant, especially adapted for sheep. It is of strong, leafy growth and bears bright red flowers. It belongs to the same order of flowering plants as peas and beans.
- St. Andrew's University**, the earliest Scottish university (1412) and the third oldest in the United Kingdom.
- St. Elmo's Fire**, a glowing brush-like discharge of electricity which takes place from sharp-pointed objects on mountains or the masts of ships exposed to the intense electric fields of thunder-clouds.
- Salamanders** are amphibia superficially resembling lizards, from which they differ in having a moist skin and no scales.
- Salicin**, a white crystalline substance, much used as a medicament, and obtained from the bark of willow-poplar and other allied trees. It is a compound of carbon, hydrogen, and oxygen.
- Salic Law** was probably instituted in France in the 5th century for the purpose of excluding females from inheriting the Crown. The Bourbons introduced the same law into Spain, but this was abolished by decree in 1830 to enable Isabella II. to succeed.
- Salicylic Acid** can be obtained from the flowers of the meadow-sweet, and from oil of wintergreen, but is now usually prepared by the action of carbon dioxide on sodium phenate under pressure. The acid is then prepared from the sodium salicylate. It is used as an antiseptic and has been used as a food preservative. Aspirin is a derivative of salicylic acid.
- Salmon**, a familiar fish notable for its habit of ascending rivers from the sea in the autumn and there depositing its spawn, not returning to the sea until the early spring. The salmon fishing season varies from place to place. (See p. 748.)
- Salt**, one of the oldest of condiments, exists in many substances, and is chloride of sodium, compounded of the non-metal chlorine and the metal sodium. It is obtained from deposits in the earth, from salt-springs, and from seawater. There are salt mines in Galicia which have been worked for hundreds of years. The chief English salt mines are in Cheshire.
- Saltpetre**. (See Nitre.)
- Salvarsan**, the organic arsenical compound arsenphenamine, which Ehrlich discovered was able to kill inside the human body the spirochæte germ that causes syphilis. Also known as "606." It has been superseded by neosalvarsan.
- Salvation Army**, The, commenced in East London in 1865 under the name of the East London Mission, later the Christian Mission. William Booth, a former Methodist Minister, was the founder. In 1878 with the title of the Salvation Army a quasi-military organisation was adopted. Mr. Booth was its first General and
- Commander-in-Chief, the declared object being the promotion of practical religion among the masses. In 1931 an Act of Parliament was passed providing for the election of all future Generals, and for the formation of a Trust Company to control Army Funds and property. In addition to the purely evangelical work the extensive network of Social Welfare endeavour in every country where the Army Flag flies covers all phases of human need from pre-natal clinics for poor expectant mothers to eventide homes for the aged poor. Commissioner Wilfred Kitching, son of a famous former commissioner, was elected to the generalship in succession to Albert Osborn in 1954. International headquarters: 101 Queen Victoria Street, E.C.4.
- Sanatorium**, an institution for people out of health, requiring nursing and medical attendance.
- Sanctuaries** were places where offenders against the law were free from arrest, and previous to 1697, when sanctuaries were suppressed, several parts of London were treated as sanctuaries. The chief of these refuge localities was in Whitefriars. There were others in the Minories, Mitre Court, the Savoy, Westminster, and the Mint. Other sanctuaries were at Beverley and at St. Burian's in Cornwall.
- Sand Blast**, an American invention introduced in 1871, is a method of cutting or decorating glass and other hard substances by means of sand driven by a blast of air or steam.
- Sanderling**, small wading bird of sandpiper family; breeds in tundra regions of far north, and is seen on sandy beaches of Britain as a winter visitor. Conspicuous white wing stripe and, like Curlew, Sandpiper, Knot, Dunlin, and other members of sandpiper family, has marked change of plumage between winter and summer.
- Sandpiper**, small- to medium-sized wading birds of several species whose migratory powers are so great that they are found in most parts of the world. They include the Common Sandpiper, frequently seen in Scotland, a bird about 7 in. long, greenish-brown head and back, white under-parts; beak long and slender. Other species met with in Britain are the Curlew, Green, Purple, and Wood Sandpipers.
- Sanhedrin**, the ancient Jewish Ecclesiastical Council of 70 members, said to have been originated by Moses when he called together 70 elders to assist him as judges. In modern times the Sanhedrin has been summoned only very rarely.
- Sanitation**, the science of health in its application to disease prevention generally, embracing the investigation of drainage, air supply, isolation in infectious disease, and hygienic measures of all kinds. The Public Health Act of 1875 laid down the basic principles of modern sanitation. Sanitary inspectors work under the direction of the local Medical Officers of Health (Local Government).
- Sans-Culottes**, a term first applied by the French aristocrats to the revolutionary leaders in 1790, and adopted by the latter as a title of honour.
- Sanskrit** is the language of ancient India, spoken by the Brahmans, and existing in early Oriental literature. It was the language of literature and government, and its relationship to the modern Indian languages is rather like that of Latin and Greek to modern European languages.
- Saponin**. The term is a generic one applied to a range of organic compounds which produce frothy, soapy solutions. Saponins are extracted from the soapwort root, horse chestnut seeds, etc. Saponin is the basis of the "foam" used for fire fighting; it can be used like soap to make insecticides and fungicides adhere to the leaves of plants.
- Sappers and Miners**, the name given originally to members of the corps of Royal Engineers.
- Sapphic Verse**, a metric form of verse said to have been invented by Sappho, the lyric poetess of Mitylene, who flourished about 600 B.C. This verse consists of five trochees, the second of which is a spondee, and the third a dactyl.
- Sapphire**, a valuable deep blue variety of Corundum (aluminium oxide) found mostly in India, Ceylon, and Northern Italy.
- Saprophytes**. A term applied to plants which feed on dead organic matter. Many fungi are saprophytes.

**Saracen**, the name given in classic times to the Arab tribes of Syria and adjacent territories. In the Middle Ages the current designation among the Christians for their Muslim enemies.

**Sarcophagus**, the name given to a stone coffin, such as was used by the ancient Egyptians, Greeks, and Romans, for receiving the remains of their famous dead. These sarcophagi were often decorated with rich carvings and sculptures.

**Sardine**, the term applied to young pilchards which are preserved by canning in oil.

**Sardonyx**, a kind of chalcedony comprising layers of alternating brown, red, white, and other colours. It is much esteemed as a gem.

**Sarrusophone**, bears the same relation to the Oboe as the Saxophone does to the Clarinet (i.e., it has a metal tube and a double-reed mouth-piece). The Contrabass Sarrusophone is sometimes used instead of the Double Bassoon.

**Sassanides** were a dynasty of Persian rulers descended from Artaxerxes from 226 to 652.

**Satellites** are small planets revolving round the larger ones. The moon is the earth's only satellite. Jupiter has eleven; Saturn, nine; Uranus, four; Mars, two; and Neptune, one.

**Satin**, a silk fabric of glossy surface of a velvety texture, once very fashionable for dresses, but now little used except for trimming purposes.

**Satin-Bird**, the famous "bower bird" of Australia, so named from its habit of constructing a bower-like nest; has a glossy black plumage, with the under parts yellow.

**Satinwood**, the timber of a tree plentiful in India and Ceylon, and valued for cabinet work. It is of fine grain and very hard. Varieties also exist in the West Indies, Florida, and Tasmania.

**Satrap**, the name given in ancient times to a Persian Governor of a Province.

**Saturday**, the seventh day of the week (the Jewish Sabbath), derived its name from Saturn, or, as some hold, is called after the Saxon idol, Saterne, which was worshipped on this day.

**Saturn**, a planet, the sixth from the sun, from which it is distant about 886 millions of miles, and around which it makes a revolution in about twenty-nine and a half years. It is about 71,500 miles in mean diameter, or nine times as large as the earth, and rotates on its axis in ten and a quarter hours. It is surrounded by a series of rings, meteoric in nature which revolve round the planet. It has nine small satellites.

**Saturnalia**, festivals held in ancient Rome in honour of the god Saturnus. They were made the scene of the most boisterous festivities, and were continued for several days at the end of December.

**Savoy Palace**, in London, between the Strand and the Thames, was originally built in the 13th century by Peter of Savoy. It was burnt in the Wat Tyler Rebellion in 1381, and afterwards restored and converted into a hospital in the reign of Henry VII. It was here that the famous but fruitless Savoy Conference was held between the Church and the Presbyterian Party in 1661. The ancient chapel of the Savoy was burnt down in 1864, but rebuilt in 1865.

**Saw**, a tool said, by Pliny, to have been invented by Dædalus, and fashioned in imitation of the jaw-bone of a snake. Saw-mills date from the 15th century, in Madeira and Breslau, but were introduced into England only in the 17th century, when they met with opposition. The circular saw was invented in the 18th century.

**Sawfish**, a large marine ray found in tropical America and Guinea, whose snout often attains the length of several feet, and is provided with saw-like projections. This "saw" is swung from side to side among a shoal of fish which form the food of this ray.

**Sawfly**. These insects are considered to be the most primitive members of the order (*Hymenoptera*) to which the bees and wasps belong. In appearance they resemble somewhat the latter, but there is no waist separating thorax and abdomen. The ovipositor is never used as a sting; usually it is saw-like so that the female can use it to make incisions into tissues of plants where the eggs are laid. The larvae look like caterpillars of butterflies and moths, but they have a great number of legs. One of the commonest species occurs on gooseberry bushes.

**Saxhorns**, large brass instruments on the cornet

model invented by Sax. They are much used in military and other brass bands. The Tuba is the Bass Saxhorn in E flat or F. The Euphonium is the Bass Saxhorn in B Flat. The Contrabass Saxhorn in B flat (i.e., one octave lower than the Euphonium) is called the Bombardon, but this term may be applied to the E flat Tuba.

**Saxons**, a Teutonic race originally inhabiting what is now Holstein. By the 7th century they had, with the Angles and Jutes, conquered and colonised most of England.

**Saxophone**, a musical instrument best described as a metal clarinet with a wide, curved tube. It is rarely used in serious music but is an important component of dance bands and the like. It is also used in French military bands.

**Scale (Musical)**, the series of notes on which a musical composition is built. Most European music is constructed upon the Major and Minor Diatonic Scales (q.v.).

**Scald**, the name of the Norse poets, who were similar to the bards of Wales. They had to celebrate the achievements of their warriors and leaders.

**Scallop**, marine bivalve molluscs of the genus *Pecten*, which is widely distributed. The scalloped edge to the shell results from a pattern of radiating grooves.

**Scandium**, an element classed in the rare-earth metals group. It was discovered in 1879 by Nilson, and occurs in small quantities in certain rarer minerals such as wolframite.

**Scapular**, a vestment hanging from the shoulder to the knees, worn by members of certain Roman Catholic orders. The name is also given to two small pieces of cloth worn over the shoulders by lay members of the Church in honour of the Virgin.

**Scarabæus**, a genus of beetles (Scarabs) widely distributed through Africa and Asia and the inner parts of Europe. It is to this genus that the "Sacred Beetle" of the Egyptians belongs, and numerous representations of it are found on ancient monuments.

**Seal**, a small Anglo-Saxon coin, circulated in the 7th and 8th centuries, and worth nominally a penny; struck sometimes in silver.

**Sceptics**, a sect of philosophers founded by Pyrrho (c. 360-275 B.C.) in ancient Greece. Their philosophy was one of dogmatic doubt. Since nothing can be denied or affirmed, the only attitude to life is one of imperturbability. Pyrrho's doctrines are chiefly known through the works of his disciple Timon.

**Scheelite**, mineral form of calcium tungstate.

**Sceptre**, the staff or rod constituting the symbol of supreme authority. Tarquin, the elder, was the first Roman to assume the sceptre in 468 B.C. The French kings of the 5th century made a golden rod their sceptre.

**Scherzo**. The word signifies a *joke*. It is used to describe a piece of music in light or jocular vein. Beethoven used the Scherzo as a middle movement in a number of Symphonies and Sonatas, since when it has tended to displace the more formal minuet.

**Schiedam**, a kind of gin, commonly called Holland, manufactured at Schiedam, from the juice of the juniper berry and malt barley.

**Schism**, an ecclesiastical term for division in a church. The Great Schism was the separation of the Greek Church from the Latin, finally established in 1054. The Western Schism was the division in the Roman Catholic Church from 1378 to 1417, when there were two lines of popes, one at Rome and one at Avignon, which arose over the election of Urban VI and Clement VII to the papacy and was more a matter of persons and politics than a question of faith.

**Schism Act** was introduced in 1714 by Bolingbroke. It took away from Dissenters the education of their own children, which was to be handed over to persons licensed by bishops of the Established Church. The Act was repealed in 1719.

**Schist**, the geological name of certain metamorphic rocks composed for the most part of minerals with thin plate-like crystals (e.g., mica) so that the layers of a schist are closely parallel. Quartz occurs in schists, and where it preponderates the term "quartz schist" is applied.

**Schoolmen or Scholastic Philosophers**, were a

body who, in the Middle Ages, devoted themselves to the study and exposition of questions of religious inquiry, and attempted to reconcile the teaching of the Church to the dictates of human reason. The chief Schoolmen were Archbishop Anselm, Albertus Magnus, Thomas Aquinas, Peter Lombard, Duns Scotus.

**Scorpion.** The scorpions constitute an order of the arthropods. Distinctive features are the pair of powerful claws at the head and a "sting" at the tail, which curves over the back in attack or defence so that it points forwards. The poison injected by the sting is potent, causing instant death in spiders, centipedes, etc., and acute discomfort to humans. The idea that a cornered scorpion can sting itself to death is a myth; scorpions are immune to their own poison.

**Scorpion Fly.** The scorpion fly, of which there are less than 500 species, constitute a separate order of insects, the *Mecoptera*. They have 2 pairs of membranous wings, and gain their popular name because in some species the end of the abdomen is turned up, though it does not function as a sting.

**Scotists** were followers of the Schoolman, John Duns Scotus, (1266-1308) who propounded certain moral laws and doctrines which were at variance with the teachings of the main body of Schoolmen, including Aquinas. (See Schoolmen.)

**Scotland Yard,** the Metropolitan Police Headquarters from which the Force is administered. The original Scotland Yard was a street near Trafalgar Square, so called because a palace stood there given by King Edgar (10th century) to Kenneth II. of Scotland. New Scotland Yard, the present official name for S.Y., is on the Thames Embankment, and the famous "C.I.D." (Criminal Investigation Dept.) has its headquarters there.

**Scouts, Boy.** This movement, founded by the late Lord Baden-Powell of Gilwell in 1908, "to help boys of whatever class to become all-round men," has been developed with great spirit and success in many countries of the world. Its aim is to develop good citizenship among boys by forming their character—training them in habits of observation, obedience, and self-reliance—inculcating loyalty and thoughtfulness for others—teaching them services useful to the public and handicrafts useful to themselves—promoting their physical development and hygiene.

**Screes or Talus,** the mass of loose, angular rock fragments which accumulate towards the bottom of hill-sides and mountain-sides. These fragments have been detached by weathering processes, in particular frost action.

**Scriber,** a sharp steel rod used for marking metal and wood.

**Scruple,** an English apothecaries' weight, comprises 20 grains, or the third of a drachm. In ancient Rome a scruple was the 24th part of an ounce, and also indicated a surface and time measure.

**Scutage or Shield-money** was a feudal tax levied from Prelates and Barons in lieu of the military service of their knights enfeoffed upon their lands.

**Scyphozoa.** (See Jelly Fish.)

**Scythians,** a nomadic people of ancient times.

**Sea Butterfly,** marine molluscs which propel themselves by two "wings," which represent lobes of the foot. They constitute the order called *Pteropoda*.

**Sea Anemones or Actinaria,** an order of marine animals of the coelenterate class *Anthozoa*. They form a large and varied group of about 1,000 species and occur in many beautiful colours, flower-like in form.

**Sea Cow.** (See Manatee.)

**Sea Cucumbers or Holothurians.** These animals constitute the class of Echinoderms called *Holothuroidea*. They are elongate and worm-like, with a ring of about twenty tentacles round the mouth.

**Sea Eagle,** a genus of eagles, consisting of five species (more closely related to the kites than to true eagles), two of which occur in Europe. They lived on fish and carrion and sometimes seek their prey among living animals.

**Sea Elephant or Elephant Seal,** a curious genus of seal, the males of which possess a proboscis a foot or more in length that suggests an ele-

phant's trunk. They are found on the coast of California and in certain parts of the Southern Ocean; their blubber has a commercial value.

**Sea Hare,** a genus of molluscs (*Aplysia*), so-called because of resemblance to a crouching hare. The shell is thin curved plate largely sunk in the animal's body. They have four tentacles, occur in Britain in the laminaria or ribbon-wrack zone, and discharge a purple fluid when molested.

**Sea Horse,** a sea-fish (*Hippocampus*), very numerous in the tropics and comprising some twenty species. Their bodies are ringed and they have prehensile tails. Their heads are horse-shaped, and they swim in a vertical position.

**Sea Lily.** A class of echinoderms, the sea lilies may be roughly described as "stalked star-fishes." There are about 400 living species, and several thousand extinct species are known. Most of the former lose their stalk at maturity and are then free swimming. Otherwise called *Crinoids*.

**Sea Mouse,** a genus of marine worms called *Aphrodite*. These are of oval shape, some 8 or 9 in. long and iridescent. They are covered with fine bristles.

**Sea Squirts or Tunicates.** These animals are placed in the sub-phylum called *Urochorda*. They are found growing in rounded, jelly-like masses on rocks near low-water level. They get their name through the water jets they discharge.

**Sea Urchin.** The Sea Urchins belong to the class of echinoderms called *Echinoidea*. The body is globular and covered with spines which may be used for both defence and locomotion. The main organs of locomotion are, however, the tube feet, as in starfishes.

**Seals or Signets,** have been in use from the remotest times. Some impressions of seals of Saxon kings are in the British Museum. The Great Seal of England was first used by Edward the Confessor, and is now used on the writs summoning Parliament, and for sealing all State documents of importance. The Lord Chancellor is the official custodian of the Seal.

**Seasons** comprise the four natural divisions of the year, and are due to the inclinations of the earth's axis to the plane of the elliptic. (See Equinox.) The spring season is entered about Mar. 21st, autumn Sept. 22nd. The summer and winter seasons are governed by the solstices (which see), and begin respectively about June 21st and Dec. 22nd.

**Secondary Sexual Characters.** Characters of animals which are distinctive of sex, but have no direct connection with the reproductive process. Examples are: the mane of the lion and the antlers of some deer.

**Secretary Bird,** so called because of the quill-like plumes about its ears, is a bird of prey related to the eagles and vultures; common in Africa, and of considerable service as an exterminator of snakes. It is a large bird about 4 ft. in height.

**Sedan Chairs** were first made at Sedan in France in the 16th century, and introduced into England in the reign of James I. They were in general use in the 18th century, when they were the usual means of carriage for ladies and gentlemen. They were borne on two side poles by a couple of bearers, and accommodated only one person.

**Sedgemoor, Battle of,** the deciding battle of the Monmouth Rebellion, fought on July 6, 1685, at Sedgemoor in Somersetshire. The Duke of Monmouth was made captive, tried, and beheaded.

**Sedition.** In law, an attempt to disturb the tranquillity of the State. It is a common law indictable offence. The principal enactments now in force dealing with seditious offences were all passed during the last twenty-five years of the reign of George III., i.e., the Unlawful Oaths Act 1797, the Unlawful Drilling Act 1819, the Unlawful Societies Act 1799, and the Seditious Meetings Act, 1817.

**Seismology,** the branch of geophysics devoted to the study of earthquakes and other earth movements. The instruments used for the registration of earth tremors are termed seismographs and consist in principle of a pendulum system, the supporting framework following the ground movement and the bob

remaining at rest, thus setting up a relative movement between two parts. In order to record the displacements completely, at one station, three seismographs are necessary to show the two horizontal and the vertical components of the motion. Apart from detection and study of waves from earthquakes, sensitive seismographs are now widely used in geophysical prospecting, particularly in the search for possible oilfields.

**Selenium**, a non-metallic element of a dark red colour, and solid, found associated with sulphur, iron, pyrites, etc., though only in small quantities. Its electrical conductivity is increased when light falls on it, a phenomenon discovered in 1873 by May. Photo-electric cells depending on this property of selenium have been used for automatic control of street lamps that switch on at dusk and off at dawn, etc., but "selenium cells" have now been largely superseded by other photo-electric devices that are more reliable.

**Self-Denying Ordinance** was a measure passed in 1645, providing that no member of Parliament should hold military or civil office, and was forced through the House of Commons by Cromwell in order to deprive the Earl of Essex and other Presbyterians of power.

**Semitic Languages** are divided into two main sections; one including the Assyrian, Aramaic, Hebrew, and Phœnician groups; the other embracing the Arabic and the Ethiopian.

**Semitone**, the smallest interval in music—half a tone in the diatonic scale.

**Senate**, the higher governing Assembly of a Legislature. The word, applied primarily to the Roman council, is also used to denote the upper chamber in the legislatures of France, the United States, and other countries. In certain universities the governing body is also called the Senate.

**Seneschal**, a high official of a royal or noble household. The title originated in France in the 10th century, and was afterwards adopted in England and other parts of Europe.

**Sensitive Plant**. A species of *Mimosa* (*Mimosa pudica*), whose leaves are extremely sensitive to touch, shaking, and burning.

**Separatists**, the name given to the Dissenters in the time of Charles II., who pressed several severe measures against them. The term has also been applied to the Irish Home Rule Party.

**Sephardim**, the name of the descendants of those Jews of Spain and Portugal who left those countries in the 15th and 16th centuries to avoid the persecutions of the Inquisition. (See *Ink Sac*.)

**Sepia**, the "ink" of the cuttlefish. (See *Ink Sac*.)

**September**, the ninth month of the year, and the seventh of the old Roman calendar; hence the name, from *Septimius*. The designation was several times changed by the Emperors, but none of the new names survived for long.

**Septembrists** were participants in the massacre of prisoners in Paris in Sept., 1792, during the French Revolution.

**Septet**, a musical composition for seven voices or instruments.

**Sextuagesima Sunday**, the third Sunday before Lent.

**Septuagint**, the Greek translation of the Old Testament.

**Squin**, a gold coin of Italy, notably of Venice, which circulated from the 13th to the 18th century. It was worth about 9s. 3d. English.

**Serfs**, the name given to the slaves formerly existing in Russia, who answered to the condition of the feudal "villeins" of England. They were attached to the soil and were transferred with it in all sales or leases. Serfdom existed in Prussia until 1807 and in Russia until 1861.

**Serjeants at Law**, the highest degree of barrister rank formerly existing in England; until 1873 it was necessary for all Common Law Judges to be Serjeants before their elevation to the Bench. This qualification was abolished by the Judicature Act of that year. After 1873 appointments ceased and Lord Lindley (*d.* 1921) was the last of them.

**Serpentine**, a mineral; chemically a hydrous silicate of magnesium. Green serpentine is used as an ornamental stone. Fibrous serpentine is called asbestos.

**Serval**, a small carnivorous animal of the lynx

order, with black spots on a tawny ground. It is numerous in Africa, preys upon the smaller animals of the deer family, and is sometimes styled the "Tiger Cat."

**Servitor**. (See *Sizar*.)

**Settlement**, Act of, passed in 1701, assigned the Crown to the House of Hanover in case of Anne's death without children. The decision represented the determination of the squires and the Anglican Church never again to trust themselves to a Roman Catholic king.

**Seven Champions of Christendom**, as set forth in mediæval literature, were St. George of England, St. Andrew of Scotland, St. Patrick of Ireland, St. David of Wales, St. James of Spain, St. Denis of France, and St. Anthony of Italy.

**Seven Churches of Asia**, referred to in the Revelation of St. John, were those of Ephesus, founded by St. Paul in 57, Smyrna, Pergamos, Thyatira, Sardis, Philadelphia (Lydia), and Laodicea (Phrygia), all in W. Asia Minor.

**Seven Sages or Seven Wise Men of Greece**, regarded as the chief philosophers of the age before Socrates, were, according to the best authorities, Solon of Athens; Thales of Miletus; Pittacus of Mitylene; Bias of Priene; Chilo of Sparta; Cleobulus of Lindus; and Periander of Corinth.

**Seven Sleepers**, of the ancient legend, took refuge from the wrath of the Emperor Decius in a mountain cavern, when they were made to sleep for 300 years.

**Seventh-day Adventists**, an evangelical Protestant denomination observing the divinely ordained seventh-day Sabbath of the fourth commandment rather than the first day of the week, for which there is no Biblical authority, and ardently looking for the second coming of Christ to right all earth's wrongs.

**Seven Wonders of the World** were: 1, the Pyramids of Egypt; 2, the tomb of Mausolus, King of Caria (hence the word *mausoleum*); 3, the Temple of Diana at Ephesus; 4, the Walls and Hanging Gardens of Babylon; 5, the Colossus at Rhodes; 6, the Ivory and Gold Statue of Jupiter Olympus; and 7, the Pharos, or Watch Tower, built at Alexandria by Ptolemy Philadelphus, King of Egypt.

**Seven Years' War** was waged by Frederick the Great and England against Austria, France, and Russia, from 1756 to 1763. It resulted in the secession of Silesia to Prussia, of Canada to England, and in the strengthening of our Indian Empire.

**Sewing Machine**, a machine for stitching cloth or other materials, and operated by manual, steam, or other power. Many attempts were made to produce such a machine between 1780 and 1840, but the first really practical invention of the kind was that of Elias Howe, an American, in 1841. Other sewing machines were afterwards introduced, and many improvements have been effected.

**Sextagesima Sunday** is the 2nd Sunday before Lent. **Sextant**, an instrument which has superseded the quadrant as a measurer of angles between distant objects. It is of special importance in navigation and surveying, and contains 60 degrees described on a graduated arc. A small telescope is attached and there are also a couple of mirrors which reflect the distant objects so as to enable them to be accurately observed. The invention is attributed to John Hadley and to Thomas Godfrey independently, about 1730.

**Sextet**, a musical composition for six voices or instruments.

**Shad**, a marine fish belonging to the same genus as the herring. It is found along the Atlantic Coast of the U.S.A., and ascends rivers to spawn.

**Shagreen**, shark's skin; also a leather of peculiar grain made from skins of wild asses, camels, horses, etc., and mostly manufactured in Astrakhan and Asia Minor.

**Shake**, a musical embellishment produced by the rapid alternation of two notes.

**Shakers** were originally an English sect who emigrated to America in 1772, and under the leadership of Ann Lee established themselves in a community at New Lebanon, in New York State. They practise celibacy and oral confession, hold goods in common, and reject baptism and the Lord's Supper. Dancing constitutes a part of their worship.

**Shalloon**, a kind of cloth manufactured from wool and worsted, and used chiefly for women's dresses and coat linings. It gets its name from the fact that it was originally made at Chalons.

**Shamrock**, the three-leaved clover-like plant native to Ireland and its national emblem.

**Shark**, a large and powerful ocean fish, comprising many species, very widely distributed, but most numerous in tropical seas. They have formidable teeth and are the most carnivorous of all fishes. They usually attain a large size, the whale-shark being often of a length of 50 ft. Commercially the shark yields shagreen from its skin, the fins are made into gelatine, and an oil is obtained from the liver.

**Sharp**. (See Flat.)

**Shawls** are loose coverings worn by women over their shoulders and were introduced into Europe from the East. They are made of various materials, wools, silk, cotton, etc., or of mixed fabrics, and those from Cashmere, India are famed for their beauty of colour and design. At one time these were very fashionable, as were the shawls made at Paisley for the great part of the 19th century.

**Sheep**, a well-known family of ruminants of great utility as wool-producers, and for food. From the earliest times sheep have been a source of wealth to England. So much were they valued in the 15th and 16th centuries that their exportation was frequently prohibited. The chief English varieties are the Leicester, Cotswold, Southdown, and Cheviot breeds. Of the foreign breeds the most valued are the Merino sheep of Spain, which yield a fine long wool. Australia, U.S.S.R., Argentina, India, U.S.A., New Zealand, and S. Africa are the chief wool-producing countries in the world.

**Sheldrake**, a handsome genus of surface-feeding ducks, one of which, the common sheldrake, is an inhabitant of this country. It is a beautiful white-and-chestnut plumaged bird with dark-green head and neck and red bill. Another species, the ruddy sheldrake, appears in Britain only occasionally.

**Shellac**. This resin is the secretion of the lac insect (*Coccus lacca*), which occurs in forests of Assam and Siam. It is used for making varnish and in the manufacture of gramophone records.

**Sherardizing**. Process for coating steel or iron parts with zinc to prevent corrosion; this is done by heating the parts in a closed rotating drum containing zinc dust.

**Sheriff**, meaning the reeve or governor of a shire, has existed as an office in England from before the Norman Conquest. These county officials are now called High Sheriffs, and are nominated each year on Nov. 12th. This office has, however, in recent times lost much of its ancient significance, though it is still usually filled by men of prominence and wealth. They are appointed by the Crown upon presentation of the Judges, except in the metropolis, where the citizens retain the right of electing sheriffs for London and Middlesex. Ordinarily the term is applied to officials acting as High Bailiffs. The Sheriffs Act 1887 repealed many old Acts.

**Shibboleth** was the test word which Jephthah used to distinguish the Gileadites, his own men, from the Ephraimites as they passed the Jordan. Such as would not give the word were refused passage. The term is now frequently used to designate any special watchword or party phrase.

**Shield**, a weapon of defence carried on the arm by soldiers before the invention of firearms, mostly made of metal, leather, or wood. In heraldry the term implies a shield-shaped escutcheon forming the ground on which arms are displayed.

**Shilling** has been an English coin from Saxon times, but it was not of the value of 12 pence until after the Conquest. The present style of shilling dates from the time of Henry VII.

**Ships** have existed from prehistoric times. There is mention of one that sailed from Egypt to Greece in 1485 B.C., and in 786 B.C. the Tyrians built a double-decked vessel. No double-decked ship was known in England, however, before the *Royal Harry* was built by Henry VII., and it was not until the 17th century that ship-building was carried on in this country as a prominent industry.

**Ship-worm**. (See Tereido.)

**Shirts** do not seem to have been generally worn in Europe before the 8th century. According to Stow woollen shirts were commonly worn until about 1253, when linen of a coarse kind, then first manufactured in England by Flemish weavers, was adopted.

**Shiva or Siva**, the most worshipped god of the Hindu trinity.

**Shoddy**, the name given to a kind of cloth mainly composed of woollen or worsted rags, torn up and re-fabricated by powerful machinery. It was first made at Batley in Yorkshire about 1813, and in later times has become a very important industry employing many thousands of people at Batley and the neighbouring town of Dewsbury.

**Shoes**, as coverings for the human foot, have been worn from the earliest times. They are referred to in the Bible and early historical records. The shoes of the Jews were made of wood, rush, linen, or leather. Pythagoras directed his followers to wear shoes made from the bark of trees. The Romans were the first to set the example of costly shoes, and introduced various decorative adornments of ivory and precious stones. In the Middle Ages fashion played some fantastic tricks with shoes, and in England about the middle of the 15th century, shoes with such long points were worn that they had to be tied to the knees for convenience of walking, the dandies using silver chains for the purpose. It was about 1633 when shoes of the present form were introduced, and in 1668 the buckle came into use as an ornament. These continued in vogue up to the 19th century, before which period shoes were not made "rights" and "lefts."

**Shooting Star**, popular name for Meteors (*vide*).

**Short Parliament**, that of Charles I. in 1640, lasting only three weeks.

**Shot**, the name given to solid projectiles fired from guns. In the time of Henry V. stone shot was used, later leaden shot, then iron shot, and finally steel shot, introduced by Sir Joseph Whitworth.

**Shrike**, the name of an extensive genus of birds, found on all continents except S. America. The shrike is commonly called the "Butcher Bird," and is of sober plumage. It preys upon small animals and birds and it gets its name from the way in which it impales its food on thorns. The red-backed shrike is a summer migrant to Britain.

**Shrimp**, a edible sea crustacean of the lobster family, is found in great numbers in the shallow places of our coast.

**Shrove Tuesday**, the day before the first day of Lent, receiving its name from the old custom of shriving, or making confession, on that day. In England the day has always been associated with the making of pancakes.

**Sibyls or Sibylls**, women reputed to be inspired, who flourished at different periods in various parts of the world. Pliny, Plato, Ælian, and Varro speak of some of these weird creatures; and an Erythæan Sybil, who offered books of destiny for a large sum to Tarquin II., is famous in classic story.

**Sicilian Vespers**, the term applied to the terrible massacre of French people in Sicily in 1282. The French under Charles of Anjou were then in occupation of the island, and had been guilty of many cruelties. It began at Palermo on Easter Monday at the hour of vespers and resulted in the expulsion of the French king and the introduction of Spanish rule.

**Siderostat**, an instrument invented in 1865 for observing the light of the sun and the stars.

**Siegenite**, a variety of Cobalt Linnaite of a nickeliferous quality, found at Siegen in Germany.

**Signals**, for conveying information or warning to ships at sea, were not in much use in any English fleet before the time of Elizabeth. Radio is now in most general use. Semaphores are the principal signals on railways, in connection with coloured lamps. The block-signal system now in general use—which ensures the safety of a train within a given distance by not permitting another train to be on the same line of rails within that distance—has been of great service in preventing railway accidents. There are also electric, automatic, and pneumatic

signals, and for times of fog explosives called fog-signals are placed on railway metals.

**Sikhs** (disciples), a religious sect established in the 15th century, which gradually developed into a powerful race, and settled mainly in the Punjab. The sect was founded by Nanak (1469-1539) who preached simplicity, equality and rejected idolatry and caste. He was followed by ten *gurus* (spiritual leaders), the last of whom, Gobind Singh (1666-1708), welded the sect into a nation of warriors. They took the name of Singh (lion). After the death of Ranjit Singh in 1839 many fierce battles were fought against the British who finally subdued them and annexed the Punjab in 1849. They proved among the most loyal of Britain's Indian subjects. In the partition of India in 1947 their country was divided.

**Silence, Tower of, or *dakhma***, a tower about 25 ft. high, built by the Parsees for their dead. The corpse is taken inside by professional corpse-bearers and left to be consumed by vultures. Parsees do not burn or bury their dead, and the *dakhma* is to protect the living and the elements from defilement.

**Silhouette**, a form of black profile portrait, invented by Etienne de Silhouette in 1759, and formed by an outline cutting made with scissors or other sharp instrument from cloth, paper, or other flat substance.

**Silicon**, an important non-metallic element. Next to oxygen, it is the most abundant constituent of our globe's crust, of whose weight about 27 per cent. is accounted for by silicon. It occurs in many rocks, and its oxide occurs in many forms (e.g., quartz, sand, flint, agate, chalcedony, opal, etc.).

**Silk**, the name given to a soft glossy fabric manufactured from the fine thread produced by the silkworm. It was known to, and highly prized by, the ancients, being at one time paid for, weight for weight, with gold. The manufacture of silk was carried on in Sicily in the 12th century, later spreading to Italy, Spain, and the south of France. It was not manufactured in England before 1604; but when certain French refugees established themselves at Spitalfields in 1688, the industry was developed and became of importance. In the 18th century the Lombes of Derby achieved great success in this industry. Japan, China, Italy, Korea, and the Soviet Union are the chief silk-producing countries.

**Silkworm**, the larva of a species of moth. It is native to China, and has been cultivated with success in India, Persia, Turkey, and Italy. The silkworm of commerce feeds on mulberry leaves and produces a cocoon of silk varying in colour from white to orange. The cocoon is the silken habitation constructed by the worm for its entrance upon the pupa condition, and to obtain the silk the pupa is killed by immersion in hot water.

**Silures**, an ancient British tribe occupying approximately the counties of Monmouth, Brecon, and Glamorgan. They resisted the Roman conquest fiercely, but were overcome by A.D. 78.

**Silurian**. This geological period is one of the major subdivisions of the Palaeozoic era. Its beginning is estimated at 390 million years ago, and the period lasted about 50 million years. Maximum thickness of the Silurian strata in Britain measures 15,000 ft.

**Silver**, a white precious metal, found in a free state also in certain combinations, and in a variety of ores. The chief silver-producing regions are the Andes and Cordilleras, Peru, Bolivia, and Mexico have yielded vast supplies of the metal since the 16th century, and Colorado and Nevada in the United States have also been very prolific in silver yield. In England standard silver (that used for coinage) formerly contained 92½ per cent. fine silver and 7½ per cent. alloy, but when the price rose to 89½d. per oz. and the coins became worth more than face value, the Coinage Act of 1920 was passed, reducing the fineness to half. To provide silver bullion for industry and for a fund towards the redemption of our silver debt to America, it was decided in 1946 to replace the United Kingdom silver coinage by one made of cupro-nickel (75 per cent. copper, 25 per cent.

nickel). Maundy money, however, is of the original silver standard. (See p. 738.)

**Silverfish**, a primitive wingless insect (*Lepisma*). About half an inch long, with two long antennae in front and three similar feelers at the tail, it is common in kitchens.

**Simmel Conspiracy**, occurred in 1486, when Richard Symonds, an Oxford priest, put forward Lambert Simmel, a baker's son, as heir to the throne. He was claimed to be Earl of Warwick, nephew of Edward Plantagenet. In 1487 Henry VII. defeated the rebels. Henry recognised that Simmel had been a tool in Yorkist hands and took him into his own service as a scullion.

**Simonian**, one who, like Simon Magus (Acts viii. 18), would purchase the gift of the Holy Ghost with money. A trafficker in spiritual things or Church benefices.

**Simony**, the offence of trading in church offices, has been contrary to English law since the time of Edward VI. Elizabeth also promulgated laws against simony. In 1879 a Royal Commission reported on the law and existing practice as to the sale, exchange, and resignation of benefices. The position is now controlled by the Benefices Act 1898, the Amendment Measure 1923, and the Benefices Rules 1926.

**Sin-eaters** were people hired in certain parts of the British Isles in olden times to eat bread over dead bodies at funerals, the idea being that the eaters thereby took upon themselves the burden of the sins of the dead.

**Sinn Féin** is the name of the organisation which supported the Irish Republican Party. This movement remained in existence down to the establishment of Eire in 1937.

**Sino-Soviet Treaty, 1950**. A 30-year treaty of alliance between Russia and China was signed in Moscow on Feb. 14th, 1950, in the presence of Stalin and Mao Tse-tung. The terms of the treaty included the withdrawal of Soviet troops from the jointly-used naval base of Port Arthur and the return to China of the Manchurian railway by 1952. At the height of the Korean war in 1952 the two countries agreed that Port Arthur should remain a jointly-operated base, pending the conclusion of peace treaties with Japan. By the terms of an agreement signed in October 1954, Russia agreed to restore to China full administration over Port Arthur by May 1955.

**Sins, The Seven Deadly or Capital Sins** are pride, avarice, lust, anger, gluttony, envy, sloth.

**Sirius**, the dog-star, so called because of its situation in the mouth of the Dog (Canis Major); it is the brightest of all the fixed stars, and is also one of the nearest to us.

**Sirocco**, a warm southerly, often dust-laden, wind blowing across Mediterranean lands from the Sahara, in advance of an eastward-moving depression over the Mediterranean.

**Siskin**, a small bird of the finch family, common in Northern regions. The common Siskin has a yellow-green colour and is a lively, swift-flying bird with a very acute bill.

**Sistine Chapel**, the chapel of the Pope in the Vatican, renowned for its frescoes by Michelangelo.

**Six Articles**, The Statute of the, was passed in 1539 for compelling adhesion to the chief doctrines of faith: transubstantiation, communion in one kind, vows of chastity, celibacy of the clergy, private masses, and auricular confession; those who refuse to subscribe to the Articles were treated as heretics. The Act was repealed in 1547.

**Sizar**, a student of Cambridge or Dublin University to whom concessions in regard to college bills are made after having passed a certain examination. He formerly waited on the table. Similar students at Oxford are called servitors.

**Size**, a gelatinous substance used as a varnish and made from shreds of parchment, glue, hides, etc.

**Skate**, a genus of sea-fishes, belonging to the Ray family.

**Skilling**, an old Scandinavian and North German copper coin, worth from a farthing to a penny.

**Skink**. The skinks constitute a large family of lizards with large smooth scales, under each of which is a bony plate. The largest species, found in Australia, is about 2 ft. long. Some skinks have adopted a burrowing habit and degeneration of the limbs is associated with this. The Common Skink is a small species

about 5 in. long, living in the deserts of N. Africa and Syria.

**Slippers.** Usually treated as butterflies, they are in some respects intermediate between butterflies and moths. Some authorities put them in separate family (*Hesperiidae*).

**Skua, falcon-like marine birds related to the gulls.** The Great Skua resides in the Shetlands and Orkneys; 25 in. long and brownish in colour, it is known as the "Robber Bird" because of its habit of pursuing terns, gannets, and gulls until these disgorge their fish, which the Skua catches on the wing. The Arctic Skua, a slightly smaller species, brown and white in colour, resides in N. Scotland and the Isles.

**Skunk.** A North American mammal of the weasel family, with short legs and long bushy tail. All fifteen species are black and white, some being striped and the rest spotted. It secretes and ejects at will a foul-smelling fluid. Anything tainted with this fluid retains the odour for days.

**Sky.** The blue colour of the sky on a summer's day is the result of the scattering of light waves by particles of dust and vapour in the earth's atmosphere. Blue light having almost the smallest wavelength in the spectrum (0.00004 cm.) is scattered laterally about 10 times as much as the red (0.00007 cm.).

**Skyscraper;** owing to congestion, lack of ground space, and growth of modern cities, buildings are being made higher than broader; hence the name. The structures are constructed of a steel framework usually clothed in concrete or reinforced concrete. Among the highest examples are the Empire State Building of New York (1,250 ft.) and the Crane Building of Chicago (1,022 ft.).

**Slate,** fine-grained clayey rocks which have undergone metamorphosis. They cleave easily, and it is this property of cleavage which makes them a valuable source of roofing material. Welsh slates are among the best, there being important quarries at Penrhyn, Llanberis, and Ffestiniog.

**Slavery,** in its earlier forms, as in the times of the Romans, in the Feudal Ages, when vassalage and villeinage existed, and in the serfdom of Russia and other northern nations, was attended by many inhumanities and evils; but perhaps in the negro slavery system which prevailed in the British Colonies for upwards of 200 years and in certain parts of the United States up to 1865, it attained its highest point of cruelty. Since 1833 no form of slavery has existed within the British Empire. (See also Serfs.)

**Sleet,** a mixture of rain and snow.

**Slide Rule,** an instrument which in its simplest form consists of two logarithmic scales sliding alongside each other. By its use multiplication, division, extraction of roots, etc., are speedily carried out.

**Slings** as a weapon of attack find prominent illustration in the Old Testament as the instrument with which David slew Goliath. There were bodies of slingers in the Carthaginian and Roman armies, and slings were used as late as the 17th century, when it was necessary to economise powder.

**Sloop,** a fore-and-aft rigged, one-masted vessel, carrying jib, fore-staysail, mainsail, and gaff-top-sail. A sloop of war used to be a gun-carrying vessel of swift motion and great utility.

**Sloth,** a curious family of mammals, only found in Central and South America. They dwell almost entirely in the trees, proceeding from branch to branch with their bodies hanging downwards, their weight being supported by their large hook-like claws. They eat foliage.

**Slow Worm,** a species of lizard found in Britain which lacks legs. Silver with longitudinal brown stripes, it lives almost entirely on slugs.

**Sloyd,** a Finnish system of manual training in which pupils in the elementary schools are taught the use of ordinary tools as a preparation for later technical instruction.

**Slump,** an economic collapse or depression such as occurred after the end of the first world war and, to a more devastating extent, in 1930 and the following years. The depression falls heaviest on the export industries and the industries

producing constructional and production goods. Between 1850 and 1939 there were twelve periods of depression in Great Britain and nineteen in the United States. A world "economic blizzard" occurred between 1931-33. Since the war, however, acute slumps have been avoided by the taking of timely action.

**Smelting.** The process of heating an ore with a reducing agent to convert ore into metal, and with a flux to convert rocky impurities into a slag that will float on top of the molten metal. Slag and metal can then be tapped separately. An example is iron smelting; the reducing agent is coke, and limestone is added as the flux; the smelting is carried out in a blast furnace.

**Snake.** The snakes constitute the important reptilian order *Ophidia*. Snakes have a scaly cylindrical body, without fore-limbs, and only in some instances possessing rudimentary hind-limbs. Their locomotion is accomplished by means of the excessive mobility of their ribs, which are very numerous. All snakes have teeth which only serve for seizing prey, and the poisonous varieties are furnished with poison fangs in the upper jaw. These fangs are hollow-modified teeth and the venom passes into them from a special gland situated behind the angle of the mouth. Snake venom owes its toxicity to two different principles; the first attacks the nervous system, causing paralysis, and the other destroys blood corpuscles.

**Snipe,** a wading bird, long-legged, with long, slender, straight bill and brown plumage. The Common Snipe breeds on boggy moors in Scotland; the Great Snipe and small Jack Snipe are occasional visitors.

**Snow.** When water vapour condenses at high levels at a temperature below freezing, a cloud of ice particles is formed. If these frozen droplets are small, they fall slowly and gradually assume a feathery crystalline structure, reaching the earth as snowflakes if the temperature remains below freezing.

**Soap** owes its cleansing properties mainly to its emulsifying power which removes the grease most dirt contains. Soap is made by the action of caustic soda or potash on animal or vegetable oils and fats, with glycerine as a by-product, which is usually recovered. In the manufacture of Pears Transparent Soap, however, the glycerine is retained and the purity of this soap is enhanced by the unique refining process employed.

**Soapless Detergents** are cleansing agents, having properties similar to soap. The shortage of soapmaking oils and fats after the second world war led to considerable development in their production and they have the advantage of not forming scum in hard water. They can be produced from mineral, animal, or vegetable oils, and many of these products are on the market in the form of soapless washing powders, shampoos, etc. Their use in industry and agriculture is steadily increasing.

**Socialism,** a form of society in which men and women are not divided into opposing economic classes but live together under conditions of approximate social and economic equality, using in common the means that lie to their hands of promoting social welfare. The British Labour Party believes in peaceful and constitutional change to socialism by democratic methods based upon popular consent.

The word "Socialism" first came into general use in England about 1834 in connection with Robert Owen's "village of co-operation" at New Lanark. About the middle of the 19th century Charles Kingsley and others established a form of Christian Socialism, and William Morris, John Burns, and others founded a Socialist League in 1886. With the development of Trade Unions the Socialist movement took a more practical trend. Fabianism, associated in its early days with the distinguished names of Beatrice and Sidney Webb and George Bernard Shaw, aims at the gradual reorganisation of society by creating intelligent public opinion by education and legislation. The first time Labour Party members were returned to Parliament was in 1906, when 29 were elected. Since that date the growth of the Labour Party has been rapid: 393 members were returned to Parliament in 1945, 315 in 1950, 295 in 1951,

and 277 in 1955. A democratic programme of planned economy and public ownership of certain vital industries and services were features of socialist government from 1945-51 together with a comprehensive system of social security.

**Sociology** is the study of society, but the science is so vast that sociologists differ in what they consider to be its subject-matter. One of the leading sociologists, however, Professor Ginsberg of London, lists the problems of the worker in this field as follows: (1) the investigation of the quantity of the population and its quality; the study of the various types of social structure and classification of social groups and institutions; (2) social control—the study of law, morals, religion, convention, and fashion—the regulating agencies of society; (3) social processes—study of the various types of interaction between individuals and groups—co-operation, conflict, etc.; (4) social pathology—the study of social maladjustments and disturbances. Sociology, like psychology, has been for long considered a field for arm-chair philosophy; most of the great philosophers from Plato and Aristotle onwards to Marx and Engels have produced theories on the nature of society, but such theories often tell more about the individual who composed them and his political prejudices than about facts. Recently, however, there are signs that sociology is becoming a science in its own right.

**Soda**, carbonate of soda, is now mainly obtained by certain processes of manufacture from common salt. It was formerly obtained from the ashes of plants. Bicarbonate of soda is the primary product in the Solvay or Ammonia-soda method for commercial manufacture of soda; it is also formed when carbon dioxide is passed into strong soda solution. The bicarbonate is used in medicine and in the preparation of baking powder.

**Sodium**, a metallic element first obtained by Sir Humphry Davy in 1807 from caustic soda by means of the electric battery. Its chloride is *common salt*; the deposits of salt (e.g., in Cheshire and at Stassfurt) have come into existence through the drying up of inland seas. Salt occurs in sea-water to the extent of about 3 per cent.; the Dead Sea contains about 22 per cent. The blood of animals contains some 2½ per cent. of salt.

**Soil**, the upper portion of the crust of the earth, the medium from which all vegetation springs. It consists of decomposed rock and organic matter, and is always characteristic of the rocky formation it covers.

**Solar System**, general term embracing the sun, the planets and their satellites, and all celestial bodies which revolve round the sun. (See p. 155.)

**Solstice**, an astronomical term indicating the point at which the sun is most distant from the equator, which occurs about June 21st, when the Summer Solstice is entered, and Dec. 22nd for the Winter Solstice.

**Somerset House**, a large Government building stretching from the Strand to the Thames at the corner of Waterloo Bridge, and comprising the headquarters of the Inland Revenue and various other offices and registries. It was built towards the end of the 18th century on the site of an old palace which had belonged to the Protector Somerset.

**Sonata**. Properly the instrumental equivalent of a Cantata, i.e., an extended piece for a solo instrument, e.g., pianoforte or violin with pianoforte accompaniment. A typical sonata (e.g., Beethoven's *Pathétique*, Op. 13) consists of three movements. Each movement (see *Movement*) consists of two or more subjects interwoven in a characteristic way. The first movement is longer than the others. A solemn introduction leads to an agitated first subject which is connected by a bridge to the second subject. This is followed by a small coda. This first part comprises the Exposition. There follows a short Development of themes found in the Exposition, this leading to a recapitulation of the first and second subjects, the latter with a change of key. The movement ends with a Coda consisting of themes from the Introduction and first subject. This treatment is typical of sonata form. The second movement is in complete contrast and

is one of the loveliest slow movements ever written. Its form is that of a simplified Rondo, 1, 2, 1-3-1, Coda. The third movement is again in contrast. It is rapid but has not the tragic character of the first movement. The form is that of a full Rondo.

**Sonnet**, a favourite form of short poem in which Shakespeare, Milton, Wordsworth, and Keats especially excelled. It consists of fourteen decasyllabic lines, and is said to have been invented in the 11th century by Guido d'Arezzo.

**Sophists** were the first Athenian teachers of philosophy in the 5th century B.C., who were supposed to base their reasoning on false premises, sacrificing much to mere quibble of rhetoric. They were denounced by Socrates. Plato and Aristotle also rallied against the Sophists and the term "Sophism" has in later times been generally applied to fallacious arguments.

**Soprano**, a female treble (see *Treble*). The highest voice in a mixed choir.

**Sorcerers** were sufficiently numerous in the middle of the 18th century to have severe laws passed against them, and in 1603 James I. made it a capital offence to pretend to gifts of sorcery or witchcraft. The legal definition according to Lord Coke is, "a person who hath conference with the Devil to consult with him or to do some act."

**Soundings at sea**, to determine depth at any point, have been taken in all seas, and with considerable accuracy. A deep reading was that of the *Challenger* expedition in 1873, near St. Thomas's in the North Atlantic, when 3,875 fathoms were sounded. In 1951 H.M.S. *Challenger* recorded the maximum ocean depth in the Marianas Trench (N. Pacific) by echo-sounding as between 5,882 and 5,940 fathoms. Another deep was located in the S. Pacific in 1952-53 of 5,814 fathoms in the Tonga Trench, 180 miles S. of Tonga Tabu. (See also pp. 384 and 156.)

**South Sea Bubble**, a project entered upon in 1711 as a financial speculation by what was called the South Sea Company. Harley, Earl of Oxford, who was then in power, conceived the idea of utilising this project for getting together a sufficient sum to pay off the National Debt, then standing at about £51,300,000. The company contracted to redeem the whole debt in 26 years on condition that they were granted a monopoly of the South Sea trade. The idea fascinated the public, fabulous profits being dreamt of, and there was an immense demand for shares, which ran up in value from £100 to £1,000. All classes joined in the gamble, but by the wise policy of Sir Robert Walpole the fraud was exposed in 1720, when the whole scheme collapsed and thousands of people were ruined.

**Sovereign**, a British gold coin worth 20s. It was first coined in 1489, and remained the principal coin of the realm until its withdrawal in 1914. Its weight was fixed at 123.27447 grains troy, and it consists of 22 parts of pure gold to 2 parts of alloy.

**Soviet**. Russian word meaning "Council." The Russian revolution 1917 was based on workers' and soldiers' councils and they became the organs of the Soviet constitution.

**Soya Bean**. This is the bean of a leguminous plant (*Glycine Soja*) found in Asia. The bean meal, which is rich in protein and oil, is familiar in Britain as "soya flour."

**Spanish Civil War, 1936 to 1939**. The war commenced by a revolt by the Fascist General Franco against the Republic which had succeeded the Monarchy in 1931. Germany and Italy aided the rebels who besieged Madrid for over 2 years. An International Brigade was formed to help the Republic, but the Spanish Government was faced by the greater part of the Army, and very effective assistance from Italy and Germany. Those powers seized the opportunity to have a curtain-raiser to the world conflict which they intended to precipitate. After a total loss of a million men the Fascists overpowered the Republic.

**Sparrow**, name given to finch-like birds found in most parts of the world, of which the House Sparrow, *Passer domesticus*, is the most familiar of British birds. Also native to Britain is the rural Tree Sparrow, distinguished by its chestnut crown. Other European species are the Italian, Spanish and Rock Sparrows.

**Speaker of the House of Commons**, an official who presides over the deliberations of the Lower House of Parliament, and acts as guardian of its privileges. He is elected by his fellow-members, subject to the approval of the Crown, at the beginning of each new parliament, though it is customary for him to serve successive parliaments. The name of a Speaker (Sir Thomas Hungerford) is first recorded in the Rolls of Parliament for Jan. 1377.

**Specific Gravity**, defined as the ratio of the mass of a particular volume of a substance to the mass of an equal volume of water at 4°C.

**Spectacle.** (See Optics.)

**"Spectator."** Addison's famous periodical publication was first issued on Mar. 1st, 1711, the last issue being Dec. 20th, 1714. The bulk of papers were contributed by Addison and Steele.

**Spectroscope**, an instrument for observing spectra. It consists of a tube through which the light, in whose spectrum the observer is interested, enters to a collimating lens, and then through the prism under investigation, a telescope serving the purpose of examination instrument.

**Spectrum.** When light is refracted by a prism the rays of different wave-length are refracted slightly differently. Thus white light is broken down to give its spectrum of colours, ranging from red (longest wave-length) to violet (shortest wave-length). This phenomenon was discovered by Newton.

**Speculum Metal**, an alloy containing one part of tin and two parts of copper. For its high polishing quality it is used for the reflecting surfaces of telescopes.

**Spermatozoa**, microscopic cells about  $\frac{1}{100}$  in. long which are the generative element in male animals, and possess the power of fertilising the female ovum. In shape they resemble a tadpole, their mobility deriving from the long tail each spermatozoon has.

**Sphinx**, in Greek mythology a winged creature with a woman's head and a lion's body. The figure of Egyptian religion, which probably originated in Mesopotamia, represented a king in divine form. The Great Sphinx at Giza, probably built in the reign of Chephren (c. 2900 B.C.) is in the form of a lion with the head of a pharaoh.

**Spiders** were formerly classed as insects, but are now included with the animals of the *Arachnida* class. They have eight legs, breathe through pulmonary sacs, have six to eight eyes, and in most species spin webs composed of a viscid fluid.

**Spinnet**, a sort of boudoir harpsichord popular in the 17th century. The name derives from that of its inventor, Spinetti.

**Spintharoscope**, the simple apparatus, also known as a scintiloscope, devised by Sir William Crookes for detecting alpha particles. The essential element is a screen coated with zinc sulphide, and every alpha particle that hits the screen produces one scintillation.

**Spirituals**, negro melodies with religious inspiration and which are still spontaneously created, but have also passed into art-music. Paul Robeson, the American Negro, is the best-known singer of spirituals to-day.

**Sponge**, a marine organism consisting of a colony of cells, each of which slightly resembles an amoeba. While the sponge lives a current of water circulates through the main apertures. It is the dead skeleton of this mass that forms the sponge of commerce.

**Spoonbill**, a long-legged marsh bird, closely related to the ibis and stork, remarkable for its snow-white plumage and broad, flat, spoon-shaped bill. The European species has not bred in England since the beginning of the 17th century, but is still a regular summer visitor from Holland, where it nests in colonies in reed-beds and islets.

**Sprat**, a sea-fish of the herring order, plentiful on all European coasts. It averages from 3 to 4 in. in length. It frequently does duty for the preparation of "anchovy" paste, as its fry does for whitebait.

**Spurs** have been used by horse riders from ancient times; in the feudal period a knight was allowed to wear gilt spurs, an esquire silver ones.

**Stainless Steel.** The development of stainless steel for cutlery manufacture, etc., began with the discovery of Harry Brearley in 1912 that

steel containing 12 per cent. of chromium is rust-proof.

**Stag**, a large species of deer, still to be found in its wild state in the forest regions of Scotland, and kept as a domestic animal in many parks. It has large curved antlers, and is a noble-looking animal.

**Stakanovite**, a worker who beats the record for production in his industry. Derives from the Russian miner, Alexei Stakanov, who during the Soviet five-year-plan in 1935 became famous for his record output of coal. The term "Stakanovism" is used of the industrial system of increased production.

**Stalactites** are calcium deposits formed on the roofs and sides of limestone caves, and in tunnels, under bridges, and other places where the carbonic acid of rain-water percolates through and partly dissolves the limestone, resulting in the growth of icicle-like forms that often assume groupings. The water that drops from these and rests upon the ground is called *stalagmite*, which accumulates and hardens into a series of sharp mounds or hillocks.

**Stamp Duty**, a tax imposed in Great Britain on written documents which are evidence of legal rights involved. The payment of the tax is denoted by a stamp which is impressed on or affixed to the document. The Stamp Act of 1891 is still the principal Act governing stamp duties, though most were doubled under the Finance Act, 1947, and many were abolished altogether under the Finance Act, 1949.

**"Standard."** A Conservative morning newspaper started in 1827, and an evening issue dating from 1857. In 1905 these papers were acquired by the Pearson Company, when the *Evening Standard* absorbed *The St. James's Gazette*. The morning *Standard* is no longer issued. The evening issue is now controlled by the Beaverbrook Group.

**Starch** is an organic compound occurring in granules in nearly all green plants, and especially in the seeds of dicotyledonous and cereal plants, potatoes, etc. In its pure form starch is a tasteless, odourless white powder, and is a carbohydrate consisting of carbon, hydrogen and oxygen.

**Star Chamber**, an ancient tribunal of State in existence in 1486 and possibly earlier, charged with the duty of trying offences against the Government, unfettered by the ordinary rules of law. It was in effect a Privy Council entrusted with judicial functions, and the present Judicial Committee of the Privy Council to some extent represents the older tribunal. Under Charles I. the Star Chamber was used by the King and his party in the most unjust manner to persecute their opponents, and became such a scandal that in 1641 it had to be abolished. (See Privy Council.)

**Starling**, a well-known insectivorous bird found in Europe, Asia, and N. Africa, one species of which is common in Britain. It nests in holes and crevices. It flies in packs, and these packs of starlings are often to be seen wheeling in an orderly fashion. (See also p. 1004.)

**States General of France** consisted of three Orders: the Clergy, Nobility, and Commons, and constituted the assembly of the realm. Phillip IV. first summoned the States General in 1302 for the purpose of giving him moral support in his quarrel with Pope Boniface VIII. It was not summoned from 1614 until 1789. When Louis XVI. summoned it in 1789 it transformed itself into the National Constituent Assembly, where the three Orders sat together.

**Statute of Westminster, 1931.** An Act of Parliament which gave a basis of equality to the British Dominions. The Dominions as well as the United Kingdom were defined by the Balfour Memorandum of 1926 as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations." The Statute was the sequel. The Dominions are sovereign States governed solely by their own Parliaments and Governments. They have separate diplomatic representation and the

right to secede from any international organisation and from the Empire.

**Steam**, the vapour derived from water heated to boiling point, and of great service as a source of motive power.

**Steam Engine**, a machine whereby steam becomes the active agent of the working of machinery, and of very wide application. The leading types of steam engine are : (a) condensing, or low-pressure engines, where the steam is generated by a boiler; (b) non-condensing, in which the cylinder exhausts its steam into the open air. Engines of the latter type are used where portable engines are required. (See also p. 182.)

**Steam Hammer**, invented by the French engineer Bourdon and James Nasmyth in 1839, which proved of great utility in the development of the iron trade. The hammer itself, which is fixed to the end of a piston-rod passing through the bottom of an inverted cylinder, often weighs as much as 80 or 100 tons, and is so perfectly controlled by the steam power that its action can be so accurately gauged that it could be made to crack the glass of a watch without actually breaking it, or brought down upon a mass of molten iron with a force representing many hundreds of tons.

**Stearin** is the portion of fatty matters and oils which remains solid at an ordinary temperature, and is a compound of stearic acid with glycerine. It is largely used in the manufacture of candles and for other commercial purposes. With caustic soda stearin forms a soap (sodium stearate), which is present in most commercial soaps with contain sodium palmitate and oleate in addition.

**Steel**, an alloy of iron and carbon, has been in general use from the earliest times, but how and where first manufactured remains a mystery. There are many varieties of steel, and these can contain manganese, silicon, copper, phosphorus, and sulphur. Other important alloying elements are nickel, chromium, molybdenum, tungsten, and vanadium. The oldest method, and one now generally adopted for the manufacture of steel, is that known as the "cementation or crucible process," but the most important method of all was introduced by Sir Henry Bessemer in 1855. This is known as the "Bessemer process," which consists in first burning all the carbon out of pig iron, and then putting back into it a sufficient quantity of carbon to produce steel containing the required proportion of this element. The metal produced by this process is called "Bessemer steel," which is of the highest value for structural purposes, rails, etc. For the manufacture of tools and weapons steel is indispensable. The United States, Germany, U.S.S.R., and United Kingdom are the leading countries in the world in steel production. (See also Stainless Steel.)

**Steel Yard**, was a sort of exchange which existed in Cannon Street, London, from the 13th to the 16th century. It was the chief resort of the Hanse merchants and the Flemings, to whom many privileges in regard to the exportation of English goods to the Continent were given.

**Stellite**, an important alloy for the manufacture of cutting tools. It contains chromium, cobalt, usually some tungsten, and a small quantity of carbon.

**Stencil**, a wax sheet or metal plate, on which is cut a pattern or set of words. By placing the stencil on a sheet of paper or other substance and applying ink or paint to the cut-out pattern a copy of the pattern is obtained on the paper. Modern business practice has proved the usefulness of stencils. Cut on wax sheets by a type-writer a good stencil can produce as many as 100 copies or duplicates.

**Stenography**, the art of shorthand writing, was practised by the ancients, but was not in use in England before the 16th century. The systems invented in the 18th century were numerous, but the one that was most widely adopted was that of Mason, as improved by Gurney. In 1837 Pitman's phonographic system was first announced, which was a decided advance on any previous system, establishing a simple series of phonetic signs that was easily learned and admitted of great abbreviation. The average speed is 120 words a minute. This is the system in

general use to-day. Its inventor received the honour of knighthood.

**Stereoscope**, an optical instrument invented by Professor Wheatstone and afterwards considerably improved. It blends into one picture two plane representations of things seen by each eye separately, which has the effect of seeming to throw natural objects into relief. It was only after photography was utilised in connection with the stereoscope that it became of special significance.

**Stereotype**, a metal cast taken from movable type which has been set up in the ordinary way. The first to introduce the process in practical form in this country was William Ged, of Edinburgh, who made stereotype plates in 1730. An impression of the type matter is first taken by means of a mould of prepared plaster of Paris or moistened sheets of specially prepared paper, and when molten stereo metal is poured upon the mould and allowed to cool and harden, the stereo plate is formed, and can be printed from as a solid block for some time.

**Stethoscope**, an instrument by which the action of the heart and other organs of the chest can be heard and gauged. It was invented by Laënnec, of Paris, in 1816, and consists of a cylinder, one end having a funnel-shaped opening which is placed against the chest, while the other end is held to the listener's ear. There is also a binaural stethoscope, which has two india-rubber tubes for the ears.

**Stibnite**, the chief ore of antimony; chemically it is antimony sulphide. Steely-grey in colour.

**Stirrup**, a loop or metal U-shaped strap suspended from the sides of the saddle, used for mounting and to support the horseman's foot. Some authorities allege their use as far back as the early Iron Age, and it is generally believed that they were used in battle in A.D. 378, when the Gothic cavalry defeated the legions of the Emperor Valens at Adrianople. Stirrups relieved the tension on the rider's knees and so enabled him to be armed from top to toe.

**Stoat**, a slender carnivorous mammal with short legs, related to the weasels. The stoat is distinguished from the latter by its longer tail, which has a black tip. The black tip is retained even in the winter when the animal turns white, the fur then being known as "ermine."

**Stocks**, an instrument of punishment, consisting of a framework of wood, with holes through which the offender's feet are put; he was compelled to sit in that position for a prescribed time. Much used in mediæval times, but now abolished.

**Stoics** were the followers of Zeno, a Greek philosopher of the fourth century B.C. They received their name from the fact that they were taught in the Stoa Poikile, or Painted Porch, of Athens. Zeno's doctrine was that since the world is the work of divine wisdom and is governed by divine law, it is man's duty to conform freely to whatever destiny may be his. He conceived virtue to be the highest good and condemned all the passions.

**Stole**, ecclesiastical vestment worn by priests over both shoulders and by deacons over the left shoulder only.

**Stoma**, the term for the microscopic pores on the surfaces of leaves. The plural of "stoma" is "stomata." It has been estimated, for example, that a single maize plant bears 200 million stomata, which are usually closed at night.

**Stonehenge**, a remarkable collection of prehistoric monuments arranged in two circles, 10,000 ft. in circumference, situated on Salisbury Plain. Modern archaeological research dates origin back to the Bronze Age. Presented to the nation by Sir Cecil H. E. Chubb, 1st Bt. of Stonehenge.

**Stool of Repentance**, a seat placed near the pulpit in Scottish churches in former times, on which persons guilty of moral lapse were ordered to sit in expiation during service.

**Stone-Flies**, comprise the order of insects called *Plecoptera*, which includes some 700 species, of which about thirty occur in Britain. The wings are membranous, and two long, thread-like feelers protrude at the tail end. The larvae are aquatic.

**Stork**, a family of heron-like birds with long bills,

freely distributed over Europe, Asia, Africa, and S. America. The White Stork is an occasional visitor to England, and, more rarely, the Black Stork; these are the only two European storks. **Storting**, the Norwegian legislative assembly, is composed of two chambers; the *odelsting*, which originates Bills, and the *lagting*, which has the power to approve or reject Bills, but not to amend them.

**Stratosphere**, a layer of the earth's atmosphere, which begins 6-7 miles above the earth. The attraction of the stratosphere as a medium for air travel rests upon the absence of storms; indeed weather phenomena as commonly understood do not occur, there being no vertical temperature gradient in the stratosphere and no convection currents.

**Strikes**. A strike is a voluntary stopping of work by common agreement of a number of workers in order to force the employer to alter conditions of employment, or to resist conditions which are not approved of.

**Strings**. A collective term for those instruments in an orchestra which are played by drawing a bow across stretched strings, *e.g.*, violin, viola, violoncello, double bass.

**Strontium**. This silver-white metallic element was discovered by Hope and Klaproth in 1793, and isolated by Sir Humphry Davy in 1808. The chief strontium minerals are celestine (sulphate) and strontianite (carbonate). Compounds of strontium give a brilliant colour to fireworks and signal flares.

**Stucco**, a mixture composed of plaster of Paris mixed with a solution of glue, and much used in architectural decoration. It was known to the ancients and freely utilised in Italy in the 16th century.

**Study**, a piece of music written primarily as a practice-piece for perfecting technique. Many of the *Studies (Etudes)* of Chopin have considerable merit as music.

**Sturgeon**, a large fish found in northern seas and rivers with five rows of bony plates along the back and sides and pointed mouth with four barbels. Caviare is prepared from sturgeon ova. Since the reign of Edward II all sturgeon caught off the coasts of Britain, except in certain privileged places, have belonged to the Sovereign.

**Sublimation**, when a solid substance is heated and turns into vapour without passing through the liquid stage, it is said to "sublime" and the process is called "sublimation." Iodine behaves in this way, and sublimation is used as a method of purifying it.

**Submarine**, the first submarine, the *Nautilus*, was designed by Robert Fulton and tried out in the river Seine and in the sea off Brest in 1801. The idea was too revolutionary to find acceptance and it was not until electricity for under-water propulsion became available that the submarine underwent extensive development. Britain became interested about 1900 and the Germans developed it and made it into an instrument of warfare.

**Succession, Acts of**, have been passed at various periods to secure royal descent in a particular line. That under which our present dynasty reigns, and which established the Protestant Succession, was passed in 1689.

**Suez Canal**, connecting the Mediterranean and the Red Sea was first projected in 1852 by Ferdinand de Lesseps. An Egyptian company was formed in 1866, with a capital of 200 million francs. The British Government acquired 176,602 shares (cost £4,080,000, value Mar. 31st, 1953, £26,986,068). The canal was opened in 1869. Its length is 101 statute miles, minimum width 196 ft. 10 in. (navigation channel) and the maximum draught of water allowed for vessels using the canal is 34 ft. The average time for transit through the canal is eleven hours thirty-one minutes. By a convention, signed on Oct. 29th, 1888, the canal was exempted from blockade, and vessels of all nations, whether armed or not, are to be allowed to pass through it in peace or war.

**Suffragette**, name given to a woman who belonged to the Women's Suffrage Movement in the early part of this century. They agitated to obtain the parliamentary vote; many suffragettes were "militant" and caused much destruction, viol-

ence, and disturbance; many suffered imprisonment and went on hunger strike. The movement ended in 1918, when women of 30 were given the vote. In 1928 a Bill was passed which granted equal suffrage to men and women. The leaders of the Women's Suffrage Movement were Mrs. Pankhurst and her two daughters, Sylvia and Dame Christabel, Mrs. Fawcett, Nellie Kenny, and others.

**Sugar**, to the chemist the term is a generic one covering a group of carbohydrates, including cane sugar (sucrose), glucose, fructose, and maltose. In ordinary parlance sugar means sucrose, which is obtained from the sugar cane, sugar beet, or sugar maple.

**Sulphur**, an elementary brittle crystalline solid abounding in the vicinity of volcanoes. It is yellow in colour. It occurs in combination with other elements, as sulphates and sulphides, and allied with oxygen, hydrogen, chlorine, etc., is of great commercial utility. Used in its pure state it constitutes the inflammable element in gunpowder; it is also used for matches.

**Sulphuric Acid**, a compound of great commercial importance, used in a variety of manufactures, and composed of sulphur, oxygen, and hydrogen.

**Sultan**, the title of the Turkish Ruler which was first held by Osman in 1299. The last of the Sultans, Mohammed VI., escaped to Malta in Nov. 1922, and on Oct. 29th, 1923, Turkey was declared a republic by the National Assembly.

**Summer Time**. In 1916 an Act was passed advancing Greenwich Mean Time by one hour during the summer months, calculated to save light and fuel by making use of an extra hour of daylight. This Act was made permanent in 1925, and summer time was to begin on the day following the third Saturday in April, or if that day was Easter Sunday, the day following the second Saturday, and end on the day following the first Saturday in Oct. By the Summer Time Act, 1947, the periods of summer time are now fixed each year by Order in Council. (See Willet, Wm., "Prominent People.")

**Sumptuary Laws**. Both the Greeks and Romans passed laws against luxury. In England regulations against luxury in food were promulgated under Edward II. and subsequently. A series of Acts of Parliament, beginning in 1363, placed restrictions on apparel, graduated according to rank. In 1603, most of these laws, which had already fallen into abeyance, were repealed.

**Sun**, one of the millions of stars in the universe, the centre of the solar system, estimated to be distant from the earth 93,004,000 miles, to have a diameter of 865,000 miles, and a volume a million times that of the earth. It rotates on its axis from east to west, though not as a solid, the solar equator turning once in about 25½ days and the poles in about 34 days. Large spots are observed on the sun—varying in size from 30,000 miles in diameter—which form and disappear at irregular intervals. The area of the disc covered by the spots, however, reaches a maximum roughly every 11 years, when the sun's heat seems rather greater than usual and magnetic storms more frequent. Spectrum analysis shows that the sun is composed of many elements found in the earth. Its surface temperature is about 6,000° C. The apparently inexhaustible heat of the sun, which has maintained life on the earth for millions of years, is derived from the destruction of matter, involved in the transmutation of hydrogen nuclei into helium nuclei, in which process about four million tons of matter is destroyed every second. At this rate of conversion it has been estimated the sun will go on radiating for 30,000 million years. (See also p. 155.)

**Sunday**, the first day of the week. In ancient times it was the day on which the sun was worshipped. In the early days of the Church Christians began to observe the first day of the week in honour of the resurrection in addition to keeping the seventh-day Sabbath of the Decalogue. Gradually the seventh-day Sabbath was abandoned and the first day adopted, though without any Biblical authority, as the Christian rest day. The first Sunday law was that of Constantine the Great in A.D. 321, in which it

was decreed that all should rest from their labours upon the "venerable day of the sun."

**Superconductivity.** This term is applied to the abnormally high electrical conductivity exhibited by certain metals when cooled to very low temperatures. The phenomenon was discovered by Onnes at Leyden in 1911, when he cooled mercury to  $3^{\circ}$  Kelvin ( $-270^{\circ}$  C.).

**Surface Tension.** The surfaces of fluids (e.g., a drop of water) behave as though they were covered by a stretched elastic membrane. This property is called "surface tension."

**Surnames** were not used in England before the Conquest. The elder Normans used the word "Fitz," signifying son, as "Fitzwilliam." The "O" of the Irish meant grandson, as "O'Connor," while the Scottish Highlanders used "Mac" for son, as "MacKenzie," "MacIntosh," etc. Then among the English the word "son" itself was simply added to the father's name, as "Johnson," "Robertson," "Simpson," etc. When surnames came into use they generally had reference to occupation, places of residence, or personal characteristics, and this style of naming is responsible for the great majority of existing surnames. Smith, Taylor, Butler, Baker, etc., are of the occupation type; Hill, Dale, Brook, Beck, etc., and place-names generally, belong to what may be called the geographical type; while personal peculiarities are denoted in such names as Savage, Redman, Black, White, Brown, etc.

**Suttee**, the practice prevalent in parts of India, until specially prohibited by a law of 1829, of self-burning of widows on their husband's pyre, the idea being, according to the religion of Brahma, that widows thus immolated passed direct to heaven.

**Swans**, large, graceful birds which together with the ducks and geese form the family Anatidae. There are three European species with white plumage; the Mute Swan, distinguished by its orange bill with black knob, being the best known and a familiar sight on the rivers and ornamental lakes of this country. Two wild swans are winter visitors here; the Whooper and Bewick's Swan. The "pen" (female) and "cob" (male) mate for life and the young swans are called "cygnets."

**Swan-upping.** The annual marking of the Thames swans which takes place during the third week of July. This ancient ceremony dates back to the 15th century when all the Thames swans were declared to be Royal birds owned by the Crown. Two city guilds—the Vintners' and Dyers' Companies—own one third of the 600 swans now on the Thames. This privilege was granted to them by King Edward IV. in return for money grants. Vintners' birds are marked with a nick on each side of the bill, the Dyers' with a nick on the right side only. The Queen's birds are unmarked.

**Sweet Potato.** This plant (*Ipomoea Batatas*) which is a climbing perennial belonging to the convolvulus family, has thick roots that are rich in starch, and are eaten like potatoes. A native of the W. Indies and Central America, new varieties of sweet potato have been bred which stand cooler climates and can be grown as far north as Cape Cod.

**Swift**, a bird so-called from the extreme speed of its flight, resembling a swallow but related to the humming-bird. It has long, scythe-like wings, sooty-black plumage and greyish-white chin. There are several species inhabiting most parts of the world, particularly the tropics. The British breeding bird is among the latest to return from Africa and the earliest to go. Swifts are the only birds to use saliva for their nests. One oriental species builds its nest entirely from saliva, and this jelly-like substance is much prized by the Chinese for their birds'-nest soup.

**Swords**, from 20 to 30 in. long, were used by the Romans. The most famous swords of the Middle Ages were those made of Damascus and Ferrara steel.

**Symbiosis.** When two organisms live together and both derive mutual benefit from the association, the partnership is known as symbiosis. An example is the symbiosis of algae and a fungus in lichens; another is the

ordinary pea plant and the bacteria which live in the nodules on the pea's roots.

**Symphony**, a "sonata for full orchestra," usually consisting of four movements. In Beethoven's Third Symphony the first movement is in typical sonata form, consisting of an exposition of two subjects followed by a development. The second movement is a funeral march on a ternary plan (i.e., 1-2-1). The third movement is a Scherzo on two subjects, while the fourth movement is an air with variations.

**Syncopation**, a displacement of the accent in music. For instance, in four-beat time the accent is normally on the first beat. If it were on any of the other beats the music would be syncopated. This device has occasionally been used in classical music, but it is the very essence of jazz.

**Synoptic Charts.** These are meteorological charts on which a synopsis of observed weather conditions is recorded using symbols of the international weather code.

**Syndicalism**, a labour movement which demands that industries shall be controlled by those who work them.

**Synods**, assemblies of heads or representatives of state and ecclesiastics for settling disputes relating to Church authority and government. (See also Ecumenical Council.)

## T

**Tabard**, a cloak or outer garment worn in mediæval days by the peasantry. The name was also applied to a garment worn by knights over their armour.

**Tabernacle**, a place of worship; a sacred place; specifically in Hebrew history the Temple of Solomon which housed the Ark of the Covenant. "Spurgeon's Tabernacle" in London, built for the famous Baptist preacher in 1861, is a familiar non-Jewish example of the application of the name. The Mormon T. in Salt Lake City, Utah, holds several thousand and has an odd-shaped roof.

**Tailor-Bird**, name of a small group of warblers, familiar in India and China, and remarkable for their habit of sewing leaves together to enclose their nests. The bill is used as needle, vegetable fibre as thread, and a knot is tied to prevent it slipping.

**Taiping Rebellion**, 1850-65, revolt to overthrow the Manchu dynasty. It was suppressed in 1864 by the aid of Colonel Charles Gordon ("Chinese" Gordon).

**Taj Mahal**, the white marble mausoleum built at Agra by Shah Jehan in memory of his favourite wife who died in 1629. Over 20,000 men were occupied for over twenty years in its erection.

**Talc**, mineral magnesium silicate. It has numerous industrial uses, and the "chalk" used by tailors is talc.

**Talisman**, a charm, consisting of a magical figure, engraved under superstitious observance of the configuration of the heavens, to which wonderful potentiality for averting evil was anciently ascribed.

**Tallage**, in Norman times, were taxes levied by the Crown upon lands of the royal demesnes. The levying of tallage was taken away by a statute of 1340 which required the consent of Parliament for all direct taxes.

**Tallow**, the more solid portions of animal fat, and prepared from beef, mutton, and other fats by melting at a low temperature. Stearin is its chief constituent. Used for making candles, soap, etc.

**Tally Office**, in the Exchequer, was the department of the Government in which tallies were kept, representing the acknowledgement of moneys paid or lent; in 1834 the Houses of Parliament were burnt down through the overheating of a stove with discarded Exchequer tallies.

**Talmud**, the book containing the civil and canonical laws of the ancient Jews, comprising the Mishna (in Hebrew), a compilation from oral tradition, and the Gemara (in Aramaic), a collection of criticisms and comments of the Mishna by eminent Jewish Rabbis. There are two Talmuds—the Palestinian (or Jerusalem) finished at the beginning of the 5th century, and the Babylonian, at the beginning of the 6th.

**Tamarind**, a tree of great utility, of which there are two varieties, one in the West Indies and the other in the East Indies. Its wood makes good building timber, its bark has tonic properties, its leaves yield a valuable dye, and its fruit is used in the making of sauces and cooling drinks.

**Tambourine**, a light, small, single-headed drum with loose metal discs let into the side of the hoop so that they jingle when the tambourine is shaken. An older name for it is the timbrel.

**Tammany**, a New York democratic organisation, sprang out of an old benevolent society named after an Indian chief, and has exerted a powerful influence over political movements in New York. The leaders of the organisation have used their power when their party has been successful at the polls to appoint their nominees to every prominent office, and have exacted bribes for concessions and privileges, and generally Tammany rule has meant wholesale corruption. Of this there is ample evidence in the disclosures of the Tweed and other Tammany frauds, and in the fact that the "Boss" for the time being usually contrives to make himself wealthy.

**Tanistry**, a system of land tenure which once prevailed among the Celts. It was abolished by a legal decision in the reign of James I. The tanist was a holder of lands or honours for life only, his successor being chosen by the adult males of the tribe or clan from among his blood relatives.

**Tank**, a heavily armoured car fort impervious to bullets and moving on "caterpillar" bands enabling it to travel over the roughest ground. First used by the British as a complete surprise to the enemy in the first world war in Sept. 1916. The Royal Tank Corps of the British Army was re-designated Royal Tank Regiment in 1939.

**Tannins** are chemical substances obtained from a variety of plants and trees, from oak-bark, and from galls. They are used in the leather trade, the tanning process making the skins resistant to decay.

**Tantalum**, a scarce bluish metallic element discovered by Ekeberg in 1802. Chemically related to vanadium and columbium, it is usually associated with the latter in nature. For several purposes it can be used in place of platinum, and it finds application in the making of surgical instruments.

**Taoism**. When Confucius (also founder of a world religion) was, about 530 B.C., a public servant to the prince of Chow—the "Middle Kingdom" of China—he met Lao-Tzu, who was treasurer to the state. Lao-Tzu was the founder of a religion very dissimilar to Confucianism; for, whereas Taoism is metaphysical, Confucianism is practical. Taoism is concerned with the individual, Confucianism with our relationships with others. *Tao*, the goal of the striver, is "Ultimate and Unconditioned Being" similar to the state of Nirvana of Buddhism. Lao-Tzu taught that one must be benevolent and compassionate; in particular, all forms of violence and compulsion are wrong. Idolatry was wrong and foolish, and, like Buddhism, there is little reference to a deity. Man must save his own soul by resignation and non-striving in order to reach the state of perfect Tao. After Lao-Tzu's death, however, the religion became corrupt, Lao-Tzu himself was deified, and various gods were worshipped—of war, weather, stars, seas, learning, etc. The greatest of Taoist scriptures, the *Tao-te-ching* may be read in Arthur Waley's translation *The Way and its Power*—it is one of the world's great devotional books.

**Tapeworms or Cestodes**. These are parasitic flat worms, so-called because they resemble lengths of tape. Several species parasitise man, and when the infestation is heavy severe anaemia results.

**Tapestry**, a fabric largely used in former times for wall decoration and hangings. It was known to the ancient Greeks, but in its modern form came into prominence in the 15th and 16th centuries, when it was manufactured in a marked degree of excellence by the weavers of Flanders, especially those of Arras. The manufacture was introduced into England early in the 17th century, and was attended by considerable success. At the present day the term is applied

to worsted cloths for furniture coverings, and there are also various kinds of tapestry carpets now made. The most famous tapestries of olden times were the Aubusson Tapestry and the Savonnerie. The Gobelins Tapestry factory, originated in Paris in the reign of Francis I., is still a national establishment. (See also Bayeux Tapestry.)

**Tapioca**, a food-substance yielded by the tuber of a tropical plant, called the manioc or cassava plant, poisonous in its raw state, but purified by roasting.

**Tapirs**. The tapirs constitute a family close to the horse family in the Ungulate order. They have four toes on the front feet and three on the hind. The snout is drawn out into a short trunk. The largest tapir is the Malayan tapir, which stands 3½ ft. at the shoulder. Four species occur in Central and S. America.

**Tar** is a dark viscid product obtained from the destructive distillation of wood, coal, peat, etc. Wood tar is acid owing to the presence of acetic acid ("pyroligneous acid"). The highest proportion of coal tar goes into road making. Distillation of coal tar yields many valuable compounds, including benzene, phenol (carbolic acid), naphthalene, and creosote; the final residue after distillation is pitch. Based on the chemical manipulation of compounds from coal tar is the preparation of many perfumes, food essences, drugs, antiseptics, and plastics.

**Tarantula**, the name given to a large range of big hairy spiders. Music was supposed to cure their sting, hence the Tarantella dance.

**Targums**, certain Aramaic paraphrases of portions of the Old Testament, first made orally and then written down about A.D. 100.

**Tarlatan**, a thin transparent muslin fabric.

**Tarpeian Rock** at Rome received its name from the tradition that Tarpeia, the daughter of the Governor of the Citadel who betrayed the fortress to the Sabines, was crushed to death by their shields and buried beneath the rock. From this height persons guilty of treason were hurled to death.

**Tartan**, a cloth of woollen or worsted plaid; formerly each clan of the Scottish Highlanders had its own tartan.

**Tartars (or Tatars)**, an Asiatic race who overran parts of Asia and Europe in the 13th century. Tartar is also a term used to denote a person of irascible temper, a vixen or shrew; to "catch a tartar" was to encounter more than was bargained for.

**Tartaric Acid** is prepared from tartar (potassium hydrogen tartrate) deposited in wine vats during fermentation. "Cream of tartar" is purified potassium hydrogen tartrate, which is incorporated in baking powders. Tartaric acid is also used in the manufacture of effervescent salts, and in medicine (e.g., "tartar emetic").

**Tate Gallery**, named after its founder, Sir Henry Tate, at Millbank, S.W., was opened in 1897; Sir Henry Tate bore the cost of the building (£80,000) and also contributed the nucleus of the present collection. "The Turner Wing," the gift of Sir Joseph Duveen, was added in 1910. The collection is thoroughly representative of British art and has been extended several times to include modern foreign art.

**Tattersall's**, a famous horse-market at Knightsbridge, originated by Richard Tattersall in 1770, and since carried on by his successors with success, the sale of thoroughbreds being the chief business.

**Taverns** were not known before the 13th century. In Edward III.'s time there were only three in London; "one in Chepe, one in Walbrook, and the other in Lombard Street."

**Taxonomy**, the science of classification of animals and plants.

**Tay Bridge** spans the Tay at Dundee, is over two miles in length, and was opened for traffic on June 20th, 1887. A previous bridge, completed in 1877, was blown down on Dec. 28th, 1879, as a railway train was passing over it, and upwards of eighty people perished.

**Tea** was introduced into England about the middle of the 17th century, when it was a great luxury, and fetched from £6 to £10 a pound. It is an Asiatic plant, native properly to China, Japan, and India. Up to about 1885 the greater por-

tion of the tea imported into this country came from China; the bulk is now obtained from India and Ceylon.

**Teal**, the smallest of the European ducks and next to the Mallard the commonest British species. It is a handsome bird and a very swift flier, but not as swift as the Garganey or Summer Teal.

**Te Deum**, the song of praise ("Te Deum laudamus"—"We praise Thee, O God"), is supposed to have been the composition of St. Ambrose in the 4th century. It is used in the services of the Roman Catholic and English churches.

**Telecommunications.** The sending of messages over a distance. The term is now generally applied to the sending of messages by telegraph, telephone, or wireless, or by a combination of such means. The possibilities of the electric *Telegraph* were outlined in an anonymous letter to the *Scots Magazine* in 1733. Experiments in electricity and magnetism by the European scientists Ampere, Gauss, Weber, and Steinheil, and those by Morse in America, made communication by telegraph practicable by the middle of the 19th century. Gauss and Weber acted upon Faraday's discovery of the induced current produced by passing a magnet through a helix of wire forming part of a closed circuit. Steinheil found that half the circuit might be formed of the conducting earth and suggested that the remainder might be dispensed with, as in wireless telegraphy. In 1837 Steinheil devised an electro-magnetic machine in which messages were recorded by a needle either striking two bells of different tone or else marking ink dots on a strip of paper. In England, Cooke and Wheatstone produced an instrument in 1840, of the type later used by the Post Office, whose monopoly the telegraph service became. At first the electric telegraph (as distinct from the old semaphore, or optical telegraph) was used only by railway companies; under the patent of Cooke and Wheatstone, the first public line was laid from Paddington to Slough in 1843. The first submarine telegraph cable between England and France was laid in 1851 and, following Hertz's investigations into the production of electric waves, Marconi's invention led to this country being linked with Europe by wireless telegraphy in 1899. Nearly all inland messages are now transmitted by teleprinter, the "long distance typewriter." Overseas telegrams are sent by electric cable or by wireless. The electro-magnetic *Telephone* was invented by Alexander Graham Bell, a Scottish-born American, in 1876. Elisha Gray of the Western Union registered his patent only a few hours after Bell, and Thomas Edison was also active in the development of the telephone. In America the Edison-Bell interests were soon merged, but in Britain there were two rival companies until 1912, when the Post Office telephone system was established. In order to speak by telephone between two points an electric current is necessary, with a transmitter and receiver at each end. The human voice, impinging on a thin metal disc, causes this to vibrate, and the vibrations produce corresponding variations in the electric current. These variations are communicated to the other end of the wire and reproduced by a second disc, whose vibrations strike the ear of the person receiving the message. Each inland telephone subscriber is provided with a pair of wires; these form a closed circuit and are run to an exchange, where they are connected with the wires of other parties. The first submarine telephone cable to span the Atlantic was laid in 1955 and speech can now be transmitted over a distance of 2,000 miles. Before that, transatlantic communication was by radiotelephone, the first circuit being opened in 1927, and ship to shore telephonic communication in 1930. London is an international switching centre, through which telephonic communication is maintained by land lines, submarine cables, and wireless channels combined. During the second world war great strides were made in the development of wireless communications, the scope of which ranged from world-wide broadcasts of news and propaganda to the transmission of code messages by

secret agents, from the linking of headquarters to units, to the carrying of small "walkie-talkie" sets by individual soldiers. In peace, as in war, ships and aircraft are now largely controlled by wireless signals; broadcasts of weather reports help shipping, aircraft, and farmers. Communication by short-wave radio is an important aid to modern police work.

**Telepathy.** The alleged ability of minds to communicate other than through the ordinary senses—"thought-transference." For a long time this was thought to be a mysterious process accepted by many laymen but denied by the scientist; it still remains mysterious, but is accepted by a certain number of scientists who have studied the matter. The first serious work on telepathy was done by the Society for Psychical Research (see *Psychical Research*), but a new era in discovery was ushered in by the publication of the book *Extrasensory Perception*, by the American scientist J. B. Rhine. Dr. Rhine claimed to have demonstrated the faculty of telepathy in many normal people in a series of prolonged experiments in the laboratory. His method was to use a pack of cards ("Zener cards"), with four simple designs; the cards were lifted off the pack one at a time by the operator, and the person experimented on was asked to call out the name of the card being looked at by the operator. The results were surprising; one student guessed nine cards in succession out of the pack of twenty-five (a two million to one chance); a child of twelve guessed the whole pack correctly (something like six hundred million, million to one). Most results were, of course, less striking, but certainly seemed to justify the claim that telepathy was proven fact. Unfortunately, matters are less simple than this, and other workers have by no means always obtained such satisfactory results.

**Teleprinter**, a telegraph transmitter with a typewriter keyboard, by which characters of a message are transmitted electrically in combinations of 5 units, being recorded similarly by the receiving instrument, which then translates the matter mechanically into printed characters.

**Telescope**, an optical instrument for viewing objects at a distance, "the astronomer's intelligencer." Lippershey is credited with construction of the first in 1608; Galileo constructed several from 1609 and Newton was the first to construct a reflecting telescope. The ordinary telescope consists of an object-glass and an eyepiece, with two intermediates to bring the object into an erect position. A lens brings it near to us, and the magnifier enlarges it for inspection. A refracting telescope gathers the rays together near the eye-piece and is necessarily limited as to size, but the reflecting telescope collects the rays on a larger mirror, and these are thrown back to the eye-piece. The world's largest reflectors are at Mount Palomar Observatory, California (200 in.), Mount Wilson Observatory California (100 in.), the McDonald Observatory at Mount Locke, Texas (82 in.), and the Victoria, B.C. Observatory (72 in.). At Herstmonceux Castle (the new Royal Greenwich Observatory) a 98 in. *Isaac Newton* telescope is being installed. The *Hale* 200 in. telescope at Mount Palomar is the largest ever made and has revealed objects never before photographed; it is able to probe space and photograph remote galaxies out to a limiting distance of 2,000 million light years. The *Schmidt* telescope at Mount Palomar is to be used to make a huge photographic map of the universe. Manchester University are constructing at Jodrell Bank, Cheshire, a completely steerable radio-telescope with a paraboloid aerial 250 ft. in diameter. This will be the largest of its kind in the world and is expected to yield important discoveries. See also *Observatories*, and pp. 185-86.

**Television**, or the transmission of images of moving objects by radio. The first demonstration of true television was given by J. L. Baird at the Royal Institution in London in 1926. The B.B.C. began television broadcasts in 1930. (See also "Radio and Television Section.")

**Tellurium**, a relatively scarce element discovered in 1782 by Reichenstein. Chemically it behaves rather like sulphur; its salts are known as tellurides. It occurs chiefly combined with metals in ores of gold, silver, copper, and lead.

**Temperature of the Body.** See "Medical Section." Templars were soldier knights organised in the 12th century for the purpose of protecting pilgrims in their journeyings to and from Jerusalem, and obtained their name from having had granted to them by Baldwin II. a temple for their accommodation. At first they were non-military, and wore neither crests nor helmets, but a long wide mantle and a red cross on the left shoulder. They were established in England about 1180. During the crusades they rendered valuable service, showing great bravery and devotion. In the 12th century they founded numerous religious houses in various parts of Europe and became possessed of considerable wealth. It was this that caused their downfall. Kings and Popes alike grew jealous of their influence, and they were subjected to much persecution, and Pope Clement V. abolished the Order in 1312. Edward II. in 1308 seized all the property of the English Templars. The English possessions of the Order were transferred to the Hospitallers of St. John, afterwards called the Knights of Malta. The London Temple is on the site of the chief seat of the Order in this country. (See also Hospitallers, Knights, Teutonic Order.)

**Temple,** a building dedicated to the worship of a deity or deities. Those built by the ancient Greeks at Olympia, Athens, and Delphi were the most famous. The Temple of Diana at Ephesus was another. The Temple of Solomon at Jerusalem was destroyed and rebuilt several times; Herod's Temple was destroyed by the Romans in A.D. 70.

**Temple Bar,** an historic gateway that until 1879 stood at the western entrance to Fleet Street, near the bottom of Chancery Lane. In olden times it was the custom to impale the heads of traitors over this gateway. It has been at Theobalds' Park, Cheshunt, since 1888.

**Tempo,** a musical expression referring to the pace at which a composition is to be played, and generally used in combination with a qualifying word, as "Tempo Ordinario," ordinary time.

**Tench,** a familiar fresh-water fish of the Carp family, averaging some three pounds in weight, and of a mingled green and olive colour.

**Tenor,** the third voice in a male voice choir, i.e., between alto and bass. The name is also applied to instruments of equivalent pitch, e.g., tenor saxophone.

**Terbium,** an element, discovered in 1842 by Mosander, belonging to the group of rare-earth metals.

**Teredo,** the scientific name of the ship-worm, a peculiar bivalve mollusc, which lodges itself when young on the bottoms of wooden ships, and bores its way inwards, causing much injury.

**Termites,** also known as *White Ants*, though they are not related to the true ants and are placed in an entirely different insect order (*Isoptera*). They abound in the tropics and also occur in temperate countries, though only two species are common in Europe. There is no British species. They live in colonies and their nests take the form of mounds of earth and wood, cemented together with saliva, and up to 20 ft. in height. Five separate castes are recognised, three of them being capable of reproduction, and the other two are sterile.

**Tern.** This slender, gull-like bird has long, pointed wings, a deeply-forked tail, white plumage, black cap, and is a very graceful flier. There are several species, most of which are summer migrants to Britain. The Arctic tern winters in the Antarctic, returning to find a nesting place in the spring.

**Terrapin,** a kind of fresh-water tortoise. There are several species widely distributed in the Northern Hemisphere.

**Territorial Army.** The Territorial Force of the British Army came into being on Apr. 1st, 1908, when the Volunteer Force and the Imperial Yeomanry combined; later in 1921 it was renamed the Territorial Army. This citizen army was administered by the various County Associations, voluntary bodies responsible for recruiting, clothing, quartering, and mobilising the T.A. units. On Sept. 1st, 1939, the strength of the T.A. was 420,000 officers and other ranks, and thousands were ready to man the anti-aircraft, coastal defence, and searchlight stations

at the outbreak of war. During the war the T.A. lost its independent existence and became merged into the Regular Army. Since the war the Territorial Army has been reorganised and the new T.A. came into being on Jan. 1st, 1947. In addition to its six infantry divisions, it now has two armoured divisions, an airborne division, anti-aircraft and coastal defence formations, and independent armoured and infantry brigades. National Service men after their 2 years' service now pass from their Regular units to Territorial units for 3½ years of compulsory part-time service.

**Tertiary.** The geological era comprising the Paleocene, Eocene, Oligocene, Miocene, and Pliocene periods, which came in that order, the Pliocene being the youngest.

**Terylene,** the newest of the synthetic fibres, discovered by two British scientists, J. R. Whinfield and J. T. Dickson. The first yarn of commercial interest was produced in 1944 and large-scale production in this country began in 1954. Terylene has unique qualities and textiles made from it are very strong, crease-resistant and mothproof and as the fibre is also resistant to chemical action and abrasion, it is finding a wide use in industry.

**Tesla Coil,** a type of induction coil.

**Test Act,** passed in 1673, prescribed that all government officers, civil and military, should be compelled to receive the sacrament according to the forms of the Church. It was repealed in 1828.

**Testudo,** the name given to a military movement in use by the ancient Roman soldiers. It consisted of a defensive screen formed by troops standing close together and massing their shields above their heads.

**Teutonic Order,** of German military knights, was founded in the Holy Land at the end of the 12th century for succouring the wounded of the Christian army before Acre. They were dispersed in the 15th century but the Order continued to exist until 1809, when Napoleon I. confiscated its properties. In 1840 the order was resuscitated in Austria as a semi-religious knighthood. (See also Hospitallers, Knights, Templars.)

**Thaler,** a German silver coin which has existed since the 16th century. The dollar is its derivative.

**Thallium,** a blue-grey metallic element discovered by Crookes in 1861. It is obtained from the flue dust resulting from the burning of pyrites for sulphuric acid manufacture.

**Thallophytes or Thallophyta,** the second largest division of the Plant Kingdom, which includes fungi, algae, and bacteria. These plants are not differentiated into roots, stems, and leaves, such an undifferentiated body being called a *thallus*.

**Thames,** the principal river of England, rising in the Cotswold Hills, and passing through Wiltshire, Berkshire, and Oxfordshire, and pursuing its ever-broadening seaward course through Reading, Windsor, Richmond, London, Greenwich, and Gravesend. It is about 210 miles long, and at the Nore, where it joins the sea, six miles wide. Commercially, it is the most important river of Great Britain. The tidal portion of the river is administered by the Port of London Authority and above Teddington by the Thames Conservancy, the lighthouse and pilotage by Trinity House. In the winter of 1683-84 the Thames was frozen for such a long spell that a frost fair was held upon the ice.

**Thane or Thegn,** a title of nobility used in Anglo-Saxon times, and in the reign of Athelstan conferred upon any free man who possessed five hides of land.

**Thaumaturgy,** the working of miracles.

**Theatres** are buildings in which plays are performed. The theatres of the ancient Greeks and Romans were generally circular, with tiers of stone seats around them, and roofless. The first authorised theatre in England was that of Burbage, built in Shoreditch in 1574. Other theatres were erected at Bankside, in Southwark—the Globe, where some of Shakespeare's plays were first produced, and the Blackfriars. From 1642 to 1660 all London theatres were closed, but at the Restoration they were opened again, and for the first time women were allowed to appear on the stage; female

parts having previously been played by young beardless men.

**Theism**, belief in a personal Deity.

**Theobromine**, an alkaloid diuretic drug found in the seeds or beans of the Cacao plant (*Theobroma Cacao*) and a chief constituent of the cocoa and chocolate of commerce.

**Theodolite**. The instrument used by surveyors for measuring angles in the horizontal and vertical planes. A *transit theodolite* is one which can be completely rotated around its horizontal axis.

**Theosophists**. The Theosophical Society, which has its headquarters in Madras, was founded by Mme. Blavatsky and Col. Olcott in 1875, in New York, and has now over 1200 branches in fifty different countries. Its professed aims are (1) to form a nucleus of the universal brotherhood of humanity; (2) to encourage the study of comparative religion, philosophy, and science; (3) to investigate the unexplained laws of nature and the powers latent in man. Among other things, theosophy claims to "restore to the world the science of the spirit," while its bond of union is "not the profession of a common belief but a common search and aspiration for Truth."

**Therapeutics**, the science which treats of the healing of diseases and the laws of health.

**Therm.** The charges for gas for lighting and heating (formerly reckoned at per cubic foot) are now based on the calorific, or heat, value of the gas, and the unit used is termed a therm. The therm is 100,000 British thermal units.

**Thermite** is the name of a mixture of granulated aluminium and oxide of iron in atomic proportions, and was developed by Dr. Hans Goldschmidt, of Essen, Ruhr. It is used for welding purposes.

**Thermodynamics**, a term first applied by Joule to designate that branch of physical science which treats of the relations of heat to work. What is called the first law of thermodynamics is thus stated by Clerk Maxwell: "When work is transformed into heat, or heat into work, the quantity of work is mechanically equivalent to the quantity of heat." The second law asserts that "the heat tends to flow from a body of hotter temperature to one that is colder, and will not naturally flow in any other way."

**Thermo-Electricity** is the electrical current resulting from the heating or cooling of two or more dissimilar metals at the point of union. Such a metallic couple is called a thermo-couple.

**Thermometer**, an instrument by which the temperature of bodies is ascertained. The most familiar kind of thermometer consists of a glass tube with a very small bore, containing, in general, mercury or alcohol. This expands or contracts with variation in the temperature, and the length of the thread of mercury or alcohol gives the temperature reading on a scale graduated in degrees. Various forms of thermometer are used for particular purposes.

**Third Force**, The. The body of moderate political opinion in France which kept both the communists and General de Gaulle out of power during the period 1951-5 when parliamentary institutions seemed threatened. The basis of this third force is the Socialist Party, the Christian Democrats, and some Radicals.

**Thirty-nine Articles**. (See Articles.)

**Thirty Years' War**, between the Roman Catholics and Protestants in Germany (1618-48). Before its termination involved most of the countries of western Europe. Concluded by the Treaty of Westphalia.

**Thistle**, Order of. (See Knighthood.)

**Thorium**, a scarce, dark grey metal discovered by Berzelius in 1828. All substances containing thorium are radioactive. Chief source of thorium is monazite sand, big deposits of which occur in Travancore (India), Brazil, and the U.S.A. Considered important as a potential source of atomic energy since the discovery that it can be transmuted into U233, which is capable of fission like U235. (See Uranium.)

**Thorough Bass**, a musical term applied to a voice part accompanied by numerals, showing the chord applicable to each note. The term also refers to the entire science of harmonic composition.

**Thrips**. These tiny insects, which constitute a

separate order called *Thysanoptera*, are common on flowers, foliage, dead leaves, fungi, etc. Several are of economic importance; e.g., Corn-thrips.

**Thrush**, a large family of song-birds related to the warblers, distributed all over the world. The British species include the robin, redstart, nightingale, song-thrush (or mavis), blackbird, missel-thrush, ring-ouzel of the mountains, and large numbers of migrant fieldfares and redwings from northern Europe are winter visitors.

**Thumb-Screw**, an instrument of torture used in olden times to extort confessions from prisoners. It consisted of a frame of three upright bars, between which the thumb of the victim was inserted; then a screw was turned on with sufficient force to give intense pain without jeopardising life.

**Thunder**, the sound heard after the occurrence of a lightning flash. It is due to vibrations of the air along the path of the flash, which are set up by the sudden heating (and expansion) followed by the rapid cooling (and contraction) to which the air is subjected. It is unusual for thunder to be heard more than 10 miles away, the distance being estimated roughly by allowing 1 mile for every 5 seconds which elapse between seeing the flash and hearing the thunder. Continued rolling of thunder results from the zig-zag nature of the flash and the multiple strokes of which it is composed, variations in the energy developed along the path, and echo effects. Thunderstorms are caused by powerful rising currents of air within towering cumulonimbus clouds and are most frequent during the afternoons and evenings of sunny summer days.

**Thursday**, the 5th day of the week, named after Thor, the Scandinavian deity. To the ancient Romans Thursday was *dies Jovis*, or Jupiter's day.

**Thyrsus**, a staff carried in ancient Greece by the Bacchantes during their festivities. It frequently appears in ancient sculptures.

**Tiara** was the name originally given to a head ornament worn by the ancient Persians. The name was afterwards applied to the Pope's Triple Crown. The tiara of the first French kings was a high round cap. At the present day any coronet or frontal head ornament is styled a tiara.

**Ticks**, blood-sucking parasites related to spiders and mites. A gorged tick may reach a length of  $\frac{1}{2}$  in.

**Tides**, the periodical rise and fall of the waters of the ocean and its arms, are due to the attraction of the moon and sun. Newton was the first to give a general explanation of the phenomenon of the tides. He supposed the ocean to cover the whole earth, and to assume at each instant a figure of equilibrium, under the combined gravitational influence of earth, sun, and moon, thus making and controlling the tides. At most places there are two tides a day, and the times of high- and low-water vary according to the positions of the sun and moon relative to the earth. When earth, moon, and sun are in line (at full moon and new moon) the gravitational pull is greatest and we get "spring" tides. When sun and moon are at right angles (first and third quarters of the moon's phases) we get the smaller "neap" tides.

**Tiers Etat**, the lowest of the three estates of the realm as reckoned in France—nobility, clergy, and *tiers Etat*—prior to the Revolution.

**Tiger**, a powerful carnivorous animal of the cat family, which occurs in India and certain other parts of Asia. Its skin is of a tawny yellow, relieved by black stripings of great beauty of formation. The tiger is hunted in India, and its ferocious disposition renders the sport both exciting and dangerous. The prey of the tiger includes buffaloes, antelopes, and occasionally human beings, though the man-eating tiger is the exception rather than the rule. Some tigers attain a length of from 9 to 12 ft.

**Time** based upon the sun being exactly south at noon is referred to as local apparent time (L.A.T.). As the apparent solar day is, however, of variable length the interval between successive transits of an imaginary "mean sun" is adopted as the unit, being designated local mean time (L.M.T.). The latter is

derived from the former by adding or subtracting the so-called "equation of time" which varies from + 14 $\frac{1}{2}$  minutes in the middle of Feb. to - 16 $\frac{1}{2}$  minutes at the beginning of Nov. By common consent the meridian of Greenwich is accepted as the prime meridian; local mean time at Greenwich (G.M.T.) is the standard to which other mean times are usually referred. One degree of longitude corresponds with 4 minutes of time. Countries east of Greenwich keep their clocks in advance of G.M.T., countries to the west keep them slower. To avoid the inconvenience of local time variations, Standard Time has been adopted by most countries, whereby clocks are adjusted to an hourly system of changes based on a geographical succession of the meridians, 15° apart.

**"Times"**, The, daily newspaper founded in 1785 by John Walter (1739-1812), as *The Daily Universal Register*, renamed *The Times* in 1788. The business was transferred to the younger son, John Walter (1776-1847), in 1803 and his enterprise, ability and independence made the paper world-famous. Considerable changes took place in 1908 and Lord Northcliffe took over financial control. On his death in 1922 the paper came under the control of John Walter, great-grandson of the founder, and Col. the Hon. John Astor (now Lord Astor), who is now chairman of the Times Publishing Company. Sir William Haley was appointed editor in 1952.

**Timpani**, the kettledrums in an orchestra. (See Drums.)

**Tin** is a white metal, whose commonest ore is cassiterite (tin oxide), which occurs in Malaya, Indonesia, Bolivia, Belgian Congo, Nigeria, and Cornwall. It protects iron from rusting, and the tin coating on tinplate is applied by dipping the tin steel sheet in molten tin or by electrolysis. Tin alloys of importance include solder, bronze, pewter, Britannia metal, etc.

**Tinplate** is tin-coated steel plate, largely used for domestic utensils and other purposes. The chief centre of the trade in this country is South Wales.

**Tit or Titmouse**, a small insectivorous bird of the woodlands and forests, bright of plumage and very active and agile, often seen hanging upside down searching for food. There are over fifty species, eight of which occur in Britain: the Great and Blue Tits, familiar in gardens and countryside, the Cole Tit, Marsh Tit, Willow Tit, Bearded Tit, Long-tailed or "Bottle" Tit, and the Scottish Crested Tit.

**Titanium**, a scarce metal difficult to extract from ores, found in association with oxygen in rutile, anatase, and brookite, as well as with certain magnetic iron ores. It combines with nitrogen at a high temperature. Discovered by the Rev. William Gregor in 1791. Titanium alloys, being very resistant to stress and corrosion, are likely to find wide application in marine and chemical engineering.

**Tithes**, an ecclesiastical tax consisting of a tenth part of the annual produce known to the ancient Jews, and first imposed by Christian authorities in the 4th century, although not made compulsory in England before the 9th century. Tithes derived from land are termed "predial," those derived from cattle being styled "mixed," while others are personal. After the passing of the Tithes' Commutation Act of 1836, tithes were gradually converted into rent charges, and to-day the old form of tithes exists only to a small degree. Consult Tithe Act of 1936.

**Toad**. The frogs and toads are grouped together in the same category of amphibians, and the two terms are not based on any sharp scientific distinction between them. As a rough guide it can be said that toads have a more squat appearance and their skins are warty. Two toads occur in Britain, the Common Toad and the Natterjack. The latter can be identified by the narrow light stripe running down the middle of the back.

**Tobacco** is made from the leaves of various narcotic plants of the *Nicotiana* family, which contain a volatile oil and an alkaloid called nicotine. Tobacco is largely grown in America, India, Japan, Turkey, Greece, Canada, Italy, Indonesia, Bulgaria, Philippines, France, Belgian Congo, China, S. and N. Rhodesia, S. Africa, S. America, and other countries of a warm

climate. It undergoes various processes of preparation. The leaves are first dried, then cut into small pieces, moistened and compressed, and in this form is known as cut or "shag" tobacco; when moistened with syrup or treacle and pressed into cakes, it is Cavendish; when twisted into string form, it is "twist" or "pig-tail." For cigars the midribs of the dry leaves are removed, and what is left is moistened and rolled into cylindrical shape. For snuff, the tobacco leaves are moistened and allowed to ferment, then dried, powdered and scented.

**Toc H**, an association that originated during the first world war of young men pledged to help one another and study social conditions. Toc H promotes clubs and hostels. The name is from the Expeditionary Force's telegraphic abbreviation of Talbot House, Poperinghe, Belgium, a Church Institute named after a fallen officer, G. W. L. Talbot.

**Toga**, an outer robe worn by the ancient Romans and corresponding to the pallium of the Greeks. It was white and made of wool.

**Toleration Act** was passed in 1689, to relieve Protestant dissenters from the more serious of the disabilities under which they had previously laboured.

**Tolls**. Payments for privileges of passage were first exacted in respect of ships passing up rivers, tolls being demanded on the Elbe in 1109. Tolls for land passage are said to have originated in England in 1269, toll-bars being erected at certain distances on the high-roads in the 17th century, where toll had to be paid for all vehicles passing to and fro. After about 1825 they began to disappear, but still linger on some country roads and bridges. Tolls on London river bridges ceased in 1878-79.

**Tomahawk**, an axe-like weapon formerly nimbly used by the North American Indians.

**Tone Poem or Symphonic Poem**, a musical work of a serious nature and of symphonic dimensions in which the composer has not adopted the forms and conventions of the true symphony.

**Tonic Sol-Fa**, a system of musical notation in which monosyllables are substituted for notes. Thus the major diatonic scale is represented by Doh, Ray, Me, Fah, Soh, La, Te, Doh. The system was invented by a Miss Glover of Norwich in about 1840 and has proved of great assistance in the teaching of music in schools.

**Tonsure**, the shaven part of the head of a Roman Catholic ecclesiastic, dates from the 5th or 6th century. In the Roman Catholic Churches only a circle, or a crown, is shaved, while in the Greek Church shaving is forbidden.

**Topaz**, a transparent mineral gem, being a silicate and fluoride of aluminium and generally found in granitic rocks. Its colour is yellow, but it also occurs in pink and blue shades. The best kinds come from Brazil.

**Tornado**, a violent whirlwind, characterised by a black funnel-shaped cloud hanging from heavy cumulonimbus. Usually tornadoes are only a few hundred feet in diameter and occur frequently in the Mississippi region of the U.S.A., where it has been estimated that the wind speeds within them may exceed 200 m.p.h. In West Africa the term is applied to thundery squalls.

**Tortoises or Turtles**, are cold-blooded reptiles, four-footed, and encased in a strong shell protection, the shells of some species being of beautifully horny substance and design, in much demand for combs, spectacle frames, and ornamental work. It is the custom to designate the land species as tortoises and the aquatic kinds as turtles. The green turtle, so called because its fat has a green tinge, is in great demand for soup. Together the tortoises and turtles make up the reptilian order called *Chelonina*, the biggest representatives of which are the giant land tortoises of the Galapagos Islands, reaching a weight of 500 lb. and living a century. Some of these giant tortoises are even said to have reached 200 or 300 years of age. (See also p. 993.)

**Torture**, as a form of punishment, was in use among the Romans, though only upon the persons of slaves. In the Middle Ages it was commonly resorted to, especially in connection with charges of heresy. It was held that torture would make a guilty person confess, but not an

innocent one. It was not inflicted in England after 1640.

**Totalisator or Pari-mutuel**, is a mechanical device now in universal use on all important racecourses which indicates the amount of money staked on each runner, and it is altered every time a fresh deposit is made, so that a backer can see at any time his position in the event of a win by the horse or dog he has backed. It is legalised by the Racecourse Betting Act, 1928.

**Toucan**, a South and Central American family of brilliantly coloured birds, remarkable for their huge bills, which often attain a length of from 6 to 8 in. Toucans live on fruit, are of arboreal habits, and nest in holes.

**Touchstone**, a kind of jasper called by the ancients "Lydian stone," of economic value in testing the quality of metal alloys, especially gold alloys. The testing process is very simple. The alloy is drawn across the broken surface of the Touchstone, and from the nature of the mark or streak it makes the quality of the alloy can be ascertained.

**Tourmaline**, a mineral occurring in different colours in prismatic crystals, and remarkable for its action on light, having the power of polarising light rays under certain conditions. It is a double silicate of aluminium and boron, and occurs in Cornwall, Devon, South America, and Asia.

**Tournaments** were equestrian contests between military knights and others armed with lances, and frequent in the Middle Ages. The Normans introduced them into England.

**Tower of London** was a royal palace from the time of the Conqueror, who began the building of the White Tower in 1078. Later kings made considerable additions. Between the 15th and 18th centuries many princes and nobles were executed or imprisoned here, and here Henry VI., Edward V., and his brother were put to death. The Crown Jewels are kept at the Tower, and in the Armoury a fine collection of armour of various dates is preserved. The attendant staff are called Yeomen Warders of the Tower. Their style of dress is of the Tudor period.

**Tractarianism**, a term that came into use from about 1833 in reference to a religious movement (the Oxford Movement) headed by Pusey, Keble, Newman, and other Oxford high churchmen, who published "Tracts for the Times." Among other things, they advocated a higher degree of ceremonial in worship, and their enthusiasm put new activity into the Church, although the secession to Rome of some of their more prominent members showed the tendency of the movement.

**Trade Winds** form part of the circulation of air round the great permanent anticyclones of the tropics and blow inwards from north-east and south-east towards the equatorial region of low pressure. Atlantic trades are more regular than those of the Pacific. The belts may extend over 1,500 miles of latitude and, together with the Doldrums, move north and south in sympathy with the seasonal changes in the sun's declination, the average annual range being about 5 degrees of latitude. The discovery of the regularity of the trade winds is usually credited to Columbus.

**Trafalgar, Battle of**, was fought off Cape Trafalgar on Oct. 21st, 1805, between the British under Nelson and the French and Spanish under Villeneuve and Gravina. It was a complete victory for the British, but Nelson was killed.

**Trafalgar Square**. The site has often been referred to as the finest in Europe. It was conceived originally as a square by John Nash (1752-1835) when the project was considered of linking Whitehall with Bloomsbury and the British Museum. It was to be named after the new monarch as King William the Fourth's Square but on the suggestion of George Ledwell Taylor (a property owner near the site) alteration to the more popular name Trafalgar Square was agreed to by the King. On the north side the National Gallery was planned by Nash and erected by William Wilkins on the place of the Royal Mews—a work of William Kent a century before. The lay-out was the idea of Charles Barry but he did not approve the erection of the Nelson column (which see).

His idea was for the square to have a grand flight of steps from the north side with sculptural figures of Wellington and Nelson but the Commons decided otherwise and the column as designed by William Railton was begun in 1840. The two fountains by Barry were supplanted in 1948 by ones designed (1938) by Sir Edwin Lutyens. Executed in Portland stone they are flanked by some bronze sculptures. In the same year memorial busts of Lords Jellicoe and Beatty were placed by the north wall.

**Transcendentalism**, a term applied to a system of philosophy which transcends ordinary experience. It originated in Germany, and had for its chief apostles Richter, Fichte, and Schelling. In America Emerson propounded transcendental theories.

**Transept**, the portion of a church which extends across the interior between the nave and the choir. The terminal portions are called respectively the north and south transepts. Some of the older churches have two transepts.

**Transmigration of Souls** was a doctrine expounded by Pythagoras, and forms part of the Brahmin and Buddhist religions. The ancient Greeks termed it metempsychosis, and the theory is that after death the soul of a man passes into the body of some other man or animal.

**Transpiration**, the term applied to the loss of water vapour that occurs from the aerial parts of plants. In most plants about 90 per cent. of transpiration occurs through the *stomata* (*vide*), and at night, when these pores are closed, transpiration is low. The balance between water uptake and transpiration is upset when a plant is transplanted owing to some of the roots being broken, and this can be corrected by reducing transpiration losses by removing some leaves or covering the plant.

**Transubstantiation**, a term which first came into recognised use in the controversy between Berengarius and Lanfranc in the 11th century, indicating the supposed conversion of the bread and wine of the Eucharist into the body and blood of Christ, and called the doctrine of the "Real Presence."

**Trappist**. (*See* Cistercians.)

**Treadmill**, a large cylindrical machine provided with a series of steps, and maintained in rotary motion by the pressure of men's weight. A rail is fixed outside the wheel, and to this the workers of the treadmill hold by their hands, while their feet are kept continually in motion from step to step, the weight of their bodies keeping the machinery revolving. It is no longer used in prisons as a form of punishment.

**Treasure-Trove**, a legal term applying to money, plate, or bullion found hidden in the earth, or elsewhere, and for which there is no owner. The treasure legally belongs to the Crown, but it is the practice to reward the finder with the full value of the property on its being delivered up. Coroners Act, 1887, provides that inquests may be held, but not as to title as between the Crown and any other claimant.

**Treble**, the highest voice in a male voice choir. This is, of course, a boy's voice, the highest adult male voice being the alto. In a mixed choir the treble part is sung by sopranos.

**Tree frog**. The true Tree-frogs occur most commonly in America and Australasia. The Common European Tree-frog is a brilliant green animal, and the adhesive discs at the tips of its fingers and toes enable it to cling to trees, etc., with ease.

**Tree of Heaven**. A species of *Ailanthus*, native to China and Japan, which is commonly cultivated throughout the world. The leaves resemble those of the ash.

**Tree Shrews**. These arboreal insectivorous mammals, which constitute the family *Tupauidæ*, are related to the shrews, though in appearance they resemble squirrels except for their sharply pointed snout. They occur in Borneo, Siam, China, and Malaya.

**Trematodes or Trematoda**, the class of flatworms comprising the parasitic flukes. The liver fluke of sheep is the best-known species.

**Trent, Council of**, first sat in 1545, the last sitting being in 1563. At this Council the general policy, principles, and dogmas of the Roman Catholic Church were authoritatively settled.

**Triangle**, in music a metal percussion instrument in the form of a triangle which, when struck by a metal rod, emits a sound of no particular pitch.

**Triassic or Trias**, the earliest geological period in the Mesozoic era, which began some 200 million years ago and lasted about 50 million years. Triassic formations 25,000 ft. thick occur in the Alps. The predominant plants of the period were ferns, cycad, and conifers. Modern insects were appearing, and also small reptile-like mammals. Other important Triassic animals were: dinosaurs, ichthyosaurs (marine reptiles), and pterosaurs (flying reptiles).

**Tribunes**, name assigned to officers of different descriptions in ancient Rome. The original tribunes were the commanders of contingents of cavalry and infantry. The most important tribunes were the tribunes of the plebs, first elected in 494 B.C. as the outcome of the struggle between the patrician and the plebeian orders. They held the power of veto and their persons were sacred.

**Trichoptera**. This is the insect order comprising the Caddis-flies. These are moth-like insects, having hairs on the wings. They are usually found fluttering weakly near water. The larvae are aquatic and are remarkable for the cases (caddis cases) which they build out of sticks, small stones, sand grains, and shells.

**Tricolour**, the flag of the French Republic since 1789, consisting of three nearly equal vertical bands of blue, white, and red (ratio 90:99:111).

**Triennial Act**, which fixed the duration of Parliament to three years, was passed in 1641. Charles II. repealed this Act, it was re-enacted in 1694; in 1716 the Septennial Act was passed. In 1911 it was made five years' duration.

**Trilobites**, extinct aquatic arthropods, most abundant in the Cambrian and Ordovician systems. Their appearance may be roughly described as resembling that of a woodlouse, and like that animal the trilobites were capable of rolling their bodies up into a ball.

**Trimmer**, a time-server, a name that came into use in English politics in the latter part of the 17th century, being specially applied to the party headed by the Marquis of Halifax, who was charged with adapting himself to both Whigs and Tories.

**Trimurti**, the Hindu triad, Brahma, Vishnu, and Siva, symbolised as an entity. In the depictions of the Trimurti three distinct heads are represented, the theological unity combining Brahma, the creative power, Vishnu, the preserving element, and Siva, the destroying principle, in one supreme unification.

**Trinity**, the term applied to the Godhead, "three persons and one God," as it is expressed in the Litany—Father, Son, and Holy Ghost. The doctrine of the Trinity has general acceptance among Christian communities, and has been explained in different ways. One of the earlier statements of it is the Athanasian: "We worship one God in Trinity, and Trinity in unity: neither confounding the Persons, nor dividing the substance."

**Trinity House**, on Tower Hill, London, was incorporated in 1514 as an association for piloting ships, and has ever since been entrusted with various matters connected with the regulation of British navigation. Since 1854 the light-houses of the country have been under its supervision. The acting Elder Brethren act as Nautical Assessors in Marine causes which are tried by the High Court of Justice.

**Trio**, strictly a musical composition for three voices or instruments. The third movement, of a classical symphony is usually in three-beat time and the second subject of the movement, which is of ternary form, is often called the Trio. Thus, Minuet and Trio, Scherzo and Trio.

**Triple Alliance**, name given to any alliance between three countries. The most famous is the one between Germany, Austria, and Italy in 1882, which was broken when Italy refused to join in the war against France, Russia, and Great Britain in 1914.

**Triptych**, a picture, carving, or other representation, with two swing doors, by which it could be closed in; frequently used as an altar-piece. Also a writing tablet in three parts, two of which folded over the one in the centre.

**Trireme**, an ancient vessel with three rows of oars, of great effectuality in early naval warfare. Mentioned by Thucydides. It was a long, narrow vessel propelled by 170 rowers. The Romans copied it from the Greeks.

**Trisagion** ("thrice holy"), an ancient Jewish hymn, still regularly sung in the service of the Greek Church. A version of it—"Tersanctus"—also forms part of the Anglican Eucharistic service.

**Triumvirate**, a term used to denote a coalition of three persons in the exercise of supreme authority. The first Roman triumvirate was that of Pompey, Julius Cæsar, and Crassus, 60 B.C.; the second was that of Mark Antony, Octavian, and Lepidus, 43 B.C.

**Trogon**, a tropical forest bird of exceptionally brilliant plumage, found in South and Central America, tropical Africa, and S.E. Asia.

**Trombone**, a brass wind instrument which has a tube of variable length. By moving the slide, which shortens or lengthens the tube, the player causes the trombone to emit different notes.

**Tropic-Bird**, a long-tailed sea bird, of which there are 3 species, frequenting the tropical regions of the Atlantic, Pacific, and Indian oceans. One species has a bright red bill and tail.

**Troposphere**. The atmospheric layer which extends from the earth's surface to the stratosphere. As a general rule the temperature in the troposphere falls as altitude increases. (See Atmosphere.)

**Troubadours**, lyric poets who flourished from the 11th to the end of the 13th century, chiefly in Provence and the north of Italy. They were often knightly amateurs, and cultivated a lyrical poetry intricate in metre and rhyme and usually of a romantic amatory strain. They did much to cultivate the romantic sentiment in days when society was somewhat barbaric and helped considerably in the formation of those unwritten codes of honour which served to mitigate the rudeness of mediæval days.

**Trout**, a fresh-water fish of the *Salmonidæ* family.

**Trouvère or Trouveur**, mediæval poet of northern France, whose compositions were of a more elaborate character—epics, romances, fables, and chansons de geste—than those of the troubadour of the south. Flourished between the 11th and 14th centuries.

**Truffles** are subterranean edible fungi much esteemed for seasoning purposes. There are many species, and they are found in considerable quantities in France and Italy, less commonly in Britain. They are often met with under beech or oak trees, and prefer calcareous soils, but there are no positive indications on the surface to show where they are, and they are not to be cultivated. Hogs, and sometimes dogs, are used to scent them out, the former, by reason of their rooting propensities, being the most successful in the work.

**Trumpet**, a brass wind musical instrument in which different notes are produced by the operation of three "valves."

**Trunk-hose** was the part of the hose which covered the trunk or body, and extended in bag form from the waist to the middle of the thigh, enclosing the hips. In vogue in the 16th and 17th centuries.

**Tsetse**, an African dipterous fly belonging to the same family as the house-fly. It is a serious economic pest as it transmits the protozoon causing African sleeping sickness when it pierces human skin in order to suck blood, which forms its food.

**Tuatara or *Sphenodon punctatum***, a primitive lizard found in New Zealand. It has a rudimentary third eye on the top of the head; this is called the pineal eye and corresponds to tissue which in mammals forms the pineal gland.

**Tuba**, an alternative name for the Bass Saxhorn in E flat or F. (See Saxhorn.)

**Tube Foot**, the characteristic organ of locomotion of starfishes and kindred animals. They are arranged in pairs along the underside of the arms, and their sucker-like ends can grip a surface very tightly. The action of the suckers depends on hydraulic pressure.

**Tudor Period** extends from 1485 to 1603. The first Tudor sovereign was Henry VII., descended from Owen Tudor; then followed Henry VIII.,

Edward VI., Mary, and Elizabeth, the last of the line.

**Tuesday**, the third day of the week, named from the Saxon deity Tuisto, Tiw, or Teusca. To the Romans it was the day of Mars.

**Tuileries**, a French royal and imperial palace dating from 1564. It was attacked by insurgents during the outbreaks of 1793, 1830, and 1848, and was burned down during the Commune of Paris in 1871.

**Tulle**, a delicate kind of silk lace, originally made at Tulle in France. It was much used for the ornamentation of ladies' garments, hats, etc., and for veils.

**Tumulus**, a mound of earth raised over the bodies of the dead. The mound of Marathon, enclosing the bodies of the Athenians who were killed in the famous battle with the Persians, is a celebrated tumulus. Such mounds were commonly raised over the tombs of the distinguished dead in ancient times, and sometimes enclosed heavy structures of masonry. The Roman "barrows" were tumuli. Evidences of such mounds are frequent in prehistoric remains.

**Tun**, a liquid measure formerly in general use, but now obsolete. A tun of ale was 216 gallons.

**Tuna or Tunny**, a large marine fish belonging to the mackerel family, frequenting the warm waters of the Atlantic, Pacific, and Mediterranean. Tuna fisheries are an important industry.

**Tundra** is the name of a vast treeless plain of Northern Russia with small lakes and morasses scattered here and there, but almost devoid of vegetation. It is a cold, bare region, where only the reindeer can find sufficient sustenance.

**Tungsten**, a hard, brittle metal, silver to grey in colour. Its chief ores are wolframite (iron and manganese tungstate) and scheelite (calcium tungstate). Tungsten is alloyed in steel for the manufacture of cutting tools; also in the non-ferrous alloy stellite (*vide*). Electric lamp filaments are made from tungsten. Tungsten carbolide is one of the hardest substances known and is used for tipping tools.

**Turban**, a head-dress worn by men in Oriental countries, and consists of a scarf wrapped round the turboosh or cap. Turbans vary in material, colour, and folds, according to the rank of the wearer.

**Turbines** propelled by steam provide power for the propulsion of many ships, and on land steam turbines are a principal source of power, being used in large central electricity stations, for instance, to convert heat energy into electrical energy. Gas turbines have recently come into use in aeroplanes, and gas-turbine railway locomotives are being developed. The first gas-turbine ship had its trials in 1947, just half a century after the first steam-turbine ship.

**Turbot**, a large flat fish, highly valued as food. It often attains from 30 to 40 lb. in weight. Its flesh is white and firm. It is confined to European waters, and is caught by line or trawl.

**Turkey**, a fowl of American origin, brought to Europe from America soon after the discovery of that country. It was a domesticated bird in England in the first half of the 16th century. (*See also* Poultry Section.)

**Turmeric**, a yellow dye substance obtained from an East Indian plant of the ginger class, which is cultivated in other warm climates also, for commercial purposes. Turmeric, in its commercial form, comprises the root of the plant dried or powdered. Used in curry powder and to detect presence of alkali.

**Turpentine**, an oily substance obtained from coniferous trees, mostly pines and firs. It is widely used especially in making paints and varnishes, and also has medicinal properties.

**Turquoise**, formerly called Turkey Stone, is a blue or greenish-blue precious stone, the earliest and best specimens of which came from Persia. It is composed of a phosphate of aluminium, with small proportions of copper and iron. India, Tibet, and Silesia yield turquoises, and a variety is found in New Mexico and Nevada. It derives its name from the fact that the first specimens were imported through Turkey.

**Turtle Dove**, a beautiful fan-tailed pigeon, a summer visitor from Africa to southern England. It is a small, slender bird with reddish-brown upper parts, pinkish throat, black tail with white edges.

**Tweed**, A rough-surfaced fabric of the twilled type, usually all-wool, though cheaper kinds may include cotton. Of a soft, open, flexible texture, it may have a check, twill, or herringbone pattern. Harris, Lewis, Bannockburn, and Donegal tweeds are well known. "Tweeds" is said to have been written in error by a clerk for "twills."

**Twelfth Night** is the eve of the feast of the Epiphany, and in olden times was made the occasion of many festivities. It was the most popular festival next to Christmas, but is now little observed.

**Twilight** is the light which is reflected in the atmosphere when the sun is below the horizon before sunrise or after sunset. The term is most usually understood to refer, however, to the evening light; the morning light we call dawn. The twilight varies in duration in different countries, according to the position of the sun. In tropical countries it is short; in the extreme north it continues through the night.

**Tyburn**, a former small tributary of the Thames, which gave its name to the district where now stands the Marble Arch, Hyde Park. Here public executions formerly took place.

**Tycoon**, a title often used by foreigners to designate the Emperor of Japan, but not used or recognised by the Japanese. The title seems to have been coined in 1854 by those concerned in concluding the treaty between the United States and Japan. In Japanese Tycoon simply means "great prince."

**Tympanum** is, in architectural phraseology, the triangular space at the back of a pediment, or, indeed, any space in a similar position, as over window or between the lintel and the arch of a doorway. In ecclesiastical edifices the tympanum is often utilised for sculptured ornamentation.

**Tynwald**, the title given to the Parliament of the Isle of Man, which includes the Governor and Council (the Upper House), and the House of Keys, the representative assembly. This practically constitutes Home Rule, the Acts passed by the Tynwald simply requiring the assent of the Sovereign.

**Typhoon**. (*See* Cyclone.)

**Tyrolienne**, a Tyrolean dance of a waltz character.

## U

**Uhlán**, a light cavalry soldier armed with lance, pistol, and sabre and employed chiefly as skirmisher or scout. Marshal Saxe had a corps of them in the French Army; and in the Franco-German war of 1870 the Prussian Uhlans won fame.

**Ultramarine**, a sky-blue pigment obtained from lapis lazuli, a stone found in Tibet, Persia, Siberia, and some other countries. A cheaper ultramarine is now produced by grinding and heating a mixture of clay, sulphur, carbonate of soda, and resin.

**Ultramontanism** is the term applied to the views of Roman Catholics who desire that absolute authority in religious affairs should be vested in the Pope, subordinate only to the Ecumenical Council.

**Ultrasonics or Supersonics**, the term applied to waves of frequencies greater than those of audible sound waves and less than those of radio waves. The first instrument for producing supersonic waves was Galton's Whistle; this showed that cats and dogs, for instance, can hear "sounds" which are inaudible to humans. The commonest type of supersonic generator depends on the piezo-electric effect of crystals, which start vibrating when an alternating current is applied to them. (The crystals usually used are of quartz, Rochelle salt, or tourmaline.) Supersonic echo-sounders have been used for detecting submarines, wrecks, shoals of fish, etc., and they are invaluable instruments for measuring the depth of the sea. The term "ultrasonics" is superseding "supersonics" owing to the increasing use of the word "supersonic" in aeronautics, where it is applied to speeds exceeding the velocity of sound. (*See also* Mach Number.)

**Ultra-Violet Rays**. These are invisible rays whose wave-lengths are less than 3,900 Angstrom units

(this unit is one hundredth of a millionth of a centimetre). The sun's radiation is rich in ultra-violet light, but much of it never reaches the earth, being absorbed by molecules of atmospheric gases (in particular, ozone) as well as by soot and smoke particles. One beneficial effect of ultra-violet light on human beings is that it brings about synthesis of vitamin-D from certain fatty substances (called sterols) in the skin. The wave-lengths which effect this vitamin synthesis also cause sun tan and sun burn. Ultra-violet lamps (which are mercury-vapour discharge lamps) are also used for sterilising the air inside buildings, their rays being lethal to bacteria. Many substances fluoresce under ultra-violet light; for instance, zinc silicate glows green, while cadmium borate throws out red light. This phenomenon is applied practically in fluorescent lamps, the light of requisite hue being secured by judicious mixture of the fluorescent materials which coat the lamp. (See Electric Light.)

**Uncials** were a form of written characters used in times prior to the 10th century; while smaller than capitals they were larger than the later minuscule. The term uncial was a misappellation of St. Jerome's *litterae uniciales*, "inch-high" letters.

**Unction**, the act of anointing with oil, a symbol of consecration practised in the Roman Catholic, Greek, and other Churches, but not in the Protestant. *Extreme unction* is the rite of anointing a dying person with holy oil. This function consists in anointing the eyes, ears, nostrils, mouth, the palms of the hands, and the soles of the feet.

**Underground Gasification**, the process of converting coal into gas underground. Briefly an "underground gasworks" comprises two approximately vertical shafts connected by a gallery through the coal seam, which is ignited. Air is led down one of the shafts, and the gas produced is drawn off from the second shaft. The technique was worked out by the British chemist, Sir William Ramsay, but it was not until 1933 that it was tried seriously—in the Donetz coalfield in Russia. America, Italy, and Belgium are also experimenting with underground gasification.

**UNESCO.** (See "A Citizen's Guide.")

**Unicorn**, a fabulous single-horned animal. In heraldry its form is horse-like, with the tail of a lion and pointed single horn growing out of the forehead.

**Union Jack.** (See p. 752.)

**Union of Great Britain and Ireland** was proposed in the Irish Parliament in Jan. 1799 after the 1798 Rebellion and came into force on Jan. 1st, 1801. The troubled history of Ireland, associated with the questions of self-government, nationalism, land, and religion, culminated in the Easter revolution of 1916. A treaty giving the 26 southern counties independence in 1921, as the Irish Free State, was followed by a period of internal dissension. In 1937 a new constitution was enacted in Eire in which no reference was made to the Crown. This, however, left in force the External Relations Act of 1936 and with its repeal in 1948, Eire separated itself from the British Crown and thus severed the last constitutional link with the Commonwealth, and became an independent Republic.

**Union, Treaty of**, was the treaty by which Scotland became formally united to England, the two countries being incorporated as the United Kingdom of Great Britain, the same Parliament to represent both, Scotland electing sixteen peers and forty-five members of the House of Commons. Uniformity of coins, weights, and measures was provided for, Scottish trade laws and customs were assimilated to those of England, and as regards religion and the practices of the law, Scotland was to continue as before. This Act was ratified on May 1st, 1707.

**United Nations.** (See "A Citizen's Guide.")

**Universe in astronomy** means not only the star system of which the sun and planets are a small part but all the countless star systems or nebulae which may be separated from each other by millions of light-years. (See "The World of Science.")

**Universities** are institutions of higher education

whose principal objects are the increase of knowledge over a wide field through original thought and research and its extension by the teaching of students. Such societies existed in the ancient world, notably in Greece and India, but the origin of the University as we know it today lies in medieval Europe, the word *universitas* being a contraction of the Latin term for corporations of teachers and students organised for the promotion of higher learning. The earliest bodies to become recognised under this description were at Bologna and Paris in the first half of the 12th century; Oxford was founded by an early migration of scholars from Paris, and Cambridge began with a further migration from Oxford. Other Universities sprang up all over Europe, including three in Scotland—St. Andrews (1412), Glasgow (1451), and Aberdeen (1494)—which were followed by Edinburgh in 1582. These six bodies remained the only Universities in Great Britain until the foundation in 1826-29 of University and King's Colleges in London (resulting in the establishment of the University of London in 1836) and of the University of Durham in 1832. The period since 1850 has been a great century of academic growth, in which the new Universities of Belfast, Birmingham, Bristol, Hull, Leeds, Liverpool, Manchester, Nottingham, Reading, Sheffield, Southampton, and Wales were founded, the latest creation being that of Exeter in 1955. There are now twenty-one Universities in the United Kingdom and two University Colleges (Leicester, and North Staffordshire). The Republic of Ireland has Trinity College, Dublin (founded in 1592), and the National University of Ireland, with its three constituent University Colleges at Dublin, Cork, and Galway. The 19th century also saw a wide extension of the University movement throughout the British Empire, the early important foundations being McGill (1821), Toronto (1827), and Laval (1852) in Canada; Sydney (1850) and Melbourne (1853) in Australia; New Zealand (1870); South Africa (1873); Bombay, Calcutta, and Madras in 1857 in India; and the University of the Punjab (1882) in the present Pakistan. There are now seventy-nine Universities of full status in Commonwealth countries outside the United Kingdom: three of these are in the Colonies (Hong Kong, Malaya, and Malta), and since the war University Colleges have been instituted in the West Indies and in East and West Africa and Rhodesia. In the U.S.A. the development of higher education has left the Universities less sharply defined than in Europe and the Commonwealth, but there are nearly 1,800 institutions of higher education covering 2,297,000 students, the best-known Universities being Harvard, Yale, Princeton, Columbia, and Chicago. The range of studies that may be pursued at a University covers humanities and sciences, and includes training for the liberal professions. It is customary for Universities to confer degrees on students who reach certain educational standards, the principal titles being those of Bachelor, Master, and Doctor in the particular discipline. In England a certain emphasis has always been placed on the provision of residential facilities for students; the ancient Universities of Oxford and Cambridge are entirely collegiate in character, while the modern Universities have halls of residence for a growing proportion of their students. In Great Britain in 1952-53 there were 81,474 full-time University students, including 19,688 women and 7,468 from overseas countries; 70% held scholarships or other financial awards. Through the University Grants Committee H.M. Treasury subsidises the recurrent expenditure of Universities to the extent of more than £20 million per annum, but they are self-governing institutions free from State control. An International Association of Universities was founded under UNESCO auspices, with headquarters in Paris, in 1950. The Association of Universities of the British Commonwealth, established in 1912, holds quinquennial Congresses (the most recent at Cambridge in July 1953) and publishes the *Commonwealth Universities Yearbook* as a detailed work of reference; its office is in London. (See *Hoods of Academical Robes*, pp. 754-57.)

**University Boat-race.** (See p. 966.)

**Upas**, the poisonous sap of certain trees growing in

Java and the Malayan and Philippine Islands. The natives use the sap for arrow-poison. Strychnine is yielded by one of these trees, the *Strychnos Nux-vomica*.

**Ur** of the Chaldees, and probably the site of Abraham's early home, is an ancient Sumerian site where important excavations have been conducted by Taylor in 1854 and by Hall and Woolley in this century. The excavated graves and other discoveries have thrown valuable light on the period subsequent to the "Flood" and have added much to modern archaeology.

**Uraeus**, the sacred serpent of the ancient Egyptians, always represented on the head-dresses of divinities and royal personages. It was the symbol of supreme power, and was in the form of an asp.

**Uralite**, a mineral produced when a pyroxene rock is metamorphosed into hornblende.

**Uraninite.** (See Pitch-blende.)

**Uranium**, a metal discovered by Klaproth in 1789 in pitch-blende. It is a white metal which tarnishes readily in air. Great developments have followed the discovery that the nucleus of the uranium isotope Uranium 235 undergoes fission, and uranium minerals have become very important since it was found that atomic energy could be released controllably by taking advantage of fission. (See Atomic Bomb, Atomic Pile.) Previous to the second world war the uranium content of all the uranium ores that were mined was estimated at 1,000 tons. Since then uranium mining has been surrounded by military secrecy, and no figures are being published. Before atomic energy work began to take the major part of the world's output of uranium minerals, the chief users of uranium compounds were the ceramics and textile industries.

**Uranus.** This planet was discovered by Herschel in 1781. Its diameter is 32,000 miles and its average distance from the sun is 1,783 million miles. It has four small satellites.

**Uriconian**, the name given to a series of volcanic rocks occurring in Shropshire near Wroxeter, the site of the old Roman station of Uriconium.

**Ursa Major**, the Greater Bear, or "Charles's Wain," a constellation familiar to all observers because of the brilliance of the seven stars forming its outline. It never sets in these latitudes.

**Ursa Minor**, the Lesser Bear Constellation, has, like Ursa Major, seven prominent stars, of which the pole star is the brightest.

**Usquebaugh**, is the old Celtic name for spirit, distilled originally from barley. The name is still used in Scotland. Burns, in *Tam o' Shanter*, wrote, "Wi' usquebae we'll face the de'il."

**Utilitarianism** is a term that originated with the Italian philosopher Beccaria, and has for its aim "the greatest happiness of the greatest number," and insists that this should be the sole aim of all public action. Jeremy Bentham was the chief propounder of the philosophy, and in more recent times John Stuart Mill advocated it with much acceptance. Herbert Spencer's exposition of the theory represented a still higher development of it.

**Utopia** was the imaginary island of Sir Thomas More's ideal state, where the conditions of life and government were perfect. The work, published in 1516, was the forerunner of a host of such books by Bacon, Lytton, Bellamy, and, of the 20th century H. G. Wells.

**Utrecht, Treaty of**, was the treaty which concluded the war of the Spanish Succession in 1713.

**Uvarovite**, an emerald-green variety of garnet. It contains chromium sesquioxide. Named after Uvarov, the Russian statesman.

**Uvula-wort** or **Throatwort**, the nettle-leaved Bell-flower (*Campanula Trachelium*), found plentifully in English copses, and has the reputation of being of service medicinally in the treatment of pains and swellings in the throat.

**Uzema**, a Burman linear measure equal to about 12 English miles.

## V

**Vaccination**, a system of inoculation against small-pox discovered by Dr. Jenner in the 18th cen-

tury. In Great Britain it is usual for all infants within 6 months of birth to be vaccinated unless the parent conscientiously believes that it would be harmful to the infant's health. (See p. 816.)

**Vagrancy** was the subject of stringent punishment under the old English laws. Various penalties were branding, setting in the stocks, mutilation of the ears, and transporting to the Colonies. The Vagrancy Act of 1824 repealed all former laws. Many Acts have since been passed.

**Valentine's Day**, the 14th Feb., is a festival in celebration of St. Valentine, one of the Christian martyrs of the 3rd century. A sweetheart or Valentine is chosen on that day and letters or tokens sent secretly to the object of affection.

**Valhalla**, in Scandinavian mythology, is the special Paradise to which the souls of warriors slain in battle were transported. The term is also generally used to designate a burial place of great men.

**Valkyries**, the chosen handmaidens of Odin, appointed to serve at the Valhalla banquets. Their most important office, however, according to the Norse mythology, was to ride through the air at a time of battle and point out the heroes who were to fall. It is one of these Valkyries who is made the heroine of Wagner's opera "Die Walküre."

**Vampire or Werewolf**, according to ancient superstition, was a spectre in human form which rose from its grave in the night-time and preyed upon the living as they slept, sucking their blood, and then returning to the grave.

**Vampire-Bats**, blood-eating bats of tropical America. They puncture the skin with their incisor teeth, leaving a wound that bleeds profusely. The blood is lapped up by the bat, not sucked.

**Vanadium**, a scarce metallic element whose chief ores are carnotite and patronite. Some iron ores contain it. Most of the vanadium commercially produced finds its way into vanadium steels, which are used for tools and parts of vehicles, being hard, tough, and very resistant to shocks.

**Vandals** were a Teutonic race who ravaged Gaul, Spain, and North Africa in the 5th century, and finally attacked the city of Rome, drawing down upon themselves universal opprobrium for their wanton destruction of beautiful objects and monuments.

**Vanilla**, a climbing orchid of tropical America, found also in Asia; the dried fruit of certain species furnishes the agreeable aromatic vanilla of commerce, though most vanilla essence now used is prepared synthetically.

**Varnish** is of two leading kinds; spirit varnish, made from resinous substances dissolved in spirit; and oil varnish, in which the dissolving agent is linseed oil and turpentine.

**Vatican**, the Papal residence at Rome, a famous palace on the hill adjacent to St. Peter's. Its museum is a rich treasure-house of literary and artistic objects.

**Vauxhall Gardens**, a famous London pleasure resort from the early part of the 18th to the middle of the 19th century. It was here that many great singers appeared, where the earliest balloon ascents were made, and where there were fine displays of fireworks.

**Vedas**, the sacred writings of the ancient Hindus, comprising hymns, sacred formulae, and prayers, and the oldest books in existence.

**Vehmgericht**, a mediæval tribunal said to have been founded by Charlemagne in the 9th century. It dealt with cases in which the penalty of death was involved. The last of these courts was held in 1568, by which time the suppression of the tribunal had become a public necessity.

**Velvet**, silk fabric that is woven with a fine pile on one side only. When the piece is made entirely of silk it is styled silk velvet; when cotton is mixed with the silk, it is cotton-velvet or velveteen.

**Ventilation** is a process of supplying fresh air to and removing contaminated air from rooms and buildings. It is a science that has been much studied in recent years and has led to the adoption of methods of air renewal by which the public health has been greatly improved. A recent development of the study of ventilation

- is air-conditioning. Being independent of outside atmospheric conditions, the air can be kept pure and at a suitable temperature.
- Ventriloquism**, the art of speaking in many voices and at apparent different distances, without seeming motion of the lips. The art was practised by the ancient Greeks and Romans.
- Venue**, a legal term designating the place where an action is to be tried or from which a jury is to be summoned.
- Venus**, the planet second in order from the Sun and distant from that orb 67,200,000 miles. It is 7,700 miles in diameter. At wide intervals Venus passes between the earth and the sun, when what is called the "Transit of Venus" takes place. The last transit was in 1882. There will not be another until 2004.
- Venus' Fly-trap**, a well-known insectivorous plant (*Dionaea muscipula*) occurring in Carolina in damp mossy places. It is related to the Sundew. The leaf is the organ that catches the insects. The leaf blade is in two halves, hinged along the centre line. Each half bears three sensitive hairs called "trigger hairs." When an insect touches a trigger, the two halves of the leaf clap together, trapping the insect between them, when it is digested by a secretion from the leaf, which afterwards absorbs the soluble products.
- Verd-Antique**, a peculiar kind of stone found chiefly in Italy, and to some extent quarried in Cornwall and certain parts of Scotland, Ireland and the United States. It is highly-ornamental stone, vari-coloured, beautifully veined and capable of high polish.
- Verdigris**, a green deposit formed upon copper when exposed to the air. Verdigris is used both as a mordant and as a pigment.
- Verjuice**, an acid liquid formerly much used in cooking. It is derived mostly from sour grapes, crab-apples, and other acid fruits.
- Vermilion**, a pigment obtained from cinnabar, but generally made artificially from a mixture of one part of sulphur with four of mercury. It yields a bright red colour.
- Vernalization**. Seeds which, after being exposed to a low temperature, produce plants that flower earlier than usual are said to have been "vernalized." This technique of seed treatment devised by Lysenko is called vernalization. It is claimed to have been widely used in Russia to obtain cereal crops in places where climatic conditions are favourable for only a short season.
- Versailles, Treaty of** The Peace Treaty, 1919, ending the First World War. The first half was devoted to the organisation of the League of Nations. Among the territorial changes Germany ceded Alsace-Lorraine to France, Posen and the Corridor to Poland. Germany undertook to disarm, to abolish universal military service, to keep only a small army of 100,000 and a small navy. Her colonies were to be shared out among the Allies under League Mandates. Reparations were to be paid, but were gradually reduced and entirely ceased in 1932. Hitler took unilateral action against the Treaty especially in regard to rearmament and the annexation of Austria. Hitler's attempt to change the eastern frontiers was the immediate cause of the Second World War.
- Verst**, a Russian measure of length equal to 3,500 ft., i.e., about two-thirds of an English mile.
- Vertebrate**, the zoological division comprising such animals as have a backbone.
- Vesta**, a minor planet or asteroid discovered by Dr. Olbers of Bremen in 1807. It revolves round the Sun between Mars and Jupiter.
- Vestals** were priestesses of ancient Rome, appointed to guard the perpetual fire consecrated to Vesta, goddess of hearth and home. They were required to take vows of chastity, and during the thousand years from Numa, 710 B.C., to Theodosius, A.D. 394, when the order was abolished, only 18 vestals were condemned for incontinence.
- Vaticum** (literally "provision for a journey"), an expression designating the ministering of Holy Communion to one on the point of death.
- Vicar of Bray**, the original of the ballad of that name was Simon Alleyn, vicar of Bray between 1540-85, who was "twice a Papist and twice a Protestant," as Fuller asserts, serving under four monarchs, Henry VIII., Edward VI., Mary I., and Elizabeth.
- Victoria and Albert Museum**, in Kensington, London was begun in 1852 as the Museum of Ornamental Art at Marlborough House. The present building was completed in 1909, and has the following nine departments; Architecture and Sculpture; Ceramics; Engraving, Illustration and Design; Metalwork; Paintings; Woodwork; Textiles; Library (of books on art) and Book-production; and the Dept. of Circulation. The Bethnal Green Museum is a branch of the V. and A.
- Victoria Cross**, an order of merit for conspicuous valour, awarded to members of the Army, Navy, and Air Force, was established in 1856. To non-commissioned holders, the V.C. carries with it an annuity of £10, plus 6d. a day to their pensions. The standard payment in respect of posthumous awards is £50.
- Vicuña**, a large mammal of the camel family, found wild in the mountain regions of Bolivia and Chile. It yields a wool which is made into dress fabrics.
- Vienna Congress**, sat at Vienna from Sept. 1814 to June 1815, and settled the delimitation of the territories of the various European nations after the defeat of Napoleon. The Treaty of Vienna which resulted gave Ceylon, Mauritius, Cape Colony, Heligoland, Malta and part of Guiana to England; France was not permitted to hold more territory than she had possessed at the outbreak of the Revolution in 1789; Austria took Northern Italy; Russia part of Poland; and Prussia, part of Saxony and the Rhenish province. Except for one or two changes the clauses of the treaty were maintained for over forty years.
- Viet-Minh**, the Indo-Chinese (Annamite) national movement led by Ho Chi-Minh which resisted French rule from 1945 to 1954, when agreement was reached at the Geneva Conference.
- Vikings** were Scandinavian sea-plunderers who from the 8th to the 10th centuries were the terror of northern waters.
- Vinegar**. This condiment and preservative is a weak solution of acetic acid, usually containing brown colouring matter. It is made by allowing a weak solution of alcohol (e.g., poor wine, sour beer, etc.) to trickle through beech-wood shavings that are covered with a kind of bacteria which is able to convert alcohol into acetic acid.
- Viola**, a stringed instrument of the violin type but rather larger than the violin. Music for the viola is written mainly in the alto clef, though the treble clef is used for the higher notes.
- Violin**, a stringed instrument rather smaller than the ancient viol from which it derives. It is held under the chin for playing, the right hand bowing while the left hand "stops" the strings. The violin has been used in its present form since the 16th century, the most famous maker being Antonio Stradivari of Cremona.
- Violoncello**, a member of the violin family of stringed instruments whose pitch corresponds with that of the bass voice. It is played while between the knees as was the old *viol da gamba*.
- Viper**, a family of poisonous snakes of which there is one example in Britain, the common viper or adder, only found in very dry localities.
- Virginal**, an English keyboard instrument of the harpsichord type greatly in vogue during Elizabethan times.
- Virgo**, the 6th constellation of the Zodiac, lying between Leo and Libra. It has seven prominent stars ranged in the form of the letter "Y." One of these stars is of the first magnitude, the other six being of the third magnitude.
- Virtues, Cardinal**. See Cardinal Virtues.
- Visibility** is defined by the distance at which the farthest of a series of objects, specially selected to show against the skyline or in good contrast with their background, can be distinguished. Visibility depends chiefly upon the concentration of water or dust particles suspended in the air. Instruments are available to measure the obscurity of the atmosphere more directly, including that at night. A large lapse rate of temperature and a strong wind are favourable to good visibility; a small lapse rate, calm or light wind favourable to bad visibility. Fog is when the visibility is less than 1,100 yds.; mist or haze when it is between 1,100 and 2,200 yds. (See Pollution.)

**Viscount**, a title of rank coming between that of Earl and Baron. The title originally stood for deputy-earl. The first English Viscount was Viscount Beaumont, created in 1440.

**Vishnu**. The second person of the Hindu Trinity, representing a principle of stability, to whom the creation of the world is sometimes attributed.

**Vitamins**. (See "Medical Section.")

**Vitriol**, the old name of sulphuric acid, represented in its pure form by oil of vitriol. Sulphate of copper forms blue vitriol; sulphate of iron, green vitriol; and sulphate of zinc, white vitriol.

**Vivandière**, a female camp follower informally attached to French military regiments, and acting as vendor of liquors, fruits, etc.

**Vivisection**, the dissection for scientific purposes of living animals. The practice has been strongly opposed by humanitarians, and Acts have been passed for restricting vivisection to authorised persons.

**Vizir**, more correctly **Vizir**, literally "burden bearer" or helper, originally the chief minister of the Abbasid (second of the two great dynasties of the Mohammedan empire) Caliphs.

**Volcanoes** are mountains or mounds beneath which, in the depths of the earth, there is a continual fire that at intervals throws up flame, molten rock (lava), ashes, etc. The most active volcanoes of modern times have been those of Etna, Vesuvius, and Stromboli, in Italy; Hekla in Iceland; and Mont Pelée in Martinique. The last-named was in violent eruption in 1902, when the chief town of St. Pierre was completely destroyed and many lives were lost.

**Vole**. There are three species of British vole: the Field-vole, the Bank-vole, and the Water-vole.

**Volt**, the electro-motive force unit, named after Volta, and defined in terms of the ohm and the ampere. (See p. 742.)

**Voltmeter**, instrument for measuring voltages.

**Volunteers**, a general term for soldiers who are not professionals nor permanently embodied under arms in peace. The idea of an organised volunteer force seems to have originated in England at the time of the Militia Bill of 1757. The Volunteers were re-formed as the Territorial Force in 1908. The British army has been recruited from volunteers in times of peace, and largely in wartime for several centuries. Conscription was used in the first and second world wars. The Home Guard (Local Defence Volunteers), recruited in the last war, was initially a volunteer organisation, but became compulsory in Mar. 1942.

**Vulgate**, a term used to designate the Latin version of the Scriptures sanctioned by the Council of Trent.

**Vulpine Phalanger**, an Australian marsupial mammal, resembling a small fox, and called also the Brush-tailed Opossum.

**Vulture**, a famous bird of prey of two distinctive groups; that of the Old World, which has the nostrils divided by a mass of bone, and the New World vulture, which has no such division. Vultures feed on carrion and are the great scavengers of tropical regions. The European species are the Griffon Vulture and the Egyptian Vulture, which, however, have seldom been known to visit England. Vultures have no feathers on the head and neck.

## W

**Wading Birds**, an order of migratory, long-legged, long-billed birds, frequenting marshes and shallow waters. They include the plovers, avocets, stilts, oystercatchers, curlews, phalaropes, godwits, dunlins, sandpipers, redshanks, greenshanks, snipe, woodcocks, the pratincole of the Mediterranean, and the sun bittern of tropical America. Many species breed in Britain.

**Wagram, Battle of**, was fought on July 5th and 6th, 1809, when Napoleon defeated the Austrians.

**Wagtail**, a familiar long-tailed small bird, of which four species are British, the Pied (or Water), Grey, Yellow, and White Wagtails, while the Blue-headed Wagtail also occasionally makes his appearance. Wagtails nest in ruts, and are active of habit.

**Waits**, the night minstrels who sing carols at Christmas in the open, a remnant of the old-

time minstrels attached to Courts and feudal dwellings.

**Wakes** were originally parish festivals in celebration of the patron saint's day and the dedication of the church in the all-night vigil. Regulated by law in 1536, they gradually fell into desuetude, or became divorced from their former significance; also vigils for the dead before interment.

**Waldenses**, the name given to an heretical Christian sect which arose in the south of France in the second half of the 12th century in protest against the worldliness of the clergy. Their leader, Peter Waldo of Lyons, had a translation of the New Testament made into Provençal, and his teaching stirred men to lead more holy lives. They were persecuted but not destroyed and survive to this day in the valleys of Piedmont. Cromwell interceded and obtained for them increased toleration, and Milton used his pen on their behalf. Since 1848 they have had full freedom of worship, and membership has steadily increased. They have a theological school at Florence.

**Walloons**, name given to the French-speaking population of the southern provinces of Belgium, in contrast to the Flemings or Dutch-speaking population of the northern provinces. The Walloon areas contain the mining and heavy industries of the country; the Flemish regions are more agricultural. The number of Walloons is estimated at about 3 millions; the number of Flemings at about 5 millions.

**Walpurgis Night**, the night before May 1st, when witches and creatures of evil are supposed to have liberty to roam. Named after St. Walpurgis, an English nun, who went on a mission to Germany in the 8th century. There is a famous Walpurgis night scene in Goethe's *Faust*.

**Walrus**, a very large marine mammal, related to the seals but having in the upper jaw two large curved tusks, which average in length from 15 in. to 2 ft. It lives on fish, and inhabits the Arctic seas. An adult walrus can exceed 12 ft. in length and weigh over a ton.

**Waltz**, a popular round dance, danced in couples, introduced into England from the Continent in 1813.

**Wapentake**, the ancient name given in the northern counties to territorial divisions corresponding to the Hundreds of southern counties.

**Wapinschaw**, an ancient Scottish custom of assembling the people for the purpose of testing their capacity for bearing arms and their readiness to take the field.

**Wapiti**, a large North American deer, often, but erroneously, styled the elk, once abundant, but now surviving only under protection.

**Warblers**, a family of small, lively song-birds, closely related to the flycatchers and thrushes. Represented in Britain by many species, including the chiffchaff, one of the earliest spring visitors, willow-wren, wood-warbler, blackcap, garden-warbler, whitethroats, sedge- and grass-hopper-warbler.

**Washington Conference** was convened in 1921 by President Harding (U.S.A.) for the purpose of discussing the limitation of armaments and Pacific and Far Eastern problems. (See also *Quadruple Agreement*.)

**Wasps**. Some wasps are social insects, others are solitary. The former build nests of papier mâché, produced by chewing wood. The solitary wasps either build nests of mud or burrow in the ground. The sting of wasps, found only in females, is acid and needs to be neutralised with an alkaline substance, e.g., the traditional "blue bag," baking soda, etc.

**Water Boatman**, a common aquatic bug which rows with its oar-shaped hind legs.

**Water Deer**, the Chinese musk deer, an animal of small size and aquatic habits, and hornless.

**Water Flea**, a small crustacean provided with several pairs of legs, carrying gills which enable it to swim rapidly to and fro on the water.

**Water Frame**, the name given to the spinning frame invented by Arkwright, driven by water-power. In Lancashire, where it was most used, it was known as the "throstle."

**Waterlander**, a sect established in Holland as an offshoot of the Mennonites. They were more tolerant than the original sect, and did not

regard the Bible as necessary to salvation. Ultimately they became reconciled with their opponents, with whom they are now united.

**Waterloo, Battle of**, was fought on June 18th, 1815. The Allies (British, German, and Dutch) under Wellington and Blücher defeated the French under Napoleon. This ended Napoleon's career.

**Waterloo Bridge**, crossing the Thames, was built by Rennie, and opened in 1817. It had nine arches, each of 120 ft. span, was built of granite, and had a length (including approaches) of 2,456 ft. The present bridge, completed in 1942, and formally opened Dec. 10th, 1945, is a fine example of reinforced concrete construction. (Architect, Sir Giles Gilbert-Scott.)

**Water-Spider**, an interesting little animal which spins a sac of silk on a water-plant, which it uses as sort of diving bell. Into this bell it introduces bubbles of air, one at a time. Thus the spider is enabled to remain below the surface a considerable time.

**Waterspout**, whirling tornado-like cloud occurring at sea. It begins as a cone of cloud tapering slowly downwards, the sea surface becoming disturbed; on reaching the centre of the cloud of spray the spout takes on the appearance of a column of water. A number of these voracious may form fairly close together at about the same time, their duration ranging up to 30 minutes.

**Watling Street**, the name of the old Roman road which ran from the Channel ports by way of London to Shropshire. (See also Roman Roads.)

**Watt**. A metric unit of electrical power equivalent to 1 joule (10 million ergs) of work per second. 746 watts equal 1 horse-power, and the kilowatt (1,000 watts) is about 1½ horse-power. (See p. 742.)

**Wavellite**. This mineral is an aluminium phosphate.

**Wax**, the name applied to certain plant substances or mixtures, and used for various purposes, such as the making of wax candles, bleaching, and making artificial flowers, anatomical models, etc., also in pharmacy for blending in the composition of plasters, ointment, etc. The best-known natural wax is beeswax, and there are others, such as spermaceti, obtained from the sperm whale, and Chinese wax which is a cerotyl cerotate.

**Waxbill**, a small Oriental and African bird of the *Ploceidae* family, with wax-like bill and beautifully variegated plumage. The Java sparrow, the South African Grosbeak, and the Blue-breasted waxbill are attractive, and often find their way into cages.

**Wayz-Goose**, the name generally given to a festive gathering of people employed in printing and other works, so called from the fact that in earlier times a goose was the principal dish of the feast.

**Weasel**. A carnivore mammal found in Britain, smallest member of the group including the Stoat, Polecat, and Pine-marten, about 8 in. long. Its fur is reddish on the upper side of the animal, white on the under side; it may all turn white in winter with the exception of the tail.

**Weather**, the factors determining to-morrow's weather are so manifold, variable, and complex that the task of the meteorologist is no easy one. There are still people who cling to the idea that weather is determined by the phase of the moon, but their predictions have no scientific backing, and can be dismissed. Changes in temperature, humidity, and speed of air masses can best be measured by instruments designed for the purpose. Weather forecasts are now a regular feature of the B.B.C. broadcast, the information being supplied by the meteorological staff of the Air Ministry. By taking into account the peculiar character of any part of the country, whether coastal, high- or low-lying, industrial, sheltered, precise forecasts for that particular region can be made up to twenty-four hours ahead and sometimes longer. Great strides were made (particularly in obtaining regular upper air observations) during the recent war when accurate forecasts were indispensable for the safety of aircraft and ships, for strategic purposes, and for the assistance of farmer and fisherman. The British Isles lie in the path of depressions moving north-eastward across the Atlantic.

It is the frequency, intensity, and speed of these centres of low pressure, which give these islands such changeable weather. On the other hand, when an anticyclone builds up and embraces the British Isles, settled weather is fairly certain, the type of weather, whether dull or cloudless, warm or cold, depending mainly on the direction of the wind in the particular area concerned and the time of year.

**Weather Lore**. Before instruments were invented to measure atmospheric conditions, man relied on his own observation of wind and sky, behaviour of birds and animals, and came to associate certain phenomena with types of weather. Many popular weather rhymes have survived the centuries, and as long as forecasting is confined to the next twenty-four hours there is perhaps something to be said for them, particularly those dealing with the winds. What is very unlikely is that next year's summer can be predicted from this year's winter, or that one month's weather is related to that of another. The study of past records reveals too many exceptions for such predictions to be of much use in forecasting.

**Weaver Bird**, the popular name for a large group of finch-like birds belonging to the family *Ploceidae*, found principally in Africa but also in Southern Asia and Australia and remarkable for their habit of building nests formed of blades of grass dexterously interwoven and suspended from the boughs of trees. (See p. 1001.)

**Weaving** has been practised since before any times of which we have record. The Egyptians credit the invention to Isis, the Grecians to Minerva. The main principle of the weaving loom is the same to-day as it was thousands of years ago; a warp extends lengthwise through the loom, the threads being held in separate regular order by being passed through a reed or "slay," while the weft is crossed through alternating threads of the warp by means of a shuttle which holds the weft. Thus the fabric is built up. Weaving was done by hand up to the early part of the 19th century, when Cartwright's steam-power loom was introduced, and is now in universal use. The Jacquard loom for weaving figured designs dates from 1801.

**Wedding Anniversaries** are: first, Cotton; second, Paper; third, Leather; fourth, Fruit and Flower; fifth, Wooden; sixth, Sugar; seventh, Woolen; eighth, Salt; ninth, Copper; tenth, Tin; twelfth, Silk and Fine Linen; fifteenth, Crystal; twentieth, China; twenty-fifth, Silver; thirtieth, Pearl; fortieth, Ruby; fiftieth, Golden; sixtieth, Diamond.

**Wednesday**, the 4th day of the week, derived its name from Woden or Odin, the Norse god of war.

**Weever**, a species of sea-fishes which possess the power of inflicting stings by means of the dorsal fin and a spine on the gill cover.

**Weevil**. The term is applied to members of a group (called Rhynchophora) of beetles with a snout at the end of which is the mouth. Certain weevils are serious pests in granaries, while the cotton-boll weevil does enormous damage.

**Weights and Measures**. Crude standards of weights and measures existed in the ancient world, and the degree of standardisation increased as civilisation progressed. Weight was taken from the grain, which is still the smallest unit. Ancient measures were based on the natural proportions of the human body, the digit or breadth of the middle part of the first joint of the forefinger being taken as the lowest unit. Under Richard I. standards of weights and measures had to be provided for the whole kingdom by the sheriffs of London. Today the Standards Department of the Board of Trade is responsible for the national standards of weights and measures. (See pp. 740-42.)

**Wenlock Group**, in geology, a sub-group of the Upper Silurian series, 4,000 ft. in thickness, consisting of limestone and shale.

**Werewolf**, a man or woman, who according to medieval belief, could be turned by witchcraft or magic into a wolf, eat human flesh or drink human blood, and turn into himself again. This belief was widely held in Europe, and similar superstitions prevail among most primitive peoples, e.g. the "leopard man" of certain African tribes. Lycanthropy (from Gr., a wolf-

man) is a form of madness in which the patient imagines himself a beast.

**Western Church**, the catholic church (Rome), as distinct from the eastern or orthodox church (Constantinople); 1054 marks the date of the final separation of eastern and western Christendom.

**Westminster Abbey** stands on the site of an old church and Benedictine foundation of the 7th century. It was rebuilt under Edward the Confessor, and again under Henry III., and important additions were made by Edward II., Edward III., Richard II., Richard III., and Henry VII., the latter erecting the beautiful eastern chapel in the perpendicular style which bears his name. The western towers and front were rebuilt by Wren in the 18th century. It contains tombs of many sovereigns, of the Unknown Warrior, and many other illustrious men are commemorated by monuments.

**Westminster Cathedral**, seat of the Roman Catholic Archbishop of Westminster. It was designed by J. F. Bentley and built between 1895 and 1910. It is of red brick, in early Christian Byzantine style with a domed campanile, 283 ft. high and a decorative interior.

**Westminster Hall**, adjoining the Houses of Parliament, was built as a Banqueting Hall by William Rufus, and many courtly festivals were held there in succeeding centuries. King John established the Law Courts there. It now forms a gigantic hallway, leading to the Houses of Parliament, but was used as a Banqueting Hall in Aug. 1905, when the then Prime Minister, Mr. Balfour, entertained the officers of the French Fleet there. Many famous people (Charles I., Sir Thomas More, Warren Hastings) have been tried there.

**Whale**, a completely aquatic mammal; the fore-limbs are modified to form fin-like paddles and there is virtually no external trace of the hind-limbs. There are two major groups of whales—the *Toothed Whales*, including the Sperm-whale (Cachalot), Dolphins, Killer-whales, and Porpoises; and the *Whalebone Whales*. In the latter a series of whalebone plates grow down from the roof of the mouth, and, being frayed at their edges into a hairy fringe, together constitute a filtering mechanism. The animal takes in sea water containing minute organisms on which it feeds; the mouth is then closed and the tongue raised when the water is forced out through the filter, on which is left the food. As the tongue is lowered, the whalebone plates straighten up, flicking the food on to the tongue, which transfers it to the gut. Most whale oil is obtained from the thick layer of fat under the skin (blubber), but in the Sperm-whale there is a large reserve of oil in the head. The oil is used for making candles, margarine, and soap. Ambergris used in perfumery comes from the intestine of whales. The number of whales that may be killed in a Season is limited by International Convention.

**Whelk**, a molluscous univalve with a spiral shell, and comprising some 20 species. The common Whelk is abundant on the British coasts, and is captured in large quantities and sold as food.

**Whigs**, a political name which came into use in the time of Charles II., and designated the progressive party down to the passing of the Reform Bill of 1832, when it was superseded by the term Liberal.

**Whimbrel**, a bird of the Curlew family, more common in Scotland than in England.

**Whinchat**, a small migratory bird, which is seen in Britain from Apr. till Sept., and has a bright brown plumage, spotted with darker brown.

**Whip**, an M.P. responsible to his Party for the organisation of the voting of M.P.s. He is responsible for ensuring the presence of (or whipping up) a sufficient number of members to carry the vote through.

**Whip-poor-Will**, the name of the American night-jar, which gets its name from its three-syllable call-note. It is a nocturnal bird, catching its insect food on the wing.

**Whirlpool**, a circling current of water often of great power, capable of drawing into its centre and submerging small vessels. The most famous whirlpool is the maelstrom on the Norwegian coast.

**Whirlwind**, a sudden circular rush of opposing winds, which often causes much damage.

**Whisky**, an ardent spirit distilled from malt or other grain, and containing a large percentage of alcohol. It has a greater consumption than any other spirit, and is of many kinds, Scotch and Irish whiskies being chiefly consumed in this country, and being of pot still or patent still production, or a blend of the two. Whisky is the most heavily taxed product; in 1661 a duty of 4d. a gallon was imposed, today the duty is £10 10s. 10d. on a proof gallon. American whiskies are mostly distilled from corn or rye.

**Whistler**, a kind of marmot found in the mountains of Northern and Western America.

**White Elephant**, a term in common use to designate a gift that causes the recipient more trouble or cost than it is worth; derived from an old-time custom of the Kings of Siam who presented a white elephant to a courtier whom it was desired to ruin.

**Whitehall Palace**, erected within sight of Westminster Abbey in the 13th century, was the residence of the Archbishops of York until Henry VIII. took possession of it in 1530. Thenceforward to 1697, when it was burned down, it continued to be the favourite town residence of royalty, and to the Stuarts especially it was a great centre of court festivities. In those days, with its grounds, it extended from the Strand to the river. The only portion of Whitehall now standing is the Banqueting Hall built by Inigo Jones, on a scaffold projected from the front of which Charles I. was beheaded. A block of new government buildings has recently been built on part of the site of the old Palace.

**White House**, the official residence at Washington of the President of the United States.

**Whiting**, a sea-fish of the cod family, very plentiful around our coasts, much used as food.

**Whitsuntide**, the festival celebrating the descent of the Holy Ghost and occurring seven weeks after Easter.

**Whole-tone Scale**, a musical scale all of whose intervals are tones. This scale has been popularised by Debussy.

**Whydah Bird**, the widow-bird of Equatorial Africa. The Paradise Whydah is remarkable for the long tail and handsome black-and-scarlet plumage of the male during mating season.

**Widow Bird**, certain species of African weaver birds with predominantly black plumage. In the breeding season the male birds are strikingly beautiful, with scarlet and buff markings and long tail feathers. (See also p. 1002.)

**Wigeon**, a surface-feeding duck which breeds in northern Europe, visiting British shores in the winter. The male has chestnut head with creamish crown, grey body, and pinkish breast.

**Willow**, a waterside-loving tree of the genus *Salix*, to which the osiers belong. The White Willow makes the best cricket-bat blades and its wood is useful in carpentry also; while the bark of nearly all the species is of considerable commercial importance, especially for tannery purposes.

**Wimple**, an antique outdoor covering for the neck, chin, and sides of the face, of silk or linen, worn by women in Anglo-Saxon and Norman days; and still retained as a Conventual dress for nuns in some places. It was bound on the forehead of females of quality by a golden and jewelled fillet.

**Wimhurst Machine**. A friction machine for producing charges of high-voltage electricity. It consists of two coaxial glass, mica, or plastic discs which rotate in opposite directions; each disc bears metal strips on which the charges are induced, to be conducted away by fixed collecting brushes.

**Winchester College**, a famous school for boys, founded by William of Wykeham in 1387.

**Wind**, air set in motion by special atmospheric conditions, is of various degrees, from a slight rustling breeze to a hurricane. Winds are constant, as in trade winds or anti-trade winds; periodic, as in monsoons and other wind-visitations occurring according to influences of season; *cyclonic* and *anti-cyclonic*, when their motion is spiral; *whirlwinds*, *hurricanes*, and *tornados*, when high temperature and great density induce extreme agitation. Ordinarily, a wind is named from the point of the compass from which it blows, or it may be expressed in

- degrees from true north. The *sirocco*, the *mistral*, and the *simoom* are local forms of winds of great velocity. A *blizzard* is a biting blast of icy temperature.
- Windmills** were in use in the East in ancient times, but were not much seen in Europe before the 13th century. Wind sawmills were invented by a Dutchman in the 17th century, and one was erected near the Strand in London in 1633. Great improvements have been made in these mills in recent years, especially in the United States, where, by the application of the wind-shaft principle, much space is saved and the mills can be used for pumping, grinding, and other purposes.
- Windows**, originally apertures for the admission of the wind into dwellings, began to be made of glass and used only for the admission of light in very early times. There is evidence of glass windows having been used at Pompeii, but they did not become common in England before the 12th century. A window tax was imposed in 1697 and again at later dates for special revenue purposes. It was repealed in 1851 and a tax on inhabited houses substituted.
- Windsor Castle**, the famous British royal residence on the banks of the Thames, as it now stands, was mainly built by Henry III., though a royal residence had existed there from the time of the Conqueror. Additions were made by Henry VIII., Elizabeth, and Charles II. Windsor Park and Forest comprise over 13,000 acres.
- Wine**, the fermented juice of the freshly-gathered grape. There are innumerable varieties, each obtaining its distinctive character from the species of vine producing the grape, the locality of the vineyard, method of cultivation, etc. Wines are of three main kinds; *sparkling*, as in champagne, due to their having been bottled before fermentation is complete; *beverage*, when the must has been fermented out before bottling. Such wines include the famous red and white wines of Burgundy, Bordeaux and the Rhone valley and the white wines of the Rhine, Moselle and Loire valleys. Wines are *fortified* by the addition of brandy before fermentation is complete, examples being Port and Sherry. The principal wine-producing areas of the world are: France, Italy, Algeria, Spain, Portugal, Rumania, Argentine, Yugoslavia, U.S.S.R., Greece, Germany, Hungary. (See also Cookery Section, p. 843.)
- Wireworm**, the larva of the click beetles. Wireworms are a serious pest of grass, cereal crops, potatoes, etc.
- Witchcraft**, the practice of sorcery or magic based on superstition and flourishing where people are ignorant of the causes of natural phenomena. Belief in witches takes many different forms, varying with time and place. In Europe witchcraft flourished from the 14th to the 18th century and gradually decayed with the spread of scientific knowledge. Johann Weyer (1515-88), a German physician, showed that the majority of "witches" were mentally ill but his views were denounced by the catholic church. Heresy was confused with sorcery and many thousands were persecuted and suffered death under the Inquisition, including those interested in scientific experiment. In England and Scotland all witchcraft acts were repealed in 1736, in Ireland not until 1821. See also Sorcerers and Magic.
- Witan** or **Witenagemot**, the name given to the Great Council of the Anglo-Saxons, "the Council of the Wise Men," and composed of the leading nobility.
- Witherite**, Mineral barium carbonate.
- Woad**, a plant (*Isatis tinctoria*) that in olden days was largely used in England for the blue dye obtained from it. It is a biennial plant belonging to the same natural order of flowering plants as the wallflower, and is still cultivated in some parts.
- Wolframite**, one of the chief ores of tungsten; chemically it is a mixture of iron and manganese tungstates.
- Wolverine** or **Glutton**, a carnivorous mammal belonging to the weasel family inhabiting the more northerly parts of the United States, and somewhat resembling the Polar bear in shape and structure, though of a dark colour.
- Wolves**, well-known carnivorous animals still found in many parts of Europe, but not existing in Britain since the middle of the 17th century.
- Woodcock**, a wading bird, greatly valued for its flesh. It is a member of the snipe family, and winters in this country. The parent bird is able to carry its young between its thigh and body when flying to and from the feeding spots. It is one of the birds protected by the Game Laws.
- Wood-Louse**, any terrestrial isopod crustacean of the *Oniscidae* family. They have segmented bodies and many legs, and feed mostly on decaying matter, animal and vegetable. The best known is the Pill Wood-louse (*Armadillidium*), which rolls itself into a ball when touched.
- Woodpecker**, a familiar tree-climbing bird of conspicuous plumage, of which three species are found in Britain, the green woodpecker or yaffle (because of its harsh cry), the great and lesser spotted woodpeckers. It builds in the hollows of trees and feeds on insects which it obtains from the trunk of trees by digging into the wood, for which purpose it has a strong chisel-shaped beak and a tongue which it can shoot out to catch the insects. The metallic drumming sound made by the birds in spring is thought to be caused by their beaks hammering away at some hard resounding substance.
- Wood's Metal**, an alloy with a very low melting point (65° C., which is under 150° F.) so that a spoon made of it will melt when used to stir a cup of tea. Contains bismuth 4 parts, lead 2 parts, tin 1 part, cadmium 1 part.
- Wool** has been largely grown and used in the manufacture of cloth in England since before the Roman invasion. It is grown on the backs of sheep, and is of various kinds, according to the breed of sheep from which it is derived. Wool differs from hair in that it has a wavy, serrated fibre, its curl being a notable characteristic, whereas hair has a smooth surface comparatively free from serratures. Long wools are mostly used for the manufacture of worsted goods, and short wools for woollen clothes, though the improvements in machinery in recent years have enabled manufacturers to utilise short wools to a great extent for dress fabrics as well as for woollens. The finest wools are obtained from the fleece of the Spanish merino sheep. Australia, New Zealand, and the Argentine are the greatest wool-producing countries.
- Woolsack**, the name given to the seat occupied by the Lord Chancellor in the House of Lords. It is a large square bag of wool, without back or arms, covered with red cloth. At the time when it was first used, in the reign of Edward III., wool was the great staple commodity of the country and, it is said, chosen for the seat of judges as a constant reminder of the main source of the national wealth. The Lord Chancellor is said to be "appointed to the woolsack."
- Worcester, Battle of**, was fought on Sept. 3rd, 1651, between Cromwell and his forces and the Scots army under Charles Stuart (afterwards Charles II.), when the latter was defeated.
- Work** is the transference or conversion of energy. Movement against resistance, the giving of acceleration to a body, or the change from one energy state into another, all require the expenditure of work. It is measured by the product of the force and the displacement of its point of application in the line of action in units of ft.-lb., erg, or joule. The ft.-lb. is the work done in moving 1 lb. through 1 ft. The erg, the unit in the c.g.s. system, is the work done by a force of 1 dyne acting through a distance of 1 cm. and the joule is the work done in 1 second by a current of 1 ampere flowing through a resistance of 1 ohm, equal to 10<sup>7</sup> ergs, 1 watt-second or 0.737 ft.-lb. In a rotating body work done is measured by the product of the moment and the angular displacement.
- Worsted**, a fabric made from long wools or wools mixed with cotton or other fibrous material. It was first manufactured at, and derived its name from, Worstead in Norfolk, in the 14th century. Norwich was, until the latter part of the 18th century, the headquarters of this industry, but now for more than 100 years the worsted manufacturing centre has been Bradford.
- Wrasse**, a sea-fish of the *Labridae* family. The family has numerous species, all of which are

thick-lipped. The British species are the balloon wrasse and the red wrasse.

**Wren**, a class of small passerine birds possessing upturned tails and most abundant in South America. The British species is an interesting singing bird with a surprisingly loud note for its size.

**Wroth Silver**, certain annual payments made by tenants of the Duke of Buccleuch on Nov. 11th of each year at Knightlow Hill, in Warwickshire.

**Wryneck**, a tree-creeping bird related to the woodpecker, of grey-brown plumage. It is a summer visitor to Britain, and gains its name from the snake-like way it curves its neck.

## X

**Xanthia**, a genus of moths with brilliant yellow markings found in America and the West Indies.

**Xanthura**, a genus of American jays, green in colour, mingled with yellow, blue, and white, and attaining a length from 12 to 14 in.

**Xebec**, a light three-masted vessel much favoured in former times by Algerian corsairs.

**Xema**, a snow-white sea-gull, with a forked tail, inhabiting the northern shore of the American Continent.

**Xenops**, a lively small bird of the tree-creeper family, common in South America and peculiar in having an upturned bill.

**Xenurus**, one of the Armadillos of tropical America.

**Xerus**, an African ground squirrel with a rather bristly fur and an enormous bushy tail.

**Xoanon**, the name given to sculptured wooden images of the time of the ancient Greeks.

**Xonaltite**, a Mexican mineral, tough and greyish-white, found associated with bustamite and apophyllite.

**X-Rays** were discovered in 1895 by Professor Röntgen, of Wurzberg, while experimenting with a Crookes vacuum tube, when the fact was accidentally revealed that a photographic plate, contained in a dark box and exposed to its rays, was affected. To the X-rays the box was transparent. X-ray photographs are now commonly taken to obtain information about objects enclosed within solid bodies; they enable bullets and any solid bodies of metal, as well as bones, etc., in the body to be perfectly located and investigated. The discovery has proved of great advantage in surgical operations.

**Xylem**, the woody tissue of higher plants. The function of the xylem is to conduct water and mineral salts upwards, and to provide mechanical support.

**Xylograph**, the name given to an engraving on wood or an impression thereof.

**Xylophone**, a musical instrument consisting of a series of tuned wooden bars of varying dimensions. It is played by striking the bars with wooden hammers held in the hands.

## Y

**Yacht**, a light vessel now much used for pleasure trips and racing. The first yachting club was the Cork Harbour Club, started about 1720; and in 1812 the Royal Yacht Squadron was founded at Cowes. The Royal Thames Yacht Club dates from 1823. The most famous international yachting trophy is *The America's Cup*, which was won by America in every contest between 1851 and 1937. The most famous English challengers were Sir Thomas Lipton and T. O. M. Sopwith.

**Yak**, a curious, long-haired ox, found in Tibet, and there employed as a beast of burden.

**Yale University** was established in 1701, and is one of the leading universities of the United States. It received its name from Elihu Yale, who endowed it largely in 1716.

**Yam**, the root of the 150 species of dioscorea, which grows in Asia, America, Africa, and Australia; used as a substitute for the potato, roasted or boiled. It also furnishes a flour for bread or pudding making.

**Yard**, a standard measure of 36 in., the word being derived from the Saxon *yrd*, or rod. The yard was anciently regarded as the circumfer-

ence of the body, but Henry I. decreed it should be the length of his arm.

**Yarn** is the textile thread or fibre spun into the form of weft or warp ready to be woven into fabrics.

**Yawl**, the jolly boat of a ship; also the name given to any small yacht of the cutter class.

**Year**. (See Calendar.)

**Year-Books**, containing annual reports of legal cases, were issued in England as far back as the 11th century, and formed the first attempt to establish legal reports. In modern times the title has been given to almost any kind of annual publication.

**Yearling**, a young horse or other animal in the second year of its age.

**Yeast**, a unicellular fungus which sets up fermentation. In brewing and wine-making the yeasts are important. The baker uses yeast to make bread rise; yeast is incorporated in the dough and ferments some of the starch present, yielding carbon dioxide gas which expands and aerates the bread in the baking process.

**Yellowhammer**, a common British bird of the bunting family, of lemon-yellow and brown plumage. Nests on the ground.

**Yeomen of the Guard** are a body of Foot Guards established in the reign of Henry VII. for the protection of the Royal Person. Yeomen are now about 100 in number, and their duties consist in being present on ceremonial State occasions, the yearly distribution of Maundy Money, and the searching of the vaults of the Houses of Parliament on Guy Fawkes' day. "Beefeater" is the nickname of both Yeomen of the Guard and Yeomen Warders of the Tower, and they both wear the style of dress of the Tudor period, but with one distinction, the Yeomen of the Guard wear a cross belt, the Warders do not.

**Yew**, an evergreen tree, the wood of which was in former days in very great demand for bow-making.

**Yezdegird**, the name of the old Persian era which began in 632, when Yezdegird was made king of Persia. The Parsees of India still use the term.

**Yoga**, one of the leading systems of Hindu philosophy which proclaims the emancipation of the soul through union with the universal spirit.

**Yogi**, a Hindu religious ascetic who practises Yoga.

**York Minster**, one of the oldest and finest of English cathedrals, is 524 ft. long, its nave is 240 ft. broad, and the central tower is 216 ft. high. The present edifice, in parts, dates back to the 12th century, but a church stood on the site in the 7th century. In 1829 it was set on fire by a lunatic named Jonathan Martin, and the destruction that then took place cost £60,000 to restore.

**Young England Party**, a term applied to a number of young Tory politicians of the Corn Law days, who opposed the repeal of the Corn Laws and sought to revive the manners and spirit of mediæval times. The party was short-lived. It was led by Benjamin Disraeli and Lord John Manners.

**Ytterbium**, a chemical element discovered by Urbain in 1907. It is one of the group of rare earth metals.

**Yttrium**, a chemical element discovered by Mosander in 1842. It is found in a few rare minerals such as gadolinite, xenotime, fergusonite, and euxenite. One of the group of rare-earth metals.

## Z

**Zaibatsu**, great and powerful family trusts, including the Mitsui, Mitsubishi, Sumitomo, and Yasuda, who held a position of unparalleled influence in Japan before the second world war, for in their hands was concentrated almost the entire economy of the Japanese nation. It was a major war aim of the Allies to break these trusts, but their economic power has been largely restored.

**Zalophus**, a genus of eared seals, which includes the common sea-lion of the Californian coast.

**Zamboni Pile**, a dry galvanic battery, which can provide small amounts of high-voltage current over a very long time. At Oxford a couple of Zamboni Piles have kept a bell ringing for over a hundred years. These Piles in the second

world war were perfected and produced in quantity, being the most convenient source of current for infra-red signalling devices.

**Zebra**, an African quadruped of whitish-grey colour, with regular black stripings, perhaps the most beautiful member of the Equine family. Rather larger than an ass and smaller than the horse, it has a tufted tail, is of light build, wild, and fleet of foot; there are several species, and the Quagga and Burchell's Zebra (ground colouring yellow), as well as the True Zebra, belong to the group.

**Zebu**, a species of oxen having a large hump on the shoulder and short horns. In India and some parts of Africa these animals are domesticated and used as beasts of burden. They are of a light grey colour and very docile. Their flesh makes good food-meat; the Hindus, however, do not slay them but regard them with much veneration.

**Zemstvo**, a local territorial assembly in Russia for dealing with matters of taxation, schools, roads, etc., under the control of the provincial governors. They were abolished by the Bolsheviks in 1917.

**Zenana**, the portion of a dwelling in India where the female members of the family are kept, and to which strangers are not admitted.

**Zend-Avesta**, the name given to ancient sacred books of the Zoroastrians or Parsees. They originally numbered twenty-one, but only three survive.

**Zenith**, the highest point in the heavens above an observer's head, the opposite pole to the Nadir.

**Zeolite**, natural hydrated silicate of calcium and aluminium; also term applied to hardwater softener.

**Zeriba**, or **Zareeba**, a military enclosure of prickly brushwood, used by the British in Egypt in 1884.

**Zero**, the cypher signifying nothing. The West is indebted to the Arabs for it, who probably got it from the Hindus and passed it to European mathematicians towards the end of the Middle Ages. The Greeks had no such symbol, which hindered the development of their mathematics. The use of zero led to the invention of decimal fractions and to the later developments in astronomy, physics and chemistry. Absolute Zero on the temperature scale is the lowest temperature theoretically possible (when no heat whatever is present) and equal to  $-273.16^{\circ}\text{C}$ .

**Zeta**, the name given in former times to the closet or room, above a church porch, where the sexton lived and guarded the documents of the church.

**Zinc**, a familiar metal, known to the ancients, and used by them in the making of brass. It occurs as the sulphide, carbonate, etc. The ores of zinc are crushed, roasted, and reduced with coal. In combination with copper it constitutes the familiar alloy called brass, and zinc itself is much used for roofing and other protective purposes. Zinc ores are mined in Canada, the U.S.A., Mexico, Poland, Australia, Russia, Italy, Spain and many other parts of the world. Zinc smelting is carried on in most industrial countries, including Great Britain.

**Zion, Protocols of.** These are a series of lectures purported to have been given by an "elder of Zion" revealing a Jewish plot for international domination. They have been extensively published in Europe since 1900, but conclusive evidence was produced in 1921 to show they were a forgery.

**Zionism**, the name of the movement, whose object has been to re-establish a Jewish National Home in Palestine. The movement was founded in 1897 by Theodor Herzl, a Viennese journalist and playwright. The Balfour Declaration promising facilities for the realisation of its objects was issued by the British Government in 1917. Thanks to the activity of the Zionist Organisation, largely under the leadership of Chaim Weizmann, the Jewish population in Palestine has considerably increased and many agricultural settlements have been established in various parts of the country. The Hebrew University was inaugurated in 1925, and great developments have taken place in all branches of industrial and commercial activity as well as in agriculture. Until 1948, when Britain handed the mandate to U.N.O., the country was

administered by a High Commissioner appointed by the British Government. Since then the Jews have proclaimed a State of Israel and the Zionists' aims have been realised.

**Zippeite**, a mineral found at Joachimsthal, in Bohemia, as an alteration product of uraninite; it is essentially a hydrated sulphate, shaded yellow, of sesquioxide of uranium.

**Zirconium** was discovered by Klaproth in the sand of the rivers of Ceylon in 1789. The crystalline metal is white, soft, and ductile; in its amorphous condition it is a blue-black powder. Zirconium is used in atomic reactors.

**Zither**, an ancient musical instrument consisting of strings stretched on a frame which is held in the left hand. The right hand plucks the strings with a plectrum.

**Zodiac**, the belt of the firmament enclosing the circuit over which the principal planets travel. It is divided into 12 equal spaces of 30 degrees each, comprising respectively the 12 signs of the Zodiac—Aries, Taurus, Gemini, Cancer, Leo, Virgo, Libra, Scorpio, Sagittarius, Capricornus, Aquarius and Pisces.

**Zodiacal Light**, a faint cone of light occasionally seen stretching along the Zodiac from the western horizon after evening twilight or the eastern horizon before morning twilight. It is believed to be due to the scattering of the sun's light by some rare gas which extends outwards from the sun and rotates round it.

**Zoetrope**, an optical instrument of a cylindrical shape, exhibiting pictures in such a form that the figures in them seem to be endowed with motion.

**Zollverein**, any of the customs unions successively formed under the leadership of Prussia among certain German states for maintaining uniform duties and tariffs against foreign countries and free trade among themselves. The administration was finally merged in the German Empire of 1871.

**Zonda**, a warm moist wind in Argentina of great velocity blowing from the north or northwest, and, like the Sirocco in Southern Europe, causes much discomfort. It happens when a depression is moving across the pampas, bringing with it a mass of air from the humid tropics. It is followed by a refreshing wind from the south-east.

**Zone**, an imaginary geographical belt encircling the earth. There are five zones—the Torrid Zone, from tropic to tropic; two Temperate Zones, from the tropics to the Polar Circles; and two Frigid Zones, from the Polar Circles to the North and South Poles respectively.

**Zoolatry**, animal worship, which in ancient times prevailed among the Egyptians and other primitive races. The zebu is still an object of adoration amongst the Hindus, and snake-worship survives on the African west coast.

**Zoological Gardens of London** were opened in 1828, and belong to the Zoological Society of London. They contain one of the largest and most varied collections of living animals in the world. The Society maintains an open-air zoo at Whipsnade, on the edge of Dunstable Downs; this was opened in 1931.

**Zoology**, the science of animal biology, treating of the structure, classification, and distribution of the various members of the animal kingdom.

**Zoophyte**, the name applied to invertebrate animals which have a plant-like appearance or mode of growth, e.g., sea anemones, corals, sponges. The term Zoophyta was used in old classifications to include all such animals, but is now obsolete.

**Zorilla**, a small African quadruped of the Skunk order, usually striped or spotted, and possessing the power of ejecting a noxious odour.

**Zouaves**, a body of French soldiers first organised in Algeria, and then consisting exclusively of Berber natives. As now constituted, the Zouave regiments are almost exclusively French.

**Zulus**, a native African people occupying Zululand, which later became part of Natal, Union of S. Africa. They are a brave race, and in a war with Great Britain in 1879 inflicted severe defeats upon our troops. The Zulu king, Cetewayo, was finally defeated and taken prisoner, and his country annexed.

## NOBEL PRIZE WINNERS (1901-1955)

These prizes, founded by the will of Dr. Alfred B. Nobel (1833-96), are five, and are awarded each year for the most important discovery or development in (1) physics (2) chemistry, (3) physiology and medicine, (4) the most distinguished literary work, (5) the best effort towards the promotion of peace.

Year.	PHYSICS.	CHEMISTRY.	PHYSIOLOGY AND MEDICINE.	LITERATURE.	PEACE.
1901	W. C. Roentgen (G).	J. H. van't Hoff (D).	E. v. Behring (G).	R. F. A. Sully Prudhomme (F).	H. Dunant (Sw), F. Passy (F).
1902	H. A. Lorentz (D), P. Zeeman (D).	E. Fischer (G).	R. Ross (B).	T. Mommsen (G).	E. Ducommun (Sw), A. Gobat (Sw).
1903	H. Becquerel (F), P. Curie (F), Marie Curie (F).	S. Arrhenius (S).	N. R. Finsen (Da).	B. Björnson (N).	Sir W. R. Cremer (B).
1904	Lord J. W. S. Rayleigh (B).	W. Ramsay (B).	I. P. Pavlov (R).	F. Mistral (F), J. Echegaray (Sp).	Institut de Droit International.
1905	P. Lenard (G).	A. v. Bayer (G).	R. Koch (G).	H. Sienkiewicz (P).	Bertha von Suttner (Au).
1906	J. J. Thomson (B).	H. Moissan (F).	C. Golgi (I), S. R. v. Cajal (Sp).	G. Carducci (I).	T. Roosevelt (A).
1907	A. A. Michelson (A).	E. Buchner (G).	C. L. A. Laveran (F).	Rudyard Kipling (B).	E. T. Moneta (I), L. Renault (F).
1908	G. Lipmann (F).	E. Rutherford (B).	P. Ehrlich (G), E. Metchnikoff (R).	R. Eucken (G).	K. P. Arnoldson (S), F. Baier (Da).
1909	F. Braun (G), G. Marconi (I).	W. Ostwald (G).	T. Kocher (Sw).	S. Lagerlöf (S).	A. M. F. Beernaert (Be), Baron d'Estournelles de Constant de Rebecque (F).
1910	J. D. van der Waals (D).	O. Wallach (G).	A. Kossel (G).	P. Heyse (G).	The Bureau International Permanent de la Paix, Berne.
1911	W. Wien (G).	Marie Curie (F).	A. Gullstrand (S).	M. Maeterlinck (Be).	T. M. C. Asser (D), A. H. Fried (Au).
1912	G. Dalén (S).	V. Grignard (F), P. Sabatier (F).	A. Carrel (A).	G. Hauptmann (G).	E. Root (A).
1913	H. Kamerlingh Onnes (D).	A. Werner (Sw).	C. Richet (F).	R. Tagore (In).	H. la Fontaine (Be).
1914	M. v. Laue (G).	T. W. Richards (A).	R. Bárány (Au).	B. Zolander (F).	—
1915	W. H. Bragg (B), W. L. Bragg (B).	R. Willstaetter (G).	—	—	—
1916	C. G. Barkla (B).	—	—	V. von Heidenstam (S).	Comité International de la Croix-Rouge, Geneva.
1917	—	—	—	K. Gjellerup (Da), H. Pontoppidan (Da).	—
1918	M. Planck (G).	F. Haber (G).	—	C. Spitteler (Sw).	W. Wilson (A).
1919	J. Stark (G).	W. Nernst (G).	J. Bordet (Be).	K. Hamsun (N).	L. Bourgeois (F).
1920	C. E. Guillaume (F).	F. Soddy (B).	A. Krogh (Da).	A. France (F).	K. H. Branting (S), C. L. Lange (N).
1921	A. Einstein (G).	—	—	J. Benavente (Sp).	F. Nansen (N).
1922	N. Bohr (Da).	F. W. Aston (B).	A. Hill (B), O. Meyerhof (G).	W. B. Yeats (Ir).	—
1923	R. A. Millikan (A).	F. Pregl (Au).	F. G. Banting (C), J. R. Macleod (C).	W. Reymont (P).	—
1924	M. Siegbahn (S).	R. Zsigmondy (G).	W. E. Einthoven (D).	G. B. Shaw (B).	—
1925	J. Franck (G), G. Hertz (G).	—	—	—	Sir A. Chamberlain (B), C. G. Dawes (A).
1926	J. Perrin (F).	T. Svedberg (S).	J. Fibiger (Da).	G. Deledda (I).	A. Briand (F), G. Stressemann (G).
1927	A. H. Compton (A), C. T. R. Wilson (B).	H. Wieland (G).	J. Wagner-Jauregg (Au).	H. Bergson (F).	F. Bulson (F), L. Quide (G).
1928	O. W. Richardson (B).	A. Windaus (G).	C. Nicolle (F).	S. Undset (N).	—
1929	L. de Broglie (F.).	H. v. Euler-Chelpin (S), A. Harden (B).	C. Bjrkman (D), F. G. Hopkins (B).	T. Mann (G).	F. B. Kellogg (A).

## PLACES OF HISTORIC INTEREST AND NATURAL BEAUTY

The following list includes some of the houses and places of special interest owned by The National Trust in England. (Times of opening have not been included as they are subject to alteration, and intending visitors should telephone Whil. 0211 for latest information, or write to 42, Queen Anne's Gate, S.W.1, for a List of Properties, price 2s. 9d. post free.) Houses are closed on Christmas Day and Good Friday.

### BERKSHIRE

*Buscot Park*, 3 m. N.W. of Faringdon. 55 acres of park and gardens laid out by the late Harold Peto, with a house built in 1780 and subsequently altered. The house contains Burne-Jones "Briar Rose" paintings, pictures by Rembrandt, Murillo and Reynolds, and fine furniture.

### BUCKINGHAMSHIRE

*Ascott*,  $\frac{1}{2}$  m. E. of Wing, 2 m. S.W. of Leighton Buzzard. The greater part of the Anthony de Rothschild Collection of pictures, furniture, and porcelain. House and grounds (261 acres); French and Chippendale furniture, pictures by Rubens, Hogarth, Gainsborough, Hobbema and other Dutch painters, and an exceptional collection of Oriental porcelain containing examples of the Ming, K'ang Hsi periods, and Chun ware of the Sung dynasty.

*Cliveden*, 4 m. upstream from Maidenhead. The home of the Astor family; 263 acres, comprising Cliveden House, with pictures and tapestries, gardens, hanging woods and the famous Cliveden Reach of the Thames.

### CAMBRIDGESHIRE

*Peckover House*, Wisbech, on N. brink of the River Nene. Built in 1722; interior contains fine rococo plasterwork and carving possibly executed by French artists.

### CHESHIRE

*Little Moreton Hall*, 4 m. S.W. of Congleton, a moated building which took its present shape between 1559 and 1589; one of the most perfect specimens of the "black-and-white" style in this country.

*Lyme Park*, on W. outskirts of Disley,  $6\frac{1}{2}$  m. S.E. of Stockport, of Elizabethan origin; for 600 years in the possession of the Legh family.

### CORNWALL

*Cotehele*, on right bank of the Tamar, 6 m. S.W. of Tavistock; 1,279 acres, including Cotehele House, one of the best-preserved mediæval houses in W. England, dating chiefly from 1485-1539.

*The Dodman*, 4 miles S. of Mevagissey, 10 miles S. of St. Austell. 196 acres of cliff and farmland on E. point of Verran Bay, with wonderful views. The "Dead Man's Rock" of "Q's" novel.

### CUMBERLAND

*Buttermere Valley*, between Barrowdale, Keswick, and Cockermouth. A large, well-wooded property with fine lake and mountain scenery.

### DERBYSHIRE

*Dovedale*, N. of Ashbourne, W. of Alsop-en-le-Dale station. 821 acres of this lovely glen on both sides of the valley, with many remarkable rock formations, including Jacob's Ladder and the Twelve Apostles.

### DEVON

*Buckland Abbey*, 6 m. S. of Tavistock, a 13th-century monastery, with tithe barn, granted by Henry VIII in 1541 to Sir Richard Grenville. Bought in 1851 by Sir Francis Drake.

*Watersmeet*, 69 acres astride the East Lyn river, from Woodside to Wilsham Wood, up to its junction with Hoar Oak Water. The meeting of the streams is of great beauty.

### ESSEX

*Paycocke's*, Coggeshall, on S. side of West Street,  $5\frac{1}{2}$  m. E. of Braintree. A merchant's richly ornamented house, dating from about 1500, with exceptionally fine panelling and wood-carving.

### GLOUCESTERSHIRE

*Snowhill Manor*, 3 m. S. of W. end of Broadway. 14 acres. Tudor house, with front of about 1700. Interesting collections of musical instruments, Japanese armour, weavers' and spinners' tools, toys, clocks, and bicycles. Terraced garden.

*Chedworth Roman Villa*, 3 miles N.W. of Fossbridge, which is on the Cirencester-Northleach road. One of the best preserved villas (A.D. 180-350) in the country, in a beautiful woodland setting. There is a museum with recent discoveries.

### HEREFORDSHIRE

*Brockhampton*, E. and S.E. of Bromyard, 10 m. W. of Worcester, about 2,000 acres of typical Herefordshire farmland, and woods of remarkable beauty. *Lower Brockhampton*, a comparatively unspoiled late-14th-century moated manor house in half-timber work, with rare detached gate-house 100 years later.

### HERTFORDSHIRE

*Ashridge Estate*, 3 miles N. of Berkhamsted. 3,802 acres of wood, heath, and down; the estate includes viewpoints, such as Ivinghoe Beacon, Clipper Down, and Moneybury Hill, many copses and open spaces, and splendid beech-trees.

### KENT

*Knole*, Sevenoaks, one of the largest private homes in England. Begun in 1456, it was greatly extended about 1603 by Thomas Sackville, 1st Earl of Dorset, to whom it was granted by Queen Elizabeth. The State Rooms contain a large number of historic pictures and rare furniture and are among the best known of England.

*Old Soar Manor*,  $1\frac{1}{2}$  m. E. of Plaxtol, between Ightham and Mereworth, a remarkably unspoilt example of part of a late-13th-century knightly dwelling.

*Chiddington*, 4 miles E. of Edenbridge,  $1\frac{1}{2}$  miles N.W. of Penshurst. Most of this well-known village, containing a row of 16th- and 17th-century houses and the Castle Inn.

### LANCASHIRE

*Rufford Old Hall*, 5 m. N. of Ormskirk, at N. end of Rufford, an early Tudor building of timber and plaster panels; wings added in 1662 and 1821. The great hall is remarkable for its hammer-beam roof, unusual "spere" disposition and massive movable screen.  $14\frac{1}{2}$  acres of gardens.

*Coniston Water*, many properties surrounding the lake, including High Arncliffe Farm, Monk Coniston Estate (which includes Tarn Hows and Yew Tree Tarn as well as the Hall, several farms and cottages), Nibthwaite Woods, and Peel Island.

### LINCOLNSHIRE

*Gunby Hall*, 1 m. N.W. of Burgh-le-Marsh station, 7 m. W. of Skegness, built in 1700 of red brick and stone dressings (Tennyson's "haunt of ancient peace"); fine oak staircase and wainscoted rooms.

*Tattershall Castle*, 9 m. S.W. of Horncastle,  $3\frac{1}{2}$  m. S.E. of Woodhall Spa, built about 1440, is one of the finest examples of East Anglian brick-work.

## LONDON

*Fenton House*, The Grove, Hampstead, N.W.3. A late 17th-century house with a walled garden. It contains a collection of porcelain, pottery, furniture, and early keyboard instruments, including Handel's harpsichord lent by Queen Elizabeth the Queen Mother.

## MIDDLESEX

*Osterley Park*, N. of Osterley Station on Great West Road. 140 acres of Park. House one of the finest examples of the work of Robert Adam, who also designed the furniture.

## NORFOLK

*Blickling Hall*, 1 m. N.W. of Aylsham, 10½ m. S. of Cromer; 4,523 acres, including deer park, woodlands, farms. The great Jacobean house is of red brick, built 1619-24 for Sir Henry Hobart. Large park contains magnificent trees and artificial lake.

## NORTHUMBERLAND

*Lindisfarne Castle*, on Holy Island, 5 m. E. of Beal across the sands. Motors may be hired. 7 acres. Built, with its solid bastions and thick walls, about 1550. Romantically situated on a high rock, with splendid views. Made habitable by Sir Edwin Lutyens after 1900. Walled garden laid out by Miss Gertrude Jekyll.

*Hadrian's Wall*, Housesteads and Hotbank, 4 miles N.E. of Haltwhistle, 2½ miles N. of Bardon Mill Station. 919 acres including Housesteads (Borricovium, a fort), several mile-castles, 3½ m. of the Wall, along the top of which visitors can walk, and a museum.

## NOTTINGHAMSHIRE

*Clumber Park*, 2½ m. S.E. of Worksop, 4½ m. S.W. of East Retford. 3,784 acres. A good example of late 18th-century landscape design, created by the Dukes of Newcastle out of heathland bordering Sherwood Forest. The stables of the demolished house survive, with pleasure grounds along the lake and a fine neo-Gothic church.

## SHROPSHIRE

*Attingham Park*, 4 m. E. of Shrewsbury, home of the Berwick family. 4,300 acres. The house, distinguished for its interior decoration, was built in 1785.

## SOMERSET

*Lytes Cary*, on the Fosse Way, 2½ m. N.E. of Ilchester. About 300 acres. A typical Somerset stone-built manor-house; chapel of 14th and the great hall of the 15th century; home for 500 years of the Lyte family.

*Montacute*, 4 m. W. of Yeovil, a magnificent house begun in 1530 and completed about 1600, built of Ham Hill stone; the home until 1931 of the Phelps family and later of Lord Curzon.

## STAFFORDSHIRE

*Wightwick Manor*, 3 m. W. of Wolverhampton just N. of the Bridgnorth road, from which a lan. leads past the Mermaid Inn and underneath a

wooden bridge: the drive is just beyond on the left. Begun in 1837, Wightwick Manor, with its contents and 16 acres of gardens, is an example of the influence of William Morris. The collection of Pre-Raphaelite works of art includes a number of pictures lent by Mrs. Rossetti Angell.

## SURREY

*Polesden Lacey*, on N. slope of North Downs, 3 m. N.W. of Dorking. 910 acres. The house contains the Greville collection of pictures, tapestries, furniture, and other works of art.

*Claremont Woods*, on the S. edge of Esher, on the E. side of Portsmouth road. 49 acres. The gardens, with a lake, fine woods, and specimen trees, were laid out about 1730 by William Kent.

## SUSSEX

*Nymans Gardens*, on S.E. edge of Handcross, 4½ m. S. of Crawley. 600 acres. The garden of about 30 acres has many rare conifers, shrubs, and plants, including fine eucryphias, hydrangeas, magnolias, rhododendrons, camellias, and roses; the other 570 acres are woodland and farmland.

*Petworth House and Park*, 5½ m. E. of Midhurst. Rebuilt in 1686-96 by the 6th Duke of Somerset; S. front reconstructed in 1869-72 to the designs of Anthony Salvin. The W. front is 320 ft. long. The house has a mid-18th-century Percy chapel. The galleries and state rooms contain one of the largest and finest private collections of pictures in England. 735 acres of park-land. One of the state rooms was decorated by Grinling Gibbons.

## WARWICKSHIRE

*Charlecote Park*, 4 m. E. of Stratford on Avon, originally built in 1558. Home of the Lucy family since the 12th century.

*Upton House*, 1 m. S. of Edgehill, 7 m. N.W. of Banbury. 31½ acres. N. and S. fronts of house express the character of William and Mary's reign; 18th-century furniture, many masterpieces of British, Dutch, Flemish, German, Italian, and Spanish schools.

## WILTSHIRE

*Ilcock Abbey*, 3 m. S. of Chippenham, in one of the most beautiful villages of S.W. England. The Abbey was begun in the early 13th century; in about 1530 a Tudor mansion was built around the monastic remains; later additions were made in 18th-century "Gothic."

*Stourhead*, Zeals, among the finest examples in England of 18th-century landscape designing. Collection of works of art, notably furniture designed by Thomas Chippendale, the younger.

## YORKSHIRE

*York: Treasurer's House*, at N.E. corner of Minster. Of exceptional interest. Mainly 17th-century, with 13th-century work in the undercroft. Fine furniture.

*Mount Grace Priory*, 6 m. N.E. of Northallerton. 10 acres. The greater part of the 14th-century Priory, the most important Carthusian ruin in England, and a 17th-century house.

## THE COUNTRY CODE

**GUARD AGAINST THE RISK OF FIRE.** Great damage is done every year to crops, plantations, woodlands, and heaths. A match or cigarette thrown away or a pipe carelessly knocked out, picnic fires not properly put out or lighted near dry crops, can quickly start a blaze.

**FASTEN ALL GATES.** If animals get out of a field they stray. As a result they may do serious damage to crops, suffer injury on the roads, or eat food that is harmful.

**KEEP DOGS UNDER CONTROL.** Animals are easily frightened, even by small, playful dogs. Stillbirths may be the result.

**KEEP TO THE PATHS ACROSS FARM LAND.** Crops are damaged by treading; flattened crops are difficult to harvest. Grass is a valuable crop.

**AVOID DAMAGING FENCES, HEDGES, AND WALLS.** If these are damaged, gaps will be caused. Where a man goes, an animal may follow.

**LEAVE NO LITTER.** Litter is not just unsightly, but often a danger as well. Broken glass and tins may injure animals and harm machinery.

**SAFEGUARD WATER SUPPLIES.** Countrymen often depend on wells and streams for water for themselves and for their animals.

**PROTECT WILD LIFE, PLANTS, AND TREES.** Wild animals should not be disturbed, plants uprooted, or trees treated roughly.

**GO CAREFULLY ON COUNTRY ROADS.** If there is no footpath, walkers are generally safer on the right, facing on-coming traffic. Care and patience are needed by motorists when passing farm animals.

**RESPECT THE LIFE OF THE COUNTRYSIDE.** Many of the machines and much of the business stock on which the farmer depends for his livelihood have to be kept in the open. Take care not to damage them.

# Business Dictionary

**Abandonment** in marine insurance is the act of cession by which in the case of the constructive total loss of a vessel or goods, the owners give up to the underwriters what remains of the vessel or goods on condition of receiving the whole sum for which insured.

**Above Par**, a price above nominal value.

**Abstract of title** is a summary of the recent history of the title to a piece of land resulting from the legal transactions affecting the title.

**Acceptance** is the signification by the person on whom a bill of exchange is drawn of his assent to the order of the drawer. It is effected by the drawee writing "accepted" across the face of the bill and appending his signature.

**Acceptance for Honour supra protest**, where a bill has been protested for dishonour either for non-acceptance by the drawee or for better security any person not already liable may with the consent of the holder accept the bill for the honour of any party to the bill.

**Acceptance General**, the acceptance of a bill of exchange without any qualification of the terms upon which it is drawn.

**Acceptance Qualified or Special**, varies in express terms the effect of the bill as drawn. The qualification may relate to the time or place of acceptance, the fulfilment of some condition, or the acceptance of responsibility for only part of the sum mentioned.

**Accommodation Bill** is a bill of exchange accepted by one person or firm for the accommodation of another person or firm, as a matter of convenience or friendship without the acceptor having received any consideration.

**Accord and Satisfaction** takes place when the parties agree to discharge their contract by substituting a new and different agreement.

**Account**. The Stock Exchange year is divided into, usually, 24 periods of 14 sometimes 21 days each called the account. If shares are bought and sold within the same account no stamp duty is payable, and no commission is charged on the sale.

**Account Day**, sometimes called settling day, is a week after the close of the account, and is the earliest day on which payment is due in respect of bargains made in the account.

**Active Bonds** are bonds bearing a fixed rate of interest payable in full from the date of issue, and include most bonds negotiable on the Stock Exchange.

**Act of Bankruptcy**, an act or default on the part of a debtor deemed to be evidence of his insolvency, and one which enables a creditor to present a petition against him in a Court of Bankruptcy. A debtor commits an act of bankruptcy (a) if he makes an assignment of his property for the benefit of his creditors generally, (b) if he makes a gift or transfer of his property with the intention to prevent its distribution in accordance with the laws of bankruptcy, (c) if he fraudulently prefers one creditor to another in the transfer of his property, (d) if he leaves the country or remains out of it, or absents himself from his house with a view to delaying or defeating the creditors, (e) if, as a result of an action in court, the sheriff seizes his goods and holds them for twenty-one days, (f) if he files a declaration of inability to meet his obligations, (g) if he falls within seven days to comply with a bankruptcy notice, (h) if he gives notice to any creditor that he intends suspending payment of his debts.

**Act of God**, any event beyond human prevention or foreseeing, such as earthquake, lightning, etc., loss in respect of which cannot be enforced unless expressly provided for.

**Actuary**, a statistician whose duties are chiefly concerned with applying the doctrine of mathematical probability to such matters as life insurance, annuities, reversionary interest, and the like.

**Adjudication Order**, the order of Court declaring the bankruptcy of an insolvent debtor and vesting his property in a trustee.

**Advance Freight**, an advance payment for freight of sea-carried goods, payable on shipment, and not recoverable in case of loss of goods in transit, unless otherwise provided.

**Advice**, any notification of a business transaction, apprising an agent, correspondent, or customer that a certain thing has been done. In the neglect of the advice of a bill of exchange, the bill may be dishonoured "for want of advice."

**Affidavit**, a statement on oath for use as evidence in judicial proceedings. It must bear a 2s. 6d. stamp.

**After Sight**, a phrase indicating that the period for which a bill is drawn does not begin to run until presented for acceptance by the drawee, or from the date of noting or protest.

**Alien**, a person who, resident in one State, is subject to another. Nationals of a country at war with the United Kingdom are enemy aliens. All other aliens are friends and have certain rights as well as duties and disabilities. Every alien must obtain leave of an Immigration Officer before landing in the U.K. and, being a resident in the U.K., must fulfil registration requirements. An alien is prohibited from owning or having shares in any British ship and from holding any parliamentary or other public office. After residential qualification he may apply to the Home Secretary for a grant of naturalisation. (See *Nationality and Naturalisation*.)

**Allotment**, the allotting of shares, stock, or bonds in a company. No allotment of shares can be made unless the minimum subscription mentioned in the memorandum or articles of association and in the prospectus, as that upon which the directors would proceed to allotment, has been subscribed, and the sum payable on application has been received by the company, or the entire share capital has been subscribed and paid for, conditions which must be carried out within forty days of the first issue of the prospectus, otherwise all moneys received on share account must be returned.

**All Rights Reserved**, a printed intimation in any book or literary work, notifying that the owner of the copyright has legally protected his rights against infringement.

**Amalgamation, or Combination**, the association of companies with a view to taking advantage of the economies of large-scale production, eliminating competition, and, in general, controlling production and, therefore, prices. Amalgamations may be *horizontal* or *vertical*, the former taking place between firms engaged in the same industry and working for the same markets, and the latter between firms carrying on distinct processes, the finished products of one process being the raw materials of another.

**Amortisation**, the redemption, reimbursement, liquidation, or repayment of a debt, the term usually being applied to the drawing and repayment of Government and debenture bonds. Amortisation may be effected by redemption at par at some predetermined future date, by means of a sinking fund, or by means of drawings.

**Ancient Lights** are rights of light enjoyed by a property owner over adjoining land. Such a right is obtained either by uninterrupted enjoyment for twenty years, or by written authority, and once legally established cannot be upset, no building being permissible that would seriously interfere with the privilege.

**Annual Return**, a summary to be rendered once a year by a Company to the Registrar of Companies. It must contain a list of shareholders and shareholdings, particulars of the Company's office, Directors, and Secretary, and a copy of the balance sheet.

**Annuity**, a fixed sum of money paid yearly or in certain portions at fixed periods of the year, and which may be certain (or terminable) or life (or perpetual) annuities. The former is a fixed periodical payment for a specific time only, and

the latter is an annuity calculated upon the probable duration of the life of the person to whom it is payable.

**Appraiser**, a valuer of real and personal property. Appraisements or valuations may be subject to stamp duties.

**Arbitrage**, the process by which operators on markets or exchanges make a profit out of the difference in prices existing at the same time for the same thing upon different markets.

**Arbitration**, a method of settling a dispute by a reference to disinterested parties, frequently resorted to in order to avoid law suits, and sometimes, where technical or other special difficulties present themselves, recommended by a court of law. Disputes between employers and employed are often settled by arbitration.

**Articles of Association** are the rules and regulations detailing the scope and method of conducting the internal business of a limited company. They must be printed in consecutively numbered paragraphs, and are supplementary to the Memorandum of Association, the terms of which they must not exceed.

**Assessment**, the official valuation of property or income for the purpose of taxation; the term is also used to represent the amount of tax which has been determined as payable by a certain person.

**Assets** are property of any kind available towards the discharge of the liabilities of a testator. Intestate debtor, or company.

**At sight**, a form of notification written on bills or notes denoting that they are payable on demand, without allowance of days of grace.

**Attachment**, a legal term applying to the seizure of a person or goods before a court under process of law, and has special reference to the writ of attachment authorising such seizure.

**Attestation** is the formal witnessing of the signing of any deed or document and the subscribing of the witness's name in proof thereof. Two witnesses, who are not interested, are required to a will, and they must append their signatures at the request and in the presence of the testator.

**Attorney, Power of**, a document under seal authorising the person to whom it is given to act in all respects as the agent of the grantor of the power in relation to matters specified in the document. When the power is general it applies to everything in which the grantor is interested, when special it applies to specific matters, such as the power to sign cheques, bills, transfers, deeds, to receive moneys, to effect sales, etc.

**Auction**, is a public sale at which goods or properties are offered for sale by an auctioneer, and sold to the highest bidders when the sale is without reserve.

**Auditor**, the person who carries out an audit of accounts. He is liable to be proceeded against for damages if by his omissions or neglect any loss arises. It is no part of his duty, however, to criticise the actions of principals, or to concern himself with the prudence or imprudence of transactions disclosed by the books. His chief duty is to ascertain the true financial position of the business and get out a balance sheet in which this is accurately set forth. The employment of auditors is compulsory in regard to the accounts of most public bodies and companies, but no director or officer of a company may hold the position of auditor.

**Authorised Depository** is an institution or person authorised by the Bank of England to hold, under the Exchange Control regulations, on behalf of the owners, foreign stocks. Banks, and since January 1955, solicitors and stockbrokers, are instances.

**Average**, a marine insurance term denoting loss or damage at sea. It may be *Particular average*, a loss or damage suffered by one of the interests risked in the voyage—ship, cargo, freight—and borne by such interest alone; or it may be *General average*, a loss suffered for the common good and borne rateably by all. Average in the ordinary commercial sense denotes a mean proportional between two or more figures.

**Award**, the decision of an arbitrator or arbitrators, or their umpire, on matters in dispute that may have been referred to them. Unless otherwise stated, or by consent for extension of time, an award must be delivered within three months of the arbitration.

**Back Bond**, a term in Scots Law equivalent to a trust deed in England. It is a deed which qualifies or attaches a condition to an absolute disposition.

**Back Freight** occurs when from causes beyond a captain's control goods cannot be landed at the port of destination, and have to be conveyed back to the place of shipment, freightage thus becoming chargeable against the owner for the return voyage.

**Bail**, the security given to effect the release of one arrested or imprisoned, on the understanding that he shall appear for trial at a fixed time and place.

**Bailment**, the delivery of goods into the trust or custody of a person.

**Balance Certificate**. (See *Certification of Share Transfer*.)

**Balance Sheet**, a statement prepared from the accounts of a concern, setting forth on the debit side the capital, its debts and other liabilities, and on the credit side all the assets, including cash, stock-in-trade, property, plant, goodwill, and so on.

**Baltic Exchange**, commonly called the Baltic, is the London market for grain imports, and in which grain imports are officially graded.

**Bank of International Settlements** exists to increase co-operation between the central banks of different countries. Its share capital is held by the central banks of the United Kingdom, the United States, France, and other countries. It was established in 1930, and undertakes the financial work involved in the European Payments Union set up in 1950.

**Bankers' Commercial Credits** are provided to finance exports. The buyer arranges with the bank in the exporter's country to make payment on presentation of the shipping documents. The credits may be *unconfirmed*, being revocable at any time, *confirmed*, meaning irrevocable before a given date; *revolving*, used for recurrent purchases being a standing order to hold credit up to a given maximum available at all times; *packing*, payable on production of some documents which like warehouse receipts precede shipment; *countervailing*, where a merchant proposing to re-export imported goods uses the foreign buyers' confirmed credit as security for opening a commercial credit in the country of his supply.

**Banking**, in its modern significance, dates from the foundation of the Bank of England in 1694. During the 18th century banking developed to a great extent and many private banks were started. General conditions of banking were greatly improved by the Bank Charter Act of 1844, which divided the functions of the Bank of England into the business of banking and the business of note issue, limited the fiduciary issue, and provided for the centralisation of note issue in the hands of the Bank of England. The Bank of England, which was brought under public ownership in 1946, is the Government's banker and manages on behalf of the Government the National Debt, the note issue, and administers the exchange control regulations.

In general terms the business of a bank consists of issuing notes, receiving deposits as interest, keeping current accounts for customers, discounting bills of exchange, advancing money to customers upon security and acting as business and financial agents for customers, as, for example, in the purchase of stocks and shares, as trustee or executor.

**Bank of Deposit**, a bank receiving money at a specified rate of interest, deposits being only withdrawable after a prescribed previous notice has been given. The bank, being thus guarded against emergency calls, is able to invest its money more favourably than ordinary banks, and to pay higher interest.

**Banks, Joint Stock**, banks whose capital is subscribed by shareholders, and now, with very few exceptions, limited liability companies, whose liability for note issue is, however, unlimited.

**Bank Rate**, the rate at which the Bank of England discounts first-class bills of exchange. Raised from 4½ to 5½ per cent. on 16 February 1956.

**Bank Stock**, strictly the Bank of England's banking capital, the rate of interest being regulated according to the Bank's profits. The capital of other banks is also called bank stock.

**Bankers' Cheques**, a cheque drawn by one bank on another.

**Bankrupt**, a debtor who has committed an act of bankruptcy, and has been adjudicated a bankrupt by a court of justice.

**Bear**, a Stock Exchange operator who sells for future delivery shares which he does not possess in the hope that he will be able to purchase them before the date of delivery at a lower price. If the bear is unable to meet his obligations on the day of delivery he is said to be "cornered."

**Bearer**. The term "or bearer," or "to bearer," on bills or cheques, denotes that any person holding the same has the same right in respect of it as the person specifically mentioned.

**Bearer Bond**, a bond for money loaned made payable to the bearer or holder of it.

**Bid**, a price offered at an auction or other sale, withdrawable at any time before it has been acknowledged by the auctioneer or seller.

**Bill Broker**, one who buys and sells bills of exchange or promissory notes, selling bills drawn on foreign countries, and buying bills for remitters to those countries.

**Bill of Credit**, a letter authorising the advance of money to a specified person, and undertaking, or implying the obligation, on the part of the writer, to reimburse the person acting on the letter.

**Bill of Entry**, a written description of goods entered at the Custom House, either for intended exportation or importation. Since 1939 most goods cannot be exported without prior notification to the Customs' Authorities and approval by them: a bill of entry is then required. In the case of an importer being unable (from insufficient advice) to make out a complete Bill of Entry, he may apply for a Bill of Sight, which contains a general description of the goods, and on that the goods are landed for further examination. Perfect entry must be made within three days by indorsing the Bill of Sight with the necessary particulars.

**Bill of Exchange** is an unconditional order in writing addressed by one person to another signed by the person giving it, requiring the person to whom it is addressed to pay on demand or at a fixed or determinable future time a certain sum in money to or to the order of a specified person or to bearer.—Bills of Exchange Act, 1882.

**Bill of Health**, a certificate signed by a consul or other official delivered to masters of ships when they leave places, showing (in the case of a *clean* bill of health) that when the ship sailed, no infectious disorder was known to exist at the port of sailing or on board. A *suspected* or *touched* bill implies that there were rumours of infection; and a *foul* bill, the absence of a clean bill, indicates that the ship sailed from an infected place.

**Bills of Lading**, a receipt from a ship's captain to the shipper undertaking to deliver goods to some person whose name is expressed or endorsed thereon by the shipper. In the hands of the consignee it serves as a document of title to the goods. A *shipped* bill acknowledges goods loaded on board ship, a *received* bill merely confirms delivery into shipper's custody. Bills may be *clean*, when the shipowner affirms that he received them in apparent good condition, or *clauséd* when he only qualifiedly affirms this.

**Bill of Sale**, a document giving evidence of sale or mortgage of personal chattels when such transaction has not been followed by the immediate transference of such chattels to the custody of the purchaser or mortgagee. A bill of sale must be presented to the Registrar within seven days.

**Bill of Store**. Goods of British origin which can be proved by documentary evidence to have been exported to a foreign country can be re-imported within five years without being liable to importation duties, and when that takes place the particulars are entered in what is termed a bill of store.

**Bill of Suffrance** is an official permit to a ship to proceed from one British port to another, with dutiable articles on board, and trade, without paying Customs dues until the goods are landed or placed in a bonded warehouse.

**Blank Acceptance**, a term used when the acceptor of a bill of exchange signs the acceptance without naming the amount for which it is drawn, in which it is open to the drawer to insert afterwards any amount up to the limit covered by the stamp.

**Blank Transfer**, a transfer of shares or stock in which the name of the transferee and the date of execution are omitted, the transfer usually being deposited with a bank as security for money lent, or with the real owner of the shares by a nominee in whose name they are registered. The company concerned will not recognise a blank transfer.

**Blue Chip**, a phrase originating in America and now widely used to denote ordinary shares of the highest investment calibre.

**Board of Trade**, a department of the Government, forming a permanent committee of the Privy Council, presided over by a member of the Cabinet. It deals with commercial policy generally, commercial relations and treaties, and questions affecting British trade with especial emphasis on export production. The administration of statutes relating to key industries, trading with and property in ex-enemy territories, price regulations (other than food), raw material control, the issue of import and export licences for goods, weights and measures, patents, designs, trademarks, registration of joint stock companies, and matters relating to bankruptcies are also dealt with.

**Bona Fides**—"good faith"—is required of any holder of a cheque or bill of exchange. Unless he acquired the document honestly and without any knowledge of fraud or theft in its prior history, he cannot cash it.

**Bond**, an obligation by deed, whereby the person giving the bond binds himself in a penalty to the obligee, either to pay a sum of money or to do or refrain from doing some act. The penalty is usually double the sum secured. The bond becomes void on its obligation being discharged.

**Bonded Goods** are goods stored in a bonded warehouse, and not chargeable with duty until required to be removed. The owner is required to enter into a bond to pay the duty on removal of the goods. Bonded goods can be moved by bonded vehicles and still remain in bond.

**Bonded Warehouse**, a building set apart for the storage of dutiable goods, the duty on which is not payable until they are removed. The warehouse is in the entire charge of revenue officers.

**Bond Note**, a note authorising the removal of bonded goods for exportation or to another warehouse, and requiring the signature of a Customs House official.

**Book Debts**, the debts standing in a trader's books in the ordinary course of business.

**Bottomry**, the act of mortgaging a ship.

**Bretton Woods**, an international agreement was signed on 8 July 1944 at a United Nations conference on currency and finance at Bretton Woods, setting up the International Bank for Reconstruction and Development and creating an International Monetary Fund (which see).

**British Ship**, a vessel owned exclusively by British subjects, or by a corporation or company established in British dominions according to British laws, and registered as a British ship, except in cases of vessels of small tonnage.

**Broker**, an intermediary agent in the purchase and sale of any goods, his remuneration being derived from commission or brokerage charged on a percentage basis for such transactions.

**Brokerage**, the commission, percentage, or fees paid to the broker for his work in connection with any business carried through by him.

**Bucket Shops** are the offices of outside brokers who are not members of the Stock Exchange, and are unable themselves to carry out Stock Exchange transactions, but get members to act for them.

**Budget**, an estimate of income and expenditure: the National Budget is presented to Parliament by the Chancellor of the Exchequer early in April of each year. An account is given of the revenue and expenditure of the past year to April 1st, followed by estimates for the coming year, giving separately the expected expenditure on the Consolidated Funds and the Supply Services. Provision is made for raising the required sums by taxation.

**Building Scheme** is an arrangement, whereby land is laid out in plots sold to different persons each of whom for the common good covenants not to use his plot for certain purposes. Later owners of such land will be bound by the covenants.

**Building Society**, a society formed for the purpose of raising, by the subscription of its members, a fund to be used for making advances to members upon security of freehold or leasehold estate by way of mortgage.

**"Bull,"** one who buys, or contracts to buy, shares in the expectation of a rise in price, with a consequent realisation of profit on them by settling day.

**Bull Account**, refers to the account of a "bull"

who, finding himself with more stock than he can settle for, pays what is called "contango" for the privilege of having the account "carried over" to the next settlement.

**Bullion Market** is the market in which gold and silver is dealt in as a commodity and not as currency. London is the leading gold bullion market.

**Burden**, a ship's carrying capacity reckoned by tonnage.

**Buyer's Market**, an area in which the supply of certain goods exceeds the demand, so that purchasers can drive hard bargains.

**Buyers Over**, a term indicating buyers are in excess of sellers.

**Bye-Laws** are special rules and regulations made by any company or corporation for the carrying on of its affairs, but they must neither contravene the powers conferred by Parliament nor the laws of the land.

**Call**, an instalment due on shares not fully paid, payable according to the terms of the prospectus or Articles of Association of the company. The term is also used in respect of the option of exercising a call to buy or sell specified securities during a certain period and at a certain price.

**Called Bond**, a bond concerning which a notice or "call" has been sent out that it will be redeemed on a date named.

**Call Money**, money lent to bill-brokers and repayable on demand or "call."

**Call of More**, or "option to double," is the privilege to double the amount of one's present buying at a future-named date on the same terms.

**Capital** is that portion of wealth which is set aside for future production and is either fixed or circulating. The former is represented by land, houses, factories, workshops, machinery, lease, goodwill, or other things necessary for the carrying on of business, and not of a nature to be sold or exchanged. Circulating or floating capital is money provided for the purchase of raw material, the remuneration of employees, and other working expenses in the ordinary course of business. In a general way, the term capital signifies the money and money-value invested in a business undertaking. The actual capital of a limited liability company is the amount that its shareholders may have subscribed for the carrying on of the undertaking. The term, however, has a varied application. Thus the full sum named as capital in the Memorandum of Association is called the "nominal," "authorised," or "registered" capital, while the sum represented by the shares actually taken up is called the "subscribed capital," the portion remaining unpaid or uncalled up being styled "unpaid" or "uncalled" capital. The principal sum of a loan is also called "capital."

**Capital Issues Committee**. A committee set up as the result of the report of the Macmillan Committee on Finance and Industry in 1931. Public offers of shares exceeding £50,000 for any single undertaking in any one year require the consent of the Committee acting on behalf of the Treasury.

**Capital Levy**, a tax assessed on a person's property and payable out of his capital.

**Capital Redemption Reserve**, a fund required to be set up out of profits upon the redemption of preference shares.

**Carat**, a term used in assessing the value of gold and precious stones. In connection with gold, it represents the proportion of pure gold contained in any gold alloy, and for this purpose the metal is divided into 24 parts. Thus 24 carats indicates pure gold, and any lesser number of carats show the proportion of gold contained in the alloy. The carat as a measure of weight is now obsolete, having been replaced by the metric carat of 0.2 grams.

**Cargo Registration Forms**, forms required to be submitted to shipowners before goods can be sent forward to ports for loading to steamer.

**Carriage Forward**, a term used in connection with the delivery of goods sold. The seller must arrange transportation, but the cost and risk of it are borne by the buyer.

**Carrier**, any person or company engaging to convey goods or passengers for hire and reward in the regular way of business. Thus railway companies are common carriers so far as concerns their carriage of goods. So long as goods are in the custody of a carrier, he is responsible for their safety, being exempted, however, when damage results

by the "act of God," from the acts of the Queen's enemies, or from "inherent vice," that is, natural deterioration, bad packing, etc. A carrier of passengers differs from a common carrier of goods in that he does not warrant the safety of his passengers, or that his carriage is absolutely free from defect at all events. His duty is to take care.

**Cartel**, a combination of trading concerns to work together for common objectives, e.g., limitation of output, price rings, apportionment of markets.

**Cart Note**, the Customs note authorising the transfer of dutiable goods from one bonded warehouse to another, or from import ship to bonded warehouse.

**Cash**, a term applied to coin and bank-notes as distinct from bills, drafts, or securities. Generally speaking, however, "cash" includes negotiable instruments that can readily be converted into coin or bank-notes.

**Caution Money** is money deposited as security for the fulfilment of a contract or obligation.

**C.D.3**, document upon which particulars are stated of currency to be received from abroad from sale of goods. It also stipulates how the proceeds of the foreign currency so obtained will be disposed.

**Certificate**, an authorised or official document certifying title, right, or verification, respecting its subject-matter.

**Certificate of Damage**, a dock certificate testifying that certain goods on being landed from shipboard are in a damaged condition.

**Certificate of Incorporation**, a certificate issued by the Registrar of Companies on the registration of the Memorandum of Association of a limited liability company.

**Certificate of Origin**, a document authoritatively indicating the place of origin of the goods, materials, or manufactures mentioned therein.

**Certification of Shares Transfer** is when shares represented by one certificate are sold in batches, and the company takes the certificate, and certifies on the transfer that the shares therein enumerated are in their custody. If only a part of the holding be sold, a "Balance Certificate" is given to the owner for what remains unsold.

**Chamber of Commerce**, an association of merchants, manufacturers, traders, and others, organised for promoting the interests of trade; and exercising a very beneficial influence in obtaining and spreading statistical information, aiding commercial legislation, and otherwise.

**Charter**, a government or Crown grant of concessions, powers, or privileges to individuals, companies, or institutions.

**Charter-Party**, a hiring contract whereby the owner of a ship grants to another person (the charterer) the right of using the ship for a specified voyage or period.

**Chattels**, things deemed to be personal property, and divided into chattels *real* and chattels *personal*, the former being interests in land less than freehold, and the latter any kind of property other than interests in land.

**Cheque** is a written order addressed by a person called the "drawer" to a banker to pay a sum of money generally to some third party known as the "payee," but may be to "bearer." In the former case it requires endorsement by the payee before payment, but in the latter case it is payable by delivery. A cheque now requires a stamp value 2d. A banker is liable to his customer for cheques paid with a forged signature of the drawer.

**Cheques Crossed**. A cheque is crossed for protection. The crossing is usually done by the drawer, who writes "& Co." between two parallel transverse lines across the face of the cheque, after which the cheque can only be realised by being passed through a bank. The simple "& Co." crossing is called "general"; when the name of a particular bank is added it is called "special." (See also *Not Negotiable*.)

**Cheque to Bearer**, a cheque payable to the person holding it without requiring endorsement. The word "or Bearer" after the name of the payee is sufficient, but if the cheque be crossed it must be paid into a bank.

**Cheque to Order**, one having the words "or Order" printed or written upon its face, to follow the name of the person in whose favour it is drawn, who must endorse the cheque before payment can be obtained. If crossed it must be paid into a bank.

**Chose in Action**, a commercial-law term denoting a thing in respect of which one has a right of action as distinct from a thing in actual possession. For example, mortgages, bonds, warrants, policies of insurance, and debts. Such rights are now assignable; prior to 1873 they were not.

**C.I.F.—Cost, Insurance, Freight**—signifies that the seller of goods will supply the goods and arrange contracts of transportation and insurance.

**Clause Paramount**, the statement in bills of lading that the provisions of the Carriage of Goods by Sea Act 1924 are to apply to the carriage. Any terms in the bill inconsistent with these provisions must give way to them.

**Clearing a Bill**, procuring cash to satisfy a bill of exchange.

**Clearing Bank** is a bank affiliated with the London Bankers' Clearing House.

**Clearing House**, the place at which clerks from each clearing bank attend daily bringing with them all bills paid into their bank on that day drawn on each one of the others. The bills are then exchanged and differences outstanding settled. The Bankers' Clearing House in London is in Post Office Court, Lombard Street.

**Closed Shop**, the demand of a trade union that employment in a business or factory shall be open only to its members.

**Collateral Security** is additional security given by a debtor to secure fulfilment of an obligation.

**Committee of Inspection**, a committee of creditors appointed by the whole body of creditors to supervise the winding-up of the affairs of a bankrupt or of a company. It should consist of not more than five or less than three persons.

**Commonwealth Citizen** is a person of British nationality. The term can be used as an alternative to "British subject" and was created by the British Nationality Act, 1948.

**Companies Liquidation Account**, an account kept by the Board of Trade with the Bank of England into which all moneys collected in the course of liquidation of companies must be paid.

**Company, Joint Stock**, a company having a permanent paid-up or nominal share capital of fixed amount divided into shares, also of fixed amount, or held and transferable as stock or dividend, and held partly in one way and partly in the other, and formed on the principle as having for its members the holders of those shares or that stock, and no other persons; and such a company when registered with limited liability under the Companies Act, 1948, shall be deemed to be a company limited by shares.

A company may be formed by seven or more (or in the case of a private company, two or more) persons subscribing to a Memorandum of Association, and otherwise complying with the requirements of the Companies Act, 1948, regarding registration. Companies so constituted may be of three kinds. (1) Limited by shares. This is the common form of joint stock company, and is divided into public and private companies. (2) Limited by guarantee. (3) Unlimited.

**Compounding with Creditors**, an agreement whereby creditors agree to accept, and a debtor undertakes to pay, or secure payment of, a certain sum in each £ in full settlement of indebtedness.

**Compulsory Winding-up** is the winding-up of a company's affairs by the order and under the supervision of the Chancery or County Court.

**Conditions of Sale**, stipulations in a contract for sale, which are of the essence of contract. Failure by one party to fulfil these conditions justifies the other party repudiating the contract.

**Confidence Indicator** is a factor whose movements are proportionate to the ratio of fixed interest yield (e.g., irredeemable 2½ per cent. Consols) to ordinary share yield, and shows to what extent changes of price are due to psychological factors as compared with interest rates or dividends. It is high in booms and low in slumps.

**Consignment Note**, a form requiring to be filled up for the despatching of goods by rail or other common carrier.

**Consolidated Fund** consists of several separate government funds, pledged for the payment of the interest of the National Debt, cost of Army and Navy maintenance, government salaries, etc.

**Consols (Consolidated Annuities)** form a large portion of the Funded National Debt of Great Britain, and represent stock at a fixed rate of interest.

**Constructive Total Loss** is a marine insurance loss entitling the insurer to payment of the full amount for which he is insured, or agreed figure, on abandonment of his ship and its contents. (See Abandonment.)

**Consular Invoices** are invoices of goods requiring to be declared before and certified by the consul of a country to which they are being exported.

**Contango**, a term of the Stock Exchange denoting the charge made for carrying over a transaction from one settling day to the next.

**Contango Day**, otherwise "continuation day," or "making-up day," is the second day before settling day, when arrangements are made as to carrying over transactions.

**Contingent Liability**, a liability which may be discharged without any liability accruing; the liability of a banker who accepts bills for a customer of substantial position is not likely to accrue.

**Contract**, an agreement enforceable at law between two or more parties, and implying both an agreement and an obligation. There must be offer and acceptance, legal capacity to contract, consideration, and genuine consent, otherwise the contract is not valid.

**Contracting Out**, the right of individuals to agree that certain parliamentary enactments shall not apply as between them.

**Contributories**, persons liable to contribute to the amount unpaid on their shares in a limited company in case of that company being wound up. Those who have been shareholders within a year of the winding up are liable to be called upon as contributors to the extent to which the present member of the company has failed to pay for his shares.

**Convertibility** is the term used to denote the attribute of a currency the holders of which have the right to demand gold in exchange at a fixed rate from the central bank. In recent years national currency regulations have either totally abrogated or severely curtailed this right, and the word is frequently applied to denote the right to exchange into other currencies.

**Conveyance**, a formal document transferring property.

**Cooperage**, a term used in sea transport to describe repairing defects in the packing or crating of goods to make them fit for continued transportation.

**Co-operative Societies**, associations for mutual benefit in manufacture and wholesale and retail trading. Interest on shareholders' capital is limited to a fixed rate, and after meeting this, the surplus on trading is distributed as dividends to members in proportion to the value of their purchases.

**Copyright**. Under the Copyright Act, 1911, copyright subsists in every original literary, dramatic, musical, and artistic work, if: (a) in the case of a published work, the work was first published in the United Kingdom; and (b) in the case of an unpublished work, the author was at the date of the making of the work a British subject or resident in the United Kingdom. The Act provides that, except in certain special cases, the author of the work shall be the first owner of the copyright, and there are no formalities, such as registration or payment of fees, to be accomplished. Copyright includes the right to produce or reproduce the work or any substantial part thereof in any material form whatsoever; to perform the work or any substantial part thereof in public, or, if the work is unpublished, to publish the work or any substantial part thereof. A work which enjoys the protection of the Act is automatically protected in those countries which are parties to the Berne Copyright Convention. The United States of America is not a party to this Convention but has, however, ratified the Universal Copyright Convention. It is anticipated that legislation will be introduced to enable the United Kingdom to adhere to this latter Convention. This would necessitate an amendment of the provisions under which copyright can be secured in the United Kingdom. The Government Department responsible for matters in connection with copyright is the Industrial Property Department, Board of Trade, 25, Southampton Buildings, London, W.C.2. See also p. 572.

**Corner**. (See Bear.)

**Cost Accounts**, a system of recording in accounts the materials used and labour employed in the

manufacture of a certain commodity or execution of a particular job.

**Cost and Freight**, a term used in respect of goods sold at a price covering cost and carriage.

**Counsel**, in legal usage, means a barrister. It originated from early times, when barristers, unlike solicitors, acted as unpaid counsellors or advisors of the litigant. Hence Q.C. (Queen's Counsel), an eminent lawyer who would be asked to tender legal advice to the Queen.

**Counterclaim**, any cause of action which the defendant in a law suit can bring against the plaintiff.

**Country Notes**, the bank notes of any bank of issue other than the Bank of England.

**Covenant**, in law, means a promise made under seal.

**Cover**, a deposit of cash or securities ensuring the depositee against loss in Stock Exchange or other operations carried out on the depositor's behalf.

**Credit, Letter of**, a letter from a bank, firm, or one person to another, authorising payment to a third person named of a specified sum, for which the sender assumes responsibility.

**Credit Note** is an acknowledgment, by a seller, of a sum due to the purchaser on accounts of packages, short weight, etc.

**Credit Sale**, an agreement for the sale of goods, the price to be paid in five or more instalments. It is governed by the same rules as hire purchase.

**Cumulative Preference Shares** are shares the dividend on which is at a fixed rate and in default of payment in one year, or in any number of years, the amount accumulates until payment can be made. Such dividends take priority over other dividends, though not over debenture interest.

**Currency Bonds** are bonds guaranteeing the repayment of principal and interest in the currency of the country of their issue.

**Current Account**, the amount of money a person has deposited at a bank, and which he can draw from or add to as may be desired, no interest as a rule being chargeable on either side.

**Customs Declaration**, a form that has to be filled up and signed by one who sends goods abroad, stating the nature, weight, value, and customs classification of the goods.

**Customs Duties**, the name given to taxes on the imports and exports of commodities. These duties rank among the most common modes of raising revenue for public purposes, and have been charged since Anglo-Saxon times.

**Customs Entry**, a statement of particulars of the nature, value, weight, and customs classification of imported or exported goods furnished to the customs officials.

**Day to Day Loans**, money borrowed for a day at a specified rate of interest, and renewable from day to day by mutual agreement.

**Days of Grace**, a period of three days allowed by custom of law beyond the fixed day of payment for a bill of exchange or note. Should the last day of grace fall on a Sunday, or other non-business day, the bill or note is due on the preceding day. These days are not allowed on bills payable on sight or on demand.

**Dead Freight**, the amount charged for empty space to one who having chartered or contracted to load a full cargo falls short of requirement.

**Dead Weight**, cargo that pays freightage according to weight, irrespective of measurements, such as iron, coal, etc.

**Debenture**, a document, or certificate, signed by a public officer, corporation, or company, acknowledging indebtedness for money lent and guaranteeing repayment with interest.

**Debenture Bonds** are the bonds of a government, company, or corporation, engaging to repay a specified borrowed sum, with interest, at a time named, the interest being payable periodically by coupon until the bond matures and is paid off.

**Debenture Stock** differs from debenture bonds in that it is usually irredeemable. The principal sum is registered in the owner's name, and the interest, which takes priority of dividends, is paid by warrant to the owner's order.

**Debit Note** is a note giving particulars of an allowance claimed in respect of defective or damaged goods.

**Deed** is a written or printed document under hand and seal. It must be signed in the presence of a witness or witnesses, must bear a seal, and must have formal "delivery"—that is, the signer must either give constructive delivery by

placing his finger on the seal and saying, "I deliver this as my act and deed," or actual delivery by handing over the deed. Without "delivery" the deed is inoperative.

**Deed of Arrangement**, a written document whereby a debtor conveys property, effects, goods, or other assets to a trustee for the benefit of his creditors generally. Such a deed is void unless registered with the Registrar within 7 days and assented to by the majority of the creditors within 21 days. (See Deeds of Arrangement Act, 1914.)

**Deed Poll**, a formal document under hand and seal of one person only.

**Deferred Annuities** are such as do not come into effect until such a specified later period as agreed upon. Such annuities are purchasable at any post office. In case of death before a deferred annuity begins, the purchase-money is not returnable.

**Deferred Bonds** are bonds issued by a government, corporation, or company, entitling the holder to a gradually increasing rate of dividend or interest, until a fixed maximum rate is reached, when they become converted into ordinary bonds.

**Deferred Stock or Shares** are such as do not rank for dividend until after the ordinary, preference, and guarantee dividends have been provided for.

**Deflation**, the process of increasing the buying value of money. It may be caused deliberately by a cut in the amount of currency in circulation or accidentally by production of goods in excess of requirements.

**Del Credere Agent** is a broker who not only finds purchasers but also guarantees their ability to pay the price.

**Delivery Order**, an order signed by the owner of specified goods, addressed to any person or official having charge of them, and requesting delivery of them to the person named in the order. It is negotiable to the extent that it can be placed with a banker to secure any advances he may make on the goods.

**Demand Draft**, a bill of exchange payable on demand.

**Demurrage**, a charge to which the charterer of a ship is liable by neglecting to load or unload within the time named in the charter-party. The term is also used in connection with delays in removing goods after being conveyed to the station of destination.

**Deposits**, in the commercial sense, comprise deposits of money for employment in business, deposits of negotiable securities with a banker for safety, deposits of similar documents as security for loans, deposits of money or bills in a bank in the ordinary course of business on current account, and deposits of sums at interest.

**Deposit Account** represents money which has been placed with a banker at interest, and which cannot be withdrawn without previous notice.

**Deposit Receipt**, bankers' receipt for monies deposited, specifying the terms of the deposit.

**Depositions** are the sworn evidence of a witness in a judicial hearing, which is written down and signed and may be used at subsequent proceedings.

**Derelict**, a vessel abandoned by its crew, and in respect of which salvage accrues to those who save it or what it contains.

**Despatch Money**, money allowed by a shipowner when a charterer does not utilise all the time allowed by the charter-party for loading and for discharge.

**Development Charge**. A charge based on the increased Capital Value of the land or buildings following permission by planning authorities to carry out extensions, alterations to, or change of use of land and buildings. The charge was imposed under the Town and Country Planning Act, 1947, but abolished by later legislation.

**Deviation**, a marine insurance term indicating an alteration of course from that set down in the policy, a departure which, unless made for avoiding perils, annuls the risk of the underwriters.

**Discounting a Bill**, the act of purchasing at a certain deduction or discount, a bill of exchange not yet due.

**Dishonour**, the refusal to accept a bill of exchange on presentation for acceptance, or to pay it at maturity.

**Disinflation**. A disinflationary cause or tendency is one which increases the value of money in terms of goods, and disinflation is the progressive increase in such value.

**Dissolution of Partnership**, the discontinuance of a partnership from any legal cause, a notice of which must be inserted in the *London Gazette*, and also specially intimated by letter or notice to all with whom the firm have had dealings.

**Distress**, or **Distrain**, a taking without legal process of a personal chattel from the possession of the occupant. Thus a landlord may recover rent in arrear; or a rate-collector or tax gatherer for recovery of rates and taxes; or by Justices of Peace for the recovery of fines due on summary conviction.

**Dividend**, (i) a periodical payment of interest on an investment; and when declared upon the capital of a company undertaking it must be out of profits alone. (ii) A composition or part payment in respect of a claim on the estate of a bankrupt, or a company in liquidation.

**Dividend Warrants** are written orders to a banker authorising the payment of dividends, and are negotiable.

**Dollar gap**. A colloquial term used to describe the excess of a country's payments to the dollar area over its receipts from that area.

**Domicile**, in a legal sense, is the home of a person where he has his permanent residence and to which he intends to return when absent. A company is domiciled where it has its registered office and its acts will normally be governed by the law of its domicile.

**Donatio Mortis Causa**, a gift of personal property on prospect of death.

**Dow Theory**, a method, named after the inventor, of determining the major trends in the prices of stocks and shares.

**Draft** (i) in financial dealings, a bill drawn by one person on another; an order in writing to pay money, a bill of exchange; (ii) in trade, a special allowance for dirt, dust, and similar matters deducted from the price of goods sold in bulk by weight.

**Drawback Goods**, goods on which imported duties have been paid but are due to be refunded when the goods are re-exported. The exporter's drawback claim must be contained in the shipping bill and at least twenty-four hours special notice must be given to the Customs officers to enable them to examine the goods on the exporter's premises before packing.

**Drawee**, the person on whom a bill is drawn, his liability on which does not come into force until he signs and accepts it, after which he is the acceptor.

**Drawer**, the person who draws a bill, who in case of dishonour is liable to the holder or any indorser, who is compelled to pay it.

**Duress**, a legal term meaning improper pressure by threats to induce a person to make a contract.

**Dutch Auction**, the "cheap-jack" method of starting the sale of an article at a price, and gradually lowering it to an amount at which a sale is effected, or the article withdrawn.

**Duties**. (See Customs, Excise and Purchase Tax.)

**Earnest**, consists of any coin or small article of value given in token of a bargain and in proof of good faith.

**Easement**, a legal term applied to a privilege enjoyed by anyone over another's property, such as right of way, ancient lights, etc.

**Ejectment**. When a tenant after the termination of his tenancy, either as the result of a notice to quit or otherwise, continues in possession of premises, an action at law can be commenced, and what is now termed writ for recovery of land issued. If the rent be over £100 a year the action must be in the High Court, otherwise the County Court must be appealed to.

**Embargo**, a Government order issued in wartime, prohibiting vessels from entering or leaving port for a time specified.

**Embargo (Rail)**, a restraint placed by the Railways on the reception of goods, which otherwise they are compelled to carry. Normally due to congestion on the Railways or in the Goods Yard.

**Endorsement**, the signing of one's name on the back of a bill, an act which transfers the right in it to the endorsee.

**Endowment Policy** is one on which premiums are payable only for a prescribed period, after which the insurer has no other liability, and may either receive the amount for which he is insured, let it remain to accumulate with interest, the whole to be paid at his death, or take an annuity based on the policy value, as may be stipulated in the policy.

**Entail**, a settlement of landed property so that it can no longer be freely sold or bequeathed.

**Entry for Warehousing**, an entry made at the Customs House giving particulars of dutiable goods to be stored on import in a bonded warehouse, and not liable to duty until taken out for consumption.

**Equity** is that branch of the law which was originally developed by the Lord Chancellor and is now administered chiefly by the Chancery Division of the High Court. Most mercantile subjects are within the equitable jurisdiction.

**Equity Shares** entitle the holder to whatever dividend the directors may declare, there being no fixed maximum. Usually all the issued capital except the preference shares are equity shares.

**Errors and Omissions Excepted** (*E.E. or E. and O.E.*), when written at the foot of invoices or accounts indicate that they are open to after-correction if any mistakes should be discovered.

**Estate Duty** is the duty payable upon the value of all property which passes or is deemed to pass on the death of any person. As from July 30, 1954, not exceeding £3,000, nil; £3,000—£4,000, 1 per cent.; £4,000—£5,000, 2 per cent.; £5,000—£7,500, 3 per cent.; £7,500—£10,000, 4 per cent.; £10,000—£12,500, 6 per cent.; rising gradually to 80 per cent. on estates exceeding £1,000,000.

**Estimate**, a written statement specifying the amount of money for which a contracting party will perform certain work, or supply certain goods.

**Estoppel**, a legal term indicating that a person is barred from a legal remedy because of some former act which precludes him of the right. Estoppel may be by record, *e.g.*, a judgment, by deed, or by conduct.

**Excess Profits Tax**, introduced as a war measure in 1939 to prevent war profiteering. Business profits above normal standard profits were taxed at 100 per cent. Terminated on 31.12.46. An Excess Profits Levy was introduced in the 1952 Budget but abolished a year later.

**Excess Shares**. When shareholders have a right to apply for new shares in the same company and do not take up their rights by the appointed day, the shares not taken up are termed excess shares, and may be applied for by other shareholders of the company.

**Exchange**, name given to building in which merchants, bankers, and brokers meet for the transaction of business in commodities, stocks, bills, etc.

**Exchange Control** has been in operation since 1939 to prevent capital moving from the United Kingdom to countries outside the Sterling Area.

**Exchequer**, which derives its name from the checkered table on which accounts were calculated in early Norman times, is a term connected with the revenues of the Crown. The Court of Exchequer Division existed up to 1881. In former times it had jurisdiction in all revenue matters. The term Exchequer is now mainly applied to the Governmental department which deals with the public revenues, and is presided over by a Chancellor, who is also a Cabinet Minister.

**Exchequer Bills**, Bills issued by the Treasury for sums varying from £100 to £1,000, and bearing interest at the rate current on the day of issue. They form part of the unfunded debt. They are made repayable, at par, in a year from date, but can be renewed annually.

**Excise Duties** are inland taxes imposed on articles of home production for home consumption, or on their manufacture or sale, and were first established in England in 1643, and made on vendors of ale, beer, cider, and perry.

**Execution**, (i) a process of court whereby, default having been made in satisfying a judgment, a writ or order of execution is issued authorising the sheriff or bailiff to seize and sell the goods of the debtor, or such portion of them as may be necessary, to discharge debt and costs; (ii) the formal act of signing a deed before witnesses.

**Exempt Private Company**, a private Company which by the Companies Act, 1948, is exempted from some of the duties of companies, *e.g.*, to annex a balance sheet to its annual return. In addition to qualifying as a private company, such companies must not have more than fifty debenture-holders, must not have any other company as a director, and no one other than the holder must have any interest in the shares or debentures.

**Export Credits Guarantee Department.** A non-profit-making Government Department founded in 1919 to insure U.K. exporters against such risks as buyer's insolvency, import cuts abroad, exchange blockages or delays, and similar "credit risks."

**Export Licence,** document granted by Board of Trade permitting goods to be exported from this country to overseas destinations.

**Ex-Ship,** goods sold on these terms are delivered free of cost to consignee as far as putting alongside wharf or quay. From there all costs and responsibility of removal falls on the purchaser.

**Extra-territorial Rights** are enjoyed by aliens who though residing in a foreign country are not subject to its laws. This privilege is enjoyed by those in the diplomatic service and by U.N. officials while performing their duties and has also been extended to resident foreigners not occupying diplomatic or official positions. Exterritoriality was entirely abolished in Egypt in 1949 and in China was voluntarily surrendered by Great Britain and the U.S.A. in 1943.

**Face Value,** the nominal value marked on the face of a security—the par value.

**Factor,** in mercantile law, an agent who is authorised in the normal course of his business to sell, forward for sale, buy, and pledge goods.

**F.A.S.—Free Alongside Ship**—means that the seller of goods shall at his expense deliver the goods to the quayside by the ship.

**Fiduciary Loan,** a loan granted without any security being given.

**Fiduciary Note Issue,** an issue of bank-notes without the provision of a money reserve.

**Fixed Capital.** (See Capital.)

**Fixtures** are legally such movable additions to a building or land as when actually secured become part of the freehold. There are three exceptions to the rule that tenant's fixtures secured to the freehold pass to the landlord, viz.:—(a) in favour of trade; (b) for agricultural purposes (see Agricultural Holdings Acts, 1923); (c) for ornament and convenience, such as tapestry, chimney-pieces. (See also Tenant's and Trade Fixtures.)

**Floater,** a Stock Exchange term referring to what are called Bearer Securities, on which loans are readily raised, and as the loans on them are called in by one bank they are passed to another, and so on, hence the name "floaters."

**Floating Policy,** an insurance policy which covers certain specified goods which are distributed over a certain area.

**Floating Security,** a term used in regard to the security of a limited company, and forming a charge on its assets, but not enforceable unless there is default in payment of principal or interest.

**Flotsam,** a legal term applied to goods lost at sea and found floating on the water. Flotsam does not belong to the finder, but must be delivered up to the rightful owners, or, if no owner appears within a year and a day, becomes forfeit to the Crown. The finder, however, is entitled to a reward proportionate to the value of the goods.

**F.O.B.—Free on Board**—signifies that the seller of goods has borne the expenses of putting them on board ship. Custom of port and whether shipment is made by charter or liner vessel, however, must be taken into consideration.

**Folio,** a term of four different meanings: (1) in bookkeeping it means two pages facing each other; (2) in ordinary legal documents 72 words constitute a folio; (3) in Parliamentary documents there are 90 words to the folio; and (4) in printing the folio is the number of any single page.

**For the Account,** Stock Exchange transactions included in current account for settlement on the next settling day.

**Force Majeure** is a phrase often found in insurance policies. It means the same as Act of God.

**Franchise,** generally means a right or privilege, particularly the right to vote. In marine insurance, franchise is the percentage proportion which the loss bears to the total value of the goods. Most policies exclude liability to make good losses below a fixed franchise.

**Franco,** a term used in certain trades to show that goods are sent pre-paid and free of expense.

**Freeboard,** a shipping term, describing the height of the side of a ship above waterline. Freeboard is needed to resist rolling in heavy seas and to prevent seas breaking over the deck and endangering the crew.

**Free Overside,** goods sold on these terms are delivered to quay or into barge at cost of seller. From quay or barge the cost and responsibility falls on purchaser.

**Freight,** charges paid for carriage of goods or merchandise by ship or rail; a term still used in the older sense to denote the goods themselves. (See London Clause Charge.)

**Freight Note,** statement giving particulars of freight charges.

**Freight Release.** When goods have been shipped "freight forward," a note of "freight release" showing that all freight charges have been paid must be produced to the master of the ship before they can be taken away.

**Funded Debt.** (See National Debt.)

**Funding,** the operation whereby a floating debt is converted into stock.

**G.A.T.T.,** sometimes referred to as Gatt. The initials of the General Agreement on Tariffs and Trade signed at Geneva in 1947 providing for tariff reductions between the member nations. Subsequent meetings of the Gatt countries have extended the policy.

**Garnishee Order,** an order of court attaching money or goods belonging to a judgment debtor but in the hands of another person, the object being to prevent such money or goods being handled by the debtor instead of applied for the benefit of his creditors.

**Gentlemen's Agreement,** an informal agreement based on good faith.

**Glit-edged** is a term denoting stocks sponsored by or having the backing of the British Government, e.g., Conversion Loans, War Loans, Consols.

**Give On,** the paying of contango.

**Godown,** a storage warehouse in the Far East.

**Gold Standard.** A country is said to be on the gold standard if holders of its currency have the right to exchange that currency at the central bank of the country for gold at a fixed rate and there is no restriction on the right to export or import gold.

**Good Delivery,** a Stock Exchange term indicating that a security is in proper form and condition.

**Goodwill,** is the benefit acquired by a business by the patronage from constant customers.

**Graving,** the cleansing of the bottom of a ship.

**Gresham's Law** states that if good money, i.e., money with the higher intrinsic value, and bad money are in circulation together, the bad money will tend to drive out the good money from circulation. For instance, the good money is more likely to be melted down or demanded in payment by foreign creditors.

**Groundage,** the charge for space occupied by a ship while in port.

**Ground Rent,** a rent charged in respect of land only, and not in respect of the buildings to be placed thereon.

**Hall Marks** are official marks impressed upon gold and silver articles, testifying to their genuineness and value. (See pp. 608, 743-5.)

**Hammered,** the procedure on the Stock Exchange for declaring a member who is unable to meet his engagements to be a defaulter.

**Hard Currency** is the currency of a country in relation to which there is an adverse balance of trade, or an adverse balance of payments, and therefore scarce and difficult to obtain.

**Haulage,** charges for the use of trucks, wagons, or carriages, from one point to another, exclusive of loading and unloading them.

**High Seas** are the seas that are open to all, and represent the entire sea-space beyond three miles of the shore. Of recent years, however, some nations have sought to impose a much wider limit than three miles.

**Hire Purchase,** a system for the purchase of goods, by which they are obtained on hire and each payment is also treated as part payment of the purchase price. If the goods cost £100 or more the agreement must be in a specified written form. Ownership does not normally pass until the last instalment is paid, but the seller cannot recover the goods for default without leave of the court. (See Hire Purchase Act, 1938.)

**Holder** is the payee or indorsee of a bill of exchange or note who is in possession of it, or the bearer thereof. Bills of Exchange Act, 1882, s. 2.

**Holding Company,** one that, although not itself trading, own shares in a company that is. Often used as a means of amalgamating two or more

companies without either of them losing its identity.

**Holding Over**, the act of refusing to quit possession of premises after the expiration of the term of a tenancy, or of legal notice to quit. If the tenancy is protected by the Rent Acts, the occupier becomes statutory tenant.

**Home Consumption**, a term relating to (1) goods consumed in the country of their production, (2) imported goods stored in bonded warehouses until duty is paid and they are brought into consumption.

**Imperial Preference** is the system of maintaining customs duties on the importation of Commonwealth and Empire goods at lower rates than in the case of similar imports from foreign countries. This system was the basis of the Ottawa Agreement of 1932 between the United Kingdom, the Dominions, and India.

**Import Licence**, document granted by Board of Trade permitting goods brought from abroad to be landed and used in this country.

**In Advance of Calls**, a phrase referring to payments made by shareholders prior to call being made on their shares.

**In Ballast**. A ship is in ballast when, not having sufficient cargo, she carries some weighty substances for stability.

**Income Tax**, a tax of so much in the pound sterling of income from whatever source, all persons resident in Great Britain and Northern Ireland, and all persons not resident in, but deriving income from property, trade, or employment in Great Britain and Northern Ireland being liable to assessment. Income is classed under five schedules: (a) from the ownership of land, buildings, etc.; (b) from the occupation or use of land; (c) from Government or public stocks; (d) from trade, profession, or vocation, remittances from abroad, bank interest, etc.; (e) from salaries, pensions, and emoluments of officers of the Armed Services, Civil Service, Ecclesiastical bodies, Corporations, Public Companies, etc.

The income-tax year is from April 6 to the following April 5. Rates of tax on taxable income for the year 1956-7 are as follows:—on the first £60, 2s. 3d. in the £; on the next £150, 4s. 9d.; on the next £150, 6s. 9d.; and on the balance 8s. 6d. in the £. Taxable income is found by deducting from Total income certain allowances.

- (1) *Earned Income* allowance of two-ninths on net earned income, up to a max. of £450.
- (2) *Personal* allowance of £140 to single persons and married women in employment; to married man living with his wife, or if wife though not living with, is wholly maintained by means of a voluntary allowance, £240. If the wife is maintained under a Court Order or under a binding legal agreement the allowance is reduced to £140.
- (3) *Child* allowance of £100 for each child under 16 years of age or receiving full-time education, provided child does not earn more than £85 a year.
- (4) *Dependent Relative* allowance of £60 for each relative or wife's relative maintained whose own income does not exceed £105. If this income is £165 or more, there is no allowance. Relief reduced by £1 for every £1 by which relative's own income exceeds £105.
- (5) *Daughter's Services*, necessary owing to old age or infirmity, allowance of £40.
- (6) *Housekeeper* allowance of £60 (certain restrictions).
- (7) *Age* allowance of two-ninths of unearned income where taxpayer (or his wife) is over 65 and total income does not exceed £600.
- (8) *Life Insurance*. Subject to certain restrictions, an allowance for the premiums paid for life insurance of tax-payer and his wife, but not on life of his child or any other person, to a maximum of two-fifths on premiums over £25.

Pensions qualify for the *earned income* relief of two-ninths, as do all investment incomes below £300 a year.

Surtax is paid on all incomes exceeding £2,000 on a sliding scale.

**Indemnity**, a formal legal acceptance of responsibility against damage or loss in such circumstances as may be expressed.

**Indenture**, any sealed agreement between two or more persons; originally the counterparts were

drawn up as one document and cut apart with indented edges.

**Inflation** is the progressive reduction in the buying value of money due to too much money chasing insufficient goods. Post-war inflation has been prevented partly by high taxation absorbing surplus money and partly by pegging prices of all vital commodities.

**Injunction**, an order or judgment of Court restraining some person or persons from doing certain things, not amounting to a crime, which are detrimental to the interests of another or others.

**Inscribed Stock** is stock in respect of which holders are simply registered, no certificates being issued to them. No one can deal with such stock except actual holders or persons appointed by the power of attorney of holders.

**Inspecting Order**, a written order authorising goods in dock, bonded warehouse, or other place to be shown to the holder.

**Insurance**, a provision or contract securing against loss by fire, tempest, or other contingency; insuring compensation for accident; allowance during ill-health; or payment of a stipulated sum at death to beneficiaries indicated. Insurances are usually effected with insurance companies, who take the hazard in consideration of annual premiums paid to them by the person insuring. The rates are based on a system of averages.

**Interest**, in its commercial sense, is payment made for the loan or use of money, and is calculated according to a specified rate. Interest is either *simple* or *compound*. When simple interest is paid, the principal sum remains the same; in case of compound interest, each year's interest is added to the principal, and succeeding interest calculations are on the increased amounts.

**Interlocutory**, a legal term describing proceedings and orders in the preliminary stages of a law suit. They deal with matters incidental to the action, but not with the actual dispute.

**International Monetary Fund** is a fund set up in 1946 as a result of plans formulated in 1944 at the Bretton Woods Conference. Membership is open to countries who subscribe to the fund, the purpose of which is the preservation of stability of currency exchange rates.

**Intestacy**. See Legal Notes, p. 731-32.

**Inventory**, a list of all goods, effects, fixtures, etc., in possession.

**Invisible Exports** consist of services rendered by the business community of one country to foreigners resulting in payments being received by that country, e.g., for shipping services to foreigners, insurance and banking facilities, including the provision of capital on which interest is paid. Conversely, payments of interest on capital borrowed from abroad, expenditures abroad for services, e.g., tourist travel, constitute invisible imports.

**I O U**, an informal written and signed acknowledgement of indebtedness, requiring no stamp, and, though not a promissory note, can be sued upon. The letters stand for "I owe you."

**Issue of Shares and Loans**. Shares are issued by the sending out of certificates in return for subscription payments, and declare the holders entitled to so many shares. A loan issue consists of bonds with a similar declaration.

**Issuing House**, a firm carrying on the business of placing new issues of shares of companies on the markets.

**Jetsam**, a turn in navigation law signifying goods thrown into the sea for the safety of the vessel. Such goods belong to the Crown in default of other claimants.

**Jettison**, the act of throwing goods overboard to protect the ship or its cargo. The liability to make good property so lost is apportioned according to average.

**Jobber**, a dealer on the Stock Exchange who is forbidden by its rules to deal with anyone outside the Exchange; he deals only with brokers and fellow-jobbers.

**Joint Stock Company**. (See Company.)

**Joint Tenancy**, the occupation or possession of land by persons jointly and equally entitled.

**Judgment Creditor**, one who had obtained a Court judgment against a debtor.

**Judgment Debtor**, one against whom a Court judgment for payment of debt has been obtained.

**Keep House**, a term applied to a debtor who

denies himself to creditors calling at his house. This constitutes an act of bankruptcy.

**Kentledge**, permanent ship-ballast, and generally consisting of pigs of iron.

**Knock-for-Knock Agreements** are commonly made between two motor insurance companies. They agree that in case of a collision between motorists insured by them each pays its own assured without inquiring who was responsible for the accident, and that they will not bring actions against each other.

**Knock-Out Agreement**, the offer of a reward for abstaining from bidding at an auction sale. It is illegal for a dealer to enter into such an agreement.

**Leaches**, a term of commercial law denoting negligent delay or failure to enforce a legal right.

**Lagan**, or **Ligan**, goods thrown from a ship and sunk in the sea, but secured to a buoy so as to be found again.

**Landing Order**, a Customs document authorising the chief officer of a ship, after dues paid, to hand over goods for landing, during which process the waiter or searcher examines the goods and finally signs the orders as correct.

**Larceny**, the unlawful taking and carrying away of things personal with intent to deprive the rightful owner of the same. (See Larceny Act, 1916.)

**Lastage**, sand or gravel used for ballasting a ship.

**Law Merchant**, the mercantile law, which embodies the customs and usages ordinarily sanctioned between merchants and traders, and is recognised as part of the common law.

**Lay Days** are days allowed for loading or unloading ships according to agreement.

**Leakage**, an allowance made for losses on liquids by leaking.

**Lease**, a letting or the documents setting forth the letting of lands, tenements, machinery, or other property for a specified consideration and time. A lease for a longer period than three years must be by deed.

**Legal Day** is the whole of the twenty-four hours of a day, from one midnight to the next.

**Legal Aid**. See p. 130.

**Legal Tender**. See p. 738.

**Letter of Credit** is a letter written by one correspondent to another requesting him to credit the bearer with a certain sum of money. It may be "general" to all persons or "special" to particular persons by name. It is not negotiable.

**Letter of Indemnity**, a letter undertaking to be responsible for any loss or damage sustained in circumstances specified.

**Letters of Administration** are the authority granted by the Probate Division to a person to act as administrator to the estate of a deceased person, either with or without a will.

**Liabilities by Indorsement** are contingent liabilities incurred by the indorsement of bills or other negotiable instruments whereby the indorser becomes responsible or payment should the other parties to the document make default.

**Libel** is a defamatory publication upon a person by writings, pictures, images. Contumelious matter that tends to degrade a man in his neighbour's opinion on publication constitutes a libel. Libel differs from slander as the latter is oral defamation whilst libel must be matter published. Libel may also in certain cases be punished criminally.

**Licence** is a permission given to do some act, which, without such permission, it would be unlawful to do. It usually refers to permits issued on payment of excise duty. Licences are required for keeping carriages, dogs, for operating a television or wireless set, for driving a motor vehicle, for shooting game, for setting up as a bookmaker, for hawking and peddling, for selling beer, ale, wines and spirits, tobacco, patent medicines, etc.

**Lien**, the right by which a person holding personal property of another can retain possession of it until some claim that he has against the original owner is satisfied.

**Light Dues** are charges levied on ships for the maintenance of lighthouses, beacons, etc., around the coasts.

**Limitation Act**. (See Statutes of Limitation.)

**Limited Liability**. When the Memorandum of Association of a joint-stock company states that the liability of its members is limited (the word "limited" will then appear in the name of the

company) no member, i.e., shareholder, can be called upon to contribute any sum beyond the nominal value of the shares he holds. Thus when the shares are fully paid the shareholder can be under no liability to contribute to the discharge of the debts of the company.

**Limited Partner**, a partner who is not liable to contribute to the payment of the firm's debts beyond his share in the firm's capital. He must take no part in the business.

**Liquid Assets** consist of readily realisable property such as coins, notes, Consols, and other high-class securities.

**Liquidated Damages**, an agreed amount of damage in case of breach of contract: or, in an action, the definitely ascertainable amount that may be indisputably due.

**Liquidation** is the termination of the existence of a company by the distribution of all the assets first in payment of creditors and then among the shareholders. The liquidation may be compulsory, under the orders of a court, or voluntary, under control of the shareholders or creditors.

**Lloyd's**, started as a meeting-place for merchants and shipowners at a coffee-house in Abchurch Lane, London, kept by Edward Lloyd, gradually developed into a very powerful association, and from 1774 to 1930 had its offices in the Royal Exchange, now situated at Leadenhall St. The members of Lloyd's mostly engage in the business of insuring or "underwriting" ships and their cargoes, but almost any risk can be covered there.

**Lloyd's Register** forms a full record and classification of all British ships, and of foreign ships classed in the register, and is published yearly. The surveyors of Lloyd's make periodical surveys of vessels, and keep a systematised inspection over ships intended for classification. The first-class mark for ships is A1.

**Loadline**. (See Plimsoll Line.)

**Lock-Out**, the act of an employer, who by reason of trade disputes, or other cause, closes his factories or workshops against his employees.

**Log-Book**, the book in which the chief incidents of a voyage are entered by the master of a ship or his mate.

**London Clause Charge**, a charge payable to shipowners giving consignees the right to ask for delivery into consignee's lighter or land conveyance. The charge varies according to class of goods.

**Long-Dated Bill**, a money-market term denoting a bill of exchange for a longer than ordinary period.

**Making-Up Price**, the price at which stocks or shares are closed for the current settlement.

**Mandamus**, an order commanding the performance of certain acts or duties. It is issued from the Queen's Bench Division of the High Court, and may be addressed to any person, corporation, or inferior court requiring them to do something specified.

**Manifest**, document giving particulars of the consignor, consignee, destination, markets, etc., of the various packages comprising the cargo of a ship.

**Margin**, a covering deposit with a broker, accompanied by instructions as to prices that are not to be exceeded.

**Maritime Lien**, a claim for salvage, damages, wages, or payments for necessities made in respect of any maritime adventure and constituting a direct charge upon the ship, freight, or cargo enforceable by arrest and sale.

**Market Overt**, in open market, i.e., a place sanctioned by law or custom for selling and buying and open to the public. All articles bought in market overt, even if stolen property, become the property of the purchaser.

**Mate's Receipt**, receipt given by the mate of a ship when goods are delivered to a ship for loading.

**Memorandum of Association**, the document to which at least seven members subscribe in the formation of a public company, or two in the case of a private company, and which states (in the case of a limited company), (i) the name of the company, (ii) the situation of its registered office, (iii) the objects of the company, (iv) that the liability of its members is limited, (v) the amount of its share capital. Clause (iii) limits the activities of the company, as any act done in excess of these powers is null and void (*ultra vires*).

**Merchant Banks**. The business carried on by merchant bankers consists, *inter alia*, of raising

loans in the United Kingdom for foreign governments and local authorities abroad, arranging capital issues of foreign public undertakings, the making and collecting of payments due on foreign trade transactions, and the acceptance of bills in the course of foreign trade.

**Mint Price of Bullion** indicates the number of coins for a given weight of bullion.

**Mixed Currency**, a currency partly of coins or the precious metals and partly of convertible paper, but both must be of legal tender quality.

**Mixed Policy** is a marine insurance policy combining time and distance conditions—a voyage and a period.

**Monopoly**, the exclusive possession of a certain commodity or the sole right to trade in it.

**Mortgage** is a transaction by which an owner (called "a mortgagor") of an interest in property borrows on the security of that interest from a lender (called "a mortgagee"). The safest form of mortgage of land is a legal mortgage now effected by (a) a lease for a term of years subject to cesser on repayment, or (b) a charge by way of legal mortgage. A mortgage of chattels is effected by means of a Bill of Sale. No action may be brought to recover any principal sum secured on land after the expiration of 12 years from the date when the right to receive the money accrued. A mortgage of a British ship must be effected in accordance with the Merchant Shipping Act, 1894.

**Mutual Life Insurance**, a system of life insurance carried on by members of a company having no shareholders and no subscribed capital and dividing the whole of its profits amongst its policyholders.

**National Debt** constitutes the financial obligation of a state, and amounted in Great Britain at March 31, 1956, to a total of £27,040 million, an increase of £106 million over 1954-55. The National Debt is divided into *funded* and *unfunded* debt, the former representing debt in respect of which there is no fixed date for repayment, and taking the form of Consols and debts due to the Bank of England, while unfunded debt consists of Government loans, repayable at a fixed date.

**Nationality, British**. A British subject or Commonwealth Citizen is a person who is a natural-born British subject: a person to whom a certificate of naturalisation has been granted; a person who has become a subject of Her Majesty by reason of any annexation of territory or who, subject to certain exceptions, is the wife of a British subject. A natural-born British subject is one born within Her Majesty's Dominions and allegiance or if born out of Her Majesty's Dominions whose father was at the time of such person's birth a British subject. A married woman does not necessarily lose her British nationality either by virtue of her marriage to an alien or of her husband's subsequent change of nationality (see also Alien). The British Nationality Act, 1948, replaced the British Nationality and Status of Aliens Act of 1914 as the basis of the law of British citizenship.

**Nationalisation**, the process of transferring property or industries into public ownership. In 1945-49 the Bank of England, the coal industry, civil aviation, telecommunications, inland transport, electricity undertakings, public hospitals, gas, and iron and steel were nationalised. The Iron and Steel Act, 1949, was repealed in 1953.

**Naturalisation**, the grant of British nationality to an alien. Before an application can be made to the Secretary of State for the grant of a certificate an alien must have qualified by 5 years' residence in the U.K. or service under the Crown, during the 8 years immediately passed.

**Navicert** is the name given to a pass issued by the Royal Navy in war-time permitting a neutral vessel to proceed with its cargo through blockaded areas.

**Negotiable Instruments and Negotiable Paper**, such as bills, notes, cheques, warrants, bonds, and other documents as are by common usage on transfer by delivery from one person to another, convey a legal right to the property therein, free from all claims. A bill of lading is not a negotiable instrument.

**Net or Nett Weight**, actual weight of goods after every allowance has been made for package, waste, etc.

**Nominal Exchange**, the state of the exchanges which depend upon the par value of moneys of the

countries, and not on the current demand for them at any given time.

**Nominal Partner**, one who permits his name to be used in the title of a business, although having no actual interest in the concern, as in the case of one who has retired from it. He may be liable for the debts of the business if he holds himself out as a partner.

**Nominal Price**, an approximate or designated price of issue of shares, or price quoted in respect of goods and securities in which dealings are infrequent.

**Notary Public** is an officer who may certify deeds and other documents, usually a solicitor appointed to certify signatures to documents intended for use abroad, and to put marks of protest on bills of exchange and promissory notes, foreign and inland, which have not been met.

**Noting a Bill**, the memorandum of a notary public written upon the face of or attached to a returned bill, after being presented by him a second time and not accepted or not paid.

**Not Negotiable**. When a cheque or bill has these words written across its face they do not limit the transfer of it from one to another, but, in the case of a transferor not having a good title to the document, the transferee is merely in the same position as the transferor, and cannot go back upon the original drawer for satisfaction.

**Novation** is the act of replacing a debtor by another who assumes the responsibility, to which there must be the assent of the original debtor and creditor as well as of the substitute.

**Nudum Pactum**, an agreement without consideration. Not capable of being sued upon except under seal.

**Official Receiver**, a person appointed by the Board of Trade to carry out prescribed duties under the Bankruptcy Act, 1914, in connection with the winding up a bankrupt's estates, and having the powers of a trustee in bankruptcy.

**Official Referee**, a High Court official appointed to deal with actions concerning disputed accounts.

**On Call**, money lent, either repayable on demand or at short notice.

**On Demand**, a term in general use to denote bills of exchange in which these words have been written. They need no acceptance and are payable on presentation.

**Open Cheque**, an uncrossed cheque payable on presentation to "bearer" or "order," as the case may be.

**Open Cover**, a general insurance policy for recurring shipments, details of which are not yet known.

**Open Credit**, credit given by a banker to a customer without guarantee of security. A letter of credit authorising payment of money to another person without condition also comes within the term "open credit."

**Open Policy**, a marine insurance policy, the full amount of which is not declared until the value of the property has been ascertained.

**Option**, a right granted to a person to buy or sell certain stock or shares at a specified price within a stated period or on an indicated day.

**Ordinary Stock or Shares**, such as have no special privilege or right attaching to them, but which receive dividends representing the profits after paying interest on preference shares and debentures and providing for reserve, etc.

**Original Bill**, the first of a duplicate or triplicate set of foreign bills. The term also applies to a bill which has been discounted before endorsement.

**O.T.C.**—Organisation for Trade Co-operation, a permanent organisation set up in 1955 to administer and strengthen G.A.T.T. It has an Assembly which meets annually, an Executive Council of 17 members elected by the Assembly and a permanent Secretariat.

**Outward Bill of Lading**, the documentation of a shipment from any port in the U.K. These are subject to the special rules of the Carriage of Goods by Sea Act, 1924.

**Overheads** are those costs of a commercial concern which are not directly attributable (like the cost of the raw materials or of labour) to the manufacture of the product, e.g., rent, insurances, research expenditure, or general administration.

**Overriding Commission**, the commission paid to a broker or other agent for securing underwriting contracts for an issue of shares or debentures.

**Over-Tonnage**, denotes the providing of a

greater tonnage of ships than is required for the freight to be shipped.

**Par**, a price that is equivalent to nominal value.

**Partners** are persons associated in the carrying on of a trade, industry, or business jointly with a view to profit; active, as when employing themselves in the conduct of the enterprise; sleeping, when providing capital but taking no active part; or nominal, when only lending their name.

**Partnership**, an association of not more than twenty and not fewer than two persons for trading purposes, whose interests, relationship, and responsibilities are usually defined in a deed of partnership. All partners are liable jointly for all the debts of the firm to the outside public, and the firm is bound by the action of any one partner. By the Registration of Business Names Act, 1916, when the partnership is carried on in a name which does not consist of the true surnames of all the partners it must be registered and the names of all partners be exhibited on all business letters, catalogues, show cards, etc.

**Passing Off** is the wrong committed where one trader by improper use of trademarks or deliberate imitations represents his goods as those of another. The injured trader can sue for damages.

**Passive Bonds and Shares**, bonds on which no interest is paid but which confer some future accruing advantage on the holder.

**Patents**. A patent is an exclusive right granted under the Patents Act to the inventor of a new and useful technical invention. An application for a patent must be filed in the Patent Office and be accompanied by a Provisional or Complete specification. The former need only describe the general nature of the invention, while the Complete must give a detailed description of the invention and of the manner in which it is to be performed and must end with a distinct statement of what the applicant desires to claim as his exclusive right. Where the specification accompanying the original application is a Provisional it must be followed by a Complete within one year. Complete specifications are examined as to form and novelty by the Patent Office and after acceptance by the Office are open to opposition. If there is no opposition or if the opposition is rejected, a patent will be granted on payment of a sealing fee. The grant is made for sixteen years, subject to payment of annual renewal fees after the first four years but this term may be extended in very exceptional cases, for example, on the ground that the patentee has been inadequately remunerated by the patent or has suffered loss by reason of hostilities. The grant of a patent is no guarantee of its validity, and patents may be attacked on certain grounds specified in the Act and may be revoked or declared invalid by the Courts. Many patents are for improvements on prior patents which they may infringe if such prior patents are still in force. A patentee may bring a civil action against infringers of his patent, and if his action is successful may recover damages and obtain an injunction against further infringement. Articles protected by patent should be marked with the number of the patent to warn the public of the existence of the patent. Penalties are prescribed for making false claims to patent rights. A patentee may assign or license his patent and may have his patent endorsed "Licenses of Right" which will enable any person to obtain a licence on terms settled by agreement or fixed by the Comptroller of Patents. For patents so endorsed the renewal fees are halved. In certain cases, particularly if the patented invention is not adequately worked in this country, the Comptroller may order the grant of a compulsory licence for the use of the patent and may determine the royalties to be paid to the patentee. All assignments and licences must be registered in the Patent Office.

Patent law and practice is difficult and complex, and it is advisable to consult a Patent Agent on the drafting of specifications and on all matters relating to the patents.

**Pawnbroking**, the business of lending money on security of goods taken in pledge. In the 18th century pawnbroking grew to be a regular business and was regulated by Acts of Parliament. A licence is required by every pawnbroker, for which he pays £7 10s. per annum, with an additional duty of £5 15s. if he deals in plate. The three balls which hang over the pawnbrokers' shops are

the ancient arms of Lombardy, the Lombards being the first money-lenders in Europe. (See *Monts-de-Piété, General Information Section*.)

**Pay Day**, the day on which Stock Exchange settlements are concluded. Used also to denote the particular day of each month on which a firm pays its accounts.

**Payee**, the person or firm to whom a bill of exchange, promissory note, or sum of money is made payable.

**Payer**, one who pays a bill of exchange, promissory note, or account.

**Payment under Protest**, a payment made after protest has been made denying all or part liability.

**Per Capita**, per head.

**Per Procuracionem** signature means that the subject of the correspondence has been put into the writer's care by his principal for him to use his personal judgment in the matter, and that he is authorised to sign on behalf of his principal. Normally contracted to *per pro* or *p.p.*

**Personal Property**, or **Personalty**, everything that is possessed apart from that which is freehold land.

**Petitioning Creditor**, one who files a petition in bankruptcy against a debtor.

**Plimsoll Line or Loadline** is a mark on the side of a ship indicating the maximum depth to which she may be loaded without danger to herself or the crew. (See *Freeboard*.)

**Pool Betting Duty**, at the rate of 30 per cent., is levied on all moneys staked on football pools; totalisator bets are taxed at 10 per cent.

**Post-Date**, to make out a cheque, bill, or document giving a date later than that on which it is written. Such a cheque would not become payable until the date given.

**Post Obit Bond** is a bond given for a loan, undertaking to repay the lender the sum borrowed, with interest, after the decease of another person from whom he expects to receive money; often may be set aside by a Court of Justice.

**Poundage**, a commission or fee fixed at a rate of so much per £.

**Preference Bonds** are such as are issued at a fixed rate of interest, and payable before dividends are declared on ordinary shares.

**Preference Shares and Preference Stock** are shares or stock entitled to their fixed dividend before any division of profits can be made amongst the holders of ordinary shares or stock. Preferential rights may be cumulative or non-cumulative.

**Preferential Payments in Bankruptcy** are such as have to be made before the claims of ordinary creditors are considered, and include rates and taxes which may have become payable within twelve months preceding the date of the receiving order; salaries and wages of clerks, servants, labourers, and workmen for services during the preceding four months, and not exceeding in any one case £200.

**Premium** has several meanings: (1) a prescribed periodical (usually annual) payment on a policy of insurance; (2) the advance in price of stock or shares above par value; (3) a bounty; (4) a payment in respect of a loan in addition to or in place of interest.

**Price Current**, a list of articles of merchandise with their prices, the duties payable (where necessary), etc., with prices and statements, duties, drawbacks, etc., if any.

**Primage**, a percentage added to the freight and paid by the shipper or consignor to the master of a ship for the loading of goods.

**Prime Cost**, in cost accounting, is the cost of labour and raw materials with all the charges thereon, such as carriage inwards, freight, etc.

**Private Company**, a small limited company privately formed by members who subscribe the whole of the capital among themselves. By the Companies Act, 1948, the number of members is limited to 50. No invitation can be issued to the public to subscribe.

**Probate** is the authority granted by the Court to a person appointed under a will to act as executor to the estate of the deceased.

**Profit**, the surplus that remains after all expenses of production and sale have been paid. *Gross profit* is the excess of selling price over cost price; *net profit* is the excess of gross profit over the selling and management expenses.

**Profit Sharing**, a method of remunerating labour,

under which the employee receives, in addition to his ordinary wages, a share of the profits.

**Profits Tax**, a tax on companies' profits. As from April 1, 1956, the rate on undistributed profits was increased to 3 per cent. and on distributed profits to 30 per cent.

**Prohibitions and Restrictions**, a term applying to articles which are either prohibited altogether from being exported or imported, or are placed under special conditions.

**Promissory Note**, an unconditional promise in writing made by one person to another, signed by the maker, engaging to pay on demand, or at a fixed or determinable future time, a certain sum in money to or to the order of a specified person or to bearer.

**Promoter**, a person who arranges the formation of a Company.

**Proof of Debt in Bankruptcy**, a creditor's affidavit or declaration, setting forth particulars of debt owing to him by a bankrupt.

**Property** is of two classes, corporeal, as land, buildings, etc., and incorporeal, as the rights in things not represented by material objects.

**Proprietary Company**, a parent company holding lands or mining rights, parts of which it sells or leases to others.

**Prospectus**, a document issued by public companies inviting the public to subscribe for shares of the company. A copy of every prospectus, before publication, must be filed with the Registrar of Joint Stock Companies. The prospectus must state various facts relating to the affairs of the company, and these are enumerated in the Fourth Schedule of the Companies Act, 1948.

**Protest**, a notification by a notary public of an unaccepted or unpaid foreign bill of exchange, which protest must be effected at the place of dishonour, and contain a copy of the bill, a statement of the parties to it, and other particulars.

**Proxy**, one who acts for another, or the written authorisation for such action.

**Public Company**, a limited company whose capital consists of shares publicly subscribed, such shares being saleable by any shareholder without the consent of the other shareholders.

**Purchase Tax**, a tax on purchases of goods in the U.K., charged on the wholesale value at a percentage rate varying with different classes of goods.

**Quarantine** is a term used to denote the period for which a vessel, on which there is infectious disease, is detained in isolation until medically certified free from taint. Originally this period was forty days; hence the term; but now the detention and prohibition of intercourse with the shore only lasts until a clean bill of health can be given.

**Quarter Days**, the last days of each quarter of the year on which payment of rent or interest falls due. (See p. 750.)

**Quit-Rent**. Formerly a rent paid by a freeholder or copyholder to a Lord of the Manor in lieu of services, but abolished in 1936.

**Quorum**. (See p. 144.)

**Quota**, the allocation of a stated amount of raw materials to a particular firm.

**Racking**, a term used in the wine and spirit trade when liquors or wine are transferred from certain casks to other casks, or when drawn off from the lees.

**Rack Rent**, rent of the full yearly value of the property held. A term generally used to denote the rent of a house and land as distinguished from rent of land only.

**Railway Advice**, a document sent by a railway company to a consignee of goods intimating that goods are awaiting his orders at a specified station.

**Rateable Value**. The value of property, other than agricultural land and agricultural buildings, as the same is assessed in the rate books of the local authorities, founded on the net annual value which is derived from the gross value, i.e., the full rental value less certain statutory deductions for repairs and maintenance. Certain dwelling-houses are now assessed on the basis of cost of construction and cost of land (see Local Government Act, 1948). (See also p. 935.)

**Rates**, a payment levied by Local Authorities on the occupiers of land or buildings in the area. The proceeds are used to defray the expenses of Local Government and public services. The amount is assessed annually as a proportion of the rateable value and varies in different cases.

**Real Estate, or Realty**, is immovable property, i.e., land held on freehold. Leaseholds, however long the term, are personal estate.

**Real Securities**, deeds of mortgage of real estate.

**Realisation** is a conversion into actual cash of what was previously contingent or doubtful, a process that may result in gain or loss on original cost according to the state of the market.

**Receipt** is a written acknowledgment of money paid, on which a stamp duty of twopenny must be paid if for a sum of £2 or over. The following are exempt: sums of money placed on deposit with a banker, bankers' acknowledgments of bills of exchange, taxes, wages, salary, or pension.

**Receiver**, one appointed to control an estate or property pending dispute or litigation.

**Receiving Notes**, documents signed by shippers requesting the chief officer of a ship to receive on board specified goods.

**Receiving Order**, the order of a Court of Bankruptcy, on petition presented by a debtor or one of his creditors, placing the debtor's estate in the hands of the Official Receiver, and barring further legal proceedings against the debtor by creditors. The effect of the order is thus to protect the estate of the debtor until it is definitely declared after the public examination whether the debtor be bankrupt or not.

**Recognisance**, an acknowledgment of indebtedness to the Crown, should a certain specified act not be duly performed; for example, a recognisance in respect of a prisoner liberated on bail, whose failure to appear on the day appointed for trial would render the recognisance realisable.

**Re-draft**, a new bill of exchange which the holder of a protested bill draws on the drawer or endorsers for the amount of the original bill with the costs added.

**Registered Bonds** are such as for security against robbery or loss are registered in the holders' names in the books of the company or State issuing the bonds.

**Reinstatement Clause** is a clause in a policy of fire insurance providing that the Company may, if it wishes, re-instate the property destroyed or damaged instead of settling the claim in cash. Used to impose a check on fraud.

**Re-insurance**, when an underwriter considers he has incurred too great a hazard he may effect a sub-insurance with others, so that in the event of loss the liability will be more widely distributed.

**Remedy**, the technical term for the extreme limit of allowance the Mint will allow from the fixed coinage standard.

**Renewal of a Bill** is frequently resorted to when an acceptor finds himself unable to meet it when it falls due. The original bill is cancelled and a new one drawn up, so that the consent of all parties to the original bill is required.

**Rentes** means in France the government debt or the interest paid thereon. Holders of government securities are called "rentiers," and the latter word has been borrowed by the world to designate the class of person who owns investments producing income on which he partly or wholly lives.

**Reputed Ownership** is a term in use regarding goods and property in the possession of a bankrupt, and applies to everything under his control at the time of his bankruptcy. All such property is presumed to belong to the bankrupt and to be available for realisation and distribution, unless the contrary is proved.

**Request Note**, a Customs note filled up and signed by an importer when requiring the removal of dutiable goods from one warehouse to another, or (in the case of perishable goods) from ship-board before clearance.

**Reserve**, a charge made against profits before arriving at the actual net profit, in order to make provision for contingencies. The fund resulting from these reservations is the Reserve Fund. If reservation is made for some specific object—e.g., the replacement of a wasting asset, or repayment of a debt—the fund is known as a Sinking Fund, and must be invested.

**Reserve Liability**, such portion of a limited company's unpaid capital as can only, by special resolution of the company, be called up for winding-up purposes, often called Reserve Capital.

**Reserve Price**. (See Upset Price.)

**Respondentia**, a legal term applying to maritime

contracts, mortgaging the cargo for money advanced for the prosecution of the voyage. It is only repayable on the safe arrival of the ship.

**Restraint of Trade** is a legal term relating to contracts which unreasonably restrict a party in the exercise of his trade or profession. Such contract will be declared void upon application to a court.

**Restrictive Endorsement** is one which destroys the negotiability of a bill of exchange, such as "Pay A only."

**Retiring a Bill** is to withdraw it from circulation either by buying it up and retaining it until maturity or at once cancelling it, or by the acceptor meeting it in the usual way when due. In the latter case it is discharged.

**Revenue**, in its ordinary application, refers to income of any kind; more strictly, however, it denotes (i) the income yielded to a State from taxes and duties, (ii) in accounting, the income earned by a company, as distinct from capital receipts.

**Revenue Account**, another name for a profit and loss account, the term being applied usually to large industrial concerns such as Railway and Shipping Companies, Gas Companies, etc.

**Reversion** is a right to property or benefit, the enjoyment of which does not come into operation until the happening of a certain event or the expiration of a certain period.

**Reversionary Interest**, a term applied to a deferred interest in money or personal property.

**Rider**, any separate addition to a document, or addition to a resolution or verdict, appended to the original.

**Ring**, a combination formed by a group of speculators to obtain the control of the operations in a certain commodity or security, and by creating scarcity to run up prices for their own profitable realisation.

**Royalty** has several meanings: (1) percentages or dues payable to landowners for mining rights; (2) sums paid for the use of a patent; (3) percentages paid to an author by a publisher on the sales of a book.

**Sale Warrant**, a document given with a weight note, in the case of goods sold on payment of deposit, conditionally on an early discharge of the balance.

**Salvage**, the reward payable by the owners of goods carried in a ship, or by the shipowner for exceptional services performed at sea by which goods or the ship are saved from loss. It is also applied to the goods saved from the dangers of the sea or to property saved from fire either on sea or land. The crew are not entitled to any reward for assistance rendered, even for extraordinary services. A passenger may be awarded a reward in exceptional cases.

**Salvage Loss**, a term used in respect of a partial marine insurance loss, being the net value of the goods recovered deducted from the full amount of insurance.

**Sans Recours**, "without recourse," a term which when written on a bill of exchange by an endorser frees him from liability on the document.

**Schedule**, a list, summary, index, or inventory. It may be either supplementary or explanatory.

**Scheduled Territories** for purposes of the export trade are countries listed in the Exchange Control Act, 1947, and which comprise the Sterling Area.

**Scrip**, a certificate of shares in a Government loan, company, or corporation, a contraction of "subscription."

**Searchers** are Customs officers entrusted with the duty of searching and examining vessels on arrival or departure for goods liable to duties.

**Search Warrant**, a document issued by a magistrate authorising a search in any place for stolen or concealed property.

**Seaworthy**, the condition of a ship which is in every respect fitted for undertaking a voyage. There is an implied warranty of seaworthiness in a marine insurance voyage policy but not in a time policy or bill of lading, and should the vessel prove to have been inefficient at starting, the shipowners will be liable for any loss by the cargo owners and any insurance of the ship will be void.

**Second-Class Paper**, bills, notes, and other securities for the satisfaction of which persons or firms of only moderate standing are responsible.

**Secured Creditor**, one who holds some property of a debtor towards the satisfaction of his claim.

If a secured creditor desires to present a petition in bankruptcy against the debtor, he must either surrender his security or establish its value and prove an unsecured balance of at least £50.

**Securities** are documents entitling the holder to specified realisable rights in land, money, stocks, shares, bonds, mortgages, etc., in the event of loans, payments, or advances for which they were given remaining undischarged.

**Seignorage**, profit made by Government on minting coins.

**Seisin**, actual possession of real estate.

**Seizure Notes** are notes made out by a Customs officer on discovering and taking possession of goods fraudulently obtained or bearing fraudulent trade-marks, and left with the goods after they have been placed in a Customs warehouse.

**Seller's Market** is the result of an insufficiency of goods to meet the demand. A market in which the seller is able to sell on his own terms.

**Sellers Over**, a market condition when sellers are in excess of buyers, or when there are no buyers at all.

**Selling Out**, a market or Stock Exchange term. If a buyer fails to take up the securities he has contracted to buy, the seller may sell out against him, the buyer being liable for any expenses to which the seller be put on that account.

**Sequestration** is a legal process putting a sheriff or other officer of Court in possession of property or goods until a dispute or claim in respect thereof has been disposed of. It may also mean the taking possession of the property of a bankrupt for the purpose of distributing it amongst his creditors.

**Set-off**, the placing of a debt due against a debt owing, wholly or partially. The two debts must be due in the same right and between the same parties.

**Settlement** may mean: (1) the discharge of a debt or claim; (2) the settling of a sum of money on a woman on her marriage as a provision for herself and children; and (3) the Stock Exchange fortnightly settling period, viz., the last three days of the account, as to general stocks and shares, and in the mining market four days.

**Settling Day**, the last day of the Stock Exchange account.

**Sharebrokers** are persons engaged in the business of buying and selling shares and stocks for clients.

**Share Certificate**, a document issued by a public company to a shareholder, certifying the number of the shares held and the sum paid up on them.

**Share Warrant**, a document certifying that the bearer owns the shares specified and that they are fully paid up. It is a negotiable instrument, with coupons attached payable at the dates named to whomsoever may present them. When shares take this form the shareholder's name does not appear on the list of shareholders.

**Shipping Articles**, the contract between a shipmaster and his seamen setting forth the terms and conditions of service.

**Shipping Bills**, Customs or trader's documents containing particulars of goods placed on shipboard.

**Shipping Cards**, cards issued by shipbrokers giving dates of sailings, approximate dates of arrivals, and other information of use to shippers.

**Shipping Note**, delivery or receipt note concerning goods sent for loading.

**Shipping Weight**, the declared weight of goods put on shipboard.

**Ship's Certificate of Registry**. This is issued by the registrar after the completion of the building of a ship, and sets forth the name, build, tonnage, and other particulars.

**Ship's Manifest** is a ship's paper that contains full details of the vessel's cargo and the ports for which she is bound.

**Ship's Papers**, such as must go with the ship, comprise the Certificate of Registry, the contract with the seamen, Charter Party or Bills of Lading, Manifest, Official Log, and Bill of Health.

**Ship's Protest**, a declaration, made before a notary, setting forth particulars of loss or damage to ship or cargo, a document necessary for production to underwriters before adjustment of claim.

**Ship's Store Bond**, a document given by a shipowner or captain in respect of dutiable articles to be used as stores during the voyage.

**Ship's Stores**, articles necessary for the provisioning of a ship; as a Customs term, however, it refers to articles which would be chargeable with duty if consumed on land.

**Short Bills, or Short-dated Bills**, are bills of exchange having less than ten days to run. They include bills payable on demand or at sight.

**Short Exchange**, rates quoted for bills payable on sight or within a few days after.

**Short Loans**, advances for short specified periods at a fixed rate of interest.

**Short Shipment**, a term applied to goods that, through accident or want of space, are unable to be taken on board.

**Sight Bills** are such as are payable at sight, without allowance of days of grace.

**Sighting a Bill**. A bill is sighted when presented to the person on whom it is drawn.

**Sinking Fund** is a fund created by setting apart a proportion of the profits of a company or the revenue of a Government with the object of extinguishing the debt or loan.

**Sit-Down**, a form of strike in which the workers down tools but refuse to leave the works premises.

**Slander of Title**, a false, malicious statement injurious to a person's title to property and causing special damage.

**Slander of Goods** is an offence of a similar nature, but where goods are disparaged whereby a man suffers loss of sales or custom.

**Slinging**, the act of putting chains or ropes round goods lying alongside a ship for convenience of hoisting.

**Slip**, a marine insurance term referring to slip-note of particulars required by an underwriter before undertaking to insure, and which he initials if accepted.

**Soft Currency** is the currency of a country in relation to which there is a favourable balance of trade, or a favourable balance of payments, and therefore readily obtainable.

**Sola**, signifying "this only," is a term applied to a document of which only the original exists.

**Solvency**, the ability to discharge all debts and obligations in full.

**Special Damage** is any loss resulting from a wrongful act over and above the damage which the law automatically presumed will result. It can be recovered only if specially claimed.

**Special Indorsement** on a bill of exchange is an indorsement specifying the name of the person to whom the indorser transfers the document.

**Specie**, metallic money or coin, in contradistinction to instruments of credit, such as bills and notes.

**Specie Point**, the point above or below the Mint par of exchange at which it is found more profitable to pay in specie than bills.

**Specific Performance**, the express carrying out of the terms specified in a contract. Where damages supply an adequate remedy, however, the Courts seldom enforce specific performance.

**Specification**, a detailed list of work to be done or goods to be supplied in the carrying out of an order or contract.

**Spits**, instruments of wood, iron, or steel, used by Customs officers in examining goods for dutiable articles.

**Spot Goods** are such as are ready for immediate delivery.

**Squeezing the Bears**, a phrase denoting the condition to which "bears" are reduced when buyers to whom they have contracted for delivery are themselves the holders of the available stock, and by this means compel the "bears" to purchase from them at an advanced price.

**Stag**, a speculator on the Stock Exchange, who applies for new securities not intending to hold shares allotted to him as an investment but to sell as soon as dealings commence, in the hope of being able to do so at above the price of issue.

**Stale Cheque**, a cheque that is not presented for payment within a reasonable period. Bankers make a rule of not cashing cheques a year or more old.

**Standard Gold** is composed of twenty-two parts of pure gold and two parts of copper alloy.

**Standard Money** is coin whose value in exchange depends upon the intrinsic value of the metal it contains.

**Standard Rent**, the maximum basic rent allowed to be charged for a dwelling house coming within the Rent Restriction Acts.

**Standard Silver** consists of one half pure silver and one half alloy by the Coinage Act, 1920. The remedy allowance was made 5 instead of 4 in force previously. (See p. 738.)

**Standardising** is an arithmetical calculation for ascertaining the value of bullion, that is, converting the gross weight of gold or silver that is not of the standard into its equivalent in weight of standard metal.

**State Notes** are the notes of a State or Government undertaking to pay bearer on demand the amount specified in specie.

**Statute Barred**, a commercial term denoting a debt has passed beyond the limit within which it can be legally recovered.

**Statutes of Limitation**, impose periods of limitation for different classes of action, at the expiration of which no action shall be brought. In actions founded on simple contract or on tort; libel and slander and trespass to person, it is laid down that actions shall not be brought after the expiration of six years from the date on which the cause of action arose. Actions based on a contract under seal and those for recovery of land are barred after twelve years.

**Statutory Meeting**, a meeting of the members of a limited company which it is compulsory to hold within not less than a month and not more than three months from the time of starting business.

**Statutory Report**, a report on the state of the company which must be sent to the shareholders at least a fortnight before the statutory meeting.

**Statutory Tenant** is one who after his lease has expired remains in occupation under the protection of the Rent Acts.

**Stay of Execution**, an order of Court suspending execution on a judgment obtained, until an appeal which has been moved for has been heard.

**Stem**, an agreement for a quantity of cargo, the date of loading it, and the time to be occupied in loading.

**Sterling Area**, the group of countries (mainly Commonwealth) which base their international transactions upon the £ and not on gold or dollars. These countries keep their reserves in sterling, money is transferred freely between them and they have a certain common policy regarding imports from and payments to hard currency countries.

**Stock** represents the consolidation of shares and other securities into a money basis of value, and includes the national debt of a country, and fully paid-up shares in a company, and, unlike shares, is divisible into fractional parts.

**Stock Exchange**. An Institution owning a building in which Stocks and Shares are bought and sold, and laying down rules for, and generally controlling, the business of dealing in Stocks and Shares. The London Stock Exchange of which there are some 3,700 Members, is controlled by a Council of thirty-six elected by the Members. There are two classes of Member: (a) Brokers, who act as agents for the public, transacting their business with (b) Jobbers, who specialise in various groups of Stocks, and deal only with the Brokers. Particulars as to Membership, Rules, etc., from the Secretary, The Stock Exchange, London, E.C.2.

**Stock Receipt**, a receipt given to the purchaser of registered stock by the seller on payment of the consideration. On production of this receipt the purchaser's name is registered as owner.

**Stockpiling** is the act of deliberately accumulating raw materials for strategic purposes.

**Stopping a Cheque or Note**, an act resorted to when a cheque or note has been lost or stolen, or for some other reason the drawer of the cheque or owner of the note does not wish the amount paid. In the case of a cheque, the drawer notifies the bank on which it is drawn that it is not to be paid and the bank will withhold payment. Regarding notes, the issuing bank cannot refuse payment, but if it has been "stopped" will trace back as far as possible the source from whence the presenter procured it.

**Stop Order**. If the holder of shares observes that prices are falling he may give his broker a stop order to sell out should the price fall to a certain figure. If that figure is reached, the broker will sell immediately at the best price he can obtain.

**Stoppage in Transit**, a seller has a right to stop goods in transit which are not paid for, and prevent their delivery on discovering after despatch that the purchaser is not solvent.

**Stowage**, the act of placing goods in the holds of a vessel.

**Strike** is a combined withdrawal from work of a body of workers, for the purpose of obtaining or resisting a change in conditions of employment.

**Subpoena**, "under a penalty," a writ of Court commanding the attendance of a witness at a specified time and place. It is called a *subpoena ad testificandum* when requiring verbal testimony only, and a *subpoena tecum* when requiring the production of documents.

**Subrogation**, a legal term meaning that one person can step into the place of another, taking over all his rights and liabilities.

**Subsidiary Company**, a company controlled by a parent or holding company owning all or the majority of the shares.

**Suffrance Wharf**, wharf licensed by H.M. Customs, upon which dutiable goods may be landed and stored.

**Sum Payable**, the amount payable on a cheque, bill, promissory note, or draft, and written out in full in the body of the document. If by error the sum written in figures in another part does not tally with the amount as written out in full, the latter will be deemed correct.

**Surrender Value**, the value of a life insurance policy at any given time when the person insured, because of inability to continue paying premiums or for other cause, desires a lump sum to be paid to him in consideration of what he has already paid and of surrendering the policy.

**Surtax** is payable in addition to income tax on all incomes exceeding £2,000, the rate increasing from 2s. in the £ with the size of the income.

**Suspension of Payment** is when persons, firms, or companies, unable to cope with their liabilities, decide to cease paying further debts, and announce the fact to their creditors. This constitutes an act of Bankruptcy.

**Take-over Bid** describes an offer made to all the shareholders of a company to purchase their shares at a named price and conditional upon acceptance by the holders of a named proportion of the total share issue. If accepted the purchaser thus gains control of the company.

**Taking Up a Bill** is discharging it when it falls due. The acceptor has the first responsibility, and if falling him, it is taken up by an indorser, the latter can sue the other parties previously liable on the bill.

**Tale Quale**, a grain trade term, denoting that goods sold are equal to samples as they lie, but that any loss by damage during transportation must be the concern of the buyer.

**Talon**, last portion of a bearer bond coupon sheet, containing the intimation that on presentation a fresh sheet of coupons will be exchanged for it.

**Tape Prices** are the latest prices as recorded on the "tapes" or the telegraph instruments at various places, as supplied by the authority of the Stock Exchange.

**Tare** is the deduction made in respect of boxes, cases, or other things used in packing goods, leaving only the actual weight of the goods to be paid for.

**Tariff**, a list of duties charged on specified articles. The term is also applied to any list of charges.

**Taxes**, payments which people of a country are compelled to make to their government to meet its expenses. This term excludes local rates which are levied by local authorities. Taxes include income tax, death duties, taxes on tea, beer, tobacco, entertainments tax, purchase tax on many articles. There are direct taxes and indirect taxes (called Customs and Excise duties), so called because they are mostly passed on by those who have to pay them to someone else (for example, the tax on beer is passed on, as it is intended it should be, by the brewer to the consumer). Besides meeting a country's expenses there are other objects of taxation. For example, purchase-tax checks the demand for luxuries and the exemption from tax of utility goods was intended to induce people to buy them. Again a lower tax is put on certain commodities (e.g., tobacco and sugar) from the Empire in order that more may be bought from the Empire than from other markets.

**Telegraphic Transfers** are messages authorising the transfer of amounts specified from one person

to another by process of debt and credit entries by bankers, and much resorted to in transactions between different countries. A trader can in this way pay a sum into a bank in London and have its equivalent paid by the bank's agent in almost any city of the world the same day.

**Tenant's Fixtures** are such as the tenant has himself put up, and are removable by him at the end of his tenancy, unless they are of such a nature that they cannot be detached without injury to the landlord's property. By the Larceny Act, 1916, the larceny of fixtures is punishable.

**Tender** is an offer to supply certain things, perform certain acts, or pay a specified sum, but it is not binding until accepted.

**Territorial Waters** are the area of the sea up to one marine league (3 miles) measured from low-water mark off the coast. They are within the exclusive control of the adjacent country.

**Through Bill of Lading**, a bill of lading for the carriage of goods from one place to another by several railway, road-transport, or shipping companies.

**Ticket**, a document giving particulars of shares sold and given to a purchaser by his broker.

**Tithe Rent Charges**, being amounts payable out of the proceeds of land for the benefit of the Church, were extinguished in 1936. A sixty years' annuity payable out of the land is now substituted. At the end of that period tithe redemption will be complete.

**Tolls (Docks and Canals)**, a charge for conveyance of goods levied against the owner of the goods. (Road and Bridge), a charge made for permission to use a road or bridge which is privately owned. It can be levied on either goods or vehicle.

**Tonnage** as registered is based, not on the carrying capacity of a ship, but upon its cubical capacity, one ton being reckoned for every 100 cubic feet.

**Tonnage Dues**, port charges, estimated on a ship's registered tonnage, payable on entering or leaving port.

**Tort**, a wrongful act causing injury for which damages may be recovered. Apart from special statutes all civil claims for damages arise from tort or breach of contract.

**Trade Bill**, a bill of exchange in respect of which value in goods has been actually received by the drawee or acceptor.

**Trade Fixtures**, like tenant's fixtures, are removable by a tenant at the expiration of his tenancy provided no damage be done to the landlord's property.

**Trade-Mark**, a mark used in relation to goods for the purpose of indicating a connection in the course of trade between the goods and some person having the right, either as a proprietor or registered user, to use the mark. Trade-Marks can be registered, the registration holding good for 7 years and being renewable thereafter indefinitely for periods of 14 years. Infringement of a registered trade-mark renders the infringer liable to damages.

**Trade Union**, a combination of workmen formed to protect the trade interests of its members, by the substitution of collective for individual bargaining between workmen and employers. (See p. 130.)

**Transfer**, any document whereby one person transfers property, securities, or rights to another. On the Stock Exchange a transfer of shares or stock is prepared by the seller's broker, signed by the seller, and handed over to the buyer on payment of the consideration. Share transfers are liable to stamp duty at 2 per cent.

**Treasure Trove**, a legal term applying to money, plate, or bullion found hidden in the earth, or elsewhere, and for which the owner cannot be found. The treasure legally belongs to the Crown. An inquest is held by the Coroner to enquire into the ownership.

**Treasury Bills** are negotiable Government acknowledgments of loans, and may be for three, six, or twelve months.

**Trust**, in law, property vested in a nominal owner to be applied by him for another's benefit; in commerce, an association of several firms in one organisation with a view to defeating competition and furthering joint objects.

**Trust Deed**, a deed assigning or conveying property, debts, or securities to a trustee or trustees for the purposes set forth in such deed.

**Trustee in Bankruptcy** is the person appointed to take over the property of a bankrupt and to distribute it among the creditors. He is appointed by a meeting of creditors and confirmed by the Board of Trade.

**Trustee Savings Banks** were founded in 1810 with the sole object of encouraging thrift and are not conducted for private profit. They are regulated by Acts of Parliament and are subject to Government supervision. All funds in the Ordinary Department must be invested with the National Debt Commissioners (the Government Department which controls the Trustee Savings Banks) and they are guaranteed by the State.

**Turn of the Market**, an expression referring to the difference between selling and buying prices of stocks and shares. For example, if a jobber names two prices, one is the price he will buy at, the other his selling price, the difference between the two is termed the "turn of the market."

**Turnover**, the amount representing the total sales of a trade during a given period.

**Ullage**, waste or leakage in liquid contents of bottles, casks, etc.

**Ultra Vires**. The memorandum of association of a company defines its objects. If a company exceeds these powers it is acting *ultra vires* (beyond its powers).

**Umpire**. In case of disagreement between two arbitrators the dispute is determined by a third person called the umpire. The umpire usually presides during the hearing, but does not express an opinion unless the arbitrators disagree.

**Underwriter**, one who insures ships against loss. Also one who, on a limited company's prospectus being issued, undertakes, if the public do not subscribe to the amount required, himself to take up shares sufficient to cover the deficiency, on a specified commission basis.

**Unilateral Contract** is a contract that is binding only on one party to it, such as a loan of money or a loan for use.

**Unseaworthy**, condition of a ship when from any cause, including inadequacy of crew or captain, it is unsafe to load it or send it on a voyage.

**Upset Price**, the price that must be reached at auction to effect a sale. If there is no bid up to that amount the property is withdrawn.

**Usury**, an excessive rate of interest paid for the loan of money. The Money-Lenders' Acts, 1900-27, compel money-lenders to be licensed; restrict advertising; prohibit compound interest; make money-lenders' contracts unenforceable unless a memorandum in writing be signed personally by the borrower; and unless a copy

thereof be sent to the borrower within seven days. A money-lender must sue for money lent or interest thereon within twelve months. The Court has power to reduce the rate of interest.

**V.C.I.**, document which is to be filled in before permission is granted for jewellery and valuables to be taken abroad by persons leaving the country.

**Vendors' Shares** are shares allotted to the vendor or vendors of a business on the same being converted into a limited company.

**Visa or Vise**, an endorsement on a passport or bill of lading certifying that the person or article of which it relates may be admitted into a country.

**Waiver Clause**, a clause inserted in marine insurance policies, empowering either the insurer or insured to do what he thinks best to minimise loss in the event of an accident, without prejudicing the terms of the policy.

**Wall Street**, the seat of New York Stock Exchange. The phrase is used to describe American banking and finance.

**Warrant**, (1) a magistrate's order for the arrest of a person or seizure of goods; (2) a receipt for goods deposited in a warehouse, and a negotiable document; (3) a document entitling the holder to certain money or property.

**Warrant of Attorney**, a document given by a client to his attorney authorising him to appear for him in specified legal proceedings and act as directed, suffering judgment if necessary.

**Warranty**, a guarantee that goods sold are of the quality stated, and giving the buyer the right of action for damages should the goods turn out inferior.

**Way Bill**, a list of passengers or goods carried by a public conveyance.

**Without Prejudice**. When statements are made or letters written with the words "without prejudice" affixed, they cannot be used as evidence in subsequent litigation without consent of the person responsible.

**Working Parties**. Committees appointed by the President of the Board of Trade for the investigation of the problems of a particular industry. The reports of these committees deal with such matters as labour relations, marketing methods, capital re-equipment, and management. The committees are composed of representatives of employers and employees in equal numbers, together with independent members.

**Writ**, the formal document by which the Queen commands the performance of an act. Most actions in the High Court are commenced by a writ ordering the attendance of the defendant to hear the plaintiff's claim.

## Legal Notes

### LANDLORD AND TENANT

#### THE CONTROL OF RENT AND PREVENTION OF EVICTION OF TENANTS

**1. Origin.** Housebuilding largely ceases in time of war, thus causing a housing shortage resulting in an increase in the rents obtainable in a free market. At the same time the increase of rates and the cost of repairs increases the financial inducement to landlords to terminate tenancies and re-let to the same or new tenants at higher rents. During the First World War the Government intervened in the case of unfurnished tenancies of dwelling-houses to control the ejection of tenants except upon prescribed grounds and to control the increase of rents above the rent at which the dwelling was let on August 3, 1914, which became the "standard rent," except for increases for the purposes of meeting a rise in the rates payable by the landlord or any expenditure incurred by him in respect of improvements or structural alterations, known as the permitted increases. The Increase of Rent and Mortgage Interest (War Restrictions) Act 1915 also prevented mortgagees of dwelling-houses from increasing the rates of interest or calling in the

security. The controls applied to all dwelling-houses where the standard rent or the rateable value did not exceed £35 in London and £26 in the rest of England.

**2. History of Property to which Control Applied.** Between the wars the housing shortage continued, and the control was extended by the Increase of Rent and Mortgage Interest (Restrictions) Act 1920 to dwellings not exceeding three times the limits set in 1915. Tenancies at a rent of less than two-thirds of the rateable value were exempt from control. Approximately 90 per cent. of the dwellings in the country were then subject to control and were known as controlled premises. The 1923 Act took a first step towards decontrol by providing that when the landlord obtained possession, *e.g.*, where the tenant voluntarily vacated or the landlord obtained a court order on one of the prescribed grounds, the premises remained decontrolled upon a subsequent re-letting. The 1933 Act hastened decontrol by limiting control to dwellings where the recoverable rent (*i.e.*,

the standard rent plus the permitted increases) did not exceed £45 in London or £35 elsewhere in England; moreover, possession could be obtained if suitable alternative accommodation (which might consist of only part of the same premises) could be shown to be available to the tenant. The 1938 Act freed all dwellings where the rateable value did not exceed £35 in London (the 1915 figure) or £20 elsewhere in England. The total abolition of control seemed a possibility.

**3. Present Scope of Control.** The outbreak of war in 1939 caused the reimposition by the 1939 Act of control of all dwellings of a rateable value not exceeding £100 in London and £75 elsewhere in England, and these limits are in force today. Tenancies at a rent of less than two-thirds of the rateable value remained exempt from control. Dwellings brought under control by the 1939 Act are called "new control" dwellings as compared with "old control" resulting from the previous Acts, and have a standard rent fixed by the rent being paid on September 1, 1939. In addition, the Furnished Houses (Rent Control) Act 1946 extends qualified control to some furnished lettings, and the Landlord and Tenant (Rent Control) Act 1949 contains provisions as to the fixing of rent by a Tribunal, cases where living accommodation was shared, and the prohibition of premiums.

**4. Main Provisions.** The detailed provisions of the control set up by the Rent Acts are complicated and often difficult even for experts, and the following notes are intended only to point out the main features of the system of control.

**5. Protection of Tenant.** A tenant whose contractual tenancy has been determined by a valid notice to quit becomes what is known as a statutory tenant of the premises on the same terms as his previous contractual tenancy with his landlord, and may only be ejected as a result of a court order obtainable by the landlord on certain grounds. The landlord can always obtain possession if he can satisfy the County Court that suitable alternative accommodation will be available for the tenant and that it is reasonable to make the order. "Suitable" involves a separate dwelling with security of tenure equivalent to protection under the Rent Acts, and suitable to the means and needs of the tenant and his family as regards extent, character, and proximity to place of work. Alternatively, where the Court thinks it reasonable it can make an order for possession if *inter alia* the tenant is in arrears with his rent, is guilty of nuisance or annoyance to his neighbours, has given notice to quit so that the landlord has contracted to sell or relet, or has assigned or sublet the whole of the dwelling in one or several parts. An order may be made if the tenant was formerly and has ceased to be in the employment of the landlord and the dwelling was let because of that employment and the dwelling is reasonably required for a person in the landlord's employ. Lastly, an order for possession may be made if the dwelling is required by the landlord for occupation as a residence for himself and family or any son or daughter over eighteen or his father or mother. In this last case possession will not be given if the tenant satisfies the Court that in all the circumstances greater hardship would be caused to the tenant by making the order than to the landlord by refusing it. The provision is usually called the greater-hardship clause, and in the post-war years by far the greater number of proceedings for possession have been brought on this ground.

**6. Fixing of Rents.** The rent which may be lawfully demanded by the landlord is fixed, in the case of old control dwellings, by the rent being paid on August 3, 1914, or if not then let, the rent at which it was last let before that date or if let for the first time after that date the rent at which it was first let. In the case of new control dwellings September 2, 1939, is substituted for August 3, 1914. The landlord might serve a written notice of increase of rent in respect of one or more of the permitted increases. Such a notice of increase also operates as a notice to determine the contractual tenancy so that the increase may lawfully be made. Further, if increases have in fact been paid, the Court will readily infer that a proper written notice of increase was served, unless the tenant can prove otherwise. In the case of old control dwellings the permitted increases include an amount calculated at a rate per annum not

exceeding 8 per cent. of the amount expended by the landlord on improvement or structural alteration, not including expenditure on decoration or repairs, and after the 1933 Act the supply of improved fixtures and fittings (not being decoration or repairs) may be included. The most common permitted increase is any increase in the amount for the time being payable by the landlord in respect of rates. Further the landlord may add on 15 per cent. of the net rent, and also if he is responsible for repairs, a further 25 per cent. of the net rent (which is the standard rent or where the landlord paid the rates the standard rent less the rates). In the case of new control dwellings the first two of the above four increases apply, and the last two do not. (Increases in respect of repairs may also be made under the Housing Repairs and Rents Act 1954 as to which see paragraph 14 below.) Where rent in excess of the rent fixed by the Acts has in fact been paid by the tenant he may recover by deduction from the current rent or by action (*e.g.*, where the tenancy has ceased), but in neither case may over-payments made more than two years before the deduction or the commencement of the action be recovered by the tenant.

**7. Premiums.** Premiums, sometimes colloquially called key-money, may not be required as the condition of the grant of a tenancy to which the Acts apply, nor for the renewal or continuance of such a tenancy. A person who has paid an unlawful premium may recover it back. The requiring of a premium is an offence punishable on summary conviction by a fine not exceeding £100, and the Court which convicts may also order the repayment of the premium. The purchase of furniture, fittings, or other articles at a price which exceeds the reasonable price of such articles as a condition of the granting of a tenancy is treated as if it were a premium. Prior to the Landlord and Tenant (Rent Control) Act 1949 the prohibition of premiums did not apply to tenancies of fourteen years or upwards.

**8. Furnished Lettings.** Where the terms of the tenancy include the use of furniture or the provision of services (*e.g.*, attendance, or heating or lighting) either party may refer the contract to the Rent Tribunal, who may approve or reduce the rent to such sum as the Tribunal thinks reasonable, or, where services are provided, may also increase the rent. After the rent has been fixed it is illegal to demand or pay a larger rent. A notice to quit served by the landlord after there has been a reference to a Tribunal shall not take effect until the expiry of three months from the decision of the Tribunal, thus providing a limited security of tenure, and the Tribunal may extend from time to time the period of security.

**9. Sharing.** When the tenant shares living accommodation, *e.g.*, the kitchen or a sitting-room with the landlord, even if other rooms are in the sole possession of the tenant, the tenant is not, except to the limited extent mentioned below, a protected tenant, and the landlord who has terminated the tenancy by a notice to quit may obtain possession. But where there is a sharing with the landlord the Landlord and Tenant (Rent Control) Act 1949 provides that the tenancy is subject to the Rent Tribunal's power to fix the reasonable rent. Where the sharing is not with the landlord, but the tenant shares with another person, *e.g.*, another tenant of the landlord, then the tenant is a protected tenant if he shares with that other person as a result of the terms of the tenancy between himself and his own landlord (but may otherwise not be protected). And if the tenant shares with his own sub-tenant of part of the premises, the tenant is as against his own landlord still a protected tenant. But as between the tenant who shares with his sub-tenant the sub-tenant is not protected against the tenant unless, which is unlikely, the sharing is the result of a term of the tenancy between the tenant and the landlord.

**10. Sub-tenancies.** A statutory tenant has the right to sub-let if he had that right under his original contractual tenancy. Control applies as between tenant and sub-tenant. The standard rent of the portion sub-let by a contractual or statutory tenant to a sub-tenant is a proportion of the standard rent of the whole, and the County Court has jurisdiction to fix the standard rent of the part sub-let by apportionment. In making

the apportionment the Court will consider the comparative size, accessibility, aspect, and other physical advantages of the part sub-let. A tenant who desires to evict his sub-tenant must show the existence as against the sub-tenant of one of the grounds set out in paragraph (5) above. As to sharing between tenant and sub-tenant see the preceding paragraph.

11. **Transmission of Statutory Tenancy.** A statutory tenant cannot assign his tenancy, nor can he sub-let the whole. He cannot transmit the statutory tenancy by will. But the widow of a statutory tenant who was residing with her husband at the time of his death, or where the tenant leaves no widow or is a woman such member of the tenant's family who was residing with the tenant at the time of the death (and had so resided for not less than six months immediately before the death) as may be decided in default of agreement by the County Court, is entitled to continue in occupation as a statutory tenant. Such a statutory transmission of the statutory tenancy can occur only once, and on the death, *e.g.*, of a widow who is a statutory tenant by reason of this provision, no other member of the family has any rights of tenancy, and the landlord will be entitled to possession.

#### EXTENSIONS OF THE LAW IN 1954

12. Two major statutes affecting the relationship of landlord and tenant were passed in 1954, namely the Landlord and Tenant Act 1954 and the Housing Repairs and Rent Act 1954. Each is elaborate and highly technical, and any person who has reason to believe that he may be affected should take professional advice. Here it is only possible to state the main objects of these Acts. On and after October 1, 1954, a tenancy originally granted for a term exceeding twenty-one years is, notwithstanding that the rent is less than two-thirds of the rateable value, brought under control. On the expiry of the term the tenancy does not

come to an end, but continues at the same rent and in other respects on the same terms as before. It may be terminated by notice, if given by the landlord of not less than six nor more than twelve months, if given by the tenant of not less than one month. The landlord may obtain possession only if he proposes to demolish or reconstruct the premises or on grounds corresponding (with modifications) to those on which he might obtain possession from a statutory tenant under the Rent Acts. If, instead of claiming possession (or after the failure of an attempt so to do) the landlord proposes to the tenant a statutory tenancy, the terms may be settled by agreement or by the Court. Thus gradually upon the expiry of long terms a large new class of controlled premises can arise.

13. **Business Premises.** Since October 1, 1954, for the first time premises used solely for business purposes became subject to provisions ensuring security of tenure. Business premises include those used for a trade, profession, or employment. A tenancy to which the statute applies does not come to an end unless terminated in accordance with complicated provisions set out in the Act, and if so terminated by the landlord the tenant may apply to the court for a new tenancy.

14. **Repairs.** Under the Housing Repairs and Rents Act 1954, which came into operation on August 30, 1954, the rent paid by a statutory tenant may be increased, provided that the premises are in good repair having regard to their age character and locality, are reasonably suitable for occupation, and the landlord is responsible wholly or in part for repairs under the terms of the tenancy or the tenant is under no obligation to repair. The landlord must produce satisfactory evidence that repair work on the premises has been done during a period of twelve out of the fourteen months prior to the notice of increase served on the tenant and to the extent of a scale of values set out in the Act.

## HUSBAND AND WIFE

### DIVORCE

1. **Persons who May Bring Proceedings.** The High Court may entertain petitions for divorce only when the husband is domiciled in England (including Wales) at the commencement of the proceedings (the wife's domicile during marriage is that of her husband). This is so whatever the nationality of the husband. A home within the jurisdiction is not sufficient. Domicile involves both residence and the intention that that residence shall be the permanent home. Two exceptions exist in favour of wives: firstly, a wife who has been deserted by her husband and immediately prior thereto the husband was domiciled in England (including Wales), secondly, a wife who is and for at least three years prior to bringing the proceedings has been ordinarily resident in England or Wales and whose husband is not domiciled in Great Britain, Northern Ireland, the Channel Isles, or the Isle of Man, may bring proceedings in the High Court.

2. **Grounds of Petition.** A petition may not be presented within three years since the date of the marriage unless the Court allows earlier presentation on the ground of exceptional hardship suffered by the petitioner or exceptional depravity on the part of the respondent. Thereafter either party may present a petition on the ground of adultery since the marriage, desertion without cause for at least three years immediately preceding the petition, cruelty, or that the other party is incurably of unsound mind and has been continuously under care and treatment for at least five years immediately preceding the presentation of the petition. In addition, a wife may present a petition on the ground that the husband has since the marriage been guilty of rape, sodomy, or bestiality.

3. **Decree Nisi.** In the first instance the Court grants a decree nisi, and the decree absolute which severs the marriage tie is not made until application to the Court by the petitioner not less than six weeks after the decree nisi.

4. **Maintenance.** On a decree being made, the Court may order the husband to pay to the wife

such weekly or monthly sum for their joint lives as having regard to the wife's means, the ability of the husband, and the conduct of the parties, the Court may think reasonable. If maintenance is allotted, it is, as a general but not rigid rule, on the basis of one-third of the joint incomes, less the wife's income.

5. **Custody of Children.** The Court may be asked to award the custody of the children under sixteen to one of the parties. The paramount consideration is the welfare of the children, and also to be taken into account are the interests of the innocent party. The age, sex, attachments, and opportunities in life of the children are of importance. The fact that a mother has been found guilty of adultery does not by itself make her claim to custody, as against the innocent father, inferior to the father's.

6. **Absolute Bar to Relief.** (a) Collusion, that is to say the presentation or prosecution of a petition under a bargain or agreement made with the other party, or with the agent of the other party to procure adultery or to supply evidence for the purpose of deceiving the Court as to the true facts, is an absolute bar. Thus it would be collusion for a husband by agreement with his wife to commit adultery for the purpose of providing the wife with evidence on which to found a petition. Similarly, an agreement for one party to provide and the other party to use false evidence of adultery for the purpose of obtaining a divorce, is collusion.

(b) **Condonation** occurs where one party with full knowledge of the relevant circumstances forgives the other party and there is a reconciliation and re-instatement of the forgiven party as the partner in the marriage. Words alone will not constitute condonation, but acts consistent only with re-instatement are evidence of condonation, for instance the resumption of cohabitation. After complete condonation the offence condoned may be revived as a ground for a petition by a subsequent matrimonial offence by the forgiven party. Thus cruelty may revive condoned adul-

tery and vice versa, and adultery may revive condoned desertion. Statutory desertion may revive condoned cruelty or desertion or adultery.

(c) Connivance occurs where the adultery of one party has been caused by or knowingly and wilfully or recklessly permitted by the other party. It therefore precedes the commission of the adultery, and is an absolute bar.

7. Discretionary Bars to Relief. (a) *Adultery*. The Court has a discretion whether or not to grant a decree if the petitioner has been guilty of adultery. The petitioner must expressly ask in the petition for the exercise of the Court's discretion and make a full disclosure in a written statement at the hearing of the facts calling for discretion. The Court will take into account the interests of any children of the marriage, of the petitioner and person with whom the petitioner has committed misconduct, especially having regard to the possibility of their future marriage, and the possibility of a reconciliation of the parties to the marriage.

The Court further regards the interest of the community in, on the one hand, maintaining the strength of the marriage tie and, on the other, the factors which make it contrary to public policy to prevent the regularisation of established *de facto* associations outside marriage.

(b) *Other Discretionary Bars*. Unreasonable delay in presenting the petition, in the sense of culpable delay, something in the nature of acquiescence, is a discretionary bar. An acceptable explanation will be called for. Cruelty by the petitioner to the other party is always a discretionary bar. And where the ground of the petition is adultery or cruelty, then a decree may be refused if the petitioner has without reasonable excuse deserted or separated from the other party before the adultery or cruelty complained of. Wilful neglect or misconduct which has conduced to the adultery, unsoundness of mind, or desertion on which the petition is founded is also a discretionary bar.

## SEPARATION AND MAINTENANCE ORDERS AND ORDERS FOR THE CUSTODY OF CHILDREN MADE BY MAGISTRATES' COURTS

1. In addition to the right to bring proceedings in the High Court on the grounds set out above to terminate a marriage by divorce the law provides an aggrieved partner with remedies during the subsistence of the marriage where the wrong conduct of the other partner is either such that it does not constitute a ground for divorce or alternatively the aggrieved partner does not wish to terminate the marriage. The Magistrates' Courts under a series of Acts (The Summary Jurisdiction (Separation and Maintenance) Acts 1895 to 1949) have power to order that: (a) a husband or wife be no longer bound to cohabit with the other party to the marriage (a "separation" order); (b) the husband pay weekly sums for the maintenance of the wife and of the children of the marriage; (c) the legal custody of the children be committed to the party who applies to the Court. The importance of these powers is increased by the facts that the remedy is near at hand in the Magistrates' Court within whose jurisdiction the aggrieved party ordinarily resides, is cheap and rapid, and that a reconciliation is not hampered, in that the orders of the Court automatically cease to have effect if the parties return to each other. Moreover, a wife may apply for an order notwithstanding that the cruelty or neglect to maintain complained of has not caused her to leave and live separately from her husband.

2. Grounds of Application to the Court. Any married woman may apply to the Court on any of the following grounds, namely that her husband has: (a) deserted her, (b) been guilty of persistent cruelty to her or her children, (c) been guilty of neglect to provide reasonable maintenance for her or her infant children, (d) been guilty of adultery, (e) is an habitual drunkard, (f) been convicted summarily of an aggravated assault upon her or convicted after a trial by jury of an assault upon her, (g) while knowingly suffering from a venereal disease insisted on sexual intercourse with her, and (h) compelled her to submit herself to prostitution. Any husband may apply to the Court on the grounds that his wife has been guilty of adultery or has been guilty of persistent cruelty to his children or that she is an habitual drunkard.

3. Desertion. Desertion has not been, and probably is not capable of being, exhaustively defined owing to the infinite variety of conduct and circumstances in married life. In any one case it is a question of fact in the light of the whole conduct of both parties. There must be conduct by the guilty party which is wilful and which is intended to bring and in fact brings to an end the whole marriage relationship (as distinct from the marriage tie) between the parties without the consent of the other party. Thus physical separation due to the necessities of earning a living does not constitute desertion, whilst desertion may occur when the parties are both living under one roof if the common household has been wilfully brought to an end by one party without the consent of the other. The wilful refusal of

sexual intercourse does not by itself constitute desertion, but may be an important element in assessing the conduct of the refusing party as a whole in order to determine whether there has been such a total disregard of the obligations of marriage as to amount to desertion. Generally the fact that the parties are living apart by agreement or *a fortiori* under the terms of a separation deed precludes desertion. The fact that one party left the matrimonial home does not by itself establish that that party deserted. The conduct of the party who remains in the matrimonial home may have been wilful and adopted for the purpose of making it impossible for the other party reasonably to remain in the matrimonial home, thus in effect driving that other party out, in which event the party who remains is the party guilty of desertion (sometimes called constructive desertion). Constructive desertion is committed by a husband who persists in an adulterous relationship with another woman in the matrimonial home if this conduct drives out his wife. Even if the adulterous relationship is being carried on by the husband elsewhere, his wife is not under a duty to remain in cohabitation and, if she leaves, the husband is guilty of desertion. A husband who is making his wife an allowance may still be guilty of desertion. Once begun, desertion continues until brought to an end by the guilty party, for instance by a reconciliation followed by resumption of cohabitation, but acts of intercourse during unsuccessful efforts to effect a reconciliation will not bring to an end the desertion. It is also brought to an end by a *bona fide* offer by the deserting party to resume cohabitation made in such circumstances that the other party could reasonably be expected to accept it, even though in fact the offer is refused. A refusal to accept a genuine offer to resume cohabitation, in the absence of any circumstances justifying the refusal, turns the party refusing into the position of being the party guilty of desertion. The existence of reasonable cause or excuse for one of the parties to separate from the other prevents the party who separates from being a deserter. Such cause or excuse need not amount to the commission of a matrimonial offence by the other party, but must be a grave and weighty matter, such conduct as makes it practically impossible for husband and wife to live properly together. Thus where a wife has so conducted herself as to give her husband reasonable ground for believing that she has committed adultery, and he does so believe at the time of the separation, does not make him a deserter.

4. Persistent Cruelty. An isolated act of cruelty such as a sudden act of violence is not sufficient. To be persistent cruelty must be part of a course of conduct which extends over a period of time, although a number of different acts need not necessarily be far apart. Conduct of such a character as to have caused danger to life, limb, or health either bodily or mental, or as to give reasonable apprehension of such danger, amounts

to cruelty. The conduct must consist of wilful acts which are unjustifiable, inflicting pain and misery on the other party and causing injury to health. Deliberate and persistent sulking or constant nagging of such a kind that it endangers the health of the other party may constitute cruelty. A course of conduct adopted by one party with the deliberate intention of wounding and humiliating the other party and composed of a long-continued series of minor acts, each of which by itself was not serious, may constitute cruelty. But mere neglect and want of affection does not amount to cruelty.

**5. Neglect to Maintain.** A wife has a right to maintenance as an incident of the status of marriage. The Court must be satisfied that the husband has had the means of maintenance or had the ability to earn money and has wilfully abstained from so doing so that the neglect is wilful and there is an element of matrimonial misconduct. A husband is not guilty of wilful neglect to maintain if the wife has left the matrimonial home without the existence of some grave and weighty matter of complaint which justifies her in leaving. When the parties are living apart under a separation deed the Court may still find neglect to provide reasonable maintenance if the financial position of the wife relevant to the husband has altered, even if the wife has undertaken not to claim maintenance through the courts so long as the payments provided in the deed are made. When the parties are living apart by mutual consent without any agreement as to maintenance the husband is not guilty of this offence until at any rate there has been a previous request for maintenance. A husband is liable to have an order made against him on the ground of wilful neglect to maintain the children of the marriage under the age of sixteen and committed to the custody of the wife, and also in similar circumstances children adopted by both parties.

**6. Adultery.** Adultery is a ground of complaint upon which either husband or wife may apply for a separation order provided the Court is satisfied by the party applying for the order that he or she has not condoned or connived at, or by his or her wilful neglect or misconduct condoned to, the adultery, and that the application is not made in collusion with the other party to the marriage or with the person with whom the adultery is alleged to have been committed. It is a valid defence to a claim by the wife for an order upon any ground that she has been guilty of adultery, provided that the husband has not condoned or connived at or by his wilful neglect or misconduct condoned to such adultery.

**7. Remedies—Separation Order and Custody of Children.** The Court may and will if the ground is satisfactorily established make an order which relieves the other party of the obligation to cohabit, commonly known as a "separation order." The order may be applied for by a wife even though she has not left her husband, but it is not enforceable by her so long as she continues to reside with her husband, and the order ceases to have effect if she continues to do so for three months after the making of the order. Moreover, if at the time of the making of the order the wife is living apart from her husband, or if she does so following the order, then if she resumes cohabitation the order ceases to have effect, although in certain circumstances it may be revived by the Court upon an application made for that purpose. When making the original order the Court may give the legal custody of the children of the marriage while under the age of sixteen to the applicant and also provide, as it thinks fit, for access to the children by the other party to the marriage.

**8. Remedies—Maintenance of Wife and Children.** The Court may order that the husband shall pay to the wife personally or to the Court or a third person on her behalf, a weekly sum not exceeding £5 for her maintenance and a weekly sum not exceeding thirty shillings for the maintenance of each child of the marriage (including children legally adopted by both spouses) whose custody has been committed to her, the payment to continue until the child reaches sixteen. The Court may on application of a wife made when the child reaches that age, and provided the child

is or will be engaged in a course of education or training after that age, order the continuance of the payments for a further period not exceeding two years, and may extend the period from time to time until the child reaches the age of twenty-one. All payments must be made without deduction of income tax. In assessing the amount of the wife's maintenance the means of the wife and in an appropriate case her earning capacity must be taken into account. The Court must be satisfied that the husband has means or is able to work to earn more than sufficient for his own maintenance. The amounts of maintenance may on the application of either husband or wife be increased or diminished from time to time. Payment may be enforced by making an application to the Court and proving the arrears, upon which the Court may issue a warrant of distress. If the Court is of the opinion, after inquiry, that the default in payment was due to the wilful refusal or culpable neglect of the husband, but not otherwise, the Court may issue a warrant of commitment for a period in no case exceeding three months. Arrears under an order may at any time be remitted by the Court in whole or in part.

**9. Jurisdiction and Hearing—Probation Officers.** The Magistrates' Court to which the application should be made is the court within the petty sessional division within which the cause of complaint shall have wholly or partially arisen or in which either party ordinarily resides, or, where the ground of application is one of the convictions referred to above, in which the conviction took place. The hearing is a domestic proceeding, and the court is cleared except for the parties, their legal representatives, and the Press, who may only report the names of the parties and their witnesses with a concise statement of the charges and defences and the decision and observations of the Court, but not the evidence. The Court may request a probation officer to investigate the means of the parties and direct the officer to report to the Court, but the report is not to be made to the Court until all issues arising in the proceedings other than the amount of an order has been determined. The report is made orally or in writing in the presence of both parties, each of whom may object to any of the probation officer's statements, in which event the probation officer is required to give evidence on oath. Further the Court may request a probation officer to attempt to effect a reconciliation between the parties. If he fails in his attempt he may, if he thinks fit, make a report to the Court containing the allegations by each party, but only if the party making the allegation agrees in writing to its inclusion. The probation officer must provide each party with a copy of the report. The Court may use the contents of the report for the purpose of questioning any witness, but may not treat the report itself as evidence. The Court has power to alter, vary, or discharge any order previously made between the parties, provided there is fresh evidence, that is, evidence which a party could not with reasonable diligence have found in time for the earlier hearing or as to facts which have happened since the earlier hearing.

**10. Guardianship of Infants.** Quite distinct from the power of a Magistrates' Court to make an order as to the custody of a child as part of the order made in domestic proceedings, as summarised above, the father or mother of an infant may apply to the High Court or the County Court or the Magistrates' Court of the district in which he or she lives for an order as to the custody of the child and as to the right of access thereto of either parent. This power is exercised under the Guardianship of Infants Acts 1836 and 1925. Application may be made notwithstanding that the parents are residing together. The Court is directed to regard the welfare of the infant as the first and paramount consideration, and is not concerned whether from any point of view the claims of the father are superior to the mother or vice versa. But where the welfare of the infant is not in question the Court may consider the conduct and wishes of each of the parents. If an order is made giving the custody to the mother the Court may, whether or not the parents are residing together, order that the father pay to the mother such weekly or other periodical sum as the Court, having regard to the means of the father,

thinks reasonable, so however that a Magistrates' Court may not award more than thirty shillings a week. The order, whether for custody of maintenance, is not enforceable and no liability accrues whilst the mother is residing with the father, and ceases to have effect at all if she continues so to reside for three months after it is made. An order may be varied or discharged by a subsequent order, even without fresh evidence.

11. Relation between Domestic Proceedings in the Magistrates' Court and Relief in the High Court. The relief obtainable by domestic proceedings in the Magistrates' Court is (apart from a decree of divorce or of nullity or of restitution) similar to but not identical with the relief which may be granted by the High Court. A decree of judicial separation may be granted by the High Court upon a petition on the ground of, *inter alia*, adultery, cruelty or desertion without cause for not less than three years. Upon the grant of such a decree the wife may apply to be maintained

by her husband under an order for permanent alimony. There is no fixed rule as to the amount which will be awarded to an innocent wife, but the order may be to pay the sum required to make up the wife's income to one-third of the joint incomes of husband and wife. On a decree for divorce the Court may order permanent maintenance in favour of the innocent wife. Again there is no fixed rule as to the amount, but the Court may adopt the same or some other proportion of the joint incomes, according to all the circumstances. The custody of, and access to, children of the marriage are matters which may be applied for and dealt with upon the making of a decree of divorce or judicial separation. The Court will treat the benefit and interest of the children as a paramount consideration, and not deprive a guilty party of the custody of the children merely as a means of punishment. Access is usually allowed to the party to whom the custody is not given.

## LAW OF INTESTACY (ENGLAND AND WALES)

The Administration of Estates Act, 1925, which came into effect on 1 January, 1926, completely changed the law of descent upon Intestacy. Prior to that Act the Statute of Distribution which had been in force since 1670 contained the rules prescribing what relatives were entitled to share the leaseholds and personal chattels of the intestate, and a different set of rules based upon the old canons of descent governed the descent of fee simple and entailed estates. Both systems were abolished by the Act of 1925. Section 45 of the Act abolished with regard to both real estate and personal inheritance: (1) all existing rules and canons of descent, including the custom of gavelkind, borough English; (2) tenancy by the curtesy and other estate and interest of a husband in real estate; (3) dower and free bench and other estate and interest of a wife (subject to certain exceptions); (4) escheat to the Crown or the Duchy of Lancaster or the Duke of Cornwall or to a mesne lord for want of heirs.

The new rules were designed to secure the same treatment of both personal (*i.e.*, leaseholds and chattels) and real (*i.e.*, land held in fee simple) property. Further, the general effect of the Act was to equalise the position of the husband and wife, as also of the parents. The parents were given a prior claim over the brothers and sisters of the deceased, and the "whole blood" over the "half blood." All relations more remote than uncles and aunts and issue of deceased ones did not share in the property.

The Intestates' Estates Act, 1952, which came into effect on 1 January, 1953, amends the Act of 1925, substituting new rules for the distribution of the estate of an intestate who dies after the commencement of the new Act. When there is a surviving spouse the "statutory legacy" (see below) is increased from £1000 to £5000 if the intestate has left issue, and from £1000 to £20,000 if the intestate has left no issue. The rules of distribution at present in force resulting from both Acts and applicable to an intestacy occurring on or after 1 January, 1953, are summarised in the tables following.

### I. If Intestate leaves a husband or wife and

- |  |  |
|--|--|
| (1) leaves no issue and no parent or brother or sister of the whole blood or issue of such brother or sister                               | the residuary estate is held in trust for the surviving husband or wife absolutely.  |
| (2) leaves issue (whether or not leaving a parent or parents, brother or sister of the whole blood or issue of such brother or sister)     | <p>(a) surviving husband or wife takes the whole of the personal chattels absolutely, and</p> <p>(b) the rest of the residuary estate is charged with payment to the surviving husband or wife of a net sum of £5000, free of death duties and costs, with interest payable primarily out of income from date of death at 4 per cent. per annum until payment or appropriated;</p> <p>(c) subject to the above charge the rest of the residuary estate is held—</p> <p>(i) as to one half upon trust for surviving husband or wife for life, and subject thereto on the statutory trusts for the issue of the intestate;</p> <p>(ii) as to the other half on the statutory trusts for the issue of the intestate.</p>  |
| (3) leaves no issue, but leaves one or more of the following: parent, brother or sister of whole blood, or issue of such brother or sister | <p>(a) surviving husband or wife takes the whole of the personal chattels absolutely, and</p> <p>(b) the rest of the residuary estate is charged with payment to the surviving husband or wife of a net sum of £20,000, free of death duties and costs with interest payable primarily out of income from the date of death at 4 per cent. per annum until payment or appropriated;</p> <p>(c) subject to the above charge the rest of the residuary estate is held—</p> <p>(i) as to one half upon trust for surviving husband or wife absolutely;</p> <p>(ii) as to the other half—</p> <p>(a) where intestate leaves one parent or both parents (whether or not brothers or sisters or their issue survive) in trust for the one parent absolutely or the two parents in equal shares absolutely;</p> <p>(b) where intestate leaves no parent on the statutory trusts for the brothers and sisters of the whole blood of the intestate.</p> |

Administration of Estates Act, 1925, Section 46 (1), as amended by Intestates' Estates Act, 1952, Section 1 (2).

II. If Intestate does not leave a husband or wife and

- (1) leaves issue the residuary estate of the intestate is held on the statutory trusts for the issue [1925 Act Sec. 46(1)(i)];
- (2) leaves no issue but leaves both parents the residuary estate of the intestate is held in trust for the parents in equal shares absolutely [1925 Act Sec. 46(1)(iii) amended by 1952 Act];
- (3) leaves no issue but leaves one parent the residuary estate of the intestate is held in trust for the surviving father or mother absolutely [1925 Act Sec. 46(1)(iv) amended by 1952 Act];
- (4) leaves no issue and no parent the residuary estate of the intestate is held on the statutory trusts for following persons living at the death of the intestate in order named: (i) brothers and sisters of the whole blood, (ii) brothers and sisters of the half blood, (iii) grandparents in equal shares (not on statutory trust), (iv) uncles and aunts being whole blood of a parent of the intestate, (v) uncles and aunts being half blood of a parent of the intestate [1925 Act Sec. 46(1)(v) amended by 1952 Act];
- (5) if no person takes an absolute interest by reason of the foregoing provisions The Crown or Duchy or Lancaster or Duke of Cornwall as *bona vacantia* in lieu of any right to escheat. Either of the above may provide for dependants (whether kindred or not) of the intestate and other persons for whom the intestate might reasonably have been expected to make provision [1925 Act Sec. 46(1)(vi)].

References to a child or issue living at the death of any person include a child *en ventre sa mere* at the death. [1925 Act Sec. 55(2).]

**STATUTORY TRUSTS.**—Sec. 47 of the 1925 Act prescribes the statutory trusts referred to above. They are as follows, namely in trust in equal shares for the issue of the intestate who are living at the death of the intestate and who attain twenty-one years or marry under that age. Similarly for all the issue of any child of the intestate who predeceases the intestate. Such issue to take through all degrees according to their stocks (in equal shares if more than one) the share which the parent would have taken if living at the death of the intestate. Hence a nephew and niece can only share if his or her parent be deceased, when the child takes the parent's share. [Sec. 47(1)(i).]

Any money paid by way of advancement to start in life or on the marriage of the child of the intestate will (unless there is a contrary intention expressed) be taken as paid out of the share the child would have taken if living at the death of the intestate. [Sec. 47(1)(iii).]

The personal representatives may allow any infant contingently interested to have the use and enjoyment of any personal chattels subject to reasonable conditions, and without being liable to account for consequential loss, *i.e.*, loss arising to a person from the culpable act or omission of another. [Sec. 47(1)(iv).]

If the trusts in favour of the issue of the intestate fail by reason of no child or other issue attaining an absolutely vested interest, then the residuary estate and the income, *etc.*, shall go as if the intestate had died without leaving issue living at the death of the intestate. [Sec. 47(2).]

Statutory trusts in relation to a person or persons other than the issue of the intestate (as, *e.g.*, in Table II (4) above) are to be construed as if such person or persons were substituted for the issue of the intestate.

**MATRIMONIAL HOME.**—Where the residuary estate comprises an interest in a dwelling-house in which the surviving husband or wife was resident at the time of the intestate's death the surviving husband or wife may during his or her life and within twelve months from the taking out of representation to the intestate's estate by a notice in writing to the personal representative require that the interest in the dwelling-house be appropriated towards the satisfaction of the surviving husband or wife's absolute interest in the intestate's estate. This right does not exist when the interest in the dwelling-house consists of either a tenancy which at the date of the death of the intestate would determine within two years, or a tenancy which the landlord by notice given after the death of the intestate could determine within the same time.

**HUSBAND OR WIFE'S LIFE INTEREST.**—On the death of a husband or wife after 1 January, 1953, leaving a wife or husband surviving entitled to a life interest in part of the residuary estate the survivor is entitled to elect to be paid the capital value of the life interest by the personal representative and the life interest thereupon ceases. The Act lays down rules for the determination of the capital value. [1952 Act Sec. 2.]

**DEATH OF HUSBAND AND WIFE** in circumstances rendering it uncertain which of them survived the other. By Law of Property Act, 1925, Section 184, the deaths are presumed to have taken place in order of seniority, so that the younger is deemed to have survived the elder. But for purposes of intestacy only the above presumption is excluded, so that the younger is not presumed to have survived the elder, with the result that if either husband or wife dies intestate his or her estate will be distributed as if there were no surviving spouse. [1952 Act Sec. 1(4).]

**PARTIAL INTESTACY.**—Where this occurs the surviving husband or wife must bring into account against the "statutory legacy" of £5000 or £20,000 referred to above, any beneficial interest taken under the will. [1925 Act Sec. 49 as amended by the 1952 Act Sec. 3.]

**COMPULSORY PROVISION.**—The Intestates' Estates Act also by Section 7 makes an innovation in the law as to intestacy by extending the provisions of the Inheritance (Family Provision) Act, 1938 (as amended), to cases where persons die intestate. That Act enables: (a) a wife or husband; (b) a daughter who has not been married, or who is by reason of some mental or physical disability, incapable of maintaining herself; (c) an infant son; (d) a son who is, by reason of some mental or physical disability, incapable of maintaining himself, to make an application to the Court on the ground that the disposition of the deceased's estate by his will or the law relating to intestacy or the combination of his will and that law, is not such as to make reasonable provision for the maintenance of the applicant, and the Court may make such reasonable provision as the Court thinks fit. No application may be made where the distribution of the estate is such that the surviving husband or wife is entitled to not less than two-thirds of the income of the net estate and where the only other persons who could apply, if any, is or are a child or children of the surviving husband or wife. [1938 Act Sec. 1(1) as amended by 1952 Act.]

The provision is by periodical payments not exceeding in the case of one applicant an annual rate exceeding the annual income of the net estate, but where the value of a deceased's net estate does not exceed £5000 the Court has power to order the provision of maintenance in whole or in part by way of a lump sum. [1938 Act Sec. 1(4) as amended by the 1952 Act.]

As a general rule, application must be made within six months from the date on which representation in regard to the deceased's estate is first taken out. [1938 Act Sec. 2(1).]

# THE ROYAL FAMILY

Showing the common descent of Queen Elizabeth and The Duke of Edinburgh from Queen Victoria and from Christian IX of Denmark.

# MODES OF ADDRESS TO PERSONS OF RANK

## ROYALTY.

### THE KING.

*Begin :* Sir, or May it please Your Majesty.  
*End :* I have the honour to remain, Sir, Your Majesty's most humble and obedient subject,  
*Address :* To The King's Most Excellent Majesty, or  
 To His Majesty The King.

### THE QUEEN.

*Begin :* Madam, or May it please Your Majesty,  
*End :* I have the honour to remain, Madam, Your Majesty's most humble and obedient servant,  
*Address :* To the Queen's Most Excellent Majesty, or  
 To Her Majesty The Queen.

### PRINCES AND PRINCESSES, DUKES AND DUCHESSSES OF THE BLOOD ROYAL.

*Begin :* Sir (or Madam),  
*End :* I have the honour to be, Sir (or Madam), Your Royal Highness's most humble and obedient servant,  
*Address :* To His (or Her) Royal Highness the Prince (or Princess) ———,  
 To His (or Her) Royal Highness the Duke (or Duchess) of ———.

## NOBILITY.

### DUKES AND DUCHESSSES.

*Begin :* My Lord Duke,  
*End :* I remain, my Lord Duke, Your Grace's most obedient servant,  
*Address :* To His Grace The Duke of ———, K.G., etc.  
*Begin :* Madam,  
*End :* I remain, Madam, Your Grace's most obedient servant,  
*Address :* To Her Grace The Duchess of ———.

### MARQUESSSES AND MARCHIONESSSES.

*Begin :* My Lord Marquess, or My Lord,  
*End :* I have the honour to be, my Lord Marquess (or my Lord), Your obedient servant,  
*Address :* To the Most Hon. The Marquess of ———,  
*Begin :* Madam,  
*End :* I have the honour to remain, Madam, Your Ladyship's obedient servant,  
*Address :* To The Most Hon. The Marchioness of ———.

### EARLS AND COUNTESSSES.

*Begin :* My Lord,  
*End :* I have the honour to remain, My Lord, Your Lordship's obedient servant,  
*Address :* To The Right Hon. the Earl of ———,  
*Begin :* Madam,  
*End :* I have the honour to remain, Madam, Your Ladyship's obedient servant,  
*Address :* To The Right Hon. The Countess of ———.

### VISCOUNTS AND VISCOUNTESSES.

*Begin and end as for Earls and Countesses.*  
*Address :* To The Right Hon. The Viscount ———,  
 To The Right Hon. The Viscountess ———.

### BARONS AND BARONESSSES.

*Begin and end as for Earls and Countesses.*  
*Address :* To The Right Hon. Lord ———,  
 To The Right Hon. Lady ———.

## BARONETS AND KNIGHTS.

*Begin :* Sir,  
*End :* I have the honour to remain, Sir, Your obedient servant,  
*Address :* To Sir Francis T——, Bt.  
*Begin :* Madam,  
*End :* I have the honour to remain, Madam, Your Ladyship's obedient servant,  
*Address :* To Lady T——.

## THE CHURCH.

### ARCHBISHOPS.

*Begin :* My Lord Archbishop, or Your Grace,  
*End :* I have the honour to be, my Lord Archbishop, Your Grace's devoted and obedient servant,  
*Address :* To His Grace the Lord Archbishop of ———,  
 Irish Archbishops are addressed in the same manner as English Archbishops with the exception of the Archbishop of Armagh, who is addressed : To The Most Reverend the Archbishop of Armagh, or To The Most Rev. His Grace The Lord Primate of all Ireland.

### BISHOPS.

All Bishops, whether Diocesan or Suffragan, are addressed by the spiritual title "Lord".  
*Begin :* My Lord, or My Lord Bishop.  
*End :* I have the honour to be, Your Lordship's obedient servant,  
*Address :* To The Right Reverend The Lord Bishop of ———.  
 It is usual to accord to Colonial Bishops the courtesy title of Lord Bishop and they are addressed in the same manner as English Bishops Assistant and retired Bishops are not addressed as Lord Bishop.

### DEANS.

*Begin :* Very Reverend Sir,  
*End :* I have the honour to remain, Very Rev. Sir, Your obedient servant,  
*Address :* To The Very Rev. The Dean of ———.

### ARCHDEACONS.

*Begin :* Venerable Sir,  
*End :* I have the honour to remain, Venerable Sir, Your obedient servant,  
*Address :* To The Venerable The Archdeacon of ———.

## THE LAW.

### LORD CHANCELLOR.

*Begin :* My Lord,  
*End :* I have the honour to be, My Lord, Your Lordship's obedient servant,  
*Address :* To The Right Hon. The Lord Chancellor.

### LORDS OF APPEAL IN ORDINARY.

*Begin and end as for Lord Chancellor.*  
*Address :* To The Right Hon. Lord ———.

### LORD CHIEF JUSTICE.

*Begin and end as for Lord Chancellor.*  
*Address :* To The Right Hon. The Lord Chief Justice of England.

### MASTER OF THE ROLLS.

*Begin :* Sir,  
*End :* I have the honour to be, Sir, Your obedient and humble servant,  
*Address :* To The Right Hon. The Master of the Rolls.

### LORDS JUSTICES OF APPEAL.

*Begin :* Sir,  
*End :* I have the honour to be, Sir, Your obedient and humble servant,  
*Address :* To The Right Hon. The Lord Justice ———.

## JUDGES.

*Begin:* Sir,

*End:* I have the honour to be, Sir, Your obedient and humble servant.

*Address:* To The Hon. Mr. —.

(On the bench the Judge is addressed and referred to as "My Lord," "His Lordship.")

## JUDGES OF COUNTY COURT.

*Begin:* Dear Judge —.

*Address:* To His Honour Judge —.

(On the bench addressed and referred to as "Your Honour," "His Honour.")

## JUSTICES OF THE PEACE.

*Address:* To The Right Worshipful —, J.P.

(On the bench addressed as "Your Worship.")

## LORD MAYORS.

*Begin:* My Lord,

*End:* Your Lordship's obedient servant.

*Address:* To The Right Hon. The Lord Mayor

of — (London, York, Belfast, Dublin, Adelaide, Brisbane, Hobart, Melbourne, Sydney, Perth).

To The Right Hon. The Lord Provost

of — (Edinburgh, Glasgow).

*Otherwise:* To The Right Worshipful The Lord Mayor of —.

Wives share the title, except in the case of the Australian cities.

*Address:* To The Right Hon. The Lady Mayoress of —.

## PRIVY COUNCILLORS.

The courtesy title of The Right Honourable is accorded all Privy Councillors (all members of the Cabinet are privy councillors, and the office is conferred for life). In the case of peers below the rank of Marquess, who already have a right to it in virtue of their peerage, the rank of Privy Councillor is indicated by the letters "P.C." after the name. Wives do not share the title.

*Address:* To The Right Hon. —.

To Admiral The Right Hon. Sir —.

To Colonel The Right Hon. —.

To Air Vice-Marshal The Right Hon.

Sir —.

To The Right Rev. The Right Hon.

The Lord Bishop of —.

To The Most Hon. The Marquess of —, P.C.

## BUSINESS LETTERS.

Business letters to persons of rank can either be written in the third person, in which case they are not signed, or in the first person plural.

## 3rd person.

Messrs. — present their compliments to The Right Hon. The Earl of — and have pleasure in. . . .

## 1st person plural.

*Begin:* Your Lordship,

*End:* We have the honour to be

Your Lordship's obedient servants,

## ORDERS OF CHIVALRY

## Garter

K.G.

The Most Noble Order of the Garter (1348).

*Ribbon:* Garter blue, not worn in undress uniform.

*Motto:* Honi soit qui mal y pense (*Evil to him who evil thinks*).

## Thistle

K.T.

The Most Noble and Most Ancient Order of the Thistle (1687).

*Ribbon:* Green, not worn in undress uniform.

*Motto:* Nemo me impune lacessit (*No one provokes me with impunity*).

## Saint Patrick

K.P.

The Most Illustrious Order of St. Patrick (1783).

*Ribbon:* Sky blue, not worn in undress uniform.

*Motto:* Quis separabit? (*Who shall separate?*).

## Bath

G.C.B. (Knight Grand Cross), (Mil. & Civ.).

K.C.B. (Knight Commander), (Mil. & Civ.).

C.B. (Companion), (Mil.).

The Most Honourable Order of the Bath (1399).

*Ribbon:* Crimson. *Motto:* Tria juncta in uno

(*Three joined in one*). (Remodelled 1725 and

1815, and enlarged 13 times since.)

## Order of Merit.

O.M. (Mil. & Civ.)

The Order of Merit (1902). *Ribbon:* Blue and

crimson. Ranks after G.C.B. before K.C.B.

## Star of India

G.C.S.I. (Knight Grand Commander).

K.C.S.I. (Knight Commander).

C.S.I. (Companion).

The Most Exalted Order of the Star of India

(1861). (Since enlarged 8 times.) *Ribbon:*

Light blue, with white edges. *Motto:* Heaven's

Light our Guide.

## Saint Michael and Saint George

G.C.M.G. (Knight Grand Cross).

K.C.M.G. (Knight Commander).

C.M.G. (Companion).

The Most Distinguished Order of St. Michael and

St. George (1818). *Ribbon:* Saxon blue, with

scarlet centre. *Motto:* Auspiciis melioris

ævi (*Token of a better age*).

## Indian Empire

G.C.I.E. (Knight Grand Commander).

K.C.I.E. (Knight Commander).

C.I.E. (Companion).

The Most Eminent Order of the Indian Empire

(1877). (Since enlarged 8 times.) *Ribbon:* Im-

perial purple. *Motto:* Imperatricis auspiciis

(*Under the auspices of the Empress*).

## Victorian Order

G.C.V.O. (Knight or Dame Grand Cross).

K.C.V.O. (Knight Commander).

D.C.V.O. (Dame Commander).

C.V.O. (Commander).

M.V.O. (Member).

The Royal Victorian Order (1896). *Ribbon:* Blue,

with red and white edges. *Motto:* Victoria.

## British Empire

G.B.E. (Knight or Dame Grand Cross).

K.B.E. (Knight Commander).

D.B.E. (Dame Commander).

C.B.E. (Commander).

O.B.E. (Officer).

M.B.E. (Member).

The Most Excellent Order of the British Empire

(1917). *Ribbon:* Rose pink edged with pearl

grey with vertical pearl stripe in centre (Mil.

Div.); without vertical stripe (Civ. Div.).

*Motto:* For God and the Empire.

## Companions of Honour

C.H.

Order of the Companions of Honour (1917).

*Ribbon:* Carmine, with gold edges. Ranks after

G.B.E. and before K.B.E.

## Victoria and Albert

V.A.

The Royal Order of Victoria and Albert (for

Ladies) (1862). (Since enlarged 3 times.)

## Crown of India

C.I.

The Imperial Order of the Crown of India (for

Ladies) (1878). *Ribbon:* Light blue watered

edged white, worn as bow on left shoulder.

## UNITED KINGDOM COINAGE

The Royal Mint is authorised to issue coins of the following denominations and specifications:—

Denomination.	Standard Weight.
<b>Gold:</b>	<b>Grains.</b>
Five Pound Piece . . . . .	616.37239
Two Pound Piece . . . . .	246.54895
Sovereign . . . . .	123.27447
Half Sovereign . . . . .	61.63723
<b>Cupro-Nickel:</b>	
Crown . . . . .	436.36363
Half-Crown . . . . .	218.18181
Florin . . . . .	174.54545
Shilling . . . . .	87.27272
Sixpence . . . . .	43.63636
<b>Silver:</b>	
Maundy Fourpence . . . . .	29.09090
Maundy Threepence . . . . .	21.81818
Maundy Twopence . . . . .	14.54545
Maundy Penny . . . . .	7.27272
<b>Nickel Brass:</b>	
Threepence . . . . .	105.00000
<b>Bronze:</b>	
Penny . . . . .	145.83333
Halfpenny . . . . .	87.50000
Farthing . . . . .	43.75000

**Gold Coinage** in Britain consists of eleven-twelfths of fine metal and one-twelfth of alloy: fineness, 916.66. Two hundred and forty troy ounces of standard gold are coined into 934 sovereigns and one half-sovereign; one troy ounce is, therefore, worth £3 17s. 10½d., and one ounce of pure gold is nominally worth £4 4s. 11½d. The minimum weight at which a sovereign is allowed to remain current unchallenged is 122½ grains; that of half-a-sovereign 61½ grains. Any person to whom it is tendered may break, cut, or deface any gold coin below the least current weight, but light gold coin which has not been illegally dealt with is received by the Bank of England on behalf of the Mint at its full face value.

**Cupro-Nickel.** The first change in the silver standard since the reign of Queen Elizabeth was made in 1920, when the degree of fineness was reduced to 500 parts in a thousand as against 925. 1946 marked the end of the silver coinage. To provide silver bullion for industry and for a fund towards the redemption of our silver debt to America the silver coins are to be withdrawn from circulation and gradually replaced by ones made of cupro-nickel, composed of 75% copper and 25% nickel. Maundy Money will, however, be raised to the original silver standard of 925 parts per 1000.

**Bronze** as employed in minting United Kingdom coins is an alloy of copper 95½ parts, tin 3 parts, and zinc 1½ parts.

**Nickel Brass.** The twelve-sided threepenny piece is composed of copper 79%, zinc 20%, and nickel 1%.

No person is permitted to coin any token to pass for, or as representing, any British piece of money under a penalty of £20.

**New Coinage.** A proclamation approving new designs for coinage was signed by H.M. the Queen in Council on November 25th, 1952. These coins became legal tender on January 1st,

1953, and include coin in gold as well as in silver, cupro-nickel, mixed metal, and bronze.

The principal design is that of the uncrowned head of Elizabeth II, which is the work of Mrs. Mary Gillick, C.B.E. This is used on the coinage of the United Kingdom, Canada, Australia, New Zealand, South Africa, Ceylon, and Southern Rhodesia, though the inscriptions vary in each country. The Queen is shown wearing a laurel wreath tied at the back with a flowing ribbon above two rows of curls at the nape of the neck. From 1st January, 1954, the inscription on the obverses of the cupro-nickel coins will read "ELIZABETH · II · DEI · GRATIA · REGINA" and on the obverses of the gold, silver, nickel-brass and bronze coins "ELIZABETH · II · DEI · GRATIA · REGINA · F · D ·".

The reverse sides of the coins are as follows:—

**Half-crown,** shield of the Royal Arms surmounted by the Crown; prepared by Mr. E. G. Fuller and modelled by Mr. Cecil Thomas, F.R.B.S.

**Florin,** circular pattern of thistles, shamrock, and leeks about a double rose. This is the first time a Welsh emblem has decorated the United Kingdom coinage as an integral part of the design; prepared by Mr. E. G. Fuller and modelled by Mr. Cecil Thomas, F.R.B.S.

**Shilling,** shield of the English quartering of the Royal Arms surmounted by the Crown; design prepared and modelled by Mr. W. M. Gardner. The Scottish shilling shows a shield of the Scottish quartering of the Royal Arms surmounted by the Crown; also designed and modelled by Mr. W. M. Gardner.

**Sixpence,** garland of interlaced rose, thistle, shamrock, and leek, designed by Mr. E. G. Fuller and modelled by Mr. Cecil Thomas, F.R.B.S.

**Threepenny piece,** chained portcullis surmounted by a coronet, designed and modelled by Mr. W. M. Gardner.

There is no change on the reverse of the bronze coinage (coppers), which will continue to bear, on the penny, the figure of Britannia, familiar since Charles II; on the half-penny, a sailing-ship inspired by the *Golden Hind*, designed by Mr. T. H. Paget, O.B.E., and on the farthing the wren of Mr. Wilson Parker.

The coins of Colonial territories, in accordance with tradition, bear the crowned head of the Sovereign, designed for the present Reign by Mr. Cecil Thomas, F.R.B.S.

The five-shilling pieces issued to commemorate the Coronation bore on the obverses an equestrian effigy of Her Majesty by Mr. Gilbert Ledward, R.A., and on the reverses a design by Mr. E. G. Fuller modelled by Mr. Cecil Thomas, F.R.B.S. of the four quarterings of the Royal Arms each contained in a shield and arranged in saltire with, in the intervening spaces, a rose, a thistle, a sprig of shamrock and a leek. Upon the edges of the coins was the inscription, "FAITH AND TRUTH I WILL BEAR UNTO YOU".

The designs specified for crown pieces issued after the 1st January, 1954 are Mrs. Gillick's uncrowned effigy for the obverses and the same design as shown on the reverses of the Coronation crown pieces for the reverses.

## LEGAL TENDER

**Bank of England Notes** are issued for sums of 10s. £1, and £5. 10s. and £1 bank-notes are legal tender in Great Britain and Northern Ireland, and £5 bank-notes (if dated September 2nd, 1944, or after) in England and Wales only. £5 notes dated prior to September 2nd, 1944, and all notes of higher denominations have ceased to be legal tender; they are, however, still exchangeable at the Bank.

**Gold Coins** if not below the minimum current weight, are legal tender; but, unless otherwise authorised by or on behalf of the Treasury, persons resident in the United Kingdom holding

sovereigns or other gold coin must, under the Exchange Control Act, 1947, offer that coin for sale to an Authorised Dealer.

**Silver and/or Cupro-Nickel Coins** are legal tender for sums not exceeding £2, nickel-brass threepenny pieces for sums not exceeding 2s., and bronze coins, including farthings, for sums not exceeding 1s. No one can demand "change".

**Treasury Notes** of the value of 10s. and £1, which were first issued during the First World War, ceased to be issued in November 1928; though no longer legal tender, they remain exchangeable at the Bank of England.

## PRESIDENTS OF THE UNITED STATES

The terms are for four years, and only President F. D. Roosevelt has served more than two terms.

George Washington	1789	Rutherford Birchard Hayes	1877
George Washington	1793	Gen. J. Abram Garfield (died Sept. 19, 1881)	1881
John Adams	1797	Gen. Chester A. Arthur (elected from Vice-President)	1881
Thomas Jefferson	1801	Grover Cleveland	1885
Thomas Jefferson	1805	General Benjamin Harrison	1889
James Madison	1809	Grover Cleveland	1893
James Madison	1813	W. McKinley	1897
James Monroe	1817	W. McKinley (assassinated same year)	1901
James Monroe	1821	Theodore Roosevelt (elected from Vice-Pres.)	1901
John Quincy Adams	1825	Theodore Roosevelt	1905
Andrew Jackson	1829	William Taft	1909
Andrew Jackson	1833	Dr. Woodrow Wilson	1913
Martin Van Buren	1837	Dr. Woodrow Wilson	1917
General Wm. Henry Harrison (died April 4)	1841	Warren G. Harding (died Aug. 2, 1923)	1921
John Tyler (elected from Vice-President)	1841	Calvin Coolidge (elected from Vice-Pres.)	1923
James Knox Polk	1845	Herbert Hoover	1929
General Zachary Taylor (died July 9, 1850)	1849	Franklin Delano Roosevelt	1933
Millard Fillmore (elected from Vice-Pres.)	1850	Franklin Delano Roosevelt	1937
General Franklin Pierce	1853	Franklin Delano Roosevelt	1941
James Buchanan	1857	Franklin Delano Roosevelt (died April 12, 1945)	1945
Abraham Lincoln	1861	Harry S. Truman (elected from Vice-President)	1945
Abraham Lincoln (assassinated April 14 same year)	1865	Harry S. Truman	1949
Andrew Johnson (elected from Vice-Pres.)	1865	Dwight David Eisenhower	1953
General Grant	1869		
General Grant	1873

# WEIGHTS AND MEASURES.

## I. WEIGHTS AND MEASURES LEGALLY PERMITTED UNDER THE WEIGHTS AND MEASURES ACTS.

### I. IMPERIAL WEIGHTS AND MEASURES.

#### AVOIRDUPOIS.

1 dram (dr.) . . . . .	27·34375 grains (gr.)
16 drams . . . . .	1 ounce (oz.) = 437·5 gr.
16 ounces . . . . .	1 pound (lb.) = 7000 gr.
14 pounds . . . . .	1 stone
28 pounds . . . . .	1 quarter
4 quarters . . . . .	1 hundredweight (cwt.) = 112 lb.
20 hundredweight . . . . .	1 ton = (2240 lb.)

#### TROY WEIGHT.

1 pennyweight (dwt.) . . . . .	24 grains
480 grains . . . . .	1 ounce

The only unit of troy weight which is now legal for use in trade in this country is the ounce Troy, and weighings of precious metals are made in multiples and decimals of this unit.

The term *carat* is not a unit of weight for precious metals, but is used to denote the quality of gold plate, etc., and is a figure indicating the number of 24ths of pure gold in the alloy, e.g., a 9 carat gold ring consists of nine parts of pure gold and fifteen parts of base metals.

#### CAPACITY MEASURE.

4 gills . . . . .	1 pint
2 pints . . . . .	1 quart
4 quarts . . . . .	1 gallon
2 gallons . . . . .	1 peck
4 pecks . . . . .	1 bushel
8 bushels . . . . .	1 quarter
36 bushels . . . . .	1 chaldron

There is no legal equivalent of the gallon in terms of cubic inches, but the most up-to-date scientific determination gives the figure 1 gallon = 277·420 cubic inches.

#### APOTHECARIES' WEIGHT.

20 grains . . . . .	1 scruple
3 scruples . . . . .	1 drachm
8 drachms . . . . .	1 ounce

While the apothecaries' ounce is the same as the troy ounce, there is no such thing as an apothecaries' or troy pound of 12 ounces. The troy pound has been obsolete for many years.

The Avoirdupois system is normally used for retailing chemicals in quantities of a  $\frac{1}{2}$  ounce and

over, whilst the metric system is used for the newer drugs. The metric system (with apothecaries' equivalents) is also used for formulae and prescriptions in the *British Pharmacopoeia*.

#### APOTHECARIES' FLUID MEASURE.

60 minims (min.) . . . . .	1 fluid drachm
8 fluid drachms . . . . .	1 fluid ounce
20 fluid ounces . . . . .	1 pint

(See under Customary Measures: "drop," "tablespoonful," "wineglassful," and "teacupful" equivalents.)

There are 437½ grains weight of distilled water at 62° F. in 1 fluid ounce.

#### LINEAR MEASURE.

1 nail . . . . .	$\frac{1}{4}$ yard
1 link . . . . .	7·92 inches
12 inches . . . . .	1 foot
3 feet . . . . .	1 yard
5½ yards . . . . .	1 rod, pole, or perch
4 rods, etc. . . . .	1 chain or 100 links (22 yd.)
220 yards . . . . .	1 furlong
8 furlongs . . . . .	1 mile = 1760 yards

#### SQUARE, SURFACE, OR LAND MEASURE.

144 sq. inches . . . . .	1 sq. foot
9 sq. feet . . . . .	1 sq. yard = 1296 sq. inches
30½ sq. yards . . . . .	1 sq. rod, pole, or perch
40 sq. rods . . . . .	1 rood
4 roods . . . . .	1 acre = 4840 sq. yards
640 acres . . . . .	1 sq. mile

(To convert decimal parts of an acre into roods and perches, multiply by 4 to give roods and decimals of a rood, and multiply this decimal by 40, to give perches and decimals of a perch.)

#### CUBIC OR SOLID MEASURE.

1728 cu. inches . . . . .	1 cu. foot
27 cu. feet . . . . .	1 cu. yard

The relationship between the yard and the bushel is not legally defined. A relationship (based on that of the gallon in "Capacity Measure" above) would be 1 cu. yard = 21·022 bushels.

## 2. METRIC WEIGHTS AND MEASURES.

#### LINEAR MEASURE.

10 millimetres (mm.) . . . . .	1 centimetre (cm.)
10 centimetres . . . . .	1 decimetre (dm.)
10 decimetres . . . . .	1 METRE (m.)
10 metres . . . . .	1 dekametre (dam.)
10 dekametres . . . . .	1 hectometre (hm.)
10 hectometres . . . . .	1 kilometre (km.)

#### SURFACE OR SQUARE MEASURE.

100 centiares . . . . .	1 are = 100 sq. metres
100 ares . . . . .	1 hectare = 10,000 sq. metres

#### CAPACITY.

10 millilitres (ml.) . . . . .	1 centilitre (cl.) = 10 c.c.
10 centilitres . . . . .	1 decilitre (dl.) = 100 c.c.

#### CAPACITY (cont.).

10 decilitres . . . . .	1 LITRE (lit.) = 1000 c.c.
10 litres . . . . .	1 dekalitre (dal.)
10 dekalitres . . . . .	1 hectolitre (hl.)
10 hectolitres . . . . .	1 kilolitre (kl.) = 1 cu. metre

#### WEIGHT.

10 milligrams (mg.) . . . . .	1 centigram (cg.)
10 centigrams . . . . .	1 decigram (dg.)
10 decigrams . . . . .	1 GRAM (gm.)
10 grams . . . . .	1 dekagram (dag.)
10 dekagrams . . . . .	1 hectogram (hg.)
10 hectograms . . . . .	1 kilogram (kg.)
The metric carat . . . . .	0·2 gram

## 3. IMPERIAL AND METRIC EQUIVALENTS.

#### LINEAR MEASURE.

##### IMPERIAL TO METRIC.

1 inch . . . . .	2·54 centimetres
1 foot . . . . .	30·48 centimetres
1 yard . . . . .	0·914399 metre
1 pole (5½ yards) . . . . .	5·0292 metres
1 chain (22 yards) . . . . .	20·1168 metres
1 furlong (220 yards) . . . . .	201·168 metres
1 mile (8 furlongs) . . . . .	1·6093 kilometres

##### METRIC TO IMPERIAL.

1 millimetre . . . . .	0·03937 inch
1 centimetre . . . . .	0·3937 inch
1 decimetre . . . . .	3·937 inches
1 metre . . . . .	39·370113 inches
1 metre . . . . .	3·280843 feet
1 metre . . . . .	1·0936143 yards
1 dekametre . . . . .	10·936 yards
1 hectometre . . . . .	109·36 yards
1 kilometre . . . . .	0·62137 mile

## SQUARE MEASURE.

## IMPERIAL TO METRIC.

1 sq. inch	6.4516 sq. cm.
1 sq. foot	9.2903 sq. decimetres
1 sq. yard	0.836126 sq. metre
1 sq. rod (30½ sq. yd.)	25.293 sq. metres
1 rood (40 sq. rods)	10.117 ares
1 acre (4,840 sq. yd.)	0.40468 hectare
1 sq. mile (640 acres)	259.00 hectares

## METRIC TO IMPERIAL.

1 sq. cm.	0.15500 sq. inch
1 sq. metre	10.7639 sq. feet
1 sq. metre	1.1960 sq. yards
1 are (100 sq. metres)	119.60 sq. yards
1 hectare (100 ares or 10,000 sq. metres)	2.4711 acres

## CUBIC MEASURE.

## IMPERIAL TO METRIC.

1 cu. inch	16.387 cu. cm.
1 cu. foot (1728 cu. in.)	0.028317 cu. metre
1 cu. yard (27 cu. ft.)	0.764553 cu. metre

## METRIC TO IMPERIAL.

1 cu. centimetre	0.0610 cu. inch
1 cu. decimetre (1000 cu. cm.)	61.024 cu. inches
1 cu. metre	35.3148 cu. feet
1 cu. metre	1.307954 cu. yards

## CAPACITY MEASURE.

## IMPERIAL TO METRIC.

1 gill	1.42 decilitres
1 pint	0.568 litre
1 quart	1.136 litres
1 gallon	4.5459631 litres
1 peck (2 gallons)	9.092 litres
1 bushel (8 gallons)	3.637 dekalitres
1 quarter (8 bushels)	2.909 hectolitres

## METRIC TO IMPERIAL.

1 centilitre	0.070 gill
1 decilitre	0.176 pint
1 litre	1.75980 pints
1 dekalitre	2.200 gallons
1 hectolitre	2.75 bushels

Note: One litre = 1000.027 c.c.; one millilitre = 1 c.c.

## APOTHECARIES' MEASURE.

## IMPERIAL TO METRIC.

1 minim	0.059 millilitre
1 fluid scruple	1.184 millilitres
1 fluid drachm (60 minims)	3.552 millilitres
1 fluid ounce (8 drachms)	2.84123 centilitres

## IMPERIAL TO METRIC.

1 pint	0.568 litre
1 gallon (8 pints or 160 fluid ounces)	4.5459631 litres

## AVOIRDUPOIS WEIGHT.

## IMPERIAL TO METRIC.

1 grain	0.0648 gram
1 dram	1.772 grams
1 ounce (16 drams)	28.350 grams
1 pound (16 ounces or 7000 grains)	0.45359243 kilogram
1 stone (14 lb.)	6.350 kilograms
1 quarter (28 lb.)	12.70 kilograms
1 cwt. (112 lb.)	50.80 kilograms = 0.5080 quintal
1 ton (20 cwt.)	1.0160 tonnes or 1016 kilograms

## METRIC TO IMPERIAL.

1 milligram	0.015 grain
1 centigram	0.154 grain
1 decigram	1.543 grains
1 gram	15.432 grains
1 dekagram	5.644 drams
1 hectogram	3.527 ounces
1 kilogram (1000 gm.)	2.2046223 lb. or 15.432.3564 grains
1 myriagram (10 kg.)	22.046 lb.
1 quintal (100 kg.)	1.968 cwt.
1 tonne (1000 kg.)	0.9842 ton

## TROY WEIGHT.

## IMPERIAL TO METRIC.

1 grain	0.0648 gram
1 pennyweight (24 grains)	1.5552 grams
1 troy ounce (20 pennyweights)	31.1035 grams

## METRIC TO IMPERIAL.

1 gram	0.03215 ounce troy
1 gram	15.432 grains

## APOTHECARIES' WEIGHT.

## IMPERIAL TO METRIC.

1 grain	0.0648 gram
1 scruple (20 grains)	1.296 grams
1 drachm (3 scruples)	3.888 grams
1 ounce (8 drachms)	31.1035 grams

## METRIC TO IMPERIAL.

1 gram	0.2572 drachm
1 gram	0.7716 scruple
1 gram	15.432 grains

## II. ELECTRICAL UNITS.

Until 31st December, 1947, the electrical units in general use were the so-called International Units, having been defined by the International Conference on Electrical Units held in London in 1908. These units were based upon specifications for a column of mercury and a silver voltameter which defined the International Ohm and International Ampere respectively, as units which for practical purposes could be accepted as equivalent to the fundamental theoretical units derived by multiplying the corresponding centimetre, gram, second (C.G.S.) electromagnetism unit by an integral power of ten. The International Units were not exactly equal to the fundamental units, and as the accuracy of all measurements increased, the discrepancy became increasingly troublesome.

The International Committee of Weights and Measures, which had succeeded the 1908 Conference, met in Paris in 1946 and decided to abolish

the International Units, and as from 1st January, 1948, to use throughout the world the fundamental units themselves, which are known as Absolute Units. The decision meant that the units in common use at that time changed by various amounts up to 5 parts in 10,000.

The International Units and corresponding Absolute Unit values are as follows:—

**OHM.** The International Ohm is the resistance offered to an unvarying current by a column of mercury of height 106.3 cm., 1 sq. mm. cross-section and weight 14.4521 grams at the temperature of melting ice (0° C.).

1 International Ohm = 1.00049 Absolute Ohm.

1 Absolute Ohm = 10<sup>9</sup> C.G.S. electromagnetic units.

1,000,000 Ohms = 1 Megohm.

**AMPERE.** The International Ampere is that steady current which in flowing through a specified solution of silver nitrate, deposits silver on the cathode at the rate of 0.001118 gram per second.

1 International Ampere = 0.99985 Absolute Ampere.

1 Absolute Ampere = 0.1 C.G.S. electromagnetic unit.

**VOLT.** The International Volt is that steady electromotive force which applied to the ends of a conductor, whose resistance is 1 International Ohm, causes a current of 1 International Ampere to flow.

1 International Volt = 1.00034 Absolute Volt.

1 Absolute Volt =  $10^9$  C.G.S. electromagnetic units.

1000 volts = 1 Kilovolt.

**WATT.** Energy is supplied to a circuit at the rate of 1 International Watt if the current in it is 1 International Ampere and the pressure across it is 1 International Volt.

1 International Watt = 1.00019 Absolute Watt.

1000 watts = 1 Kilowatt.

1 Kilowatt-hour = 1000 watts supplied for a period of 1 hour = Board of Trade Unit.

**COULOMB.** The unit of quantity, and is the quantity passing in 1 second when the mean current is 1 ampere.

1 Coulomb = 0.1 electromagnetic unit.

**HENRY.** The unit of inductance, defined as the inductance of a circuit in which the induced electromotive force is 1 volt when the inducing current changes at the rate of 1 ampere per second.

1 International Henry = 1.00049 Absolute Henry.

1 Absolute Henry =  $10^9$  C.G.S. electromagnetic units.

**FARAD.** The unit of capacity, and is that capacity which is charged to a difference of pressure of 1 volt by 1 coulomb.

1,000,000 microfarads = 1 farad.

1 International Farad = 0.99951 Absolute Farad.

1 Absolute Farad =  $10^9$  C.G.S. electromagnetic unit.

The earliest fully-developed factory-mark is that of late-16th-century Italian porcelain made at Florence, but it was not until 1724, when the Meissen factory adopted the crossed swords from the arms of Saxony, that the practice was generally taken up by most pottery factories worthy of note.

In 1766 French manufacturers were compelled by law to mark their products with a mark previously registered with the police, but elsewhere marks similar to those of the reputable factories

were adopted. Many factories used marks designed to look like the crossed swords of Meissen, whilst the English factories of Bow, Lowestoft, Derby, and Worcester made no attempt to disguise their occasional use of the device.

Many initials and numerals often found on porcelain are no aid to the identification of its place of manufacture and are merely the mark of a workman for factory or record purposes, pattern or mould numbers. The safest mark to accept as genuine is that which has been incised or

Drawn by J. P. Cushion, Victoria and Albert Museum.

stamped in the paste before firing and subsequently glazed.

The most widely used method of marking wares during the 18th century was by painting or printing in underglaze-blue which is generally accepted as authentic, but all painted, printed, or stencilled marks applied over the glaze could be added to a piece with the intention of deceiving. Any refiring of old wares is generally revealed by black specks in the glaze.

German porcelain of the eighteenth century particularly lends itself to forgery due to the hard-paste material then used still being available, and reproductions were made throughout the 19th century, but all tend to have an over-clean finish not in keeping with the original. Chelsea wares were also widely copied but owing to the soft-paste used for their manufacture are far easier to detect when produced in the harder material. See also Porcelain, p. 664.

## HOW TO CORRECT PRINTERS' PROOFS

Marginal mark	Meaning	Corresponding mark in text
	Delete (take out)	Cross through
	Delete and close-up	 Above and below letters to be taken out
<i>stet</i>	Leave as printed (when words have been crossed out by mistake)	 Under letters or words to remain
<i>caps</i>	Change to capital letters	 Under letters or words to be altered
<i>s. c.</i>	Change to small capitals	 Under letters or words to be altered
<i>caps &amp; s. c.</i>	Use capital letters for initial letters and small capitals for rest of words	 Under initial letters and  under the rest of the words
<i>l. c.</i>	Change from capitals to lower case	Encircle letters to be altered
<i>bold</i>	Change to bold type	 Under letters or words to be altered
<i>ital.</i>	Change to italics	 Under letters or words to be altered
<i>rom.</i>	Change to roman type	Encircle words to be altered
<i>w. f.</i>	(Wrong fount.) Replace by letter of correct fount	Encircle letter to be altered
	Invert type	Encircle letter to be altered
<i>x</i>	Replace by similar but undamaged character	Encircle letter to be altered
<i>7</i>	Insert (or substitute) superior figure or sign	 (Or encircle letters or signs to be altered)
<i>7</i>	Insert (or substitute) inferior figure or sign	 (Or encircle letters or signs to be altered)
	Close-up—delete space between letters	 Linking words or letters
<i>#</i>	Insert space	
<i>eq. #</i>	Make spacing equal	 Between words
<i>less #</i>	Reduce space	 Between words
<i>trs.</i>	Transpose	 Between letters or words, numbered when necessary
<i>centre</i>	Place in centre of line	Indicate position with 
	Move to the left	
	Move to the right	
<i>n. p.</i>	Begin a new paragraph	Before first word of new paragraph
<i>run on</i>	No fresh paragraph here	 Between paragraphs
<i>spell out</i>	The abbreviation or figure to be spelt out in full	Encircle words or figures to be altered
	(Caret mark.) Insert matter indicated in margin	
<i>“ ”</i>	Insert single quotation marks	
<i>“ ”</i>	Insert double quotation marks	

## ELECTRICITY METERS

## Two Types.

1. Clock dials of the same type as a gas meter. Read from left. If pointer is between two

numbers, read the lower. Take no reading of smaller dials if any. Above example is reading 5947.

2. Cyclometer dials on which figures appear in

openings; each dial (except units dial) moves one figure for a complete revolution of the dial to the right.

Read from the left. If two figures are showing in units opening, read the lower. Take no notice of smaller or red dials if they appear in conjunction with the others; these are for testing purposes only. Above example is reading 5947.

## GAS METER

The top dial is only used as a test dial, and has nothing to do with the record of gas consumed.

Dial.	One Complete Revolution of Hand Records.	Each figure, 1 to 9, on Dial Records.
A.	1,000,000 cubic feet.	100,000 cubic feet.
B.	100,000 ..	10,000 ..
C.	10,000 ..	1,000 ..
D.	1,000 ..	100 ..

Commencing with dial A, write down the

smaller of the two figures between which each of the hands is standing, unless the hand is between 9 and 0, when put down 9.

Add 00 after the figures so set down, and you have the present state of the index.

Deduct the state of the index previously recorded, and you have the figures representing the consumption of gas since the last reading. The accompanying index reads 701,500. If the reading a month before had been 640,600, the consumption during the month would have been 60,900 cubic feet.

## THE MEANING OF "A THERM."

A Therm is 100,000 British Thermal Units (B.Th.U.).

A British Thermal Unit is the quantity of heat required to raise the temperature of 1 lb. of water 1 degree Fah.

The number of Therms in 1,000 cubic feet of gas of 500 B.Th.U. per cubic foot =

$$\frac{1000 \text{ cubic feet} \times 500 \text{ B.Th.U.}}{100,000} = 5 \text{ Therms.}$$

The number of cubic feet of gas that will produce one Therm =

$$\frac{100,000}{500} = 200 \text{ cubic feet.}$$

## EASTER DAY

Falls on the first Sunday after the full moon following the vernal equinox. The rule fixing the date of Easter refers not to the true full moon but to an ecclesiastical imaginary moon, which is generally a day or two ahead of the true full moon. (See Easter, Gen. Inf.)

## BANK AND PUBLIC HOLIDAYS

In *England, Wales, N. Ireland and The Channel Islands* it is ordained that the Bank Holidays shall be: Easter Monday, Whit Monday, first Monday in August, Boxing Day (first weekday after Christmas).

*N. Ireland and the Irish Republic* have in addition a special Bank Holiday on St. Patrick's Day, March 17th.

The Stock Exchange is closed on Bank Holidays.

	1956.	1957.
Easter Monday . . . . .	Apr. 2	Apr. 22
Whit Monday . . . . .	May 21	June 10

Good Friday, January 1st and on Saturdays throughout the year.

The Queen's birthday (when decreed) is observed in the Customs and certain other Government establishments as a holiday.

In *Scotland* it is enacted that the Bank Holidays observed shall be: New Year's Day, first Monday in May, first Monday in August. There are also special Spring and Autumn holidays in Edinburgh and Glasgow.

	1956.	1957.
1st Monday in Aug. . . . .	Aug. 6	Aug. 5
Boxing Day . . . . .	Wed. Dec. 26	Thurs. Dec. 26

## THE SEASONS

1956.  
Vernal Equinox—Spring begins Mar. 20, 3 p.m.  
Summer Solstice—Summer begins June 21, 10 a.m.  
Autumnal Equinox—Autumn begins Sept. 23, 2 a.m.  
Winter Solstice—Winter begins Dec. 21, 9 p.m.

1957.  
Vernal Equinox—Spring begins Mar. 20, 9 p.m.  
Summer Solstice—Summer begins June 21, 4 p.m.  
Autumnal Equinox—Autumn begins Sept. 23, 7 a.m.  
Winter Solstice—Winter begins Dec. 22, 3 a.m.

(All the above times are in G.M.T.)

## BRITISH GAME, FISH AND SPORTING SEASONS

Black Game, from August 20 to December 10; but in Somerset, Devon, and New Forest, from September 1 to December 10.  
Buck-hunting—August 20 to September 17.  
Bustard—September 1 to March 1.  
Red Deer hunted—August 20 to September 30.  
Male Deer (Ireland)—October 20 to June 10.  
Fallow Deer (Ireland)—June 20 to Michaelmas.  
Eels—Seasons vary according to whether fishing by rods, baskets, traps, etc.  
Fox-hunting—November to Lady Day.  
Fox Cubs—August 1 to first Monday in November.  
Grouse-shooting—August 12 to December 10.  
Hare-hunting—October 1 to February 27.  
Hare-coursing—Between September and March.  
Hind—Hunted in October and again between April 10 and May 20.  
Moor Game (Ireland)—August 20 to December 10.

Oyster (deep sea)—August 5 to June 14; (other than deep sea)—August 5 to May 13.  
Partridge-shooting—September 1 to February 1.  
Pheasant-shooting—October 1 to February 1.  
Ptarmigan—August 12 to December 10.  
Quail—Season varies in different parts; some areas give protection throughout year.  
Rabbits—Between October and March.  
Salmon—Seasons controlled by River Boards and vary from place to place; (rod-fishing)—about February to October.  
Trout—Seasons controlled by River Boards and vary from place to place; about April 1 to September 30.  
Woodcock—Season varies in different parts; in certain places complete protection throughout year.

Game in England—Hare, pheasant, partridge, grouse, and moor fowl.

Game in Ireland—Same as England, with the addition of deer, black game, landrail, quail, and bustard.

Game in Scotland—Same as England, with the addition of ptarmigan.

## ENGLISH LAW SITTINGS

	1956.	1957.		1956.	1957.

Reproduced from the Nautical Almanac by permission of the Controllor of H.M. Stationery Office.

ONE HOUR must be ADDED to the above times when SUMMER TIME is in operation.  
 LIGHTING-UP TIME is from 1 hour after local sunset to 1 hour before local sunrise during SUMMER TIME and from  $\frac{1}{2}$  hour after local sunset to  $\frac{1}{2}$  hour before local sunrise during the remainder of the year.

THE UNION JACK

The present Union Jack is composed of three heraldic crosses, viz., the cross of St. Andrew, forming the blue and white basis; upon which lies the red and white cross of St. Patrick; and upon the whole rests the red and white cross of St. George, dividing the flag vertically and horizontally. The original Union Jack combined only the St. George and St. Andrew crosses and was adopted in 1606 by order of James I. who as James VI. of Scotland succeeded to the throne of England in 1603. No further alteration was made in the flag until January 1st, 1801, when the Irish Parliament was dissolved and the Act of Union came into force.

It is flown on the following days on Government and Public buildings (from 8 a.m. to sunset):—

Feb. 6 (1952)	H.M. the Queen's Accession.	Aug. 4 (1900)	Birthday of H.M. Queen Elizabeth the Queen Mother.
Mar. 31 (1900)	Duke of Gloucester's Birthday.	" 15 (1950)	Princess Anne's Birthday.
Apr. 21 (1926)	Birthday of H.M. the Queen.	" 21 (1930)	Princess Margaret's Birthday.
" 25 (1897)	Princess Royal's Birthday.	Nov. 14 (1948)	Prince Charles' Birthday.
May 24	Empire Day.	" 20 (1947)	The Royal Wedding Day.
June 2 (1953)	Coronation Day.		
" 10 (1921)	Duke of Edinburgh's Birthday.		

and on the occasion of the "official" Queen's birthday, Remembrance Day and the opening and closing of Parliament by the Queen.

The *Royal Standard* is hoisted on buildings in which Her Majesty the Queen is actually present.

THE BEAUFORT SCALE OF WIND FORCE

Beaufort number	Wind	Effect on land	Speed	
			M.p.h.	Knots
0	Calm	Smoke rises vertically	Less than 1	Less than 1
1	Light air	Direction shown by smoke but not by wind vanes	1-3	1-3
2	Light breeze	Wind felt on face; leaves rustle; wind vanes move	4-7	4-6
3	Gentle breeze	Leaves and twigs in motion; wind extends light flag	8-12	7-10
4	Moderate breeze	Raises dust, loose paper and moves small branches	13-18	11-16
5	Fresh breeze	Small trees in leaf begin to sway	19-24	17-21
6	Strong breeze	Large branches in motion; whistling in telegraph wires; difficulty with umbrellas	25-31	22-27
7	Moderate gale	Whole trees in motion; difficult to walk against wind	32-38	28-33
8	Fresh gale	Twigs break off trees; progress impeded	39-46	34-40
9	Strong gale	Slight structural damage occurs; chimney pots and slates blown off	47-54	41-47
10	Whole gale	Trees uprooted and considerable structural damage	55-63	48-56
11	Storm	Widespread damage, seldom experienced in England	64-75	57-65
12	Hurricane	Winds of this force only encountered in tropical revolving storms	Above 75	Above 65

## THERMOMETER COMPARISONS

Centigrade, 100°	Fahrenheit, 212°	Centigrade, 100°	Fahrenheit, 212°
95	203	20	68
90	194	15.5	60
85	185	12.8	55
78.9	174	10	50
75	167	7.2	45
70	158	5	41
65	149	1.7	35
60	140	0	32
55	131	- 1.1	30
52.8	127	- 5	23
50	122	- 6.7	20
45	113	- 10	14
42.2	108	- 12.2	10
40	104	- 15	5
36.7	98	- 17.8	0
35	95	- 20	- 4
32.2	90	- 25	- 13
30	86	- 30	- 22
26.7	80	- 35	- 31
25	77	- 40	- 40

To reduce Fahrenheit to Centigrade, subtract 32 degrees and multiply by 5/9; to reduce Centigrade to Fahrenheit, multiply by 9/5 and add 32 degrees.

## UNIVERSITY DEGREES—COLOURS OF HOODS

## Aberdeen

M.A.	Black corded silk lined with white silk and edged round cape and cowl.
D.Litt.	Scarlet superfine cloth lined with white silk.
B.D.	Black corded silk lined with purple silk.
D.D.	Scarlet superfine cloth lined with purple silk.
B.L.	Black corded silk edged with light blue silk.
LL.B.	Black corded silk lined with light blue silk.
LL.D.	Scarlet superfine cloth lined with light blue silk.
M.B., Ch.B.	Black corded silk lined with crimson silk.
Ch.M.	White corded silk lined with crimson silk.
M.D.	Scarlet superfine cloth lined with crimson silk.
B.Sc.	Black corded silk lined with green silk.
D.Sc.	Scarlet superfine cloth lined with green silk.
B.Sc.(Agric.)	Black corded silk edged with green silk.
B.Sc.(Eng.)	Black corded silk with green and white silk.
B.Sc.(For.)	Black corded silk with waved green silk edging.
B.Com.	Black corded silk edged with lilac silk.
Ph.D.	Scarlet superfine cloth lined with black ribbed silk.

*Note:*—All the hoods of this university are of the full type, with rounded capes, but have no lipripe to the cowl or hood portion proper.

## Belfast, The Queen's University

B.A.	Black ribbed silk edged with white fur and the neck edged with watered blue silk.
M.A.	Black ribbed silk lined and edged with watered blue silk.
D.Litt.	Scarlet superfine cloth lined with white silk and edged with watered blue silk.
B.D.	Black ribbed silk lined with white silk and edged with watered blue silk.
D.D.	Scarlet superfine cloth lined with black silk and edged with watered blue silk.
LL.B.	Black ribbed silk lined with pink silk and edged with watered blue silk.
LL.D.	Scarlet superfine cloth lined with pink silk and edged with watered blue silk.
M.B., B.Ch., B.A.O., M.Ch.	Black ribbed silk lined with scarlet silk and edged with watered blue silk.
M.D.	Ribbed red silk lined with white silk and edged with watered blue silk.
M.A.O.	Scarlet superfine cloth lined with scarlet silk and edged with watered blue silk.
B.Mus.	Black ribbed silk lined with purple silk and edged with watered blue silk.
D.Mus.	Blue silk lined with white silk and edged with watered blue silk.
Ph.D.	Scarlet superfine cloth lined with blue silk and edged with watered blue silk.
B.Sc.	Scarlet superfine cloth lined with violet silk and edged with watered blue silk.
M.Sc.	Black ribbed silk lined with green silk and edged with watered blue silk.
D.Sc.	Ribbed red silk lined with green silk and edged with watered blue silk.
B.Sc.(Econ.)	Scarlet superfine cloth lined with green silk and edged with watered blue silk.
M.Sc.(Econ.)	Black ribbed silk lined with rose pink silk and edged with watered blue silk.
B.D.S.	Rose pink silk lined with white silk and edged with watered blue silk.
B.Agric.	Black ribbed silk lined with grey silk and edged with watered blue silk.
M.Agric.	Black ribbed silk lined with yellow silk and edged with watered blue silk.
	Red ribbed silk lined with yellow silk and edged with watered blue silk.

*Note:*—Bachelors' and Masters' hoods are of the simple shape and Doctors' of the full shape. All the hoods have the neck portion at least edged with the pale blue watered silk peculiar to this University.

## Birmingham

B.A.	Black ribbed silk lined for 3" with watered electric blue.
M.A.	Black ribbed silk fully lined with watered electric blue.
B.D.	Black ribbed silk lined with watered cobalt blue.
D.D.	Scarlet superfine cloth lined with watered cobalt blue.
LL.B.	Black ribbed silk lined for 3" with watered bronze green silk.
LL.M.	Black ribbed silk fully lined with watered bronze green silk.
LL.D.	Scarlet superfine cloth lined with watered bronze green silk.

M.B., Ch.B.	Black ribbed silk lined for 3" with watered cardinal silk.
Ch.M.	Black ribbed silk fully lined with watered cardinal silk.
M.D.	Scarlet superfine cloth lined with watered cardinal silk.
B.Mus.	Black ribbed silk lined for 3" with watered orange silk.
D.Mus.	Scarlet superfine cloth lined with watered orange silk.
Ph.D.	Crimson cloth, lined with the watered silk of the Faculty.
B.Sc.	Black ribbed silk lined for 3" with watered grey silk.
M.Sc.	Black ribbed silk fully lined with watered grey silk.
D.Sc.	Scarlet superfine cloth lined with watered grey silk.
D.Litt.	Scarlet superfine cloth lined with watered electric blue silk.
B.D.S.	Black ribbed silk lined for 3" with watered dark red silk.
M.D.S.	Black ribbed silk fully lined with watered dark red silk.
B.Com.	Black ribbed silk lined for 3" with watered terra-cotta silk.
M.Com.	Black ribbed silk fully lined with watered terra-cotta silk.
B.Soc.Sc.	Follow the scheme for Bachelors and Masters above with 3" of the watered silk of the Faculty.
M.Soc.Sc.	

*Note:*—All hoods are of the full shape, similar to London, all the capes having well-rounded corners.

## Bristol

B.A.	All hoods are of the full shape, similar to Cambridge. No scarlet superfine cloth is used. All hoods are made of the University's special red stuff or silk. All Bachelor's hoods are partly lined with a silk of a somewhat lighter shade than the outside. All Masters' hoods are fully lined with white silk, and all Doctors' are fully lined with salmon coloured silk. The M.B., Ch.B. hood is an exception and is fully lined with light red silk and is edged inside the hood proper with $\frac{1}{2}$ " of white silk. The Ph.D. hood is of red silk fully lined with dark violet silk.
M.A.	[This is an unconventional system.]

B.D.S.	Black, Crimson bordered with Ivory Fur.
M.D.S.	Black, Crimson bordered with Ivory Fur.
B.Com.	Black, Primrose Yellow, Fur.
B.Ed.	Black, Blue and Fur.

*Note*.—All hoods are of the simple shape and are worn back to front; all are lined with silk of the Faculty colour, Bachelors' being edged with white fur as well. Some of the Doctors' hoods (e.g. M.D.) have a sewn on cape of crimson silk as well.

## Exeter

B.A.	Dove grey cloth edged with Faculty colour art. silk.
M.A.	Dove grey cloth lined with Faculty colour art. silk.
D.Litt.	Scarlet superfine cloth lined with dove grey cloth.
LL.B.	Dove grey cloth edged with Faculty colour art. silk.
LL.M.	Dove grey cloth lined with Faculty colour art. silk.
LL.D.	Scarlet superfine cloth lined with dove grey cloth.
B.Sc.	Dove grey cloth edged with Faculty colour art. silk.
M.Sc.	Dove grey cloth lined with Faculty colour art. silk.
D.Sc.	Scarlet superfine cloth lined with dove grey cloth.
B.A. (Social Studies).	Dove grey cloth edged with Faculty colour art. silk.
M.A. (Social Studies).	Dove grey cloth lined with Faculty colour art. silk.
Ph.D. (all Faculties).	Dove grey cloth lined with scarlet cloth.

The Faculty colours are:—

Arts	Kingfisher blue.
Law	Purple.
Science	Turquoise blue.
Social Studies	Dark blue.

*Note*.—All bachelors have theological college style hoods, unlined, all the seams show, and the hood proper is merely edged with the Faculty colour 2" both inside and outside the cowl portion. All Doctors' hoods (incl. Ph.D.) are very heavy, being made of cloth and fully lined with cloth—no silk. All hoods are of the full shape similar to Cambridge. The Ph.D. hood is the Higher Doctors' hood inside out.

## Glasgow

M.A.	Black and Purple.

B.D.S.	Black, Green and Scarlet cloth border.
B.V.M.S.	Black and Green.
M.V.S.	Black, Terra-cotta and Scarlet cloth border.
D.V.M.	Black and Terra-cotta.
B.Ed.	Black, Blue and Scarlet cloth border.

*Note*.—All hoods are of the full shape with well-rounded capes.

## Hull

B.A.	All hoods are lined throughout with the University silk, a turquoise blue taffeta.
M.A.	All Bachelors' hoods (other than B.D. and B.Mus.) are of black ribbed rayon, of the improved Oxford Burgon shape. The B.D. is of black superfine cloth of the same shape as the Doctors'. The B.Mus. is of the same shape as the B.A., LL.B. and B.Sc., but is of cream figured damask silk.
D.D.	The Ph.D. is of claret coloured cloth.
LL.B.	The D.Mus. is of the same shape as the Doctors' (i.e. of the improved Oxford Doctors' shape) but is of cream figured damask silk.
LL.M.	All the Higher Doctors' hoods are of scarlet superfine cloth with semi-circular cape of the improved Oxford Doctors'. The necks of all hoods are cut in one piece with a single central seam and no neck bands are let in. Edging of all hoods is forbidden except that Masters' hoods are ordered to be edged 1" with the lining silk (turquoise blue) round the cape portion only: all Masters' hoods are of the London shape, with well-rounded cape.

## Southampton

Faculty colours:—

Arts	Mid-cerise
Law	Blue (Univ. silk)
Science	Rich gold
Engineering	Orange
Economics	Light green
Education	White
B.A.	All hoods are lined throughout with the University silk, a peacock blue. All Bachelors' hoods are of black ribbed rayon of the improved Oxford Burgon shape. The cowl portion only is edged inside and outside with ½" of the Faculty colour, except in Law, in which case the lining is turned over ½" on to the outside to form the edging, and B.A.(Law) which has an added edging of mid-cerise of ½" on the outside of the cowl portion. All Masters' hoods are of the London shape, but with well rounded cape, the cowl portion is edged ½" inside and outside with the Faculty colour except LL.M., in which case the lining silk is turned over ½" on the outside to make the edging. The cape of Masters' hoods is edged ½" with the peacock-blue lining silk. All Ph.D. hoods are of claret-coloured cloth fully lined with peacock-blue silk. All the Higher Doctors' hoods are of scarlet superfine cloth fully lined with peacock-blue silk. All Doctors' hoods (incl. Ph.D.) are of the improved Oxford D.D. shape. Neck bands are prohibited for all hoods, the neck of which must be cut on the curve in one piece with a single central seam.

USEFUL FACTORS

$$\begin{aligned}(a+b)^2 &= a^2 + 2ab + b^2 \\ (a-b)^2 &= a^2 - 2ab + b^2 \\ a^2 - b^2 &= (a+b)(a-b) \\ a^3 + b^3 &= (a+b)(a^2 - ab + b^2) \\ a^3 - b^3 &= (a-b)(a^2 + ab + b^2) \\ x^4 + x^2y^2 + y^4 &= (x^2 + xy + y^2)(x^2 - xy + y^2) \\ a^3 + b^3 + c^3 - 3abc &= (a+b+c)(a^2 + b^2 + c^2 - ab - bc - ca) \\ a^2(b-c) + b^2(c-a) + c^2(a-b) &= -(a-b)(b-c)(c-a) \\ bc(b-c) + ca(c-a) + ab(a-b) &= -(a-b)(b-c)(c-a) \\ a(b^2 - c^2) + b(c^2 - a^2) + c(a^2 - b^2) &= (a-b)(b-c)(c-a)\end{aligned}$$

ARITHMETICAL PROGRESSION

$$\text{Last term} = a + (n-1)d$$

$$\text{Sum to } n \text{ terms} = \frac{n}{2}[2a + (n-1)d]$$

GEOMETRICAL PROGRESSION

$$p\text{th term} = ar^{p-1}$$

$$\text{Sum to } n \text{ terms} = a \frac{r^n - 1}{r - 1} \text{ or } a \frac{1 - r^n}{1 - r}$$

$$\text{Sum to infinity} \left\{ \begin{array}{l} \text{when } r < 1 \end{array} \right\} = \frac{a}{1 - r}$$

PERMUTATIONS AND COMBINATIONS

$${}^nP_r = n(n-1)(n-2) \dots (n-r+1) = \frac{n!}{(n-r)!}$$

$${}^nC_r = \frac{n(n-1)(n-2) \dots (n-r+1)}{r!} = \frac{n!}{r!(n-r)!}$$

BINOMIAL THEOREM

$$(a+x)^n = a^n + na^{n-1}x + \frac{n(n-1)}{1 \cdot 2}a^{n-2}x^2 + \dots + {}^nC_r a^{n-r}x^r + \dots + x^n$$

MENSURATION FORMULAE

**LINE**  $\left\{ \begin{array}{l} \text{Pythagorean Theorem } a^2 = b^2 + c^2 \\ \text{Circumference of circle} = 2\pi r \end{array} \right.$

**PLANE AREAS**  $\left\{ \begin{array}{l} \text{Parallelogram} = bh \\ \text{Triangle} = \frac{1}{2}bh \\ \text{Trapezium} = \frac{1}{2}(a+b)h \\ \text{Circle} = \pi r^2 \\ \text{Ellipse} = \pi ab \end{array} \right.$

**CURVED SURFACES**  $\left\{ \begin{array}{l} \text{Cylinder} = \text{circum. base} \times \text{height.} \\ \text{Cone} = \frac{1}{2} \text{ circum. base} \times \text{slant.} \\ \text{Conical Frustum} = \pi(R+r)s \\ \text{Sphere} = 4\pi r^2 \end{array} \right.$

**VOLUMES**  $\left\{ \begin{array}{l} \text{Prism (or Cylinder)} = \text{area base} \times \text{height} \\ \text{Pyramid (or Cone)} = \frac{1}{3} \text{ area base} \times \text{height} \\ \text{Prismoid} = \frac{h}{6}(A+B+4C) \\ \text{Sphere} = \frac{4}{3}\pi r^3 \end{array} \right.$

TRIGONOMETRY

(a)  $\pi = 3.14159 \dots$  [approximations are  $\frac{22}{7}$  and  $\frac{355}{113}$ ]

(b)  $\sin^2 \theta + \cos^2 \theta = 1$

(c)

Degrees	0°	30°	45°	60°	90°
Radians	0	$\frac{\pi}{6}$	$\frac{\pi}{4}$	$\frac{\pi}{3}$	$\frac{\pi}{2}$
Sine	0	$\frac{1}{2}$	$\frac{1}{\sqrt{2}}$	$\frac{\sqrt{3}}{2}$	1
Cosine	1	$\frac{\sqrt{3}}{2}$	$\frac{1}{\sqrt{2}}$	$\frac{1}{2}$	0
Tangent	0	$\frac{1}{\sqrt{3}}$	1	$\sqrt{3}$	$\infty$

(d)  $\sin(-\theta) = -\sin \theta$ ;  $\cos(-\theta) = \cos \theta$   
 $\sin(90^\circ - \theta) = \cos \theta$ ;  $\cos(90^\circ - \theta) = \sin \theta$   
 $\sin(90^\circ + \theta) = \cos \theta$ ;  $\cos(90^\circ + \theta) = -\sin \theta$   
 $\sin(180^\circ - \theta) = \sin \theta$ ;  $\cos(180^\circ - \theta) = -\cos \theta$   
 $\sin(180^\circ + \theta) = -\sin \theta$ ;  $\cos(180^\circ + \theta) = -\cos \theta$

(e) If  $\sin \theta = \sin a$ , then  $\theta = n\pi + (-1)^na$   
 If  $\cos \theta = \cos a$ , then  $\theta = 2n\pi \pm a$   
 If  $\tan \theta = \tan a$ , then  $\theta = n\pi + a$

(f)  $\sin(A+B) = \sin A \cos B + \cos A \sin B$   
 $\cos(A+B) = \cos A \cos B - \sin A \sin B$   
 $\sin(A-B) = \sin A \cos B - \cos A \sin B$   
 $\cos(A-B) = \cos A \cos B + \sin A \sin B$   
 $\sin C + \sin D = 2 \sin \frac{C+D}{2} \cos \frac{C-D}{2}$

$$\sin C - \sin D = 2 \cos \frac{C+D}{2} \sin \frac{C-D}{2}$$

$$\cos C + \cos D = 2 \cos \frac{C+D}{2} \cos \frac{C-D}{2}$$

$$\cos C - \cos D = 2 \sin \frac{C+D}{2} \sin \frac{C-D}{2}$$

$$2 \sin A \cos B = \sin(A+B) + \sin(A-B)$$

$$2 \cos A \sin B = \sin(A+B) - \sin(A-B)$$

$$2 \cos A \cos B = \cos(A+B) + \cos(A-B)$$

$$2 \sin A \sin B = \cos(A-B) - \cos(A+B)$$

$$\tan(A+B) = \frac{\tan A + \tan B}{1 - \tan A \tan B}$$

$$\tan(A-B) = \frac{\tan A - \tan B}{1 + \tan A \tan B}$$

$$\sin 2A = 2 \sin A \cos A$$

$$\cos 2A = \cos^2 A - \sin^2 A = 1 - 2 \sin^2 A = 2 \cos^2 A - 1$$

$$\sin 2A = \frac{2 \tan A}{1 + \tan^2 A}; \cos 2A = \frac{1 - \tan^2 A}{1 + \tan^2 A}$$

$$\tan 2A = \frac{2 \tan A}{1 - \tan^2 A}$$

$$\sin 3A = 3 \sin A - 4 \sin^3 A$$

$$\cos 3A = 4 \cos^3 A - 3 \cos A$$

$$\tan 3A = \frac{3 \tan A - \tan^3 A}{1 - 3 \tan^2 A}$$

$$\sin \frac{A}{2} = \pm \sqrt{\frac{1 - \cos A}{2}}; \cos \frac{A}{2} = \pm \sqrt{\frac{1 + \cos A}{2}}$$

$$2 \sin \frac{A}{2} = \pm \sqrt{1 + \sin A} \pm \sqrt{1 - \sin A}$$

$$2 \cos \frac{A}{2} = \pm \sqrt{1 + \sin A} \pm \sqrt{1 - \sin A}$$

(g)  $\log_a mn = \log_a m + \log_a n$

$$\log \frac{m}{n} = \log_a m - \log_a n$$

$$\log_a m^n = n \log_a m$$

$$\log_a m = \log_a m \times \log_a b$$

(h)  $\frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c}$   $\cos A = \frac{b^2 + c^2 - a^2}{2bc} \dots$

$$\sin \frac{A}{2} = \sqrt{\frac{(s-b)(s-c)}{bc}} \dots \cos \frac{A}{2} = \sqrt{\frac{s(s-a)}{bc}} \dots$$

$$\tan \frac{A}{2} = \sqrt{\frac{(s-b)(s-c)}{s(s-a)}} \dots$$

$$\sin A = \frac{2}{bc} \sqrt{s(s-a)(s-b)(s-c)} \dots$$

$$a = b \cos C + c \cos B, \dots$$

$$\tan \frac{B-C}{2} = \frac{b-c}{b+c} \cot \frac{A}{2} \dots$$

$$\Delta = \sqrt{s(s-a)(s-b)(s-c)} = \frac{1}{2} bc \sin A = \frac{1}{2} ca \sin B = \frac{1}{2} ab \sin C$$

(i)  $R = \frac{a}{2 \sin A} = \frac{b}{2 \sin B} = \frac{c}{2 \sin C} = \frac{abc}{4 \Delta}$

$$r = \frac{\Delta}{s} = (s-a) \tan \frac{A}{2} = \dots$$

$$r_1 = \frac{\Delta}{s-a} = s \tan \frac{A}{2}$$

$$\text{Area of a quadrilateral inscribable in a circle.}$$

$$= \sqrt{(s-a)(s-b)(s-c)(s-d)}$$

$$\frac{\sin \theta}{\theta} = 1, \text{ when } \theta \text{ is very small.}$$

$$\sin a + \sin(a+\beta) + \sin(a+2\beta) + \dots \text{ to } n \text{ terms}$$

$$= \frac{\sin \left\{ a + \frac{n-1}{2} \beta \right\} \sin \frac{n\beta}{2}}{\sin \frac{\beta}{2}}$$

$$\cos a + \cos(a+\beta) + \cos(a+2\beta) + \dots \text{ to } n \text{ terms}$$

$$= \frac{\cos \left\{ a + \frac{n-1}{2} \beta \right\} \sin \frac{n\beta}{2}}{\sin \frac{\beta}{2}}$$

CONSTANTS

1 metre = 100 cm. = 1000 mm. = 0.001 Km.

1 yard = 3 ft. = 36 in. = 0.9144 metre.

1 mile = 8 fur. = 320 po. = 1760 yards.

1 Hectare = 100 ares = 10,000 sq. metres.  
 1 acre = 4 rods = 4840 sq. yds. = 0.4047 Hectare.  
 1 litre = 1 c. dm. = 100 cl. = 0.01 Hl. = 0.001 c. metre.  
 1 gallon = 4 qt. = 8 pt. = 0.1606 c. ft. = 4.546 litres.  
 1 quarter = 8 bush. = 32 pk. = 64 gal.  
 1 Kilogram = 1000 g. = 0.001 tonne.  
 1 lb. = 16 oz. = 7000 grains = 453.6 grams.  
 1 ton = 20 cwt. = 80 qr. = 2240 lbs.  
 1 litre of water weighs 1 kg.; 1 c. ft. of water weighs 62.3 lbs.  
 1 gallon of water weighs 10 lbs.  
 A circle of a radius  $r$  has a circumference of length  $2\pi r$  and has an area of  $\pi r^2$ , where  $\pi = 3.1416$ .  
 $\frac{1}{\pi} = 0.3183$ ,  $\pi^2 = 9.8696$ .

Base of natural logarithms is  $e = 2.7183$ .  
 The acceleration of a falling body is 32.2 feet per sec. per sec., or 981 cm. per sec. per sec.  
 1 horse-power = 550 foot pounds per second = 746 watts.  
 1 atmosphere = 760 mm. of mercury (30 in.) = 1.03 Kg. per sq. cm. = 14.7 lbs. per sq. inch = 1010 millibars.  
 1 statute mile = 5280 feet = approx. 1.6 kilometres.  
 1 sea mile = 6080 feet = approx. 2000 yds.  
 1 cable =  $\frac{1}{10}$  sea mile.  
 1 shackle =  $\frac{1}{2}$  cable.  
 1 knot = 1 sea mile per hr. = approx. 100 ft. per min.

MECHANICS

$$v = u + ft$$

$$s = ut + \frac{1}{2}ft^2$$

$$v^2 = u^2 + 2fs$$

$$P = mf$$

$$\text{or } P = \frac{mv}{t}$$

Time of swing of Pendulum—

$$t = 2\pi \sqrt{\frac{l}{g}}$$

AREAS AND VOLUMES

$\pi = 3.14159$   
 Circumference of circle =  $2\pi r$   
 Area of circle =  $\pi r^2$   
 Vol. of sphere =  $\frac{4}{3}\pi r^3$   
 Surface of sphere =  $4\pi r^2$   
 Vol. of cylinder =  $\pi r^2 h$   
 Vol. of cone =  $\frac{1}{3}\pi r^2 h$

## WAVE LENGTHS

(IN TEN-MILLIONTHS OF A MILLIMETRE)

Name of Line.	Colour.	Salts used.	Wave lengths = $\lambda$ .
Lithium	Red	Lithium chloride or nitrate	6708
Lithium	Orange	Lithium chloride or nitrate	6104
D	Yellow	Sodium chloride or bicarbonate	5893
"Little b"	Green	Magnesium ribbon	5173
Strontium	Blue	Strontium chloride or metal	4607
Calcium	Blue	Calcium nitrate or chloride	4227
Potassium	Violet	Potassium chloride	4046

## CHEMICAL NAMES OF COMMON SUBSTANCES

Alcohol	= Ethyl Alcohol ( $C_2H_5OH$ ).
Alum	= Potassium Aluminium Sulphate ( $K_2SO_4, Al_2(SO_4)_3, 24H_2O$ ).
Aqua fortis	= Nitric Acid ( $HNO_3$ ).
Bi-Carbonate of Soda	= Sodium Hydrogen Carbonate ( $NaHCO_3$ ).
Blue Vitriol (Blue Stone)	= Copper Sulphate ( $CuSO_4, 5H_2O$ ).
Boracic Acid	= Boric Acid ( $H_3BO_3$ ).
Borax	= Sodium Borate ( $Na_2B_4O_7, 10H_2O$ ).
Calomel	= Mercurous Chloride ( $Hg_2Cl_2$ ) (inactive, non-poisonous).
Chalk	= Calcium Carbonate ( $CaCO_3$ ).
Common Salt	= Sodium Chloride ( $NaCl$ ).
Corrosive Sub- limate	= Mercuric Chloride ( $HgCl_2$ ) (violently poisonous).
Epsom Salts	= Magnesium Sulphate ( $MgSO_4, 7H_2O$ ).
Fire Damp	= Methane ( $CH_4$ ) + air.
Glauber Salts	= Sodium Sulphate ( $Na_2SO_4, 10H_2O$ ).
Green Vitriol	= Ferrous Sulphate ( $FeSO_4, 7H_2O$ ).
Hypo	= Sodium Thiosulphate ( $Na_2S_2O_3, 5H_2O$ ).
Lime	= Calcium Oxide ( $CaO$ ).
Oil of Vitriol	= Sulphuric Acid ( $H_2SO_4$ ).
Plaster of Paris	= Calcium Sulphate ( $CaSO_4, H_2O$ ).
Red Lead	= Triplumbic Tetroxide ( $Pb_3O_4$ ).
Sal Ammoniac	= Ammonium Chloride ( $NH_4Cl$ ).
Sal Volatile	= Impure Ammonium Carbonate ( $(NH_4)_2CO_3$ ).
Saltpetre	= Potassium Nitrate ( $KNO_3$ ).
Salts of Lemon	= Potassium Hydrogen Oxalate ( $KHC_2O_4$ ).
Spirit of Salt	= Hydrochloric Acid ( $HCl$ ).
Sugar of Lead	= Lead Acetate ( $Pb(C_2H_3O_2)_2, 3H_2O$ ).
Verdigris	= Basic Copper Acetate ( $-Cu[C_2H_3O_2]_2, Cu(OH)_2$ ).
Vinegar	= Dilute Acetic Acid ( $C_2H_4O_2$ ).
Washing Soda	= Crystalline Sodium Carbonate ( $Na_2CO_3, 10H_2O$ ).
White Lead	= Basic Lead Carbonate ( $2PbCO_3, Pb(OH)_2$ ).

## UNITS AND DIMENSIONS.

	Symbol.	Dimension.	Absolute Unit.	Practical Unit.	Ratio.
Length . . . . .	<i>l</i>	<i>L</i>	centimetre	micro-millimetre	$10^{-7}$
			foot	light-year	$946 \times 10^{15}$
Mass . . . . .	<i>m</i>	<i>M</i>	gram	mile	5280
			pound		
Time . . . . .	<i>t</i>	<i>T</i>	second		
Velocity . . . . .	<i>v</i>	<i>LT^{-1}</i>	cm. per sec.		
			ft. per sec.	miles per hr.	1.47
Acceleration . . . . .	<i>f</i>	<i>LT^{-2}</i>	cm. per sec. per sec.	knots	
			ft. per sec. per sec.		
Momentum . . . . .	<i>mv</i>	<i>MLT^{-1}</i>			
Force . . . . .	<i>F</i>	<i>MLT^{-2}</i>	Dyne		
			poundal	poundweight	32.2
Work, Energy . . . . .	<i>U</i>	<i>ML^2T^{-2}</i>	erg	joule	$10^7$
			foot-poundal	foot-pound	32.2
Power . . . . .	<i>P</i>	<i>ML^2T^{-3}</i>	ergs per sec.	watt	$10^7$
			foot-pounds per sec.	foot-pounds per sec.	32.2
				horse-power	$1.77 \times 10^6$

## ELEMENTS

manganese	Mn	25	54.93				
mendelevium*	Mv	101	256				

\* In the cases of these elements, which are very rare or not found in nature, but have been artificially prepared, atomic weight in the chemical sense is meaningless; the integral mass of the most stable isotope known is given.

## GAS LAWS

Boyle's Law (1662)  $pV = \text{constant}$ .

Charles' Law (1787)  $\frac{pV}{T} = \text{constant}$ .

Van der Waal's equation  $\left(p + \frac{a}{V^2}\right)(V - b) = RT$  where  $a$  and  $b$  are constants.

Adiabatic expansion of a gas  $pV^\gamma = \text{constant}$  where  $\gamma = \frac{C_p}{C_v}$ .

# Medical Dictionary

It is impossible for any one individual to keep abreast of all the advances in modern medicine. The subject is far too complex, and there are far too many special branches of which the general practitioner can only know the mere outlines. But it is possible, at least, to show along what lines medicine has recently developed, and what are the main directions in which it is progressing. These are somewhat as follows :

Firstly, medicine is becoming much more scientific. Doctors are no longer content merely to relieve symptoms; they want to know what the symptoms mean. In the past they have often tended to suppress pains and the other annoying or distressing signs of illness. Now they want to know their meaning so that they can attack the fundamental cause. In this they have been aided by the discovery of powerful new drugs of the type which the German scientist Ehrlich once called "magic bullets". These are drugs which, when introduced into the body, specifically attack the bacteria causing the trouble. Up to the end of the nineteenth century, physicians rarely cured diseases; they simply tried to put the patient in the best condition so that he might be cured by nature. Now, drugs such as the sulphonamides and penicillin directly attack the cause of infectious diseases and destroy them. In other words, medicine has passed from what was very largely a position of active defence to an active attack on the causes of disease. But all illnesses are not caused by bacteria, and a further great discovery has been the fact that emotions, when long continued, can cause disease. Resentment, lack of affection, fear, worry, and hatred, can make people ill with such diseases as gastric ulcer, high blood-pressure, various skin diseases, and nervous illnesses. They may even indirectly lead to infectious diseases by lowering the resistance of the body to bacteria. What this means, is that the physician now studies the whole man. To find the cause of any one illness, the doctor needs to consider the patient's physical health, the shape of his body, his previous illnesses, his occupation, whether he is happy in his work and at home—in fact, he must consider the patient as an individual, not as a machine. In any one disease one of these factors may be more important than the others; an ill man is not necessarily unhappy, but he very often is. To take an example: a patient with asthma is found to have attacks which are caused by inhaling the dust of a substance with which he works. But the explanation does not end there. His tendency to asthma is perhaps inherited, but it would not have happened had he not become sensitised to this particular dust at his work. Nor would it have affected his chest had he not suffered from bronchitis in childhood. His relatives notice that he has more frequent attacks when he is angry or irritable—emotions have a strong influence on asthmatic seizures. In order to treat this one case, then, the doctor has to consider heredity, childhood illnesses, occupation, and home environment. That is, he should ideally be a scientist, a specialist in chest diseases, an industrial medical officer, and a psychologist.

The modern physician is much more inclined to trust nature. He uses far fewer strong and dangerous drugs—especially antiseptics. There is a great deal of truth in Bernard Shaw's statement that the use of soap and improved hygiene have done more than vaccination and inoculations to put an end to the epidemics of smallpox and other infectious diseases. But vaccination and inoculations have also played an important part. Improved Public Health measures are one of the most potent weapons of modern medicine: for the best doctors in the world could not have saved as many lives as the simple procedure of ensuring a pure water supply, or improving methods for the disposal of sewage. In 1840 the average age of death was twenty-nine, today it is fifty-eight. In 1840 one-third of all the babies born died before the age of five. In the really bad areas of the industrial slums the average age of death was thirteen, and fifty to sixty per cent of the total deaths were infants under five. The common causes of death were typhoid fever, smallpox, cholera, and starvation. Typhoid and cholera are both spread by infected water supply, and could not be dealt with until the first Board of Health in the early nineteenth century insisted on a pure water supply and proper disposal of waste.

Public Health includes preventive medicine. We have discovered that it is easier, cheaper, and more humane to keep people from becoming ill than to cure them once they are ill. Preventive medicine covers a vast field: inoculation protects against such diseases as smallpox, typhus, typhoid, tetanus, diphtheria, and so on; giving a good food supply prevents the vitamin deficiency diseases of scurvy, rickets, and night-blindness; ante-natal clinics reduce maternal mortality by noting dangerous symptoms in time. Examination of school-children by doctors, dentists, and eye-specialists, extra milk for schools, and Child Guidance Clinics, all play a part in the prevention of disease. No less important is the function of Industrial Medicine in keeping workers healthy mentally and physically, and Education, whether adult or juvenile, in making them well-informed. Ignorance is an ally of disease. It is important to realise that one of the signs of health is to be unconcerned with health. Provided one eats enough of the proper kind of food, keeps clean within reason, does not worry unduly, and, above all, keeps happy and occupied, there is no reason whatever to keep thinking about one's health. In fact, it would not be difficult to show that the most miserable people are those who make a hobby of their health, and are always trying to keep fit. It may be that those who lead sedentary lives require a certain amount of exercise in order to keep fit, but, on the whole, exercise should be motivated by pleasure rather than by a sense of duty. The best reason for playing games is that one likes doing so, and joy and enthusiasm in living make up for a great deal of lack of exercise. Nothing is more pathetic than to see an over-developed body associated with an under-developed mind. Excessive attention to health is confusing the means with the end; one wants a healthy body and mind in order to live a happy and useful life, but being healthy in itself is not the sole purpose of life.

**Abdomen.** The part of the body lying below the chest and above the thighs. Pain in the abdomen may be due to many causes; flatulence, indigestion, appendicitis, gall-bladder inflammation, dysmenorrhœa, and so on. Usually it is necessary to call a doctor to distinguish between these various pains, but the following generalisations may be made: pain due to indigestion is usually relieved by one of the many alkaline mixtures; other pains will be at least temporarily relieved by the application of a rubber hot-water bottle; purgatives must never be used while abdominal pain is present—even death may result from this; finally, in severe or prolonged pain, or pain accompanied by vomiting, a doctor should be called at once. (*See Duodenal ulcer, Appendicitis, Dyspepsia, Gall-stones, Dysmenorrhœa.*)

**Abortion.** The termination of pregnancy, from whatever cause, before the child is capable of independent existence. Deliberate abortion is illegal in Britain unless two doctors are able to certify that having a child will endanger the mother's life. It is, of course, very common, but extremely dangerous. No drug will produce abortion without severely affecting the mother (unless there is a strong tendency to abortion in any case). Inserting instruments in the womb is even more dangerous as it is likely to lead to infection. The Catholic Church forbids deliberate abortion in any circumstances. Signs of a threatened abortion are, abdominal pain in the lower part of the abdomen, and vaginal bleeding. Such symptoms in a pregnant woman should be treated by immediate rest in bed: the doctor should be called.

**Abortus Fever.** An infectious disease, also known as undulant fever, which produces abortion in cows and pigs. Human beings may develop the disease by drinking cow's milk containing the germs, or by handling infected material from a cow or pig. Abortus fever is very similar to Malta fever, which is spread by goat's milk. As its other name implies, the fever "undulates" for several weeks; but modern drugs are, on the whole, successful in treating this condition. At least 25 per cent. of the unpasteurised milk in Britain is contaminated by the bacillus abortus, the causative organism of the fever.

**Abrasion.** Any injury which rubs off the surface skin. An abrasion should be washed thoroughly in soap and water and a clean dressing applied. A little vaseline will keep the dressing from sticking. Strong antiseptics (*see Antiseptics*) are neither necessary nor desirable, as they are liable to destroy the body cells and prevent healing. If used at all, antiseptics should not be repeated on re-dressing.

**Abscess.** A collection of pus enclosed anywhere in the body—in other words, a sort of internal boil. It is caused by infection with germs and may end in one of three ways: by bursting inwardly, by bursting on the surface of the body, or by becoming absorbed. Most abscesses are short-lived, but some, as in tuberculosis ("cold abscess"), are chronic and last for a long time. Since the usual treatment is surgical, combined with the use of penicillin or sulphonamide drugs, it is necessary in most cases to call a doctor.

**Achondroplasia.** A form of dwarfism in which the trunk is of normal size, but the limbs are too short.

**Acidosis.** Meaning an acid condition of the blood, is a misnomer, since the blood is always alkaline. The name therefore means decreased alkalinity, and applies to a tendency rather than to a disease. Acidosis is not nearly so common as is usually thought, but where it exists without any serious disease being present, it may be relieved by taking more oranges and other citrus fruits in the diet.

**Acidity.** Excess of the hydrochloric acid normally found in the stomach. It is found in some, but by no means all, cases of dyspepsia; for indigestion may be caused by lack of acid as well as by excess. Acidity is relieved by the use of alkaline powders, such as magnesium trisilicate, but prolonged indigestion should be treated by a doctor.

**Acne.** "Blackheads" are usually found on the face and chest. As they are caused by minor imbalance of the gland secretions, they occur most often at puberty and in adolescence. The skin is generally oily. In mild cases, anything which dries up the skin will relieve the condition. Thus

frequent washing with antiseptic detergents such as "Cetavlon" is useful. In more severe cases, sulphur lotion should be dabbed on at night. Ointments or other greasy substances should never be used. In the worst cases, medical attention is required, and X-rays or injections of glandular extract may be used.

**Acridavine.** A yellowish antiseptic used for wounds. It is useful, but modern developments have made it somewhat out of date.

**Acromegaly (gigantism).** A state of excessive growth of the body caused by overaction of the pituitary gland in the base of the brain. The giants of circus sideshows are suffering from this disease. It can only be stopped by operation at an early stage.

**A.C.T.H.** An abbreviation for adreno-cortico-thyrotropic-hormone, a new drug which has an action similar to that of Cortisone (which *see*).

**Adenoids.** In the back of the throat, and elsewhere in the body, are areas of spongy tissue which have the function of trapping germs. When, at the back of the nose and throat, these tissues become inflamed and infected, they are no longer able to work properly, and cause obstruction to breathing. This condition is usually found in children, and the symptoms are—cough, sometimes fever, frequent colds, mouth breathing, and tendency to disease of the ears. Difficulty of breathing results in a typical facial expression: the mouth is open, the eyes dull, and the child appears stupid. Treatment is by surgical operation—a relatively simple one.

**Adhesions.** After an operation, areas which have been cut or bruised may adhere to each other by fibrous tissue and cause pain through stretching. This, however, is less common than is generally thought.

**Acrophagy.** (*See Flatulence.*)

**Agar.** A form of seaweed used in treating constipation.

**Ague.** An old-fashioned name for malaria or other fevers.

**Air.** Important factors about the air we breathe are—temperature, moisture, and dust content. Ideally, a climate should be temperate, neither too dry nor too moist, and there should not be excessive dust in the atmosphere. However, the body is very adaptable and a great deal of nonsense is talked about the subject of fresh air. There are not many houses with insufficient air, even when doors and windows are closed. The idea that open windows make an immense difference to health is ridiculous, but, on the other hand, cool air is more stimulating than air which is over-heated.

**Albuminuria.** (*See Nephritis.*)

**Alcohol.** In moderation, alcohol is a lubricant of civilisation. It encourages sociability, and, generally speaking, makes people more friendly. In moderate doses, alcohol is harmless, and, from the lessening of mental tension it induces, perhaps even helpful. It is absurd to believe that it has any serious pretence to be considered as a food. When alcohol becomes a necessity, and life becomes intolerable without it, the condition becomes one of alcoholism, which is a disease. Many treatments have been employed for alcoholism, but it can be stated categorically that any treatment based on drugs alone is bound to fail. Drunkenness can only be cured by understanding and treating the causes which compel the patient to drink; the body known as "Alcoholics Anonymous" often helps.

**Allergy.** Means abnormal sensitivity to any substance which does not affect normal people—hay-fever, asthma, eczema, migraine, are all allergic diseases. The substances causing them may be pollen, grasses, feathers, dust from plants or animals, and so on. When the particular substance to which the patient is over-sensitive is discovered, it may be possible to desensitise and so cure him by injecting increasing doses of the stuff under the skin. Allergic diseases are related to emotional upsets. *See Antihistamine Drugs.*

**Aloes.** A strong vegetable purgative.

**Alopecia.** (*See Hair.*)

**Amenorrhœa.** Stopping of the normal monthly periods. It may be due to pregnancy, anaemia, or internal causes in the pelvis. Treatment depends on the cause. In healthy women, amenorrhœa may be caused by fear or hope of pregnancy.

**Amnesia.** Loss of memory, may be due to physical causes, *e.g.*, following a blow on the head, there may be forgetfulness of the short period prior to the accident. Most types are psychological in origin and are caused by the repression of thoughts which conflict with the everyday beliefs of the individual, *e.g.*, a soldier may desert in a state of amnesia. Nevertheless, loss of memory is not nearly so common as many people choose (often conveniently) to think.

**Anæmia** ("Bloodlessness") happens when the red cells which carry oxygen from the lungs, by way of the blood vessels, to the rest of the body are reduced in number. This may happen in various ways. An accident may cause anæmia if there is severe bleeding; the bone-marrow which manufactures new blood cells may become exhausted; or poisons may kill many of the cells. In other words, anæmia is caused by loss of blood, by destruction of blood in the body, or by lack of materials to build new blood. By far the commonest type of anæmia is that due to excessive menstrual loss and inadequate food in young women. Symptoms are paleness, exhaustion, and breathlessness. Treatment is to take iron in the form of Blaud's capsules, or ferrous sulphate. Yeast—either Marmite or tablets—is useful in addition to the iron. Men less often have simple anæmia, but gastric cases who take too little proper food may suffer from it; treatment is the same. Other types of anæmia need specialised treatment and cannot be dealt with without medical help. In particular, pernicious anæmia requires different treatment, since it is due to lack of a substance which enables blood to be manufactured in the body. The substance is found in stomach or liver extracts, which are therefore used in treatment.

**Anæsthesia.** Any drug used by surgeons to remove pain during an operation. Opium and similar substances have been used for centuries to relieve pain, but the characteristic of an anæsthetic is that it completely prevents the pain, either by making the patient unconscious, or by the use of local anæsthesia, which removes pain sensations from a particular part of the body. The first general anæsthetic to be used in this country was chloroform, the use of which was discovered by Professor J. Y. Simpson of Edinburgh. It was used mainly to relieve pain in child-birth, and became popular after Queen Victoria had permitted its use during the birth of one of her children.

An American dentist, Horace Wells (1815-48), used nitrous oxide ("laughing gas") some years before the use of chloroform became known, and ether has also been extensively used. All the above drugs are administered by breathing through a mask.

Nowadays it is much more common to give general anæsthetics in the form of an injection, and such drugs as sodium amylal, Pentothal, and others are used. These act more quickly than the older type, and the after-results are less unpleasant. Local anæsthetics are also used in modern surgery. In small operations they may simply be injected into the spot to be operated on, but, when larger areas are being dealt with—*e.g.*, the arm—loss of feeling may be produced over the whole limb by injecting the main nerves in the shoulder. A still larger area may be rendered insensitive by injecting the drug into the spinal canal. This is known as spinal anæsthesia, and removes all feeling below the waist.

It is not always realised that the inside of the body is capable of very little sensation. The intestines, or even the brain, may be operated on without producing any pain whatever, and all that is necessary is to deaden the nerves in the skin and muscle where the incision has to be made. Brain and abdominal operations are therefore frequently done with only a local anæsthetic. The first such anæsthetic to be used was cocaine, but it was found too dangerous, and now synthetic drugs are always used.

For many minor operations, such as the opening of an abscess, all that is necessary is to freeze the surface of the skin by the use of a substance known as ethyl chloride, which evaporates so quickly that it produces a thin layer of frost on the skin, temporarily paralysing the nerve endings.

**Analgesia.** A drug prescribed for the relief of

pain. The best known analgesic is aspirin, which deadens centres in the brain where pain is felt. Although many other analgesic drugs are known, it can be stated generally that any pain which does not respond to 10 grs. of aspirin (two tablets) will not respond to anything less potent than morphia.

**Anatomy.** The science which deals with the structure of the body. It describes the way the body is built, while the related science of physiology describes how it works.

**Aneurysm.** A swelling in a blood-vessel arising from the stretching of a weak place in the wall. Aneurysms may occur in almost any blood-vessel in the body, but are usually found on the larger or medium-sized arteries. The most usual cause is an infection destroying part of the elastic tissue of the artery—for example, chronic syphilis was at one time a common cause of aneurysm in the aorta (the main blood-vessel arising from the heart). A nearby abscess may also cause weakening leading to aneurysm. Gunshot wounds may have a similar effect. The circle of arteries surrounding the spinal cord at the point where it joins the brain, may be the site of congenital aneurysms, that is to say, aneurysms present from birth. In most cases, no treatment is possible, unless the swelling is in some easily accessible spot. It may then be possible to remove the aneurysm, or introduce some material which causes the blood to clot inside. In the brain, such treatment is obviously impossible. The chief danger is that the aneurysm may rupture and cause a serious hemorrhage, so it is always necessary for the patient to be under constant medical supervision, and to take life easily.

**Angina Pectoris.** An illness marked by severe attacks of pain over the heart, coming on following exertion. It is most important to remember, however, that 99 per cent. of people with pain in the chest do not suffer from angina. Pain, in fact, is a very uncommon symptom in heart disease. The most common causes of chest pain are—fibrositis, injury, and pleurisy, in that order of frequency. The pain of angina is very severe, and is, perhaps, the most terrible pain known in any disease when the condition is fully developed. It comes on following exertion, and usually radiates from the heart region along the inner side of the left arm. Whenever the exertion stops, the pain tends to subside. Coronary thrombosis (which see) causes a similar pain—not, however, relieved by cessation of exertion. Angina is caused by narrowing of the blood-vessels to the heart, which prevents an adequate supply of blood reaching it. Treatment should only be carried out under the care of a doctor, but the outlook, with reasonable precautions, is quite good. Recently it has been discovered that angina tends to occur in people of a particular psychological type, and the victims are usually over-consciousness brain-workers. Many people have their first attack following severe reverses in business. The most important don'ts for people suffering from this illness are: Don't eat too much, or too quickly, avoid sudden or prolonged physical exercise, avoid emotional stress or worry, and get plenty of sleep. Try to reduce if overweight.

**Ankylosis.** Partial or complete rigidity of a joint produced either by disease, such as arthritis, or deliberately, by surgical operation.

**Anorexia.** Loss of Appetite (which see).

**Antabuse.** The name of a proprietary drug used in the treatment of alcoholism. Antabuse works by producing unpleasant symptoms of giddiness, faintness, and collapse in those who subsequently take alcohol.

**Anthrax.** Anthrax is an uncommon disease in this country. The germ, first discovered by Koch, is usually found in the hair, hide, or excretions of animals. It is, therefore, most often found in farm-workers, workers with hides, and butchers. There are two forms of the disease; when the infection is on the surface of the body, large boils result, but the germs may be breathed in, causing a sort of pneumonia known as "wool-sorter's disease." A common cause of the skin variety is by using an infected shaving brush.

Since Anthrax is uncommon, we need not discuss here any further details. In treatment, serums have been used, and the sulphonamide drugs have also been found useful. Without immediate treatment, the outlook is very bad.

**Antibiotics.** The group of drugs to which penicillin (which see) belongs. Most antibiotics are prepared from moulds or mould-like organisms, and, together with the sulpha drugs (sulphathiazol, "M. & B. 693," etc.), have revolutionised the practice of medicine. While penicillin acts upon staphylococci, streptococci, pneumococci, meningococci, and the germs of gonorrhoea, syphilis, and certain other diseases, the other antibiotics—streptomycin, aureomycin, chloromycetin, terramycin—have differing ranges of curative effect. Thus, streptomycin is most frequently used in the treatment of certain types of tuberculosis, and, although it has not proved so easy to cure these conditions as it was for penicillin to cure the others, in at least two diseases which were formerly incurable there is now some hope for the patient. These diseases are tuberculous meningitis and acute miliary tuberculosis, which, instead of being invariably fatal, are now cured in about 25-40 per cent. of cases. Streptomycin is, however, a more dangerous drug to use than penicillin, which is almost non-poisonous.

Aureomycin, unlike the other drugs, is given only by mouth. It is effective in even more diseases than either of the above. Good results have been noted in gonorrhoea, all types of pneumonia, typhus and typhoid fevers, undulant fever, psittacosis, as well as in staphylococcal and streptococcal infections. Unlike either penicillin or streptomycin, germs do not become resistant to aureomycin after repeated use.

Chloromycetin is similar in effect to aureomycin, is given by mouth, and is most potent in the treatment of the typhoid group of diseases. It seems likely that drugs of this type will be multiplied almost indefinitely and will become ever more potent over a greater range of diseases. As has been indicated, the main danger is that after repeated use germs may become resistant to them, but a solution will no doubt be found to this problem.

**Antidote.** A remedy given to counteract a poison. (See under Poison.)

**Antihistamine Drugs.** A series of new drugs used in the treatment of allergy (which see). Although allergic diseases, such as asthma, hay fever, dermatitis, some types of migraine, and perhaps even acute nephritis are due to an abnormal sensitivity to various substances, the final result in the body is always the same: a substance known as histamine is liberated from the body cells. Histamine is, therefore, the immediate cause of the symptoms of allergic illnesses. Antihistamine drugs aim to neutralise the effects of histamine on the body, but, although they were at first highly thought of, it is now generally believed that their use is strictly limited. Their main use is in hay fever and in certain specific types of dermatitis such as urticaria (*i.e.*, "nettle rash"). These drugs do not effect a permanent cure, and, even in those cases where they are of help, require to be continued. Unpleasant symptoms, such as giddiness, sleepiness, and so on, may result from the use of antihistamines, which should, therefore, always be used under the direction of a doctor. Recently, it has been shown that the morning sickness of pregnancy responds very well to such treatment. A good deal of publicity was given to the use of antihistamine drugs in the prevention and cure of colds; they were widely used in the United States for this purpose. More careful experiments have shown that they are quite useless in this field. Proprietary names of the drugs are Anthisan, Antistin, Benadryl, Ancolan, Phenergan, and Thephorin.

**Anticoagulants.** A new group of drugs, such as Dicoumarin, which reduce the clotting tendencies of the blood. They are used to prevent thrombosis (which see).

**Antiseptic.** A drug which destroys germs. Antiseptics were, naturally, unknown, until the discovery by Pasteur that some diseases are caused by germs. It then became a logical necessity to discover something that would destroy germs without unduly harming the human body. The second factor is the critical one, because, although thousands of substances are known which will kill bacteria, the vast majority are equally deadly to the cells of the body. Lister, who discovered the use of antiseptics, first used carbolic acid, and this is still used, either diluted, or in the form of soap. But modern research has discovered countless other safer substitutes.

From the practical point of view, what should be remembered is that the incorrect use of antiseptics may produce a result almost as bad as the disease they were designed to prevent. Doctors commonly see patients with an injury or abrasion, received many weeks before, which has remained still unhealed because antiseptics have been applied daily, thus interrupting the healing process and destroying the growing cells. Most wounds, unless obviously contaminated with dirt, are fairly clean to begin with, and all that is necessary is to wash the area with soap and water, and apply a sterile dressing. If antiseptics must be used, they should be used only on the first occasion of treating the wound. It is quite useless to go on applying antiseptic to an area where no germs exist. In any case, after the first few hours, any germs in the wound will have gone far below the surface, where they can no longer be reached.

There are so many excellent proprietary antiseptics that nobody need ever use the old crude ones such as acriflavine, carbolic acid, and iodine. The best to use are those containing hypochlorites, such as Milton, or the more complex ones, such as Dettol, and numerous others.

When used for other purposes than the cleaning of wounds, different antiseptics must be used. Probably the best gargle is glyco-thymoline, or Listerine. It should be remembered, however, that gargling, from the medical point of view, serves very little useful purpose. It is not possible, in tonsillitis, for example, to do anything more than kill a thin layer of germs on the surface, and the germs must be attacked by modern germ-killing substances, such as penicillin or sulphonamide, which circulate in the blood. Of course, gargles refresh the patient and create a pleasant taste in the mouth.

Vaginal douches for women, unless local disease or discharge is present, should not contain antiseptic at all, and ordinary warm water is quite adequate. It is always unwise to use any antiseptic frequently, and even the regular use of antiseptic mouth-wash is better avoided, as the body in health supplies its own antiseptics.

**Anti-Toxin.** A substance manufactured by the blood, which neutralises the poison (toxin) given off by a particular germ. Each anti-toxin is specific for one particular germ and no other. They are created by the body in response to invasion by germs, and it is for this reason that injections of dead germs (*e.g.*, T.A.B. given in the Army) are given to stimulate the creation of anti-toxin.

**Antrum.** A space within a bone, usually that in the maxilla or upper jaw.

**Anuria.** Inability to pass urine, which may be due to (1) a failure of the kidneys to secrete urine, or (2) some factor preventing the escape of urine from the bladder.

**Anus.** The outlet of the bowel.

**Aorta.** The main artery leaving the heart.

**Aphasia.** A condition produced by brain disease, in which the patient, although his power of producing sounds is unimpaired, is unable to form words.

**Aphrodisiac.** A drug which produces sexual excitement. Although drugs are often sold for this purpose, no true aphrodisiac exists. That is to say, no drug can stimulate desire unless it already exists. Alcohol, by reducing the critical faculties, may make people aware of previously suppressed desire, but it does not create it. Most of the drugs sold as aphrodisiac are merely poisons which have a local irritant effect on the sexual organs. When normal desire is absent, a doctor should be consulted, and it may be possible to relieve the condition by the use of sex-hormones. However, nearly all lack of normal sexual feeling is caused by psychological factors.

**Apoplexy.** Commonly known as a "stroke." This usually affects people with high blood-pressure and hardening of the arteries, and is one of the commonest causes of death. It may be caused by three different mishaps: (1) rupture of a blood-vessel in the brain, producing hemorrhage which destroys part of the brain tissue; (2) embolism, which is produced by a clot of blood from somewhere else in the body lodging in an artery in the brain, and thus stopping the blood supply to the part affected. This type frequently occurs after an operation elsewhere in the body; (3) thrombosis, where a clot develops spon-

taneously in one of the blood-vessels of the brain producing the same effect as in (2).

Hæmorrhage most usually occurs during excitement or exertion. Embolism, which may occur in younger people, sometimes happens when, a week or so after an operation, the patient is getting up for the first time. Thrombosis may occur during sleep. In all cases, however, the result is the same—paralysis, due to destruction of part of the brain, develops almost at once. Most usually, the paralysis is of one half of the body, but sometimes only an arm or leg may be affected. To begin with, the patient is generally unconscious, and, indeed, he usually falls down immediately the stroke occurs. He should not be moved until the doctor arrives, nor should any attempt be made to force alcohol or other stimulant down his throat. He should be kept warm.

The after-care is a matter for medical attention, but, if the patient survives the first day, the immediate outlook is fairly good. Prolonged rest in bed will probably be necessary, and the main point at this stage is to avoid bedsores (which see).

**Appendicitis.** This condition was hardly known until the end of last century, and the symptoms were probably attributed to other causes. The appendix is a small body, about the size of the little finger, which projects from the large intestine in the right lower part of the abdomen. In many other animals the appendix does not exist, but apes, dogs, cats, and sheep have an appendix just like human beings.

It used to be thought that appendicitis was always caused by blocking of the appendix with seeds or indigestible foods, but this is no longer believed. The illness is due, like any other kind of inflammation, to an infection with germs, which may result in blocking of the canal and formation of an abscess. Another fallacy is the belief that appendicitis is a disease of civilisation. In fact, it is equally common among primitive peoples. Appendicitis comes seventh or eighth on the list of the commonest causes of death, and a very common reason for death is that the patient has taken castor oil, or some other purgative to cure a pain in the abdomen, which really is appendicitis. Purgatives should, therefore, never be taken when any pain is present.

Appendicitis usually begins with a general feeling of unwellness, and soreness in the upper part of the abdomen—that is, in the region of the stomach. Later the pain becomes more severe and localized in the right-hand lower part of the abdomen. There may be vomiting, and the temperature and pulse-rate rise. It is important to realise, however, that the symptoms may be by no means as obvious as this, and even surgeons have difficulty in discovering the cause at times.

Once discovered, the treatment by operation is simple, and usually the patient will be out of hospital in about ten days.

**Appetite.** The feeling of hunger is caused by contractions of the stomach. Anything, therefore, which tends to upset this will cause loss of appetite. Excessive smoking, for example, is one of the commonest causes, since tobacco causes the stomach muscle to relax. It is usually considered that general debility spoils the appetite, but people who are very run-down may nevertheless be extremely hungry.

The fact is, that the main stimulus to appetite is psychological, and hunger cannot exist in the presence of fear, anxiety, or worry. The mind must be at rest, and, for this reason, it often helps to drink wine or small amounts of spirits, before, or during, meals. Reading or thinking of business during meal-times, is, of course, bad.

**Arteriosclerosis.** As people grow older, their arteries tend to become thick and less elastic. The cause of this is not known, but it seems to occur earlier in some families than others. It has been said that excessive smoking or drinking may lead to arteriosclerosis, but this is nonsense, for cases of chronic alcoholism show no more tendency in this direction than others. People with hardening of the arteries tend to have an abnormally high blood-pressure, which is an attempt on the part of the body to compensate for the narrowing of the blood vessels. In such cases it is sometimes dangerous to try to bring the pressure down.

The commonest symptoms of arteriosclerosis are headaches, insomnia, buzzing in the ears and giddiness, but it should be remembered that

millions of people have these symptoms from psychological or other causes.

There is no treatment for arteriosclerosis, because it is a physical impossibility to alter the composition of the blood-vessel walls. It is therefore sheer waste of time and money to take patent medicines. The doctor may, however, order sedatives, or various other drugs to help headaches or sleeplessness. Recent research suggests that, although the fully-developed condition cannot be cured, it may be dieting be possible to prevent the disease.

Many people who have lived to be a hundred have had hardening of the arteries for forty or more years, so the condition is not necessarily serious; but if the hardening is in the blood-vessels of the brain or heart, the outlook is not so good.

**Arthritis.** Inflammation of one or more joints. The commonest cause of arthritis occurring simultaneously in a large number of joints is rheumatic fever (which see), but other types, such as rheumatoid arthritis and osteo-arthritis, may be found. The acute type—that is, the type that comes on suddenly and lasts for a relatively short time—may be due to rheumatic fever, or infection with the germs that cause scarlet fever, typhoid fever, or gonorrhœa. These latter types, then, are caused by definite infection with a germ. Rheumatoid-arthritis, on the other hand, is due to some unknown cause, but fatigue, injury, emotional strain, or exposure to damp or cold, are contributing causes.

The usual symptoms are pain and swelling in the joints anywhere in the body, but there is a degenerative type of arthritis known as osteo-arthritis which comes on with old age, although it may be present in younger people after an injury. This kind is not caused by any infection, but simply by hardening of the bones in the area of the joint.

Treatment, of course, depends on the cause. In some cases, vaccines, heat treatment, or injection of gold salts, may help. Those due to particular germs will be cured when the germs are destroyed. There is no evidence that diet has any effect, provided the patient gets enough good food, but arthritis, being a painful and troublesome disease, has more than the usual share of quacks and humbugs claiming to cure it. The best drug to relieve pain is aspirin.

Cortisone (which see) may produce good results in some types of arthritis.

**Artificial Respiration.** The simplest method of artificial respiration to be used when, for any reason, the patient has stopped breathing, is as follows: Lay the patient face downwards on the ground with the head on one side, and pull the tongue forward (preferably the head and shoulders should be at a lower level than the rest of the body). Sit astride the small of his back, and place the hands one on either side of his chest. Lean forward, pushing the air out from his chest in the process. Count three slowly, and then lean backwards, relaxing the pressure on the chest, and allowing air to enter through the mouth. This should be kept up for several hours if necessary, until the patient begins to breathe. Meantime a doctor should be sent for.

The most usual mistakes in using this method are, (1) to apply pressure merely with the hands instead of pressing downwards with the whole weight of the body; (2) to press in and out too quickly.

Other methods are in use, but this is the simplest.

When a stretcher is available, a good method is to lay the patient face downwards on the stretcher, and lift the stretcher on to a trestle which supports it in the centre only. The stretcher is then slowly moved up and down like a see-saw. Another mechanical method, used in infantile paralysis, when the nerves to the breathing-muscles have been destroyed, is Drinker's apparatus. The patient is kept with the body enclosed in a metal cylinder in which the pressure is alternately raised and relaxed by electricity. Some people may have to spend their whole lives in such an apparatus if the damage to the nerve is irreparable.

**Asbestosis.** A disease of the lungs occurring in those who work with asbestos. See Silicosis.

**Ascites (Dropsy).** An accumulation of fluid in

the abdomen caused by heart, liver, or kidney disease. Treatment depends on the cause.

**Asepsis.** A technique which differs from antiseptics in that all instruments and dressings coming in contact with the area to be operated on are sterilised beforehand. It is universally used now in surgery. In earlier days, an operation was carried out by soaking the area, instruments, dressings, and the surgeon's hands, in antiseptic. What happens now is that the area to be operated on is cleaned by antiseptics, and everything else coming in contact with it has been previously sterilised. Instruments are boiled, dressings are sterilised with steam, and the surgeon and nurse wear similarly sterilised clothing. In other words, in antiseptics, the germs are killed, in asepsis, they are prevented from reaching the wound. Antiseptic means "Against sepsis," Asepsis means "Without sepsis."

**Asphyxia.** Stoppage of breathing due to obstruction of the air passages, as in diphtheria, pressure on the windpipe, as in strangling or tumours, or other causes such as drowning. Treatment is to remove obstruction and give artificial respiration.

**Asthma.** A chest disease usually caused by hypersensitivity to some substance. (See Allergy.) The causes have been divided into those due to allergy, those due to chronic bronchitis, and those due to psychological causes, but all these causes are present in nearly every case. The condition is often found in people who come in contact with various dusts, such as flour, fur, cotton, feathers, etc. Asthma often goes in families, and sufferers are nearly always emotionally sensitive—in fact, attacks are very often brought on by anger or other emotions.

During an attack, the patient finds it more and more difficult to breathe and has a feeling of suffocation. His skin may become pale or blue. Such attacks often come on at night, and may occur almost daily, or only once every few months.

The treatment may be divided into immediate and long-term. During an attack, the doctor may give a drug, adrenalin or ephedrine, which usually gives relief. But the real problem is to find the substance to which the patient is hyper-sensitive, and to give him increasing doses of this until he becomes de-sensitised. Psychological causes, where they exist, must also be investigated.

Chronic asthma causes breathlessness and tends to make the chest barrel-shaped; it produces a condition of the lungs known as emphysema.

**Astigmatism.** A defect of eyesight caused by uneven curvature of the outside membrane of the eye. The various parts of an image are therefore focused unevenly, and glasses are required.

**Atebrin.** A synthetic form of quinine developed since 1936 as a specific treatment against malaria.

**Ataxia.** Loss of co-ordinated movement caused by disease of the nervous system.

**Atheroma.** Hardening of the arteries. (See Arteriosclerosis.)

**Athlete's Foot.** A form of ringworm of the feet. It occurs in the form of a white, sodden, appearance of the skin, and cracks between the third and fourth, or fourth and fifth toes. The most important factor in treatment is to keep the area clean, and absolutely dry. In mild forms, medicated powder may be sufficient, but in the more advanced form Whitfield's ointment, containing salicylic acid, should be used. Glaxo, Boots, and a number of other large firms produce excellent fungicidal creams, but the important thing is to avoid re-infection from shoes or socks worn before treatment, which should therefore be dusted with fungicidal powder.

**Atomic Bomb Injuries.** In general, the injuries to be expected from atomic warfare do not differ greatly in kind from those due to ordinary high explosives. The main complicating factors are those introduced by intense heat and radioactivity. When an atomic bomb explodes, immense energy is released which takes three main forms capable of causing damage to materials and persons. These are heat, radioactivity, and blast. Heat and blast, although much more intense and of far greater range, are similar to what is found in connection with high-explosive bombs. Treatment of burns is as described elsewhere in this dictionary for ordinary burns, but the effects produced by radioactivity are profound, and peculiar to this form of war-

fare. Briefly, radiation is capable of inducing changes in various tissues of the body, particularly in the bone marrow (which plays a large part in manufacturing blood cells) and in the sex glands. These changes lead, as John Hersey has graphically described in his book *Hiroshima*, to sterility and fatal forms of anaemia. A detailed account of first-aid treatment will be found in the official booklets on the subject, but, as has already been indicated, the immediate treatment of casualties follows the lines recommended in earlier types of warfare.

**Atomic Medicine.** Recent discoveries in atomic physics have had a profound influence both upon practical medicine and medical research. As is well known, it has now become possible to make many substances radioactive—i.e., to activate them so that they give off rays in much the same way as does radium. This is done by an elaborate apparatus called a cyclotron.

In medical and biological research such radioactive atoms are capable of being traced throughout the body by means of special instruments, so that, for example, it is now possible to discover what happens to iron from the stage when it is swallowed in the food to the stage when it is built up into the red blood cells which carry oxygen around the body. In a similar manner the growth of plants and animals may be studied in detail. Such activated atoms are described as "tracers," and it seems likely that, in this way, atomic research will have much to contribute to the study, not only of the normal bodily processes, but also of the processes which take place in disease.

Substances which have been made radioactive in a cyclotron are also used in treatment. Thus, cancer of the thyroid gland has for many years been treated with radium and X-rays, but this method proved only moderately successful, since the rays did not penetrate deeply enough unless they were so powerful as to damage other tissues than those of the cancer. Now, all iodine taken into the body ultimately reaches the thyroid gland, and when the iodine is made radioactive the rays which destroy cancer cells are given off within the gland itself, and so are able to exert a much more potent effect, which, however, does not harm the surrounding healthy tissues. There can be little doubt that further advances in atomic medicine will revolutionise treatment of many serious diseases. See Radioisotopes ("The World of Science").

**Auscultation.** The method used by a doctor when he listens for signs of disease inside the body by means of a stethoscope.

**Autonomic Nervous System.** The most primitive part of the central nervous system, which supplies the internal organs. It is divided into two parts, the sympathetic nervous system, and the para-sympathetic nervous system, one of which, broadly speaking, induces relaxation of the internal organs, while the other produces stimulation. The sympathetic system has the function of preparing the body for fight or flight, and therefore increases the heart rate, makes the skin pale, increases the blood-sugar, and so on. The importance of the autonomic nerves has been increasingly realised, since it has a great deal to do with all those diseases in which emotional over-stimulation plays a part—such diseases as asthma, dyspepsia, high blood-pressure, and so on.

**Backache.** The backbone is composed of a number of cylindrical bones known as vertebrae, each of which is separated from the adjoining one by a small disc made of elastic material. All the vertebrae are joined together by ligaments. Backache is a symptom which may be caused by many different diseases—sometimes disease of the vertebrae themselves, sometimes strain of the ligaments, and sometimes inflammation or spasm of the surrounding muscles. "Lumbago" is usually due to inflammation of the muscles in the small of the back. Displacement of the disc between the vertebrae may cause backache.

On the other hand, many cases of backache are due to disease elsewhere. Stomach ulcer, gall-bladder disease, and diseases of the womb may cause such pain. So also may defects of the legs and feet, or a faulty posture or manner of walking.

Obviously the most important thing in this illness is to find out the cause, and therefore a doctor should nearly always be consulted. Back-

ache from purely local causes—that is to say, those causes given in the first paragraph—may be treated temporarily by applying heat in the form of a kaolin poultice or a rubber hot-water bottle and taking two aspirin tablets three times a day. (See also Fibrositis.)

**Bacteria.** Pasteur, the famous French scientist, discovered about a century ago that many diseases are caused by germs so small as to be invisible to the naked eye. Since then, many different types of bacteria have been discovered and scientists have shown how they may be passed from one individual to another. Infection may be spread by germs coughed out by other people, by eating or drinking infected food or water, by dirt getting into wounds, or by sexual contact with someone who is harbouring the germ. However, getting an infectious disease is not simply a matter of the germs entering the body. A lot depends on the ability of the body to fight back and destroy them. This ability to resist depends on being in good physical health and also on the mental attitude. Happy people who have plenty of interest in life are much less likely to become ill than miserable people. Another important factor is cleanliness, but this should be attained by ordinary common-sense means—namely, the use of soap and water. Normal people rarely need to use antiseptics unless, as in the case of doctors or nurses, their work brings them into constant contact with disease. (See Antiseptics.)

**Baking Soda.** Sodium bicarbonate is often used for treating indigestion. It should not be used as it produces gas and makes the blood too alkaline. The best alkali to use is magnesium trisilicate, which does not have this defect.

**Barber's Itch.** An infection of the beard area properly known as sycosis. It is caused by the use of infected towels, shaving brushes, or razors, and appears in the form of small, moist, septic spots on the face. Sycosis is very infectious and therefore great care should be taken in using clean towels in case the skin becomes re-infected. Treatment by a doctor is always necessary, but, although this disease was at one time very difficult to cure, it can now be cleared up in a few days in many cases by the use of sulphonamide powder or penicillin. Ointment should never be used.

**Basal Metabolism.** All the processes of the body are carried out at a particular speed, and if the speed is too fast or too slow it is usually due to disease. For example, in exophthalmic goitre, excess secretion of the thyroid gland speeds up all bodily processes. Doctors may take measurements of the basal metabolic rate in order to find out whether such disease is present.

**Bedsore.** Patients with a chronic illness who have lowered resistance, or old people confined to bed, may develop large sores where their bodies are compressed by the mattress. These sores should be prevented by frequent washing every four hours with soap and water, followed by dabbing on spirit (methylated spirits or eau de cologne), and, finally, dusting with talcum powder. The most important thing is to keep the skin dry. In severe cases, it may be necessary to use a mattress filled with air or water. Care should be taken to see that the bed-clothes under the patient are not creased. The treatment of a bed sore once it has developed is a matter for the doctor, but only mild ointments should be used and moist dressings forbidden. Bedsore is a dangerous symptom and may lead to death.

**Bed-Wetting.** This is much more common in boys than girls. It may be due to minor physical defects of the bladder, faulty training, or psychological causes. The latter is much the most common cause and the child should be taken to a Child Guidance Clinic for advice. Adults may require psychiatric treatment.

**Bee-stings.** In most people, the result of a single bee or wasp sting is not serious and clears up in about twenty-four hours. In a small number of cases, however, there is a more dangerous reaction. Usually all that is necessary is to apply a soothing lotion or ointment, such as calamine. Theophorin cream, one of the new antihistamine substances, is particularly effective.

**Bee poison** has been used in the treatment of arthritis and other diseases, but there is no reason to believe that it has any effect whatever.

**Bell's Palsy.** Paralysis of the facial nerve is shown in weakness of one side of the face. The

eye on the affected side will not close properly and it becomes impossible to blow out the cheeks or whistle. Usually the condition follows exposure of one side of the face to excessive cold, for example, when driving a car with the window open, but Bell's palsy is unusual unless the individual is generally run-down. Heat and electric treatment are often applied, but there is no evidence that they hasten cure. Mild cases recover in two to three weeks, but sometimes the defect is permanent. Paralysis may also be due to disease inside the skull, or to an injury which cuts the nerve as it passes out just below, and in front of, the ear.

**Benzadrene.** The proprietary name of a drug known as amphetamine, which is used as a nervous stimulant. It has been used in the treatment of depression, certain nervous diseases, and for the relief of pain due to spasm of muscle, as in period pains in women. Less wisely, it has been used in the cure of "hangovers" and by students to keep them awake when studying for examinations. One type of amphetamine known by the proprietary name of Dexedrene is used to treat obesity, in which case it acts by reducing the desire for food. Amphetamine, except in too large doses, is not a dangerous drug, but it should never be taken without medical advice, since a dose which hardly affects one person may produce extreme nervousness, agitation, and insomnia in another.

**Beri-beri.** A disease, uncommon in this country, caused by eating food deficient in vitamin B. It is a form of neuritis and shows itself with numbness of the arms and legs and swelling of the feet and hands. The most common state of affairs is when people eat polished rice from which the husk containing the vitamin has been removed, but those who drink too much alcohol may develop mild beri-beri, since inflammation of the stomach prevents vitamin B from being absorbed into the system. Treatment is to give the vitamin, either pure, or in the form of yeast.

**Biliousness.** Medically speaking, there is really no such condition as biliousness, but the condition popularly called this is usually due to mild upset of the liver caused by dietary indiscretion. Treatment is to avoid rich food and alcohol, take light diet for a few days with plenty of sugar, and a dose of fruit salts.

**Birth Control (Contraception).** To be effective requires expert advice, which should be sought either from a doctor or a Birth Control Clinic. Various methods employed are: (1) mechanical, in which a pessary or sheath is used to prevent the union of male and female sex cells; (2) chemical, in which jellies or tablets are used to destroy the male sex cells; (3) "natural" methods depending on the un-proven theory that the female cell is only released at a particular time, once a month.

Contraception is not necessarily used to avoid having children at all, but is properly employed to ensure suitable spacing of births. Methods (1) and (2) are forbidden by the Catholic Church, but (3) is allowed.

**Birth-mark.** This usually takes the form of a reddish patch on the skin made up of distended blood vessels. If unsightly, it may be possible to have it removed by electrical or surgical treatment.

**Bladder.** The liquid waste matter filtered out of the blood by the kidneys passes down two tubes called ureters and is collected in the bladder. The bladder is subject to many diseases, such as inflammation due to infection (cystitis), tumour, and irritation from hard collections of waste material known as stones or calculi. The usual symptoms of inflammation are the frequent passing of urine accompanied by pain. In such cases, the best first-aid treatment is to drink plenty of fluids, whether in the form of water, lime juice, or other non-irritating liquid. If there is much pain, a rubber hot-water bottle on the site of the pain may help. When stones are present, blood may be passed in the urine. All these diseases require skilled medical attention, and patent medicines should never be used.

**Bleeder.** A person suffering from hæmophilia, an inborn incurable disease in which severe bleeding follows even a slight cut. The disease is only fatal if such an injury causes the patient to bleed to death. It was this disease in the Crown Prince of Russia which led to the influence of Rasputin over the Czarina in 1916. Members of the Spanish royal house also suffered from it.

**Blepharitis.** Inflammation of the eye-lids shown by redness, crusting, swelling, and falling out of the eye-lashes. It is usually a chronic disease, and requires expert attention.

**Blood.** Blood is the fluid responsible for carrying oxygen from the lungs to the cells of the body, and for carrying away carbon dioxide, which is later expelled by the lungs. It is also responsible for carrying the nourishment resulting from digestion of food in the stomach to the body cells, and carrying away waste material to be expelled by the kidneys. Blood consists of a fluid part called the plasma, and, floating in this, the red and white cells. A cubic millimetre of blood contains about 5 million red cells and 5000 white cells, the former being concerned with carrying food and oxygen, the latter with resistance to infection. In anaemia, the number of the red cells is reduced, while in infection by germs, the number of the white cells is increased. Chemical investigation of the blood gives the doctor a great deal of information about the state of the body.

**Blood-pressure.** This term refers to two different pressures in the blood system—the systolic pressure, which is that existing when the heart is contracting, and the diastolic pressure, when the heart is in full relaxation. The condition popularly known as "blood pressure," therefore, refers only to cases in which pressure is abnormally high. It is found as a symptom in several different illnesses, for example, in kidney disease, and internal poisoning during pregnancy. In the former type, it appears that a substance is given off by the kidneys which causes the high tension in the blood-vessels, and it is now possible to give substances which help to counteract the condition.

On the other hand, the disease known as essential hypertension occurs without any other illness being present. It is now considered that psychological factors, particularly prolonged emotional stress, are of the greatest importance. In normal fear, a substance called adrenalin is released into the blood in order to prepare the body for emergency. Adrenalin raises the blood-pressure in order to ensure a better blood supply to the brain and muscles. Chronic anxiety is a state of perpetual fear, and the continual secretion of adrenalin keeps the blood-pressure high.

In treatment, several points must be taken into consideration, first, that high blood-pressure is often a compensation for narrow blood-vessels which require a high pressure in order that the blood may be forced throughout the body. It is therefore not always a good thing to reduce it without considering whether a high pressure is, in the circumstances, a necessity. Secondly, it is not now considered that diet has any great influence on this condition. Thirdly, it is most important to reduce over-weight, if it exists, and above all, to relax mentally, and avoid physical over-exertion.

High blood-pressure may sometimes be treated by the operation of sympathectomy (*i.e.*, by cutting the nerves of the sympathetic nervous system—*see under Autonomic Nervous System*). Also effective are certain new drugs. Of course, all such treatment should be carried out under medical supervision. (*See Emotions*.)

**Blood-pressure (Low): Hypotension.** Many people worry needlessly over this alleged disease which has recently become fashionable. When the blood-pressure is too low there may be a tendency to fainting attacks, especially when getting up from a lying-down or seated posture. There is, however, no danger in this, and, since there is less wear and tear on the arteries, such people will probably live longer than most. In short, low blood-pressure is not a cause for anxiety.

**Boil.** A boil is an infection of the skin, and is caused by three separate factors: (1) the presence of germs on the surface of the skin; (2) lowered bodily resistance to these particular germs, and (3) the existence of pressure or friction causing the germs to be rubbed into small cracks in the skin. Boils are therefore commonest where such pressure exists, for example, on the neck where the collar rubs, on the wrists beneath the cuffs, in the armpit, and on the buttocks. The treatment is directed to the causes: (1) keep the skin clean with frequent washing with soap and water; (2)

increase bodily resistance by taking yeast tablets, or by the use of manganese, or tin preparations; (3) avoid pressure and friction, and ensure that collars and other clothing compressing the skin are frequently changed.

When a boil has developed, the best treatment is to wash and clean up the area surrounding it, and then to apply an Elastoplast dressing of suitable size. The dressing should not be changed until necessary, because it appears that shutting the germs in, "to stew in their own juice," has a helpful effect. In more serious cases, a doctor may recommend penicillin injections. It should not be forgotten that, when many boils occur, this may be a sign of diabetes or other chronic disease.

**Bones.** Bones are made of elastic tissue, hardened with calcium salts. Therefore, for healthy development of bones and teeth, a continual supply of calcium is necessary. Few people suffer from calcium deficiency, since most foods contain an ample supply, but calcium can only be used by the body if vitamin D is present. This vitamin, which is necessary for the development of bones, is found in butter and milk, and is created by the influence of sunlight on the skin. When necessary, it may be taken in more concentrated form, as cod-liver, or halibut-liver, oil, or still more concentrated, as Adexolin capsules.

**Botulism.** The most dangerous form of food-poisoning, caused by a germ known as the bacillus botulinus which is found chiefly in badly-canned sausages, or meat paste, and sometimes in preserved vegetables. Fortunately, botulism is uncommon in Europe. The main symptoms are weakness and paralysis.

**Bradycardia.** A slow heart-rate. Sometimes found in people convalescing from influenza or other fevers, but may be found in perfectly normal people.

**Brain.** Man's brain is the chief distinguishing feature between human beings and other animals. It is the telephone exchange which sends out and receives messages to and from the rest of the body. It is impossible to give more than a most superficial account of the nervous system, but the main facts are as follows: Essentially, the nervous system consists of two different levels, the lower centres, where primitive emotions are felt, the viscera controlled, and simple actions initiated, and the higher centres, the true brain, which holds the lower centres under control. For example, if one is pricked with a pin, a message passes up the nerves, and through the spinal cord to the lower centres, which return the impulse causing the hand to jerk away. All this takes place without any deliberate, or conscious interference. In fact, such actions can take place even after the true brain has been removed. It is possible, of course, to be pricked by a pin, and, by deliberate effort, refuse to draw the hand away. This occurs because the higher centres suppress the lower. All mental life is a constant conflict or inter-action between the higher and lower centres. When we become angry, the anger originates in the lower centres, and may be suppressed by the higher centres. To some extent, the latter correspond to what is called the conscious mind in psychology, the former to the unconscious mind.

The relationship of mind to brain, has been a subject for discussion by philosophers for centuries. Briefly, there have been three main types of theory about this relationship: (1) idealism, which states that matter is not real and only mind exists—that the universe is a thought in the mind of God; (2) materialism, that only matter exists, and mind is not real; (3) interactionism, which states that both mind and matter exist and interact in some unknown way. The modern theory is that, although mind exists, it is not a thing, but a process occurring in the brain just as digestion is a process occurring in the stomach.

Other facts are: The nervous system is made up of nerve cells and supporting tissue. The actual cell is smaller than the head of a pin in size, but has a long narrow fibre attached. It is these fibres which form the nerves of the body. The brain of a man is, on the average, slightly heavier than that of a woman, but size has no direct relation to intelligence. The various faculties are located in various areas of the brain, *e.g.*, sight at the very back, and hearing at the side. The brain cannot be exhausted by overwork in the ordinary sense of the word, and the feeling of mental ex-

haustion is usually due to mental conflict—for instance, being compelled to do work, when one has lost interest. From this it follows that there is no such thing as a "nerve tonic" to "build up" the brain.

The commonest diseases of the brain are—meningitis caused by infection of the lining of the brain, and abscesses or tumours. The two latter are serious diseases, and the symptoms are, generally speaking, severe headache, vomiting, and slow pulse rate. At a later stage, there may be epileptic fits. In brain abscess there is usually fever. It should be remarked, however, that over 90 per cent. of headaches are caused by worry or digestive upset. The illness known as "nerves" has no relationship to brain disease whatever, nor has insanity in most cases. (See under *Neurosis*, and *Psychosis*.)

**Bright's Disease (Kidney Disease).** (See under *Nephritis*.)

**Bromidrosis (Offensive body odour).** Most people are able to keep sufficiently clean by the use of soap and water, but some, in spite of ordinary cleanliness, still find that their perspiration has an offensive odour.

This may need medical attention, but can usually be cleared up by dabbing on a 1 per cent. solution of formalin. In cases where excess sweating is caused by nervousness, sedatives may be necessary. Although much publicity has been given to the use of chlorophyll in this condition, it is quite useless taken internally. It is, however, just possible that chlorophyll may have some effect when applied locally, *e.g.*, as tooth paste.

**Bronchiectasis.** A state in which the lung tissue around the ends of the breathing tubes becomes infected with the formation of sac-like cavities which fill with purulent material. The main symptoms are—continual cough, and the spitting up of a great deal of bad-smelling sputum. The amount of sputum coughed up depends on how large the cavities are, and how much infection is present. Other symptoms are, difficulty in breathing, blueness of the skin, excessive sweating, especially at night, and loss of weight. In the morning there is usually a specially large amount of sputum.

The treatment depends (under medical advice) on the severity of the disease. Plenty of nourishing food, fresh air, and rest are necessary. It also helps if, in the morning, the patient lies face down over the edge of the bed, in order to let the fluid escape, and coughs into a basin on the floor. Sometimes surgical treatment is helpful—the lung may be made to collapse in order to rest it, and sometimes parts of the lung, or even the whole lung, may require to be removed. Some cases are helped by drugs directed against whatever germs may be present.

**Bronchitis.** Bronchitis means inflammation of the tubes leading from the windpipe to the lungs. It is part of a continuous process which may attack any part of the breathing apparatus. Thus, one may get laryngitis, tracheitis, bronchitis, and pneumonia, according to whether the inflammation is in the voice-box, the windpipe, the bronchi, or the lungs. It is not caused by any one germ, and any of the germs found in the throat and mouth may cause bronchitis.

The usual sequence of events is as follows: an ordinary cold fails to clear up; it is followed by aching in the chest, tightness, and cough. There may be a temperature. At first the cough is hard and dry, but later it becomes softer, and an increasing amount of sputum is coughed up.

The treatment for this form of the illness should be rest in bed, easily digested and nourishing food, with plenty of milk and other fluids. Inhalations may be used to relieve the symptoms. These are made up of about a pint of boiling water into which is put either a pinch of menthol crystals, or a teaspoonful of Friar's balsam. The latter should be floated on the surface, not mixed up with it. A towel is then put over the head, and the steam inhaled. Care must be taken to ensure that the boiling water is not spilt over the patient, an accident which is very liable to happen if he is in bed.

Cough mixtures are a treatment for bronchitis that everybody knows about, but it is important to remember that there are two types of cough mixture which are entirely opposed in their action—sedative cough mixture, and stimulant

cough mixture. A sedative cough mixture contains drugs which act on the coughing centre in the brain, and suppress the cough. It should only be used when an irritating cough is present which is dry and results in the production of no sputum. A stimulant cough mixture, on the other hand, is designed to make the patient cough to better effect. It makes the waste material in the lungs more fluid, so that it can escape more easily. Patent medicines are liable to contain a mixture of both these opposed types of drugs, and the end result may be that they have no effect whatever.

It should not be thought that coughing is always a symptom of bronchitis. A cough merely means that the body is trying to rid itself of some irritant in the breathing passages. Obviously this may be a crumb in the back of the throat, irritation caused by excessive smoking or breathing irritating dust, or, as in bronchitis, fluid in the bronchial tubes. A smokers' cough may safely be suppressed because it is, in a sense, a false alarm—there is no foreign body in the throat, but merely an irritation of the lining.

Chronic bronchitis is less common than is usually believed. It is essentially a disease of old people or the very young and is rather uncommon in the middle-aged.

**Bruises.** Any injury to the surface of the body in which the skin is not broken. If the skin is broken, the condition is called an abrasion (which see).

When a blow leads to the formation of a bruise, what has happened is that some of the smaller blood vessels have ruptured making the area "black and blue." As is well known, some people bruise more easily than others. Generally speaking, unless any other injury is present, the only problem is to remove the unsightly blue colouration of the skin as quickly as possible. This is best done by the application of heat.

In a few cases, especially when a blow has been severe, one must look for the presence of more severe injuries beneath the bruise. Thus, a bruise on the abdomen may conceal the rupture of some underlying internal organ, and a bruise on the scalp may conceal a fracture of the skull. All severe blows, especially of the head, or abdomen, should be attended to by a doctor.

**Bubonic Plague.** (See *Plague*.)

**Bürger's Disease.** A disease of the blood vessels, usually in the arms and legs, in which spasm of the arteries leads to numbness, coldness, and pain in the muscles. The symptoms are like periodic attacks of cramp.

This disease is not very common, but is interesting in that it is one of the diseases in which excessive tobacco-smoking is an important factor. However, only a small number of people who smoke excessively have the particular form of over-sensitivity that leads to Bürger's disease. Only a doctor can treat this condition and usually a surgical operation is necessary.

**Bunions.** Like most deformities of the feet bunions are largely due to ill-fitting footwear. At an early stage, they may be remedied by wearing correctly fitting shoes; in a later stage, the discomfort can be relieved by a chiropodist. But when they are large, inflamed, or have existed for a long time, the only satisfactory treatment is surgical.

**Burns.** The seriousness of a burn depends (1) on how deep it is; (2) on how extensive it is. The latter is, generally speaking, a more important factor. In any extensive burn, the first thing to do is to treat the patient for shock, since this leads to 80 per cent. of the total deaths. The patient should be placed in a position of rest, with the head slightly lower than the body. He should be kept warm, and, if pain-relieving drugs are available, they should be given immediately. Hot sweet tea is said to help, and at any rate can do no harm. The doctor should be sent for.

The application of dressings to severe burns is really a matter for the expert. Mild burns may be treated with boracic ointment, but, unless no medical help is likely to be available, it is exceedingly important that nothing should be put on a severe burn, as it may interfere with the later use of more efficient remedies.

The treatment used by surgeons for burns has changed a great deal since the second world war. Tannic acid jelly is now little used, and the applications vary from so called triple dye, to a particular

type of paraffin, and mixtures of blood plasma with sulphonamides.

If medical help is not likely to be available, after treating for shock, the patient's clothes should be removed with as little disturbance of the burns as possible. In bad cases, the clothes should be cut off, and the burned area gently cleaned with soap and water. Great care must be taken to avoid sepsis, and the hands of the person carrying out the treatment should be thoroughly cleaned before touching the burn. The dressing applied thereafter will naturally depend on what is available, but the best dressing is vaseline with sulphonamide. In other cases, gauze soaked in normal salt solution can be used (this is made by adding an ounce of salt to a pint of boiling water, and applying cool). Further dressings should be carried out with scrupulous attention to the cleanliness of the hands of the person doing the dressing.

**Bursitis.** Any part of the body which is continually rubbed or pressed may develop a bursa. This is a little swelling produced by a sac of fluid under the skin. The bursa is a response on the part of Nature to protect the underlying bones or tissues—it is a sort of shock absorber. Later, a bursa may become infected, and require to be removed, opened, or simply drained through a hollow needle. This may also have to be done if it becomes inconveniently large. The commonest forms of bursitis are—housemaid's knee, miner's elbow, or the types that develop on the buttocks or the shoulder.

**Cachexia.** The extreme wasting and weakness found in the later stages of a severe illness.

**Cesarean Operation.** When the abdomen has to be opened to remove the child in a pregnant woman. The process is named after Julius Caesar who is said to have been born in this way.

With modern methods, this operation is no longer as serious as it used to be, and the results are usually favourable.

**Caisson Disease.** Occurs in workers, such as divers, who have to work under high atmospheric pressure. It comes on when the pressure is reduced too rapidly, and the nitrogen in the blood tries to escape in the form of bubbles. The symptoms are—pain in the legs and abdomen, dizziness, and difficulty in breathing. The treatment is to reverse the process by putting the patient back under high-pressure conditions, and reducing the pressure gradually.

**Calamine.** A pink substance composed of zinc oxide and a little iron oxide which is used in the form of a lotion or ointment to soothe the skin.

**Calcium.** (See under Bone.)

**Calculus.** A stone-like mass which may form in the body under abnormal conditions. The usual types are gall-stones, and stone in the kidney or bladder. Calculi may exist without giving rise to any symptoms, but, when symptoms are present, an operation is usually necessary. Contrary to the claims of patent medicines, no drug is known which will dissolve calculi.

**Callouses.** Any thickening of the skin formed on the site of continual irritation, usually on the feet or hands. Since they are designed to protect the body against irritation, treatment is not necessary unless they become too thick or unsightly. They may then be shaved down, if on the feet, by a chiropodist.

**Callus.** The new tissue formed at the site of fracture when a bone heals.

**Calorie.** A measurement of energy intake and output in the body. The large calorie or Calorie used in food chemistry is equal to 1,000 small calories. (See Gen. Inf. for definitions.)

**Camphor.** A drug obtained from the camphor tree and used to stimulate the skin, as in camphorated oil.

**Cancer.** There are numerous immediate causes of cancer—whatever may be its basic cause—some of them are as follows: (1) continual irritation; cancer of the tongue or lip is often found in elderly people who have been in the habit of smoking a broken-off clay pipe. The rough edge of the broken pipe stem continually irritates a part of the tongue, and hot tobacco-smoke, pouring on the sore, creates a condition of continual irritation which may lead to cancer; (2) sometimes, in the process of development before birth a small piece of a particular tissue becomes enclosed by tissue

of another kind. This may lead later on in life to development of a cancer. It is even possible for a cell that would have developed into a twin child, to get shut up in the body of the other, and to start growing later in life. This kind of cancer is called a teratoma, and may contain hair, bone, or teeth; (3) in the laboratory, cancer may be caused in animals by rubbing coal-tar into a part of the body. Human beings may also get this kind of cancer by frequent contact with certain dyes, soot, etc.; (4) in certain animals, an infectious type of cancer caused by a virus, may be produced. So far as is known, this type does not occur in human beings.

There is no reason whatever to believe that cancer is hereditary and it should be realised that far more people are afraid of cancer than ever develop it. Nevertheless, any untoward symptoms should be seen by a doctor, especially if they persist for more than a short time. The following are especially important: (1) hoarseness of the voice, lasting for more than two weeks, and not responding to ordinary treatment; (2) any sore on the body, especially in the mouth, which does not heal in a few days; (3) if a patient who suffers from chronic indigestion begins to find that the pain becomes more constant and does not respond to the usual remedies, if blood appears in the bowel movements, or loss of weight occurs, he should report to his doctor at once; (4) in women, any discomfort, pain, or swelling in the breast, any irregular bleeding from the vagina, especially in women over thirty-five, should be immediately dealt with.

It must be remembered, that not only is cancer not incurable, but it is cured, in fact, very often indeed. There should, therefore, be no hesitation in going for treatment, and no foolish prejudices should be allowed to interfere. Finally, it cannot be said too often, that there is no treatment, except that given by doctors or surgeons, which can lead to anything else but disaster. No disease is 100 per cent. incurable, because all disease is a fight between an abnormal process, on the one hand, and the body on the other. Sometimes, even in apparently incurable cases, the powers of the body and mind step in and determine to defeat the enemy. "Miracles" of this sort do occur, both at Lourdes and in the consulting room of the good physician, who can instil hope and faith in his patient. But none of these facts can take away from the absolute necessity of using all the knowledge and power of modern science.

**Carbohydrates.** The scientific name for sugars, starches, and cellulose.

**Carbuncle.** A very large boil, which should be treated in the same way as ordinary boils (which see). The only point to remember is that carbuncles are more likely to be associated with underlying disease of the body, such as diabetes, and, therefore, the patient should have a thorough investigation.

**Carcinoma.** A particular type of cancer (which see).

**Cardiac.** Concerning the heart (which see).

**Caries.** A condition of decay, usually applied to decay of the teeth. (See p. 818.)

**Carminative.** A drug to aid digestion and relieve flatulence, such as ginger, peppermint, or dill-water. Their virtue is largely imaginary.

**Carrier.** A person who harbours disease germs without suffering from the disease himself. Such individuals are dangerous because they may infect others. Carriers are commonly found who spread typhoid fever in this way.

**Catalepsy.** A general name to describe various states marked by loss of power to move the muscles. The patient often appears to be unconscious, although he, in fact, is not. These states are mainly of psychological origin, and occur in such mental illnesses as schizophrenia and hysteria. Catalepsy may last, if untreated, for several hours, or for months, and, occasionally, years. In the types due to mental illness, the cause is the desire to retreat from the responsibilities of life.

**Catamenia.** An out-of-date name for menstruation.

**Cascara.** A laxative used in the treatment of constipation. It is made from the bark of a tree, and given in the form of liquid extract or sugar-coated pills. (For general discussion see under Constipation).

**Castor Oil.** An old-fashioned purgative which is still used and found useful in two circumstances: (1) when, before an operation, the surgeon wishes to clear out the bowels completely by single administration of purgative; (2) in mild cases of diarrhoea when similar effects are desired with the intention of clearing-out poisons in the system. Castor oil has the effect of producing constipation later on. It should therefore not be used regularly.

**Cataract.** A clouding of the lens of the eye which prevents clear vision. The usual symptoms are, sore eyes with swollen eye-lids, poor vision, and headaches. Cataract usually occurs in older people above fifty, but may occur from before birth in children.

Treatment is by operation—a procedure which has been carried out for centuries, and is still carried out under primitive conditions in India. After the modern operation, 97 per cent. of patients have good vision, but it becomes necessary to wear glasses which replace, and do the work of, the lens which has been removed.

It is quite wrong to believe that drugs or treatment other than operation can influence cataract in any way.

**Catarrh.** This is an out-of-date word applied to any illness which causes inflammation of the membranes, with a discharge of mucus. Thus one may talk of nasal catarrh when the nose is running, bronchial catarrh when mucus is being coughed up from the breathing-tubes, and gastric catarrh when mucus is supposed to be secreted to excess by the stomach. In reality, the word is an unscientific one to use, and is, practically speaking, meaningless.

**Cathartic.** A purgative. (See under Constipation.)

**Cauterisation.** The application of heat or burning chemicals to the surface of the body. Cauterisation is used in three different ways: (1) to burn off warts or small tumours; a wart may be burned off by a red-hot electric needle, or by chemicals such as silver nitrate; (2) some operations, especially on organs such as the lungs, or liver, from which much bleeding is expected, can be carried out by cutting with a red-hot needle, heated by electricity, instead of by a knife. This clots the blood as it cuts, and prevents bleeding; (3) in olden days, pain, for instance, in the back, or in sciatica, was treated by applying to the skin a heated piece of metal the size of a halfpenny, which burned the skin slightly. This, of course, did not remove the original pain, but merely distracted attention from it and therefore is not now used.

**Cellulitis.** A deep inflammation of the tissues just under the skin caused by infection with germs.

**Cerebellum.** A small part of the nervous system, situated at the back of the brain, which is concerned with co-ordination of movements. When the cerebellum is diseased, the patient may stagger about like a drunken man, because he can no longer co-ordinate the separate movements involved in walking.

**Cerebro-spinal Fluid.** The watery fluid which surrounds the brain and spinal cord as they lie inside the skull and in the canal of the spinal column. This fluid acts mainly as a shock absorber. The two important facts about it are: (1) when, due to a tumour or infection, the fluid is prevented from circulating, a state called hydrocephalus (water on the brain) results; (2) since the cerebro-spinal fluid becomes infected by any germs present in the nervous system, the doctor can discover what germs are present by drawing off some of the fluid and examining it. This is done by a process called lumbar puncture, in which a hollow needle is pushed between the bones composing the spinal column, usually in the small of the back, and the fluid withdrawn.

**Cerebrum.** The brain, especially the large front portion, as distinct from the cerebellum and the spinal cord.

**Chafing.** Irritation caused by the rubbing together of two skin surfaces. Usually occurs between the thighs, the buttocks, or under the breasts, and is aggravated if sweating occurs. In treatment, ointments or oily dressings should be avoided, and probably the best thing to do is to apply eau de cologne, or surgical spirits and dust with talcum powder.

**Chancere.** The name given to the sore that appears on the body when infection with certain types of venereal disease has occurred. It usually takes the form of a flat, hard ulcer, and is found on the part of the body through which the germ has entered. Thus, the most usual sites are on the sex organs or on the lips. The most usual form of chancre is caused by syphilis, but another less serious disease called chancroid or soft sore is sometimes found. Of course, many types of sore occur on the sex organs which are not caused by venereal disease and the patient need not be unduly anxious unless there is reason to fear infection from sexual intercourse in the preceding six weeks. Nevertheless, it is always wise to consult a doctor in cases of doubt.

**Change of life.** There are many mistaken ideas about this perfectly natural state of affairs. The menopause, to give it its proper name, usually occurs between the ages of forty and fifty-five in women, and about ten years later in men. It is marked, in women, by the stopping of the monthly periods, and sometimes by other symptoms, both physical and mental. The characteristic symptoms are headaches, "hot flushings," dizziness, and irregular periods. Sometimes the flow may be excessive and more frequent than usual, or, on the other hand, it may be reduced in amount and less frequent. Mentally, a woman is liable to feel depressed, anxious and nervous.

It should be understood that these symptoms are neither inevitable nor natural, and, indeed, rarely occur in women living under more natural surroundings. The only practical effect of the change of life is that sex cells are no longer produced by the ovaries, and therefore pregnancy, once the changes are completed, can no longer occur. But the cells of the ovary which produce sexual desire and make a woman feminine and attractive continue to function for many years after. The vast majority of women in this country grossly exaggerate the importance of the menopause, and there is a tendency to attribute every symptom or unpleasant feeling at this time to the "change of life." There is, in fact, no reason why there should be any unpleasant sensations whatever. Many of these symptoms and the feeling of misery that goes with them are caused by the fact that the woman's attitude is wrong. If she believes that she has reached the end of the "womanly" stage of her existence, there is no wonder that she becomes unhappy and exaggerates every out-of-the-way sensation by paying undue attention to it. As we have seen, the menopause should be only a minor incident in the healthy life, and the symptoms have a great deal to do with a wrong way of looking at something which is quite normal.

If, however, the symptoms are troublesome, the doctor should be consulted, and with modern treatment it is usually possible to remedy them quite quickly. Severe depression is abnormal and should be treated by a psychiatrist.

**Chapped Skin.** This is usually due to cold weather which causes the glands of the skin to be less active than usual. The skin becomes dry, and therefore cracks more easily than in warm weather.

Since the condition is due to lack of the natural oil of the skin, the treatment should be (1) to avoid excessive use of soap and water; (2) dry the hands immediately they become wet; (3) apply grease in the form of cold cream, or some other mild ointment.

**Chicken-pox.** Chicken-pox is a very infectious children's disease, which usually develops about two weeks after contact with someone suffering from the disease. It is caused by a virus—that is to say, a germ which is so small as to be invisible under even the most powerful microscope. There is no specific treatment, but, since nearly every other person has suffered from chicken-pox in childhood, there is no reason to worry. The only way to avoid the illness is to keep away from people who are suffering from it.

All the treatment required is to make sure that the blisters which appear on the chest and face are not scratched, because this will result in their being infected by other germs and may produce disfiguring scars in later life. Ordinarily, when left alone, they disappear in a few days.

The diet should be light, and the doctor will probably prescribe soothing applications to stop irritation. Warm baths are often helpful.

**Chilblains.** Painful swelling of the fingers, toes, and ears caused by exposure to cold. Chilblains occur most often in the young, and in those who are run-down or have insufficient nourishing food.

In appearance, the chilblain is first of all a pale area on the skin, but later it becomes red, shiny, and painful. The part swells, and blisters may develop.

The most important thing is to make sure that the patient has plenty of nourishing food. In addition, it will help if vitamin tablets are taken, particularly those containing vitamins A and D. These may be obtained from the chemist, either in the form of halibut-liver oil, or vitamin capsules. One capsule should be taken three times a day. Woollen socks should be worn, and the hands covered with gloves in cold weather. More recently vitamin K and tablets of nicotinic acid have been used successfully.

**Child Care.** The following are the signs of a healthy baby: A clear skin, good sleep, a good appetite, steady increase in weight, and regular bowel movements. The baby should sleep with the mouth and eyes closed, and should not vomit or spit up its food. At birth, the baby should weigh about 7 lb., but anything between 5½ and 9 lb. is fairly normal. All babies should be breast fed, if possible, not only because breast milk is the best food for an infant, but also because the act of sucking acts as an important stimulus to the baby's mind. Feeding should be at regular intervals, and, in a child of normal weight, every four hours. Under-weight babies may, on the doctor's advice, be fed more often. Weaning is nowadays recommended to begin about the fifth month, but opinions differ; it is usually carried out by gradually substituting such foods as Farex, Robinson's barley, bone broth, and artificial milk foods, for the breast milk. While feeding the baby, the mother should have an ordinary nourishing diet to which should be added three or four glasses of milk a day. Ordinarily speaking, there is no food that the mother may not take, and she can, in general, carry on as usual. Very few drugs appear in the milk, and the mother need not be afraid of taking any medicine necessary. Alcohol and tobacco in moderation are harmless. Artificial feeding is a matter for discussion with the doctor or maternity nurse.

**Bowel control:** opinions differ about this, but the modern tendency is to leave it till the second year. Napkins should be changed as soon as possible, whenever they become wet. It should be remembered, however, that babies have different ideas on cleanliness from those of their parents, and behaviour that appears very dirty to a grown-up is quite natural to a baby. The baby should be bathed daily, paying special attention to folds of skin where irritation may develop; these should be powdered afterwards.

The doctor or nurse should be called in when (1) a baby is not gaining in weight, or is crying unduly, or vomiting up food; (2) when there is anything abnormal about the appearance of the bowel motions; (3) when any eruption appears on the skin; (4) if the baby is sickly in appearance, sleeps poorly, and does not look contented.

The first thing to remember about bringing up children is that they are being prepared to live in a particular type of environment. It is silly to teach a child "baby words" for its natural functions, or for any part of the body that the parents are prudish enough to think unmentionable. On the other hand, it is equally stupid to go to the other extreme, and tell a child a lot of unnecessary facts about sex which it is unable to understand. The keynote in bringing up a child should be complete honesty. The child should be told the proper name for everything, and its questions should always be answered truthfully. Thus, if at a later stage, a child asks where it came from, the answer should be that it grew inside its mother, but there is no need to give a detailed account of the process. Each question should be answered as it is asked, but usually no unasked-for information need be given. In the second place, a child's upbringing should always be consistent—if a child does something which it is told is wrong on one day, it should still be wrong on another day. The child should not be punished according to the good or bad moods of its parents. But it cannot

be repeated too often, that children are not born with any moral ideas. They are perfectly natural. It is therefore always necessary to explain first why something is wrong, be lenient on the next occasion, and explain again, and only consider punishment when it is quite certain that the child knows that he is doing wrong. Even then an intelligent parent will want to know why his child persists in doing wrong. It may be with the intention of getting the parents to fuss over him, when he feels that he has had too little attention. A famous teacher has said, "There are no problem children—only problem parents." Finally, because grown-ups have been spoiled by a stupid society into believing that various natural processes, especially sexual ones, are dirty, they should be on their guard against imposing their own unreasonableness on their children.

**Chill.** This is not a proper medical word, but refers to the symptoms that occur when one first becomes infected with any germs which cause fever. When such germs enter the body, all the defending processes are mobilised and speeded up. The white cells in the blood increase in number, and the amount of energy used is greater than normal, causing the temperature to rise. This rise in temperature increases the ability of the body to fight back, and, in order to retain heat within the body, the blood-vessels in the skin contract so that less heat is lost by radiation. This makes the skin cold and pale.

What is ordinarily called a chill is merely an infection by the germs causing cold or influenza. But a chill may be the preliminary to almost any infectious disease, such as measles, mumps, scarlet fever, pneumonia, and so on.

The best treatment when the temperature is raised is to go to bed with as much warmth as possible. Hot drinks and hot-water bottles are helpful. The ordinary type of chill, which is not a prelude to anything else, shows in the form of a feeling of coldness, shivering, headaches, and general shakiness.

It is the custom to take aspirin or similar drugs in these circumstances, but it should not be thought that they have any effect in curing a chill. All that aspirin can do is to depress the "shivering centre" in the brain, and relieve headache. It therefore only removes the symptoms, without altering the disease. However, it may give some relief, and will do no harm.

**Chiropractic.** A system of treatment, founded in America, based on the belief that all disease is caused by pressure on the nerves as they leave the spinal column. This belief is not accepted by orthodox medical practitioners.

**Chloasma.** A brownish discoloration of the skin found in patches on any part of the body. It is usually found in pregnancy, but may occur in some people after sun-bathing.

**Chlorosis.** A form of anaemia, very common in young girls during the nineteenth century. It is now almost unknown. The treatment is as for ordinary anaemia.

**Cholecystitis.** (See under Gall-bladder.)

**Cholera.** A tropical intestinal disease, somewhat similar to typhoid fever, although much more severe in its symptoms. It is mainly found in India and the Far East, is less common in Europe, and is not now found in England. The germs are taken in by swallowing infected food or water and the disease can be avoided by using only cooked food and boiled water. Vaccines have been prepared which, when given by injection, protect against cholera.

The symptoms are—very severe diarrhoea, followed by the passing by the bowel of almost pure mucus and water, and severe vomiting. The loss of fluid and salts leads to severe muscular cramps. Cholera is a serious disease and many patients die of it.

**Chorea.** Also known as St. Vitus' dance or Sydenham's chorea. A disease of the nervous system, usually considered to be related to rheumatism. The real cause, however, is unknown, but it appears that it occurs in those who have been infected with rheumatism and who have particularly sensitive nervous systems. It is much more common in children, occurs more often in girls than boys, and in some families more than others.

The symptoms are—rapid twitching movements of the hands, and sometimes of the whole body.

Children are often punished by parents who suppose that the movements are being made deliberately. Patients with chorea require careful nursing and plenty of good food. The treatment is a matter for the doctor, but, with adequate care, the child will recover in a few weeks, although a long convalescence is necessary.

It should be remembered that there are several diseases which closely resemble chorea, one of which is a serious chronic illness, and the other is an hysterical illness due to psychological causes. It is therefore essential that a doctor should distinguish between these different illnesses.

**Chronic.** A chronic disease is one which is prolonged and relatively mild, as opposed to an acute one, which is short and severe.

**Chyme.** The food after it has been digested in the stomach.

**Cicatrice.** A scar.

**Circumcision.** The operation of cutting off the fore-skin which is carried out by Jews and Moslems for religious reasons, but is sometimes carried out for reasons of cleanliness or when disease is present.

Undoubtedly, there are certain cases in which circumcision is necessary and advisable, but it should certainly never be done for reasons associated with "cleanliness" or crank moral ideas.

Unless absolutely essential, circumcision is best avoided; for there can be little doubt that its psychological effect is often harmful.

**Cirrhosis.** Hardening of any tissue, but particularly of the liver. Usually said to be due to alcoholism, but probably more often caused by germs or parasites. Doctors are not nowadays so certain that alcohol causes cirrhosis of the liver, but certain drugs, such as chloroform, arsenic, and phosphorus, do. In mild cases no symptoms may be present, but in more severe cases, there is loss of appetite, fluid in the abdomen, and sometimes vomiting of blood. At this stage, the disease is serious, and requires medical attention. Treatment involves leading a quiet, regular life.

**Claustrophobia.** A psychological symptom, which causes the individual to be afraid of enclosed spaces. People with claustrophobia are afraid of being shut in railway carriages, or in small rooms, or of going through railway tunnels. The condition is very common and not serious in itself. It is one of the symptoms of a neurosis (which see). The usual meaning of such a fear is that the individual is afraid of being "shut-in" in the social sense—that is to say, he has an abnormal fear of his personal freedom being interfered with by others.

**Cleft Palate.** The depression in the middle of the lip just beneath the nose is the site where, during development before birth, two parts of the skull join together. Defects in this union may lead to all different degrees of deformity. Thus the two sides of the lip may fail to join together, causing a hare-lip, or the two sides of the palate may fail to unite. Minor degrees are unimportant, but the only possible treatment for cleft palate is surgical.

**Climateric.** (See *Change of Life*.)

**Climate.** (See under *Air*.)

**Club-Foot.** A deformity of the feet, present from birth, of unknown cause. It can only be treated surgically, and the sooner treatment is undertaken, the better. The longer a parent waits before beginning treatment, the longer time is necessary for treatment and the less is the hope of success. If begun in the first year of life, there is every chance that the child will grow up practically normal.

**Cocaine.** The first drug to be employed as a local anæsthetic. It is now no longer used, except in eye surgery, but is common as a drug of addiction. In curing the cocaine habit the same principles apply as in alcoholism (which see).

**Coccyx.** The small bones at the end of the spine which correspond to the tail in other animals. They may be injured by a kick, or sitting down hard, and such an injury may cause a great deal of pain. Treatment is a matter for the doctor.

**Cod-Liver Oil.** The chief source of vitamins A and D which ensure the health of the skin and bones. Nowadays, these vitamins are better taken in the form of halibut-liver oil or vitamin capsules such as Adexolin, which are more concentrated.

**Coffee.** Coffee makes some people tense and nervous, or unable to sleep, because it contains the stimulant drug caffeine. Such people should either stop taking coffee or take it only in the morning and early afternoon, or else use one of the brands of coffee now made in which the caffeine has been much reduced.

**Coitus.** Sexual intercourse.

**Colds.** Colds are highly infectious, and come on two to three days after contact with someone else who has a cold. The most infectious period is the first day. Colds are caused by a virus—a germ which is so small, that it cannot be seen under an ordinary microscope—but later in the course of a cold other germs are concerned which produce a yellow discharge from the nose.

Being exposed to cold and damp has no direct relation to having a cold except that such conditions are apt to reduce the vitality. Psychological factors are extremely important—people who are happy and keen on their work are less likely to get colds than those who are not. One is less likely to get cold when attending a football match which is interesting than doing some outdoor work, which is not.

Although many doctors recommend bed and aspirin for colds it should be noted that aspirin has no curative effect (see under *Chills*), and unless the patient feels really run-down, or has a temperature, it is probably better to carry on. A Benzadrine inhaler is the best means of relieving the choked-up sensation in the nose. In the later stages, the secondary infection by other germs can be relieved by penicillin, or sniffing up mild antiseptics.

No inoculations or vaccines taken by injection or by mouth have the slightest effect in preventing colds, and their use is a piece of medical humbug. The most such vaccines can do is to reduce secondary infection.

**Cold Sores.** (Herpes Simplex.) Small groups of blisters, usually round the lips, frequently associated with colds, pneumonia, or other diseases. They may also be found on the sex organs. Nothing can be done to prevent these, but the best treatment is to clean them and apply collodion.

**Colic.** A severe pain in the abdomen, caused by spasm of one of the internal organs, usually the intestines. True colic only occurs in those parts of the body which are hollow tubes, such as the stomach, intestines, bile duct, or the tube leading from the kidneys to the bladder. The pain is characteristic, since it is periodic, that is to say, it comes on, increases to a certain pitch of intensity, and then becomes less painful, only to be followed once more by an increase in pain. In the stomach the most frequent cause of colic is flatulence (which see). In the intestine, any harmful substance which has been swallowed may lead to colic, which is usually followed by diarrhoea. Gall-bladder colic may occur either following inflammation of the gall-bladder or its ducts, or as the result of gall-stones. This type of colic produces severe pain just under the margin of the ribs of the right side. There may also be pain in the region of the shoulder-blade on the right side.

So-called renal colic is caused by the passage of a stone from the kidney towards the bladder. Pain is felt in the kidney region, which radiates down the front of the abdomen into the groin and the thigh.

Any form of colic, if the pain is severe enough, may be associated with vomiting, sweating, and temperature. Since nearly all types require medical attention, the only thing to do in the meantime is to put the patient to bed and apply heat to the site of the pain, preferably in the form of a well-covered rubber hot-water bottle.

**Colitis.** Inflammation of the large intestine. Food, after being digested in the stomach, passes along the small intestine, which is about 22 feet long, and during its passage all the available nourishment is absorbed into the system. The food then enters the large intestine, or colon, by which time it consists largely of waste matter, and is subsequently eliminated. Colitis is caused by irritation of the latter part of the digestive system.

Many cases of colitis are neurotic in origin, and nearly all of them are caused by the patient himself, through excessive use of purgatives.

The usual type of the disease, known as mucous colitis, is caused in this way and shows itself by pain in the abdomen associated with the passing of excessive mucus and possibly small amounts of blood. It is found in patients who are constantly concerned about their bowels, and are always taking medicines or "crank" foods. The disease is, as we have seen, directly caused by this wrong attitude, but when it has got so far, treatment may be necessary in the form of special diet. Certainly no further laxatives should be taken, and apart from essential treatment by the doctor, the less attention paid to the bowel functions the better. (See the article on Constipation.) Colonic lavage, since it helps to fasten the attention on the colon, is extremely inadvisable as a general rule.

There is another condition of the bowel which is more serious, the cause of which is not yet completely known. This disease is known as ulcerative colitis. As in the first illness, blood and mucus may be passed by the bowel, but there is also loss of weight, anæmia, weakness, and diarrhoea. Ulcerative colitis must always be treated by a specialist. The outlook is sometimes serious, but is much improved with modern treatment.

Since colitis is an inflammation of the large intestine, such infectious diseases as dysentery and cholera also come under this heading, but, generally speaking, the use of the word is limited to the two conditions described above.

**Colon.** The large intestine (see above).

**Colloidion.** A drug which, when painted on the skin, forms a thin transparent protective film. It is also known by the proprietary name of New Skin.

**Colour Blindness.** An inborn condition in which, while ordinary vision remains normal, the individual is unable to distinguish between particular colours. The most common type is difficulty in distinguishing between red and green; less common is difficulty in distinguishing blue from yellow. The importance of this abnormality lies in the fact that people who are unable to tell, say, red from green, are liable to be a danger on the roads when automatic traffic signals are encountered.

**Coma.** Complete loss of consciousness, which may be due to many different diseases. Alcohol, diabetes, cerebral hæmorrhage, brain tumour, and epilepsy, are a few of many possible causes. Only a doctor can treat coma.

**Comedones.** Blackheads. (See Acne.)

**Concussion.** Stunning. A condition of dizziness, mental confusion, and sometimes unconsciousness, due to a blow on the head. The patient is usually pale and suffers from shock, with a weak pulse and slow breathing. He should be put to bed and kept there until the doctor arrives.

An important fact about concussion is that serious after-results are not nearly so common as many people imagine. Very severe blows can lead to epileptic fits and certain other symptoms, but most people who complain of symptoms following a head injury are suffering from a wrong attitude to the accident, or what is technically called a neurosis. Such factors as resentment, desire for compensation, or general discontent, may lead to the appearance of symptoms, such as headache, dizziness, and "nerves," which are attributed to the original blow. It is in the patient's own interest that he should take note of these facts.

Every doctor knows that if one compares the results in people who have been injured on the head at sports with the results in those who have had similar injuries while at work, the latter will be found to have a far higher number of cases with residual symptoms. This is because the mental attitude in each case is different. A man injured playing football is not resentful and wants to get back as soon as possible. But, when the injury occurs during work, the attitude is usually the very opposite. It is these emotional causes which lead to unpleasant after-effects following concussion far more often than physical causes.

**Congenital.** Existing at, or before, birth.

**Congestion.** Excess accumulation of blood or mucus in any part of the body.

**Conjunctivitis.** Inflammation of the trans-

parent membrane which covers the eyeball. The symptoms are—irritation on the front of the eye, which often feels as if dust had got into it, redness, and excessive flow of tears, or discharge. Often the eye-lids are stuck together in the morning.

Conjunctivitis is caused by infection with germs of different types, and the treatment depends on what germs are present. The safest treatment is to bathe the whole eye with hot water, and then apply a solution of boric acid with an eye-bath. This will cure mild cases, but it may be necessary to see a doctor if the inflammation does not clear up. Since conjunctivitis is infectious, the eye should not be touched either with the hands or with a dirty handkerchief.

A very severe form of the disease, leading to blindness, may result from a newly-born baby's eyes being infected from a mother with gonorrhoea. For this reason it is compulsory to drop antiseptic into the eyes of new-born children.

**Constipation.** There has been more nonsense written and published on this subject than on almost any other disease in medicine. Bowel motions occur normally at intervals of anything from twenty-four hours to four or five or more days. The idea that constipation leads to serious internal poisoning is believed by nobody nowadays, although it is carefully fostered by those who sell patent medicines. It is possible to go for weeks without any bowel movement and with no very serious results. (It must be remembered, however, that constipation may be a sign of more serious disease, and it is this, rather than constipation itself, which may cause unpleasant effects.) In general, constipation should be looked on as a sign that a wrong diet is being taken, or that faulty habits have been formed in childhood, but, if the condition does not improve after a diet containing fresh fruit, stewed prunes, and wholemeal bread, a doctor should be consulted.

Purgatives should never be used regularly, because most of them are merely poisons which irritate the bowel. The least harmful are such substances as agar. The proper function of a purgative is to clear the bowel on one occasion only, and frequent repetition may lead to a disease, such as mucous colitis, which is much more serious than constipation.

In fact, a normal person should have no occasion to be interested in the functions of his bowel, or in the nature of his bowel motions, but every doctor sees only too frequently patients who think they are constipated because their bowels do not work daily! In most cases, there is little need to be worried if they work only three times weekly, and even this may be quite normal.

**Consumption.** (See Tuberculosis.)

**Contagion.** (See Infection.)

**Contraception.** (See Birth Control.)

**Contusion.** A bruise (which see).

**Convulsions.** Any kind of fits, but this term usually refers to convulsions in children, which occur much more frequently than in adults. Indeed, any form of infectious disease or other irritation in a child, may lead to convulsions. In these, the child becomes unconscious and rigid, and there may later be spasmodic jerking of the face, arms, and legs. A doctor should always be called to distinguish between this condition and epilepsy. Epilepsy is only the cause in one-fifth of cases. The best treatment is to keep the child warm, either with a hot bath or hot-water bottles. Great care must be taken not to cause burning. Since convulsions in children are sometimes caused by lack of calcium in the blood, doses of halibut-liver oil may be given.

**Cornea.** A transparent membrane covering the eye, and lying beneath the conjunctiva.

**Corns.** Corns are produced by continual rubbing or irritation of the feet by ill-fitting shoes, but they may occasionally also appear on the hands. In ordinary cases, the best treatment is to cut them away with a razor-blade, but, unless the footwear is altered, they will, of course, grow again. Various corn-cures containing salicylic acid may also be used. If the corns are at all bad, it is best to consult a chiropodist.

**Coronary Thrombosis.** Clotting of blood in the blood-vessels which supply the heart. The illness is similar to angina pectoris (which see).

**Cortisone.** A hormone, or potent chemical substance, produced by the suprarenal glands.

which are situated above the kidneys. These glands produce several hormones, of which cortisone is only one. Medically, cortisone is obtained by the extraction and purification of the substances derived from the suprarenal glands of animals, and since these glands are very small, it was at first impossible to obtain more than very small amounts of cortisone, which was, therefore, also extremely expensive. Now, however, it is more generally available.

The original work on cortisone was carried out in the United States, where it was found to have an effect on certain diseases which could only be described as magical. For example, sufferers from the serious and crippling disease of rheumatoid arthritis were described as being relieved of their symptoms within minutes of an injection and being able to get up and walk quite normally for the first time in years. It was admitted, however, that, unless the injections were continued, the condition was liable to relapse. Unfortunately, these first enthusiastic reports have not been substantiated, and recent writers in this country have not found cortisone to be superior to aspirin in rheumatoid arthritis. Although cortisone was hailed as a cure-all for many different disorders, including certain mental diseases, the most that can be said now is that it is very useful in a small number of conditions, and makes others dramatically worse.

Nevertheless, cortisone has served the useful function of drawing attention to the nature of disease processes in general; for, although the point cannot be elaborated here, we are on the verge of a hypothesis which may indicate that all diseases, of whatever nature, produce their effect at the cellular level in basically the same manner. This hypothesis, which is at present being developed by Professor Hans Selye of Montreal, is known as the theory of the General Adaptation Syndrome.

**Cough.** An attempt on the part of the body to expel something causing irritation in the chest or throat. Cough mixtures should not be given indiscriminately, as there are two separate types: one for stopping a useless and troublesome cough, the other for liquifying material choking the bronchial tubes so that it can be expelled more easily. (For a fuller discussion, see under *Bronchitis*.) Very occasionally, cough may be caused by irritation outside the throat or chest, such as the cough produced by irritation from wax in the ears.

**Cramps.** (See under *Colic* and *Dysmenorrhœa*.)

**Cretinism.** A condition of idiocy, caused by lack of secretion of the thyroid gland just after birth; it may be removed by giving the baby thyroid extract by mouth. In some districts, such as Derbyshire and parts of Switzerland, cretinism is more common than elsewhere, because of lack of iodine in the drinking water. The deficiency may then be made up by the use of iodised table salt, or iodised chocolate. Any baby which appears to be dull in infancy should at once be referred to a doctor, to see whether cretinism is present or not. Later treatment has much less effect than when it is begun early.

**Crisis.** The turning-point of a disease, such as lobar pneumonia, in which, usually on the seventh or eighth day, the temperature suddenly starts to come down.

**Croup.** An old-fashioned name applied to the diseases now known as laryngitis, diphtheria, or sore throat.

**Cyanosis.** A term used to describe blueness of the skin, generally caused by lack of oxygen. Most usually found in heart diseases, less often in lung and blood diseases.

**Cysts.** Any sac in the body filled with liquid, or semi-liquid substance. They are most frequently due to blocking of the mouth of a gland.

**Cystitis.** Inflammation of the bladder. (See under *Bladder*.)

**Cystoscopy.** The process of examining the inside of the bladder with an instrument.

**Dandruff.** Dandruff is only part of a more widespread condition of the skin, known as seborrhœa, and those who suffer from dandruff of the head usually also show it on the back, shoulders, and chest, in the form of a greasy, patchy irritation, which may itch badly. The back and chest may be infected from the scalp, and the main measure to prevent dandruff is

frequent washing of the scalp, and, of course, of the other areas if they are infected. It is not difficult to stop dandruff temporarily, but, since the infection can only take place where the skin is excessively oily, the underlying state of oiliness will make the disease tend to recur. For the head, the use of "Cetavlon" 20% or shampoos containing "Cetavlon" will help. On the body, in addition to thorough frequent washing, sulphur lotion may be used. No greasy substance or ointment should be used in treatment.

**Deafness.** The inside of the ear is a wide tube divided into three parts; the outer ear, which communicates with the air; the middle ear, which contains three tiny bones, which transmit vibrations from the ear-drum (at the inner end of the outer ear), to the third part, or internal, ear. The latter is a very complicated apparatus which is connected, not only with hearing, but also with the sense of balance. The vibrations from the ear-drum pass along the three small bones of the middle ear, and, in the internal ear, are transformed into nerve impulses, which pass along the auditory nerve to the brain.

Deafness may result from disease in any part of this system. Thus, a boil or wax in the external ear may block the passage of sound waves, or infections from the throat may pass along the tube which connects the throat with the middle ear. Infectious diseases, such as measles and scarlet fever, may have a similar effect. Any such infection may lead to middle ear inflammation which causes deafness by preventing the small bones from transmitting sound. In the inner ear, disease of the nerve may cause deafness.

In older people, a common cause of deafness is otosclerosis, a hardening of all the tissues in the ear, which occurs in some people at an earlier age than in others. Like hardening of the arteries, it is merely a sign of old age. Certain trades, in which workers are exposed to continual loud noises, especially those of a high-pitched nature, are associated with deafness.

Most types of deafness cannot easily be cured once they are established, and if the defect is severe, it may be necessary to use some sort of hearing aid. Lip-reading is also helpful.

**Death-Rate.** The number of people who die each year, compared with the total number of population. It is expressed as the number of people who die in a particular group of every thousand persons, e.g., a death rate of 12 per thousand means that, on the average, of every thousand people 12 die each year.

**Debility.** Weakness. There is no disease called "debility," but general weakness may be the result of many different types of disease. It can only be treated by dealing with the cause.

**Deficiency Disease.** Any disease caused by the lack of some essential part of the diet. Usually applied to vitamins, the term may also be used to include deficiency in fat, carbohydrate, or protein, or of minerals in the diet. (See *Beriberi*, *Pellagra*, *Rickets*, and *Scurvy*.)

**Deglutition.** The act of swallowing.

**Delirium.** A mental disturbance, usually occurring in the course of some infectious disease, or under the influence of poisonous drugs. The word can only be used for an acute and, generally speaking, short-lived disturbance. The patient becomes restless and incoherent, may have hallucinations, or believe that he is being persecuted. He may also be disorientated and unaware of where he is, or of the identity of those surrounding him. The most common type of delirium occurs in the course of pneumonia and other fevers. Delirium tremens, due to chronic alcoholism, is now less common. Treatment is a matter for the doctor, but the main point is to give the patient as much rest as possible, and ensure that he gets enough fluids and does not over-exert himself.

**Delusion.** (See *Hallucination*.)

**Dentifrice.** Any substance used for cleaning teeth. The most important point about a toothpaste is that it should clean the teeth adequately, without injuring the gums or the enamel covering the teeth. Coarse materials should therefore not be used. It is a mistake to believe that antiseptic taken into the mouth can have any effect in destroying germs. Scientifically speaking, the use of an antiseptic mouth-wash is no more effective in killing germs than washing the mouth out with water, because any antiseptics contained

in it are in contact with the germs for much too short a time to have any effect. (See p. 827.)

**Depilatory.** A substance used to remove hairs. In the past, caustic substances were used in the form of cream for removing superfluous hairs, but the most satisfactory methods now in use are mechanical methods, such as wax which pulls off the hair when it hardens, or, when the hairs are not too coarse, an abrasive pad of a substance resembling sand-paper. The only permanent way of removing hair is to use an electric needle which kills the roots, but probably the best method for ordinary use is a safety-razor. It is probably untrue that shaving makes the hair grow more quickly, or become coarser. X-Rays may also be used, but they are liable to cause scarring of the skin.

It should be remembered that all growth of superfluous hair is caused by glandular abnormality which may sometimes be cured, thus removing the condition permanently.

**Dermatitis.** Inflammation of the skin, also known as eczema. Although any inflammation of the skin is scientifically called dermatitis, the term is ordinarily used to apply to inflammation caused by undue sensitiveness to various substances. Dermatitis is therefore related to other allergic diseases (which see).

In industry, there are many substances which can cause irritation in those with sensitive skins, and if the inflammation is allowed to spread by continual contact with the irritant, the result may be serious. Dermatitis is therefore legally notifiable in industrial workers. Treatment is a specialist's task, and depends on the type of eruption present, but the first essential is to remove the patient from contact with whatever is the cause of his illness. As in other allergic diseases, emotional factors have a great deal to do with dermatitis.

**Diabetes.** A disease of the pancreas, which shows itself in an inability of the body to make use of sugar in the food, which, therefore, accumulates in the blood, and is finally excreted in the urine.

The pancreas produces a substance known as insulin without which sugar, which is one of the most important energy-producing substances in the body, cannot be utilised. When it happens that not enough insulin is produced, the sugar continues to accumulate in the body and cannot be made use of. The blood becomes loaded with sugar and ultimately it is passed out in the urine.

There are no specific symptoms in the early stages of diabetes; there may be general debility, loss of weight, and excessive hunger or thirst. People who have large numbers of boils should have their urine tested, as this is sometimes a symptom of diabetes. If the condition is allowed to go on too far, the patient may develop diabetic coma, and become unconscious.

Fortunately, diabetes can be easily diagnosed by the discovery of sugar in the urine. Treatment in mild cases may be confined to diet, but, in more severe cases, regular injections of insulin are necessary. There is no reason why a diabetic should not live as long as a normal person, and no reason why he should not marry and have children, although diabetes is, to some degree, hereditary.

**Diaphragm.** The large muscle which separates the inside of the chest from the inside of the abdomen.

**Diarrhoea.** Looseness of the bowels, which may arise from many causes, but is mainly due to eating irritating or poisonous food. It is simply an attempt on the part of the body to get rid of harmful substances and therefore should be helped, rather than hindered. That is to say, it is unwise to take drugs, such as chalk and opium, which will stop the diarrhoea before all the poison has been expelled, unless the patient is becoming weak. For ordinary diarrhoea, the best treatment is to take a dose of castor oil. Colic will be relieved by a rubber hot-water bottle.

The above only applies to simple diarrhoea, which may be associated with vomiting, but diarrhoea may also be found as a symptom in many more serious diseases, such as dysentery, typhoid, cholera, and colitis. Prolonged diarrhoea should be referred to a doctor.

**Diathermy.** The process of producing heat within the tissues by means of an electrical

apparatus. It is used in the treatment of fibrositis, rheumatism, etc. The same apparatus is also used in surgery (see *Cauterisation*) with an electric needle attachment, for cutting tissues that are likely to bleed.

**Diathesis.** The type of constitution which makes one liable to a particular disease, e.g., rheumatic diathesis—a tendency to rheumatism.

**Dick Test.** A test devised by George and Gladys Dick of Chicago, to discover whether a patient is liable to, or immune from, scarlet fever.

**Diet.** A suitable diet contains the following: (1) carbohydrates, which form the fuel of the body, and are found in starchy foods, sugar, and sweets; (2) proteins, the building substances of the body, found in meat, cheese, nuts, peas, beans, lentils, herrings, and milk; (3) fats, the warmth-producing and protective food, found in butter, animal fats, etc. In addition, there must be minerals, mainly calcium and phosphorus, found especially in milk, eggs, herrings, and meat. Vitamins, which are essential factors in any diet, are found in butter, margarine, milk, fresh fruit, and vegetables; particularly concentrated sources are halibut or cod-liver oil, yeast, oranges. (See *Vitamins*.)

Every diet must contain adequate amounts of these foods. The energy value of a diet is calculated in calories (which see).

**Digitalis.** A drug used in the treatment of heart diseases. It is obtained from the fox-glove, and has the effect of slowing the heart and strengthening the force of the heart-beat.

**Diphtheria.** A disease, caused by a particular germ, taking the form of a sore throat in which a membrane may grow, which in serious cases interferes with breathing and may cause death. Usually, the child develops a slight temperature, looks pale and ill, and complains of pains in the throat.

Before the use of anti-toxin, the infection in the throat often resulted in the formation of the greyish membrane already described which might cause death from suffocation. Now, with early treatment, the outlook is much better. Thus, before the use of anti-toxin, 35 per cent. of children died of ordinary diphtheria, now only 5 per cent. die.

In those who have not yet suffered from diphtheria, it is possible, by means of the Schick test, to discover whether they are susceptible or not. They can, if susceptible, be inoculated against it by the use of diphtheria toxoid. This is a perfectly safe procedure and gives a high degree of protection.

**Dipsomania.** This is a term which is often misused. It means a periodic and almost irresistible craving for alcohol in someone who ordinarily drinks little or not at all. It is a mental disease and requires psychological treatment.

**Disinfection.** Killing germs by antiseptics or other methods. In the room occupied by a sick patient, it is necessary to destroy germs in any of the bodily secretions—particularly, of course, in those which are most liable to carry infection in the particular disease concerned. Thus in typhoid fever or dysentery, the bowel motions should be disinfected, in tuberculosis, the sputum. The process of disinfecting rooms is, however, quite another matter, and, although still carried out by many Public Health Authorities, "fumigation" and the use of sulphur or formaldehyde is about as useful as the medieval custom of prayers and bells. Antiseptic sprays create a pleasant and refreshing atmosphere in a sick-room, but their effect in killing germs is negligible.

**Dislocation.** Displacement of the bones in a joint.

**Disseminated Sclerosis.** A disease of the nervous system in which small patches of hard tissue (sclerosis) develop throughout the spinal cord and brain. The cause is unknown. Beginning in patients about the age of twenty to thirty, there may be many different symptoms, such as defects of eyesight or of the eye muscles, weakness or paralysis of the legs, difficulty in speaking, etc. The disease may last for many years, but the outlook is not very good as no treatment has yet been discovered which will stop the process.

**Diuretic.** A medicine which increases the flow of urine by making the kidneys more active. It usually acts by increasing the amount of salts in

the blood so that an increased flow of water is required to wash them out.

**Diverticulitis.** In some people, the large intestine develops numerous small pouches along the wall. Usually these may be present without producing any symptoms, but if waste material from the bowel gets into them, inflammation may be set up, and this condition is called diverticulitis. It can be discovered by an X-ray picture, and the treatment, in mild cases, is to take a suitable diet. In more serious cases, it may be necessary to remove the affected piece of bowel by a surgical operation.

**Drop Foot.** When the foot, by reason of paralysis of the muscles of the front of the leg, cannot be raised upwards. It may be due to neuritis, or to an injury of the nerve supplying the muscles.

**Dizziness.** This is one of the commonest symptoms in medicine, and may be found in many different diseases. It is often associated with a feeling of nausea. Mild degrees of food-poisoning, certain drugs, some physical disorders of the nervous system, diseases of the ears, too high, or too low, blood-pressure, may all be causes of dizziness. In the larger number of cases, however, there is usually little evidence of any physical upset, and, in such cases, the symptom is due to nervous or emotional instability. The so-called "black-outs" which were a familiar complaint in war neuroses had such an emotional origin. Treatment depends, of course, on the cause, but persistent dizziness should be referred to a doctor.

**Dropsy.** An abnormal accumulation of fluid anywhere in the body. It may be generalised over the whole body, or tend to be in the more dependent parts, such as the legs and feet. Sometimes fluid collects, not throughout the tissues, but in the body spaces of the abdomen or chest. Severe dropsy is usually due to kidney or heart disease, but lesser degrees may be found in diseases of the liver or blood. Treatment is always a matter for a doctor, and depends on the underlying condition.

**Duodenal Ulcer.** These are found four times as often in men as in women, and are ten times more common than ulcer in the stomach. The cause of duodenal and gastric ulcers has been sought for many years by doctors, but it is doubtful whether they can be said to have any single cause. Faulty eating habits, bad food taken at irregular intervals, and "natural" tendency to the disease have been blamed in the past, but it now seems that by far the most important factor is high-tension living, and excessive worry. With modern instruments which make it possible to see the inside of the stomach in the living individual, it can be shown that emotions such as anxiety and fear cause contraction of the stomach muscles and pallor of the lining of stomach and duodenum. Persistence of such emotions causes a state of affairs in which the acid normally found in the stomach may start to eat away the weakened lining. Although excessive acid has been blamed in the past for causing ulcers, it is well known that many perfectly normal people have a high acid content, and some people with ulcers have very little acid. Alkaline powders, which are used in treatment, produce their result mainly by relaxation of the stomach muscle. Certain drugs which have no effect in neutralising acids produce relief of pain just as efficiently by causing relaxation. The patent medicine advertisements with dramatic accounts of how acids are neutralised to produce relief of pain, are largely nonsense, since, as we have seen, neutralisation has little to do with their effect.

Treatment can only be carried out efficiently under medical supervision, but, in order of importance, the main points are as follows: (1) the relief of anxiety, preferably by removing the cause, or by sedatives if necessary; (2) diet; (3) alkalies or other medicines which act directly on the stomach. (See Emotions.)

**Dysentery.** The name given to a group of disorders in which there is diarrhoea, produced by irritation of the bowels. It is uncommon in this country, but found frequently in tropical or sub-tropical countries. The two main types are amoebic dysentery caused by a small parasite, and bacillary dysentery caused by various groups

of germs. Infection occurs by eating food infected by these organisms, or drinking infected water. Usually, the organisms get into food and water through contamination with the excreta of someone who already has the disease.

Minor degrees of dysentery cause colic and diarrhoea, but, in more severe degrees, blood and mucus may be passed as well. The chief points are: (1) prevention: in countries where dysentery occurs, food and water should be disinfected or boiled before use; (2) immediate medical treatment, since the disease may become chronic if treatment is inadequate. (This is especially true of amoebic dysentery.) Modern treatment is highly successful, but depends on the type. Amoebic dysentery requires to be treated by drugs which are derivatives of arsenic and antimony; bacillary dysentery is treated by sulphaguanidine, which is related to sulphonamide and "M. and B."

**Dysmenorrhœa.** Painful menstruation is one of the commonest causes of loss of time in industry, and, of course, causes a great deal of discomfort and suffering which are, in most cases, avoidable. It is impossible here to give an account of the various causes of painful menstruation, which may be due to glandular causes, or local disease in the pelvis. Most often, however, it is found in women who have subconscious fear, anxiety, or disgust about their sexual functions. Self treatment is unwise, firstly, because drugs, such as aspirin, do not get to the fundamental cause, and secondly, because a medical examination is necessary to discover the particular cause in each case.

**Dyspepsia.** (See Duodenal Ulcer.) Dyspepsia is a term used for indigestion in general. Minor degrees may exist in the absence of any structural change and the condition is then called functional dyspepsia. More severe degrees result in gastric or duodenal ulcer. The treatment is the same in all types.

**Earache.** Is caused by inflammation within the ear. (See description under Deafness.) Inflammation may be caused in the outer ear by a boil or sometimes by infection introduced, for example, while swimming. In the case of the middle ear, where infection is more often found, the spread usually occurs from the throat up the Eustachian tube connecting the throat with the middle ear. This type of inflammation is, therefore, most often found where there is tonsillitis, adenoids, or a history of frequent colds. Boils or other irritation in the outer ear may be very painful, but are not often serious. In the middle ear, however, the pus is unable to escape owing to the presence of the ear-drum and there is a serious risk of the disease spreading to the surrounding bone (mastoid), or rupturing the ear-drum.

The only first-aid measures which should be used in earache are the application of heat to the outside of the ear and, perhaps, the taking of two aspirin tablets. It is extremely unwise for the layman to put anything inside the ear. Peroxide and olive oil should, in particular, be avoided; the first because impurities in it often lead to severe irritation, the second because it merely leads to the accumulation of dirt and serves no useful purpose. When earache is severe or prolonged, a doctor should always be called.

**Eclampsia.** A form of internal poisoning which may occur in the course of pregnancy. The early symptoms are headache and failing vision. Later, the blood-pressure is raised, and fits and unconsciousness occur. With modern treatment, the outlook is very much better than it once was, but the fact is that eclampsia ought never to occur because if the woman is seen regularly at an ante-natal clinic (as she should be) the disease can always be arrested in time.

**E.C.T.** The abbreviated form of the name for a modern type of treatment for certain psychiatric disorders—electro-convulsive therapy. This treatment was first used by Dr. von Meduna of Budapest in 1934, but has been greatly elaborated on since that time.

Dr. von Meduna believed that an antagonism existed between the mental disorder of schizophrenia and the condition known as epilepsy. On the basis of this assumption (which, in the light of more recent knowledge, is more than doubtful), he began to induce in his schizophrenic

patients a state of artificial epilepsy by giving them the drug named cardiazol, which causes convulsions very similar to those of epilepsy. Good results followed this empirical treatment, and other convulsion-producing methods were used, the most recent of which is the use of electric shock.

In E.C.T. the patient lies on a bed or couch and two metal plates attached to an apparatus which passes a current lasting about one-tenth of a second are placed on either side of the head. The switch is thrown over, and the patient immediately loses consciousness and remains in this state for a few minutes. He may be slightly confused when he comes to, but there is no pain associated with this treatment, and complete loss of memory exists for what has happened in the previous ten or fifteen minutes. Still more recently, the drug named curare, which was used by certain primitive tribes for poisoning their arrow-tips, is given before the convulsion to induce relaxation and prevent undue strain to the muscles or bones during the convulsive attack.

Although, as has been indicated, this treatment was first used in the treatment of schizophrenia, it has been found that insulin is better for schizophrenia and E.C.T. for depressive states. In suitable cases E.C.T. is almost 100 per cent. effective in removing the depression.

**Eczema.** (See Dermatitis.)

**Electric Shock.** A person who has been subjected to a severe electric shock should, first of all, be removed from contact with the source of electricity (if he is still in contact with it). Those helping must, of course, take care to insulate themselves from the body of the patient so long as he remains in contact with the source of power. Treatment for shock should then be applied, and if the patient has stopped breathing, artificial respiration (which see) will be necessary. Burns and other injuries should be treated last.

**Elephantiasis.** A tropical disease in which blocking of the lymph vessels by a parasite leads to great swelling of the tissues, especially in the lower part of the body.

**Embolism.** An embolus is a small clot which has become detached from the inside of a blood-vessel and is floating free in the blood stream. Occasionally, it may be a particle of fat released by a fracture, or an air bubble. The main danger of an embolism is that it may lodge in an area where there is only one blood-vessel supplying the tissues and block the blood from reaching them. If the embolus is infected, it may set up an abscess in the spot where it lodges. The most dangerous areas for embolism to occur are the brain, heart, lungs, or kidneys, and in these areas the result may be death. Treatment, when possible, is immediate operation; but this is obviously not practicable when the embolus is in the heart or brain. People who have an excessive tendency to clotting of the blood may be given a substance known as heparin which lessens the likelihood of casualties.

**Emotions.** It is not generally realised just how important emotional factors are in the maintenance of health or the causation of illness. People tend to think of "psychological" influences as being in some way mysterious and intangible, yet the fact is that emotions are accompanied by bodily changes both in muscle tension and in the chemical constitution of the blood. For example, anger or worry are accompanied by rise in blood-pressure, increase of the normal sugar in the blood, increase of tension in all the muscles, and tightening and pallor of the lining of the stomach. When these emotions are persistent, the physical changes not only persist but may give rise to structural changes, such as gastric and duodenal ulcers, high blood-pressure, etc. So-called "fibrositis" and "rheumatic" pains, asthma, various skin diseases, and many other conditions have a similar origin. In general, the emotions which give rise to illness are those which are repressed—that is, those which do not find expression in action. Continual unexpressed resentment in marriage or business, a sense of frustration in life, and other unsatisfied longings are the cause of much disability which has been graced by the name of "psychosomatic" illness. In fact, however, nearly all illness is related to the patient's way of life, and a great deal of the doctor's difficulty in treating it is due to this

cause. Too often the patient only wants a bottle of medicine, not realising that every illness implies some failure of adaptation either of body or mind, indigestion, for instance, is not something to be merely charmed away by drugs—it implies a host of other factors: does the patient eat properly cooked and selected food? Does he eat it in a satisfactory way, at reasonable intervals? Is he worried, unhappy at business or at home? What is his attitude to life, and so on (with more emphasis on the latter than the former factors, because if anything is obvious it is that some people can eat any way they like without any ill results—they are the ones who do not worry). We are beginning to realise that happiness and the desire to live are the best medicines and, conversely, that unhappiness has much to do with weakening resistance to illness or even directly causing it.

**Empysema.** A condition of the lungs in which the lung tissue becomes thinned out owing to the breaking-down of the walls between the tiny compartments of which the lung is composed. It is not in itself a disease, but rather the result of such diseases as chronic bronchitis and asthma where there is continual coughing. The symptoms are cough and breathlessness on exertion. On thumping the chest, as the doctor does on examination, it gives out a hollow resonant note. Treatment depends on the cause.

**Empyema.** A collection of pus in the lung, more commonly found in children. It may be caused by the germs which cause infection in ordinary abscesses or boils, or it may be caused by certain funguses or by tuberculosis. The symptoms are—pain in the chest, sweating, and fever, often following on another illness, such as pleurisy or pneumonia. When pus has formed, it is usually necessary to draw it off through a needle with a hollow bore. Nowadays, with penicillin and the sulpha drugs, the outlook is much better than formerly.

**Encephalitis** is inflammation of the brain, and the term is often used to mean encephalitis lethargica or sleepy sickness (this is, of course, not the same as sleeping sickness, which is a tropical disease found in Africa). Common in 1918, it is now rather uncommon in this country. The symptoms are drowsiness in the daytime and an inability to sleep at night, weakness, and paralysis, etc. Most unpleasant are the after-effects which often followed—mental dullness, tremors, and weakness, and sometimes, in children, moral delinquency. Encephalitis may also be caused by lead poisoning and, very occasionally, by vaccination for smallpox.

**Endemic.** Referring to a disease, means prevalent in a particular area.

**Endocarditis.** Inflammation of the lining of the heart, especially of the valves. Generally follows rheumatic fever, diphtheria, or scarlet fever. (For further details see under Heart.)

**Endocrine Glands.** (See under Glands.)

**Endometritis.** Inflammation of the lining of the womb.

**Enema.** An injection of liquid into the rectum, usually intended for the treatment of constipation. Unless given, as in hospital, in preparation for an operation or examination, enemata are usually a sheer waste of time. Many cranks and humbugs specialise in giving enemata or "colonic lavage" for the most varied diseases, real or imaginary, to those other cranks who have nothing better to think about than the action of their bowels.

**Enteric.** (See Typhoid Fever.)

**Enteritis.** Or gastro-enteritis. Inflammation of the intestinal tract by infection or irritating food. There is diarrhoea, colic, a feeling of nausea, or actual vomiting. The best treatment, if the diagnosis is certain, is a dose of castor oil to clear out the poison, and mild diet for a few days.

**Enuresis.** Bed-wetting (which see).

**Ephedrine.** A drug used to shrink the lining of the nose in colds, and also in the treatment of asthma.

**Epidemic.** A disease that affects many people at one time in the same area, being infectious.

**Epiglottis.** A lid which covers the opening to the wind-pipe and prevents food from getting into the voice-box or lungs.

**Epididymitis.** Inflammation of the epididymis, a structure which covers the upper end of the testicle. It may be caused by various germs,

among them the germ of gonorrhoea. Treatment depends on the cause.

**Epilepsy.** It is, in general, incorrect to think of epilepsy as a disease having a single cause and requiring a single type of treatment. Fits are a symptom of numerous different diseases and should only be named "epilepsy" when no other underlying condition can be found. In children, almost any minor trouble may lead to fits without there being any tendency to epilepsy. Later in life, however, fits are always a sign which needs to be thoroughly investigated. Among the possible underlying conditions are brain tumour (in cases where the fits are of recent origin and are accompanied by headache and other symptoms), head injury (although not quite so frequently as is often thought), and hysteria, which is a purely psychological illness.

If no other disease has caused the fits, the patient is said to have true, or idiopathic, epilepsy, and it is nowadays possible to diagnose this by means of an instrument known as the electroencephalograph, which records minute electrical waves in the brain. True epilepsy is treated by such drugs as phenobarbitone, which decrease the activity of the brain centres in which disturbances arise. A more modern drug is epanutin, which has less tendency to make the patient sleepy. None of these drugs should be used except under a doctor's advice. Some patients require to take medicine all their lives, but others are able to discontinue it if the seizures stop.

**Epistaxis.** Nose-bleeding.

**Epithelioma.** Cancer of the skin. (See Cancer.)

**Ergot.** A drug used in midwifery to cause contraction of the uterus and control bleeding after child-birth.

**Ergosterol.** A substance found in the skin and elsewhere, which, when exposed to sunlight, becomes converted to vitamin D.

**Erysipelas.** An infection of the skin with streptococci. It begins as a red, raised area anywhere on the body where the germs have been able to enter through a small crack or cut in the skin. The red area advances and spreads over the body until the disease is got under control. Erysipelas is very infectious, and those who look after the patient should always wash their hands thoroughly after contact. At one time, the disease used to spread as an epidemic throughout hospital wards, but this is very rare nowadays.

Treatment is, of course, a matter for the doctor, although erysipelas is no longer as serious as it once was. The sulphonamide drugs are used.

**Erythema.** Redness of the skin due to any cause, but usually inflammation.

**Erythrocytes.** The red cells of the blood.

**Exanthem.** Any fever accompanied by a rash.

**Exercise.** One of the more ridiculous ideas of modern times is the idea that violent exercise is an essential for health and that large muscles are a sign of fitness. Every normal child gets enough exercise without having to be told, and, in later life, too much exercise does more harm than good. There seems little doubt that athletes who engage in the more violent sports are less long-lived than normal people. This is not to say, that normal people should "take care" in indulging in any exercise which happens to amuse them, but it does mean that there is only one good reason for engaging in sport, and that is because one wants to. There are few more pathetic specimens than the physical fitness "expert" who can think of nothing better than absurd training to no particular end, and whose muscles are as over-developed as his mind is under-developed. Exercise and sports are for pleasure and should not be considered as a means to anything else; anybody who has a guilty fear that he does not exercise enough should take to heart the advice of an American writer: "When I feel the urge to exercise, I lie down on a couch with a good book, and pretty soon the urge leaves me."

**Exhaustion.** There are two kinds of exhaustion, physical and mental, and both are much less common than is generally believed. Physical exhaustion is caused by the accumulation of the waste-products of muscular exercise in the blood, and ceases as soon as these are excreted—a matter of a few hours. Mental exhaustion in the same sense does not exist, and, in fact, it must be admitted that so-called mental exhaustion is almost

entirely plain boredom. Thus, when any act is carried out for too long, boredom and resentment increase and one has to fight against an increasing unwillingness to do any more. Similarly, in so-called "neurasthenia," anxiety and concern over personal matters is so great that the patient is unable to concentrate on more practical tasks and is therefore more easily exhausted. It is really surprising how the most exhausted individual (in the psychological sense) can nevertheless talk for hours about himself, while his more normal listener is long ago tired out. There is also no doubt that the girl who is too tired to help wash the dishes is readily cured when her lover calls. There is nothing deceitful about this; it is merely that the mind is easily bored and yet is less tired by doing the things it wants to do.

**Exophthalmos.** Bulging of the eyes, usually caused by over-activity of the thyroid gland.

**Expectorant.** A drug supposed to have the effect of liquefying the sputum in bronchitis.

**Fæces.** The waste matter excreted by the bowel.

**Fainting.** A temporary loss of consciousness due to insufficient blood reaching the brain. The immediate cause may be exhaustion or emotion. Treatment is to keep the patient lying down, so that an adequate flow of blood may once more reach the brain; any tight clothing should be loosened. It is usually unnecessary to give any stimulants.

**Fallopian Tubes.** The tubes which connect the ovaries with the womb within the pelvis, and along which the ovum passes. They may cause pain through being twisted or blocked, or through becoming infected with germs (the latter may be caused by gonorrhoea or other infection). Sometimes the ovum becomes fertilised before it reaches the womb, and, as it grows, stretches, and finally bursts the tube, causing dangerous hæmorrhage. This condition, known as tubal pregnancy, requires an operation.

**Favus.** An infection of the skin and hair caused by a fungus. It is related to ringworm. The eruption consists of round crusts, usually on the scalp, which cause baldness. Treatment is difficult, but can usually be effected by exposure of the scalp to X-rays.

**Feeble-Mindedness.** A state of low development of the intelligence. It is inborn, and has no relationship to insanity or the so-called mental diseases. There are three degrees of feeble-mindedness, the lowest being idiocy, the next imbecility, and the least pronounced being termed mental dullness, dullness and backwardness, or, in America, such a person is called a moron.

An idiot is defined in law as a person so defective in intelligence as to be unable to guard himself against common physical dangers. An imbecile is defined as a person who, while not so defective as an idiot, is incapable of managing his own affairs, or, if a child, of being taught to do so. A person who is dull and backward is one who is slightly below normal intelligence. In England 10 per cent. of children are of too low intelligence to benefit by an ordinary education, and require to be sent to special schools.

Except in the case of Cretinism (which see) there is no treatment for feeble-mindedness, and all that one can do is to train such people to the highest capacity of which they are capable. Some require to be kept constantly under supervision in an institution. Mental defect is inherited, but idiot and imbecile children may be born to seemingly normal parents. Those who are dull and backward, however, are usually the children of dull and backward parents. Nobody knows the cause of these conditions; they are simply hereditary abnormalities. In a few cases mental defect is due to disease of the brain in early life, or birth injury, but this is not very common.

**Fenestration.** A relatively new type of surgical operation designed for the treatment of certain types of deafness. In such types it may be most successful; but it is not, as some sufferers suppose, a cure-all for deafness in general.

**Fever.** Any disease in which a high temperature is the main symptom. The normal temperature is 98.4 degrees Fahrenheit. In most cases fever is caused by the invasion of the body by germs, and the high temperature is part of the body defences set up to defeat the disease. It is therefore a great mistake to take drugs which lower the temperature without considering whether it is advisable to do so. Aspirin,

phenacetin, and similar drugs, should not be used nearly so frequently as they are, since their only effect is to dull the pain and fever-producing centres of the brain. They have no curative effect whatever—but perhaps it is asking too much to expect the reader to act on this advice!

**Fibrillation.** A state of tremor in the muscles found in certain nervous and muscular diseases. It may also occur in the muscle of the heart and is then known as auricular fibrillation. This is a serious state of affairs, as it means that the heart-beats become irregular and heart-failure may develop. Auricular fibrillation can, however, be treated.

**Fibroid.** A kind of muscle tumour found in the womb. It is not malignant—that is to say, it does not spread like cancer, but it may cause abdominal pain and irregular bleeding. Usually fibroids occur in childless women of over thirty, but any woman may be affected. Treatment is removal by an operation if the symptoms are troublesome.

**Fibroma.** A tumour composed of fibrous tissue. It is benign—that is to say, it does not spread, and is not dangerous to life.

**Fibrositis.** This is a very common disease, but the causes are not completely known. Among the alleged factors are exposure to cold and damp, over-exertion, and poisoning from concealed septic areas in the body, such as septic teeth, gall-bladder, appendix, etc. More recently, attention has been drawn to the emotional causes of muscle pains, such as continued anxiety or resentment. (See article on Emotions.)

Those who believe in the first group of causes consider that fibrositis is a state of inflammation of the fibrous tissues between the muscle fibres. "Emotional" fibrositis is caused by spasm of the muscles—a literal "pain in the neck"! Most often the muscles affected are those of the back, whichever type of fibrositis is present. Treatment depends on finding the cause, and maybe massage and other forms of physical therapy, or, on the other hand, psychological treatment may be advised.

**Filariasis.** A tropical disease due to infection of the body with tiny worms which block the lymph vessels, causing swelling of the limbs or elephantiasis (which see). They are spread by blood-sucking flies or mosquitoes.

**Fistula.** An abnormal passage leading from the surface of the body to an internal cavity, such as the rectum or stomach.

**Fit.** (See Convulsions and Epilepsy.)

**Flat Foot.** The sole of the foot is normally raised from the ground in certain areas, formed by a longitudinal arch between the base of the toes and the heel, and a transverse arch across the base of the toes. When the muscles supporting these arches become weakened, they flatten out, leading to flat foot. Treatment may be in the form of exercises, or the use of supports; occasionally operation may be necessary. It is only fair to say that many people have flat feet which lead to no discomfort whatever. Medical Officers in the Army noted that many men who fell out on route-marches had flat feet—this was thought to be of great significance until someone thought of examining the feet of those who had not fallen out, when it was discovered that almost as great a proportion of these had flat feet as in the first group.

**Flatulence.** Gas in the stomach or intestines. This is a purely psychological symptom since no gas of any sort is formed in the bowels in sufficient quantity to cause discomfort. What happens is that a feeling of discomfort in the intestines or stomach is interpreted as being due to gas, and an attempt is made to "bring it up." This results in air being swallowed and the process continues until the stomach is, in fact, full of "wind" which has been swallowed. It must be repeated that the only gas in the stomach is that which the patient puts there himself.

Treatment is that for indigestion in general, and the patient must resist all attempts to "bring up" wind. Unless this is done, all treatment is a waste of time. The use of baking soda for indigestion also leads to flatulence.

Intestinal flatus may be treated by a dose of purgative. This type of flatulence may come on after an abdominal operation, and is in this case due to temporary paralysis of the intestinal muscles.

**Fomentation.** The treatment of inflammation by applying heat and moisture to the affected part. The usual thing is to apply hot, wet, boracic lint. Such treatment is rarely used nowadays and is deservedly falling out of repute, the reason being that heat is not retained long enough in a hot fomentation to be of any service, and, further, that the moisture has a bad effect on the skin, making it sodden and more liable to further infection.

Heat is one of the most useful agents in medicine, but it should be dry heat, best applied in the form of infra-red rays or radiant heat. If these are not available a hot-water bottle may be applied or a kaolin poultice, which does not make the skin moist. There is no objection to soaking the affected part in hot water, as hot as can be borne, for the objection to wet fomentations is that the moisture is shut-in by oiled silk which prevents it from escaping.

In short, the best all-round poultice is kaolin or its patent form antiphlogistine. Needless to say, the home-made poultices of sugar, bread, and so on, should never be used in any circumstances, as such substances are not free from germs.

**Food.** An adequate diet must fulfil several conditions. To begin with, it must contain a correctly balanced proportion of the basic food constituents, which are carbohydrate (sugars and starches), protein (found in cheese, lean meat, and nuts), and fat (found in animal and vegetable oils—e.g., butter, fat meat, margarine, etc.). Next, it must contain an adequate amount of certain minerals, such as iron, manganese, copper, calcium, potassium, and sodium, and there must be a proper amount of vitamins A, B, C, and D (see under Vitamins). Lastly, it must supply calories (which see) sufficient to compensate for the amount of work done by the individual. This varies from 1500 calories daily for the sedentary worker to three or more times this amount in the case of the heavy manual worker.

Provided that these requirements are fulfilled, there is no evidence that it matters *how* this is done. That is to say, there may be good economic or moral reasons for being a vegetarian, but there are no known health reasons for being one. In fact, it is known that, since vegetables and fruit are relatively poor in protein substances, it is necessary to eat larger amounts of such foods in order to obtain sufficient protein in the diet.

There are many people, in particular those who have been influenced by theories of "nature cure" (see Naturopath), who have exaggerated and completely unscientific views as to what dieting is capable of accomplishing. The orthodox physician makes considerable use of dieting in his treatment of sickness, but he realises that there are limits to what may be accomplished by such means. Patients with gastric or duodenal ulcers should obviously take easily digested foods with plenty of milk and no fried or greasy dishes. Those with gall-bladder disease are advised not to eat too much fatty food. Diabetics have to limit their carbohydrate intake, and patients with chronic constipation require food with a good deal of bulk and residue. There are also special diets for such conditions as vitamin deficiencies, sprue, and colitis. With the exception of the illnesses mentioned here, dieting plays little part in the cure of disease, although it may be a useful adjunct to other treatment. It must be repeated that if a diet contains adequate proportions of carbohydrate, protein, and fat; enough vitamins; enough minerals, and provides an adequate amount of calories to cover the energy output, it matters not if it be obtained from sawdust, grass, or beefsteak—or, for the matter of that, from a test-tube. There are, as a psychologist would point out, unconscious reasons why some individuals attach such excessive importance to diet. Food is to babies, and those who have failed to grow up emotionally, a symbol of love and affection (that is why many who have been starved of affection eat to excess and become pathologically fat). Such people cannot realise that food is not all-important, and therefore tend to produce without any scientific foundations entirely fantastic theories which seem to imply that all diseases are caused by faulty feeding habits and can be prevented or cured by dieting. The more orthodox medicine discovers about the causes

of illness, the less opportunity will there be for faddists to make exaggerated claims concerning this subject. We do not hear about dietary cures for pneumonia, venereal disease, or small-pox, simply because we know about these conditions. But we hear a great deal about dietary treatment of "rheumatism" and even cancer, because ordinary medicine cannot in all cases effect a cure of these complaints. Nothing said here is meant to imply that food is unimportant or that dieting does not help some diseases. But it is not a cure-all.

**Food Poisoning.** (See Dysentery and Enteritis.) The latter is the usual form found in this country.

**Fracture.** When a bone is broken, treatment is, of course, a matter for a surgeon. In the meantime, as a first-aid measure, all that is necessary is to apply splints (walking sticks or other rigid pieces of wood of a suitable size, or even rolled-up newspapers), which are bound firmly along the limb. The patient should be moved as little as possible, and kept warm and comfortable.

**Freckles.** Freckles are simply small patches of sun-tan, and are more commonly found in blonde or red-headed people. In spite of many silly beliefs, it is not possible to remove them. If they are thought to be unsightly, the "patient" may (1) keep out of the sunshine; (2) use a cream which shuts off ultra-violet rays causing sun-tan, (3) use a tinted cosmetic cream which conceals the freckles. (See also p. 914.)

**Frost-Bite.** Frost-bite rarely occurs unless the temperature of the air falls below 8° F. A strong wind is especially likely to cause it. The first sign is paleness of the skin, which becomes a normal colour once more on warming. Later, when frost-bite becomes more severe, the pallor is not removed by warming, the skin gradually becomes purplish or black, and large blisters begin to form. The most important consideration is prevention, and outdoor work should not be carried on if the temperature is below 8° F. Clothing should fit closely, but not too tightly. In treatment, there is no point in rubbing the affected part with snow once frost-bite has developed; it is best to massage very gently with oil for a few minutes, and then wrap in cotton wool. It is dangerous to try to warm the limb too quickly.

**Furunculosis.** Boils (which see).

**Gall-Bladder.** The pear-shaped bag which acts as a reservoir for the bile secreted by the liver.

**Gall-Stones.** If anything occurs to block the tube which carries the bile, if infection of the gall-bladder occurs, or if gall-stones form, attacks of pain may occur. Such attacks are usually said to occur in otherwise healthy women who are "fat, fair, and forty." Severe abdominal pain occurs in the upper part of the abdomen on the right side, may last for a few hours, and then not appear again for months or years. On the other hand, attacks may be much more frequent, and in between attacks there may be aching under the ribs, especially on eating fatty foods, pain under the right shoulder-blade, and a constant feeling of fullness of the stomach.

Gall-stones may be present without causing any symptoms whatever, or they may cause attacks such as have already been described. Such a condition is called cholelithiasis. If, however, a stone completely blocks the duct, infection and inflammation of the gall-bladder may occur, and this is much more serious. The medical name for inflammation of the gall-bladder is cholecystitis. In mild cases diet and medical treatment may be adequate, but in more serious cases operation is necessary.

**Ganglion.** A cyst-like swelling found in the region of a joint or the sheath of a tendon. The most usual site is the back of the wrist, where it takes the form of a round elastic swelling under the skin. It causes no pain and is quite harmless, but, if it becomes troublesome, the ganglion may be removed by a minor operation.

**Gangrene.** The death and deterioration of a part of the body, caused by interference with the blood supply. Gangrene may be caused by wounds, or inflammation affecting the blood vessels (for instance, of the leg), which results in blood failing to reach the lower part of the leg and foot. Too long application of a tourniquet will have the same effect, or the very serious wound

infection known as gas-gangrene. Old people and diabetics are specially liable to get gangrene.

When any of these accidents occur, the limb below the affected part becomes pale and numb and later turns bluish black. Since the tissues at this stage are damaged beyond repair, the only possible treatment is removal by operation. The most serious thing that can happen is when the gangrenous area becomes infected (as in gas-gangrene) and the infection continues to spread up the body. This is now much less likely to happen with modern advances in germ-killing drugs, such as penicillin and sulphonamide.

**Gastric.** Pertaining to the stomach.

**Gastric Ulcer.** (See Duodenal Ulcer.)

**Gastritis.** Inflammation of the stomach may be acute or chronic, depending on whether it has come on recently and suddenly, or has lasted for a long time. Gastritis is not the same thing as stomach ulcer and is, in fact, simply a state of irritation in which the lining of the stomach becomes red and swollen as any other part of the body may do when irritant substances come in contact with it. The usual irritants are alcohol, and, in cases of poisoning, such substances as carbolic acid or strong alkalis. In people with unusually sensitive stomachs, coarse or over-spiced foods may have a similar effect. In acute gastritis there is pain over the stomach persisting for a period of several days and not only appearing after meals as in the case of ulcer. Chronic gastritis leads to dull ache over the stomach, a continual feeling of nausea, and loss of appetite. Treatment depends on removing the cause and giving a light diet until the inflammation has disappeared. A more specialised treatment is a matter for the doctor.

**Gastro-Enteritis.** (See Enteritis.)

**Gastropnoia.** A form of visceroptosis in which the stomach muscle is over-relaxed and sinks below its normal position in the abdomen. In most cases, the importance of this condition is grossly exaggerated, since there is no evidence that gastropnoia in itself causes any symptoms whatever. It is often associated with neurotic and hypochondriacal behaviour.

**Geriatrics.** The medical study of old age.

**German Measles.** (See Rubella.)

**Gigantism.** (See Acromegaly.)

**Gingivitis.** Inflammation of the gums which shows itself in the form of swelling of the gums around the base of the tooth and bleeding after brushing the teeth. There are numerous causes for this condition, which may occur in chronic poisoning with lead, bismuth, and other drugs, in scurvy due to deficiency of vitamin C, and in certain infections, such as pyorrhoea and Vincent's angina. Treatment depends on the cause and is best carried out by a dentist. Penicillin lozenges are successful in many types of gingivitis. (See also p. 820.)

**Glands.** There are three main types of glands: (1) lymph glands, which are found mainly at various junctions in the body, such as the armpit (where the arm joins the chest), in the groin (where the leg joins the pelvis), and also within the body and around the base of the neck. Their function is to trap germs and prevent them reaching vital areas. That is why in an infection of hand or foot a swelling often develops in the groin or armpit—the glands having trapped the germs are themselves suffering from inflammation; (2) larger glands, such as the pancreas and liver which produce mainly digestive agents such as bile, trypsin, and so on. These glands empty their products into the intestines through a duct or tube; (3) the endocrine glands, which are also called ductless glands because they empty their products direct into the blood-stream, and unlike the former have no ducts. These glands are of immense importance because they have a great deal to do with making an individual into the type of personality that he is. The best-known endocrine gland is the thyroid in the base of the neck, which acts as accelerator to the body. That is, it controls the speed at which body processes are carried out. When it is over-active (see Goitre) the patient becomes tense, nervous, flushed, his heart beats faster, and he loses weight. If the gland is too sluggish in action, the effect is the opposite (see Myxœdema). The small parathyroid glands, attached to the thyroid, control the amount of calcium in the blood, and therefore are

also related to nervous tension, and, in addition, to the constitution of the bones. The sex glands, ovary in women and testis in men, produce the typical sexual characters of the adult, while the suprarenal glands prepare the body for emergencies, for example, by producing the emotion of fear. All these glands are co-ordinated by the pituitary gland at the base of the brain, which, besides controlling the other glands, determines the height of the individual, his self-assertiveness or otherwise, and many other personality traits. In addition to the above, the pancreas which, as we have seen, supplies through a duct digestive ferments into the intestines, also produces insulin (see Diabetes) which passes directly into the blood. Most of the substances produced by endocrine glands can now be made synthetically and are used in the treatment of diseases due to glandular deficiency.

**Glaucoma.** A disease of the eyes in which the tension of the fluid within begins to increase. The symptoms are pain and redness of the eye, dim vision, and very severe headache. There may be vomiting in addition to the above. Glaucoma is a serious emergency, and urgent hospital treatment is required.

**Gleet.** The discharge from the urethra which used to be found in chronic gonorrhoea. Since the discovery of modern drug treatment it is rarely seen.

**Glossitis.** Inflammation of the tongue.

**Glottis.** The space between the vocal cords.

**Goitre.** An enlargement of the thyroid gland which lies at the base of the neck. There are two main types: (1) the simple goitre, which is usually found in childhood, and is caused by deficiency of iodine in the diet, iodine being a mineral necessary for the production of the secretion of the thyroid gland. This type of goitre is especially common in areas where the water is deficient in iodine, such as Derbyshire and certain parts of Switzerland. It can be prevented by the use of iodised salt and chocolate. Simple goitre, although it may be unsightly, or uncomfortable, does not produce any other symptom; (2) exophthalmic goitre. This is produced by excessive secretion of the thyroid gland and is usually, but not always, found in older people between thirty and fifty. The symptoms are those of general over-activity of the whole body; the heart beats faster, the patient is nervous, thin, flushes and sweats easily, and the typical appearance of exophthalmos—prominent eyes—may appear. The cause of this condition is not known, but there is no doubt that severe chronic anxiety has a great deal to do with it. Treatment is usually by operation, X-ray therapy, or recently the use of a drug which damps down the action of the thyroid gland, and is known as thiouracil. This gives excellent results in suitable cases. Atomic research has led to the discovery of radio-active forms of iodine, which will probably be used in the treatment of this condition in the near future.

**Gonorrhoea.** A venereal disease spread in nearly all cases by sexual intercourse with an infected person. It is very unusual for an adult to be infected in any other way. Gonorrhoea is much less serious than syphilis. The symptoms are that usually about two to five days after sexual intercourse with a person who already has the disease, a discharge starts to come from the urethra (the pipe through which the urine passes). There is a burning pain on passing water, and the discharge becomes thicker. If the infection is carried by the hands to the eyes, a serious type of inflammation may begin there. It is, of course, essential to go as soon as possible to a doctor or to a V.D. Centre where the disease can be treated and cured by modern drug treatment in a comparatively short time. It is equally essential to avoid infecting anyone else, and sexual intercourse should be avoided until the illness is cleared up. The patient need not be afraid to report to his doctor or the nearest V.D. Centre, because the treatment will be done in secret, and there is little left nowadays of the moral humbug which at one time surrounded the whole subject.

**Gout.** A disease in which there is an upset in the excretion of certain kinds of food in the body, and uric acid, which is a product of the digestion of certain proteins, collects in the blood and is later deposited in some of the joints. A very painful type of arthritis develops in the smaller

joints of the body, especially the big toe. Two factors are apparently present in this disease: (1) a natural tendency to gout, the cause of which is not known, and (2) the eating and drinking by the patient of an excessive amount of certain rich foods—spirits, wines, sweetbreads, liver, etc. The treatment is both dietetic and by means of drugs, but can only be carried out by a doctor.

**Grave's Disease.** (See Goitre.) Grave's disease is exophthalmic goitre.

**Gumboil.** A swelling in the mouth due to an abscess at the root of a tooth. Hot mouthwashes and hot applications to the outside of the cheek with aspirin taken four-hourly will relieve the pain for a time, but a dentist will have to be consulted sooner or later to remove the tooth, if necessary.

**Gynaecology.** The study of the diseases of women.

**Hæmatemesis.** Vomiting of blood, a symptom which may occur in the course of several diseases, for example, stomach or duodenal ulcer, cancer of the stomach, certain diseases of the blood, and cirrhosis of the liver, in roughly that order of frequency.

**Hæmatoma.** A swelling containing clotted blood, usually caused by direct violence, e.g., a black eye.

**Hæmaturia.** The passing of blood in the urine. Hæmaturia is a symptom of various diseases in general, those which cause irritation of the urinary tract, such as nephritis, stone in the ureter or bladder, or inflammation of the prostate gland. It is also found in certain blood diseases, tropical diseases due to parasites, heart disease, and so on. Treatment depends on treating the cause.

**Hæmoglobin.** The red pigment in the blood (which see).

**Hæmophilia.** (See Bleeder.)

**Hæmoptysis.** The spitting-up of blood. Although this is a well-known symptom of tuberculosis of the lungs, it is also found in heart disease, pneumonia, and also in some quite trivial conditions. Many people who spit up blood are simply suffering from some inflammation of the mouth or throat, or the blood may come from a bleeding area at the back of the nose (which communicates with the back of the throat). Nevertheless, hæmoptysis should always be taken seriously until it has been shown that no serious disease is present, and every patient who has this symptom should consult a doctor at once.

**Hæmorrhage.** Bleeding. This is usually due to an injury, but, especially when the bleeding is internal, it may be caused by an ulcer or some process eating into the tissues; or the blood-vessels may be particularly liable to bleed because of a vitamin deficiency (vitamin K), or a blood disease, such as hæmophilia. In any serious bleeding of whatever type the first necessity is to keep the patient absolutely quiet and at rest. Next, the doctor should be sent for. If the bleeding is internal, nothing further can be done by the layman. If the blood comes from an internal injury, however, a clean pad should be firmly pressed over it; if in a limb, a tourniquet may be used. This is made by tying a handkerchief loosely round the limb at some distance above the injury, and then inserting a pencil beneath the handkerchief and twisting it until the bleeding stops. It is of the utmost importance to realise that no tourniquet must be kept on longer than ten minutes. After that time, it should be slowly released, and, if the bleeding has stopped, it may be removed. If bleeding continues, the tourniquet should be tightened once more after a short interval. A tourniquet kept on too long may cause the loss of the whole limb.

**Hæmorrhoids.** (See Piles.)

**Hair.** In this limited space we can only deal with a few of the more important facts about hair. The most important point is that hardly anything has any influence on the rate of growth or quality of the hair. It is untrue, for example, that shaving makes the hair grow faster or coarser. Shaving, indeed, has no effect of any sort. Substances, such as oils or pomades are equally without effect, and the same applies to ultra-violet rays. The only substances or physical force known which have any effect on the hair are X-rays and certain chemicals which cause the hair to fall out. Hair in poor condition is usually

an indication of either bodily ill-health or neglect. Regular brushing and massage help to keep the scalp healthy, by freeing the pores from clogging particles of dust, waste oils and acids, etc., and stimulating the flow of blood to the hair roots. (See also p. 817.)

**Baldness**, in most cases, is an hereditary trait, inherited through the male side of the family; being hereditary, it cannot be altered. There is, however, a type of baldness known as alopecia areata in which temporary baldness is caused by such factors as nervous debility and certain fevers. This type usually recovers itself.

The hair should be washed at least every two weeks, but this will depend to some extent on whether the scalp is oily or not. Certain types of shampoo or applications for the hair are better than others, in that they give the hair a cleaner or more attractive appearance. (For superfluous hair, see under **Depilatory** and also p. 826.)

**Halitosis**. Bad-smelling breath arises from the mouth, teeth, or throat, and is caused either by decay of the teeth, or infected gums or tonsils. Occasionally it comes from diseases of the nose, lungs, or stomach. (For the treatment of gum infection, see under **Gingivitis**.)

Mouth-washes are of only temporary value in halitosis because the antiseptic is never in contact with the infected area for long enough to produce any effect. In general, they merely act by concealing the unpleasant smell by a stronger and more pleasant one. Tooth decay and gingivitis should be dealt with by a dentist. They are caused either by infection with a germ, or by particles of decaying food between the teeth. Chronic tonsillitis is another common cause—it should be dealt with by an ear, nose, and throat specialist.

Only very severe disease of the lungs or stomach leads to bad breath and, again, these can only be treated under medical supervision.

**Hallucination**. A hallucination is a mistaken sense impression. That is to say, it is the hearing, seeing, smelling or feeling, of something which does not exist in reality. The most common type is the hallucination of hearing, in which the patient hears voices or sounds which are imaginary. The next most common type is the hallucination of sight, in which the patient has visions which are not based on reality. Hallucinations of touch and smell are much less common.

Hallucinations of sound are usually a sign of mental disorder. They are commonest in schizophrenia (which see), but are also found in hysteria (which see), and, occasionally, it appears in the absence of any abnormality whatever. The same applies to visual hallucinations which, in addition to the above causes, may be produced by drugs such as opium and hashish.

Hallucinations of touch are found in cocaine poisoning, but those of smell are uncommon except in some types of brain tumour and occasionally in mental disease.

**Delusions** are false beliefs, and are, generally speaking, a symptom of mental disease. The subject is, however, much more complicated than this because many people have delusions without being in any way insane. Thus, an African native may believe that he is bewitched without being abnormal mentally—such a belief is normal to the culture in which he lives. Similarly, a few Englishmen believe that the earth is flat, but are not abnormal, first, because a few other people have the same belief, and secondly, because they consider whatever to discuss the matter and

Delusions arise other theories may not be true. as projection, in which the mental process known with the personality as a whole, which conflicts to agents in the outside world. The attributed a woman who has been brought up to be a sexual desire wicked, may, if she becomes an example: abnormal, attribute these desires to consider sources, thereby keeping her self-respect at the expense of her normality. They may then be the form of believing that she is in danger of being seduced, that she is pursued by one or more men, or there may be actual hallucinations of voices, appearing to make indecent or suggestive remarks. The voices are simply a projection of her own thoughts, as are all hallucinations.

**Hammer-Toe**. A claw-like deformity of the toe as a result of which the first joint presses

upwards against the top of the shoe, while the tip of the toe points downwards to the sole. Hammer-toe is caused by abnormal tension of the tendons, and can only be dealt with, in severe cases, by operation. In less severe cases no operation should be necessary.

**Hare-Lip**. A defect in the development of the upper lip which is related to cleft palate (which see). In mild degrees, the cleft may be only on the lip, in more severe degrees it may extend to the palate. The condition should be treated by operation in the first few months of life. The results are very satisfactory.

**Hay Fever**. An allergic disease (see **Allergy**) caused by abnormal sensitivity to certain grass pollens, and therefore mainly found in early summer. The symptoms are—running nose, irritation, redness, and running of the eyes. Sometimes there may be red patches or blisters on the skin. There are two aspects of treatment: (1) the symptoms may be relieved by bathing the eyes, and using ephedrine drops or a Benzedrene inhaler for the nose; (2) an attempt may be made to cure hay fever by giving increasingly large doses, by injection, of the pollen to which the patient is sensitive. In some cases the anti-histamine drugs (which see) have a useful effect upon the symptoms of hay fever, but, of course, the relief is purely temporary; for they do not, in any sense of the word, cure the underlying condition. Nevertheless, in severe cases anti-histamine drugs taken throughout the summer may afford almost complete relief.

**Headache**. Headache is one of the commonest of all symptoms, and it may be caused by many different diseases, or, as most people realise, by no disease at all. It is hardly an exaggeration to say that 90 per cent. of headaches are caused by functional upsets of a purely temporary nature such as anxiety, frustration, depression, or minor gastric troubles. The next most common cause is defective eyesight, which should always be referred to an eye specialist. Other causes of headache are—high blood-pressure or very low blood-pressure, meningitis, migraine, and brain tumour, but it must be repeated that the tendency to think out some dramatic cause for headache when the cause is probably a perfectly simple one should be guarded against. In other words, far more people have headaches caused by worry and frustration than headaches caused by tumour in the brain. Persistent headaches should always be referred to a doctor, and nobody should get into the habit of taking aspirin and other drugs. All drugs are poisonous and should only be regularly used on the advice of a doctor.

**Health**. Most people have a very exaggerated belief in the power of healthy living to prevent disease. For, while it is true that certain fairly obvious measures such as adequate food, fresh air, moderate exercise, and a calm mind play a large part in preventing nutritional and infectious diseases, there are two important facts to be remembered by would-be "healthy lifers." First, the healthy life is based solely on the simple measures mentioned above, and there is not the slightest evidence that any additional measures of the type dear to cranks provide any additional protection to health. Special diets, vegetarianism, over-enthusiasm in exercising the body, yogi and physical culture, deep-breathing, and so on have not the smallest effect over and above the ordinary precautions taken by the sensible man. Secondly, the length of life depends largely upon heredity and has much less to do with how one lives than most people usually believe, and a very large number of diseases are not prevented by any health measures. Cancer, for example, one of the most dreaded of sicknesses, comes to the healthy and unhealthy alike, and so do the organic nervous diseases, diabetes, heart disease, and the degenerative diseases of old age. No evidence has ever been found to suggest that eating meat and drinking in moderation have any adverse influence upon health. (In fact, there is some evidence that moderate drinkers live longer than teetotallers.) The best attitude to adopt is, as the Bible says, to "be not overmuch concerned"; for there is much truth in the saying that the man who cuts out all the minor joys of life for the sake of his health may not live twice as long as the man who does not, but his life will only seem twice as long.

**Heart.** The heart lies in the centre of the chest and slightly to the left side between the lungs. It consists of four chambers, the right and left auricles, and the right and left ventricles. Each auricle communicates with the corresponding ventricle, through a valve placed in such a way that blood can flow only from auricle to ventricle and not in the opposite direction. Disease of these valves therefore renders the heart less efficient, since it permits blood to flow backwards into the auricle. Circulation of the blood may be said to begin at the left ventricle, which pumps blood through the aorta, the main artery of the body, and thence throughout all the rest of the arteries. After passing through the tissues, blood is collected by the veins and ultimately reaches the largest vein in the body, the vena cava, which opens into the right auricle. The blood then flows into the right ventricle and from there is pumped through the lungs where it becomes oxygenated and gives off the carbon dioxide it has collected in the tissues. Thus purified, the blood enters the heart again at the left auricle and passes from there into the left ventricle, to begin its circulation once more. Although this process has been described as it would appear to a single blood cell passing round the body, the beating of the heart is of course much simpler than it might seem from this description. The contraction of the heart begins at the auricles simultaneously, and passes on to the ventricles; the heart then relaxes and a further wave of contraction begins at the auricles, and passes once more to the ventricles.

Heart disease may be of various types. Thus in a few cases, babies are born with defective valves, but in most cases valvular disease is the result of inflammation following rheumatic fever, scarlet fever, or diphtheria. Defective valves cannot be cured—that is to say, the defect cannot be removed—but the heart has considerable ability to compensate and there need not necessarily be any need for concern. A heart "murmur" (the sound the doctor hears through his stethoscope in cases of valvular disease) may be of no importance whatever. Less commonly, heart disease may be caused by degeneration of the heart muscle in older people, or disease of the blood-vessels supplying the heart muscle. The disease known as pericarditis is an inflammation of the thin membrane which covers the heart.

Heart disease is far too large a subject to describe here in detail, but the following story gives an indication of the modern medical attitude to it: A wealthy patient had with great difficulty arranged an appointment with a well-known London heart specialist, as he considered that there might be something wrong with his heart. On reaching the hospital, he found that the doctor's office was on the third floor, and the lift was not working. He was therefore compelled to walk up three flights of stairs, and finally knocked at the door of the specialist's office. When the door was opened, the doctor looked at him and asked: "You walked up the stairs because the lift was broken?" "Yes," replied the patient. "Then your heart is perfectly normal. Good afternoon!" said the doctor.

What this story illustrates is that, generally speaking, the only sensible criterion of the heart's efficiency is whether it works satisfactorily. It is rarely possible to have heart disease in the presence of a perfect ability to do whatever one wants to do. In conclusion, it should be noted that symptoms related to the heart in an obvious manner, such as pain over the heart, discomfort, or palpitation, are not often signs of heart disease (an exception is Angina Pectoris—which see). Palpitation is nearly always a sign of excess nervous tension and so is minor discomfort in the heart region. There is no evidence that tobacco affects the heart in any way.

The end result of true heart disease is heart failure, in which the heart becomes too weak to pump the blood throughout the body. The main symptoms are—extreme breathlessness on exertion and swelling of the legs. But these symptoms may be present in other diseases, and nobody who has them should jump to conclusions until he has seen a doctor.

**Heart-Block.** A disease of the heart in which the impulse of contraction is unable to pass from the auricles to the ventricles, with the result that both beat independently of each other.

**Heartburn.** A burning sensation, either in the back of the throat or in the oesophagus, leading from the throat to the stomach. It is a form of indigestion, caused by excessive acid in the stomach.

**Heliotherapy.** The treatment of diseases by the rays of the sun, usually by the use of an ultra-violet lamp. This was a popular medical fad about twenty years ago, but it is now realised that the value of sun-ray treatment in medicine is strictly limited. Heliotherapy is very useful in certain skin diseases in which stimulation of the skin is necessary. Apart from this, it is practically valueless. Large-scale experiments carried out during the war have shown that it is untrue that sun-rays have any pronounced tonic effect. What makes a person feel better when sun-bathing is relaxation and the mental satisfaction of exposing the body to the air. Perhaps, also, the feeling that "Handsome men (or women) are slightly sunburnt" has a good deal to do with it!

**Hemiplegia.** Paralysis of one side of the body caused by hæmorrhage into the brain. (See Apoplexy.)

**Hepatic.** Concerning the liver.

**Hepatitis.** Inflammation of the liver.

**Heredity.** Every physician knows that many of his patients add to their burden of misery by worrying, often needlessly, about their condition. Of these worries, one of the most frequent is the belief that their illness is hereditary, that it "runs in the family."

Scientific knowledge about heredity, which is now very considerable, dates from the work of the Abbé Mendel, an Austrian Roman Catholic priest, in the early years of last century. By observing the interbreeding of peas, Mendel was able to discover the laws of heredity that now bear his name. These laws, while relatively simple, are nevertheless too complex to describe here. (See p. 173.) Suffice it to say that the inheritance of physical characteristics is now clearly understood—by physical characteristics we mean such factors as eye colour, hair colour, stature, and body-build generally. There is also a fairly accurate understanding of what diseases are inherited, and it is known that these are relatively small in number. Thus certain organic nervous disorders, such as Huntington's chorea (a rather rare disease) and some others that are even more uncommon, are inherited, but even in these cases there is nothing inevitable to make it certain that any one member of a family will suffer from the disorder. Hæmophilia, the "bleeding disease" (which see), is handed on through the female side of the family, although it occurs only in males. The significant point is that none of the common illnesses are inherited. Tuberculosis, for example, "runs in families" in some instances, not because it is hereditary, but because the children are infected in early childhood. Cancer is not inherited, nor does it "run in families," and although venereal disease may be discovered in a child at birth, this, of course, is due to infection in the womb, and could have been prevented if the mother had been treated.

With regard to mental characteristics, there is no evidence that these are inherited in any specific way. What is inherited, or is believed to be so, is temperament. Thus a person may be slow or quick in his reactions, dull or clever intellectually, emotional or unemotional, as a result of his heredity, but he does not become a good piano player, a good athlete, brave or cowardly, criminal or good citizen because of his heredity. These are qualities which are acquired during upbringing within the family circle or from early influences in general.

So far as mental illness is concerned, there is no evidence that neurosis is in any sense inherited. But there is fairly conclusive evidence that schizophrenia and manic-depressive insanity are, at least in part, hereditary. However, these diseases may arise in families with no such history, and other families with a bad history in this respect may produce many generations free from any sign of the disease. It would appear that "insanity" as such is not inherited, but rather the tendency to break down, given other stresses in life. Further, it must be remembered that abnormal parents are unlikely to give any child a favourable home atmosphere or a healthy upbringing, and this may often give the impression

of heredity at work when it is merely an example of unhealthy parents rearing children in an unhealthy way. So, too, when we are told that crime runs in families, this shows, not the potency of heredity, but the power of parents to influence their children, favourably or unfavourably.

In short, unless the patient has one of those comparatively uncommon organic nervous diseases, or hæmophilia, it is rarely necessary to trouble about the possibility of handing on disease. Most handing on is done (in the case of infectious conditions) by contagion from parents to children, or (in the case of mental disorders) by bad example in the home from abnormal relatives.

**Hernia.** Rupture; the bulging-out of a part of any of the internal organs through a weak area in the muscular wall. The most common herniæ are found in the groin (so-called inguinal hernia), in the middle of the abdomen (umbilical hernia), or on the site of an operation scar (incisional or post operational hernia). The main danger of a hernia is that a piece of intestine may get caught in the cavity and twisted, thus causing a blockage in the passage of intestinal contents (strangulated hernia). The patient with a rupture may either wear a belt or truss to keep it in position, or he may have it completely cured by an operation in which the gap in the muscles is closed up. Babies are sometimes born with a hernia which is best treated by operation as soon as possible.

**Herpes.** There are two types of herpes, both quite unrelated to each other: (1) herpes simplex, which is the name given to a collection of small blisters which sometimes appears in the region of the mouth, especially following, or during, a fever such as pneumonia. It is a minor illness best treated by keeping clean and applying collodion; (2) herpes zoster or shingles, which is an extremely painful skin disease due to inflammation of a nerve root at the point where it leaves the spinal cord. It takes the form of a painful area, usually on the back or side of the chest, but sometimes on the face on which, a few days later, a crop of blisters appears. Shingles should only be treated by a doctor, although there is, so far, no specific treatment. The illness, however, clears up of itself, although in old or rundown patients, there may be a residual pain long after the blisters have disappeared. Both types of herpes are caused by virus, and that of herpes zoster appears to be related to the virus causing chicken-pox.

**Hiccoughs.** Hiccough is caused by contractions of the diaphragm, the large muscle which separates the abdomen from the chest. The spasm is usually due to irritation from the stomach. Ordinarily, hiccoughs are not serious, and can be dealt with by the usual methods of drinking cold water, or pressing on the upper lip. Probably the best first-aid treatment is to hold a paper bag over the nose and mouth, and breathe deeply in and out. Occasionally, hiccough may be serious and may go on for days; in such cases the treatment rests with a doctor.

**Hives.** (See *Urticaria*.)

**Hoarseness.** (See *Laryngitis*.)

**Hodgkin's Disease.** A disease in which the lymph glands and spleen become swollen. Usually the first symptom is a painless enlargement of the glands in the side of the neck. Hodgkin's disease is a very serious illness for which no specific treatment has yet been discovered, although X-rays and radium often help. However, there are so many diseases in which the lymph glands are swollen that the condition can only be diagnosed by an expert.

**Homœopathy.** A system of healing, discovered by a German physician called Hahnemann. It is based on two assumptions: (1) that diseases may be cured by giving drugs which would produce the symptoms of the disease in normal people; (2) that drugs have a more potent effect when given in very minute doses. As with most sects, there is a certain amount of truth in these assumptions, but it is quite certain that there is no one system of healing, and any sect adhering exclusively to a particular philosophy is bound to be mistaken.

**Homosexuality.** A psychological disorder which causes a patient to be attracted to people of the same sex. Homosexuality is really a failure to grow up, because everybody passes through a stage of mental homosexuality in the course of their development (between the ages of twelve and fourteen). Physical love by homosexuals is

illegal in Britain in the case of males, but not of females. There is no evidence that physical causes, such as glandular defects, have anything to do with this condition; but, in the case of males, it is possible to reduce the sexual drive by giving stilboestrol (female sex hormone), which thus may keep the homosexual out of conflict with the law.

**Hormone.** (See *Gland*.)

**Hydrocephalus.** "Water on the brain." An illness in which the cerebro-spinal fluid which circulates round the brain and spinal cord is either blocked in its flow or increased in amount. The increasing pressure causes shrinking of the brain leading to fits and headaches. Hydrocephalus usually occurs in infants, in which case the head becomes abnormally large. When the bones have become firmly fixed together, however, swelling of the head does not occur.

**Hydrophobia.** Rabies. A disease caught by infection from animals usually by the bite of a mad dog (that is, one which suffers from rabies). It is uncommon in this country. Symptoms do not appear for one to six months after the bite, and during this period the disease can be prevented by injections discovered by Pasteur. When they begin, there is spasm of the throat muscles, choking feeling, and delirium, ending in death. Drinking makes the throat spasm worse, hence the name, which means fear of water.

**Hyperhidrosis.** Excessive sweating. (See *Bromidrosis*.)

**Hypertension.** High blood-pressure. (See *Blood-pressure*.)

**Hypothyroidism.** (See *Goitre*.)

**Hypochondriasis.** A person who is always imagining that he is ill is called a hypochondriac. Such a person is dealing with his worries by failing to face up to the real source of the trouble and concentrating instead on sensations coming from his body. Anybody can produce symptoms in this way if he thinks hard about his heart-beats, or the movements of his stomach, or any other bodily actions which are normally unconscious. For example, a man who has been spoilt in childhood and later marries a wife who refuses to go on fussing over him, may develop palpitations or queer sensations in the stomach or bowels. The real source of his worry (that he wants more attention) is not respectable, whereas heart disease is. Hypochondriasis is really a form of selfishness or self-love, but it can only be treated by getting the patient to face up to reality.

**Hypotension.** Low blood-pressure. (See *Blood-pressure-low*.)

**Hysteria.** The term hysteria is popularly taken to mean the sort of "attack" when a girl loses control and behaves in such a way that someone has to throw a bucket of water over her. Properly speaking, however, hysteria is a form of neurosis in which (as in hypochondriasis) a failure to face up to reality leads to the appearance of symptoms which appear to be due to bodily disease although the patient is, in fact, quite normal physically. There may be paralysis of the arms or legs, deafness, or even blindness, but the doctor can usually discover quite easily whether any organic disease is present. A person with hysterical illness always gets some benefit from his symptom—part of his mind does not really want to see or hear or move. Thus someone who has seen a horrible sight may not want to see any more, a soldier who is afraid of going into battle may not want to be able to move—he wants to be able to escape from a hard reality. Hysterical illness is very common, and even more common is the element of hysterical behaviour which is found in all, or nearly all, physical disease. People who have a desire to remain ill in order to evade responsibilities take much longer to get well than others. For example, a certain minor operation on the knee is done in hundreds of hospitals every day, and the patients return to work in about two weeks. In the Army, the same operation was done by the same surgeons in the same way, under just as favourable conditions—and the patients were often six months in returning to duty. This is not simply a matter of malingering, because the desire to evade duty is unconscious. Perhaps the best definition of hysteria is unconscious malingering.

**Ichthyl.** A coal-tar product used in the treatment of skin diseases. It is less used now since more effective remedies have been found.

**Ichthyosis.** A condition in which babies are born with a skin which is dry and scaly like that of a fish. The cause is not known.

**Icterus.** Jaundice (which see).

**Immunity.** The ability to resist infectious disease. This may be inborn—for example, certain peoples have in the course of history become increasingly resistant to particular diseases, while others are extremely susceptible to them. Syphilis is much less deadly than it once was to Europeans, and, on the other hand, some islands in the Pacific have had their populations decimated by measles, which is a relatively trivial illness in Europe.

When germs invade the body, certain substances known as antitoxins (which see) are created by the body in order to neutralise the poisons (toxins) of the bacteria. When the disease has been defeated, the patient becomes immune to a second attack for as long as the antitoxins remain active in the blood. This period may be a lifetime or only a few days, depending mainly on the type of germ. One of the reasons why anti-cold inoculations are useless is that the period of immunity following a cold is only a few days. Unless, therefore, the sufferer is prepared to take a course of inoculations for the rest of his life, he can never avoid colds in this way.

Inoculations against disease may be active or passive. In the first case, either a very weak strain of the germ or a solution of dead germs is injected and the body produces its own immunity against them. In passive immunity, the antitoxins from a patient or animal who has had the disease are injected—this is only done when the patient is already ill and there is no time for active immunity to be built up. But, with the discovery of penicillin and the sulpha-drugs, the use of sera (the solutions of antitoxin) are less and less used. In conclusion, it is important to realise that immunity does not depend solely on chemical substances in the blood. A happy, well-adjusted life makes one much less liable to disease. Thus in a factory workshop in which colds were very prevalent, one group of workers remained free from infection all winter. They were producing a play in their spare time, were passionately interested in it, and simply did not want to be ill. People who have no time to be ill are not often ill.

**Impetigo.** An infectious disease, caused by infection of the skin by streptococci and staphylococci, the germs that are responsible for most septic conditions. It takes the form of blisters filled with pus, usually on the face. Under the blisters, the skin is red and inflamed. Elsewhere, there are yellow crusts. Impetigo is easily spread by touching with the fingers, or by dirty towels, and the first necessity is to use clean towels in drying the face and ensure that they are not used by anyone else. Treatment is with sulphonamide powder or penicillin, but must be carried out by a doctor. No other drugs should be used—ointments or patent medicines must especially be avoided.

**Indigestion.** (See Dyspepsia, Duodenal Ulcer.)

**Infantile Paralysis.** (See Poliomyelitis.)

**Inflammation.** The changes that occur in living tissues when they are invaded by germs. The classical signs of inflammation were described many years ago as redness, swelling, pain, and heat (in Latin, *rubor, tumor, dolor, and calor*). When, for instance, a cut is infected, the part becomes red because an increased amount of blood is sent to help fight the germs (see Immunity); this increase of blood supply leads to swelling and heat in the part, and the tension in the tissues to pain. A barrier of body cells develops which shuts off the infected area from the rest, and white cells (phagocytes or leucocytes) leave the distended blood vessels to eat up the bacteria. In the body as a whole, the poison of the germs causes an increase in the number of leucocytes in the blood—a sign which gives the doctor an idea as to how well the body is responding—and there is a rise in temperature. All these signs must be understood as a natural response to infection and the most that medical treatment should do is to aid Nature. Heat is applied both to increase the flow of blood to the part and to ease pain (see Fomentation), but it is unwise for the layman to attempt anything else. Above all, it is extremely dangerous to make an incision in an infected area until the infection is localised

by the body defences and the dead tissues have become liquid pus. Nor is there any point in taking drugs to reduce the temperature unless the fever is causing discomfort. Modern treatment, such as the use of sulphonamide or penicillin, can only be used under a doctor's advice.

**Infantilism.** A failure of development, mental and physical, due to glandular lack, especially of the pituitary gland. (See Glands.)

**Influenza.** While serious epidemics of influenza take the form of a very dramatic and often fatal disease, the milder type more usually seen is not easy to distinguish from a common cold. However, a sudden onset, pains in the back and legs, redness of the eyes, and a good deal of weakness are typical of influenza rather than a cold. Most typical of all is the long period of weakness and depression which may follow. Influenza is caused by a virus (which see) and is not yet curable by any of the new drugs, but a vaccine has been developed which may be useful. For the present, the best treatment is rest in bed, and plenty of drinks (of the orange squash or lemon barley water variety—there is no evidence that whisky helps, although it may make the illness more tolerable). In serious cases, death may be due to the onset of pneumonia, but this happens only in old or weak patients or in serious epidemics.

**Inoculation.** (See Immunity.)

**Insomnia.** Inability to sleep may be due to two groups of causes: (1) physical, (2) mental. The first group includes illnesses which produce pain or discomfort and thus keep the patient from sleeping. The treatment here is obviously to remove the cause of pain. Certain drugs, of which coffee is the commonest, stimulate the brain and make sleeping difficult. This can be dealt with either by using coffee from which the stimulant, caffeine, has been removed, or by avoiding coffee in the late evening. In old people, heart failure, high blood-pressure, or hardening of the arteries, may lead to insomnia, which can only be dealt with by a doctor.

By far the larger number of cases of insomnia are due to mental causes. These may be simple, as when intellectual work is carried on right up to bed-time, and the mind is then too stimulated to be able to sleep. Or the cause may be worry, either conscious or unconscious. In the treatment of insomnia due to mental causes, it is first necessary to remove the cause of worry. In addition to the original worry which led up to insomnia, many people get very worried in case sleeplessness leads to mental exhaustion or insanity. This fear is quite groundless, and, although it is exhausting to get insufficient sleep, nobody has ever become ill as a result of it. The very worst way to get peaceful sleep is to try so hard that sleep becomes impossible. It is a good idea to have a hot drink before going to bed, and to ensure that the bed is comfortable. If it is difficult to sleep, a book should be ready to hand, because anything which distracts attention from trying to sleep, helps. No drugs should ever be taken for sleeplessness without the advice of a doctor. Indeed, it is impossible to get these without a prescription.

**Insulin.** The internal secretion of the pancreas used in the treatment of diabetes. (See Diabetes and Glands.)

**Insulin Therapy.** Insulin is a substance produced by the pancreas which, under normal conditions, enables the body to utilise the sugar absorbed from the digestion of food in the stomach. In the disease of diabetes the pancreas fails to produce sufficient insulin, with the result that sugar accumulates in the blood and the excess is secreted in the urine. Insulin is, therefore, used in the treatment of diabetes, and is given by injection to replace what the pancreas no longer produces.

Since insulin reduces the amount of sugar in the blood-stream, it tends to produce hunger, and is given to patients with a poor appetite—especially when this is due to psychological causes—in order to get them to eat. However, apart from its use in diabetes, the main use of insulin is the effect which it has upon certain mental disorders, in particular, upon schizophrenia. The prospect of recovery from this serious disease was formerly very slight (although, of course, it is not dangerous to life), and no more than about 30 per cent. of cases showed any tendency to spontaneous recovery. With the use of insulin, this recovery-rate has

more than doubled, and in most hospitals stands at about 60-70 per cent.

The technique of insulin therapy is somewhat as follows: the patient is kept in bed in a warm room and given a relatively small dose of insulin while the results are observed. Each day the dose is increased until relatively large amounts are being given. Initially, the only effects are slight sweating and nervousness, but with larger doses the results are more pronounced, until finally the patient becomes unconscious and goes into a coma. When the coma appears to be getting too deep, or when it is desired to stop the daily treatment, injections of sugar (glucose) are given which rapidly put an end to the coma. Insulin is used in certain other mental conditions, but other treatments usually give better results in these.

**Intelligence.** Intelligence has been defined as the ability to see the relationship between things. Being inborn, it is not increased by education (although through inadequate education of emotional problems, the individual may be unable to make full use of what intelligence he has been born with). Although intelligence is inherited from the parents, low intelligence is sometimes caused by injury or disease of the brain at birth. (See Feeble-mindedness.) The various grades of intelligence are described as follows—progressing from the lowest to highest: idiot, imbecile, dull and backward, average, above average, genius. These grades are discovered by means of intelligence tests.

**Intermittent Claudication.** (See B rger's Disease.)

**Intestine.** The tube beginning at the mouth and ending at the rectum. It includes the  sophagus, leading from the mouth to the stomach (about 2 feet long), the stomach (1 foot long), the duodenum (1 foot long), the small intestine (23 feet long), the large intestine (5 feet long) and rectum (6 inches long). In this tube digestion takes place. The main diseases of the intestine are: ulceration, as in stomach ulcers, or ulcerative colitis, infection, as in dysentery and typhoid, obstruction due to twisting, or tumours. All these are treatable only by a doctor.

**Iodine.** This is found in sea-water, and especially in sea-weed. It is used internally in small amounts as a sedative for the stomach and in the treatment of goitre. Externally, it is used as an ointment in treating muscular pains; the tincture of iodine was formerly used as an antiseptic, but is much less efficient than more modern antiseptics. (See Antiseptics.)

**Iritis.** Inflammation of the iris, the area surrounding the pupil. It may be caused by many different germs. The symptoms are—pain, redness, and abnormal sensitivity to light. Iritis cannot be treated without medical help.

**Iron.** A metal found in the red cells of the blood. Lack of iron leads to  m mia. It is taken in the form of Bland's pills, ferrous sulphate, or iron and ammonium sulphate.

**Itching.** This may be a symptom of many diseases, such as infection of the skin by germs or fungi, or by parasites, such as lice or "the itch" (scabies). It also occurs in dermatitis due to oversensitiveness of the skin to certain substances which are harmless to others. (See Dermatitis.) Glandular defects, especially in women at the change of life, may lead to itching. The treatment depends on the cause, but many types of itching of the skin have no discoverable physical cause, and are psychological in origin. These are known as pruritis.

**Jaundice.** Yellowness of the skin, eyes, and urine, due to the presence of the colouring matter of bile in the blood. Jaundice may occur when there is excessive breaking-down of the red cells in the blood. This type is found in pernicious  m mia, and the yellow tinge is usually slight. Or it may occur in diseases of the liver produced either by poisons or germs. Finally, any blocking of the bile ducts, as in gall bladder disease, may lead to jaundice. The commonest type is the sort of jaundice occurring after mild gastritis and known as infective jaundice or infective hepatitis. This usually passes off in two to three weeks. All cases of jaundice should be referred to a doctor immediately.

**Joint Diseases.** (See Arthritis, Backache, and Gout.)

**Kala-azar.** Also known as Mediterranean

fever, Dumdum, or Black fever, occurs in tropical countries and shows itself in fever,  m mia, dropsy, and swelling of the liver and spleen. The germ is carried to human beings by the bite of the sand-fly.

**Keloid.** An over-growth of tissue on the site of a scar. It is more commonly found in Negroes. The usual treatment is radium or X-rays.

**Keratitis.** Inflammation of the cornea, the membrane in front of the eye.

**Kidneys.** The kidneys are about 4 inches long and 2 inches wide. There are two, one on each side of the spinal column, in the small of the back. All the blood in the body is filtered through the kidney, and the waste matter passes through two tubes known as ureters which enter the bladder. It then leaves the body through the urethra in the form of urine. The commonest diseases of the kidneys are stone (see Calculus), inflammation (see Nephritis), and tumour.

**Kyphosis.** Hunch-back, usually caused by tuberculosis of the bone, rickets, and spinal injuries.

**Labour.** Child-birth.

**Lactation.** Secretion of milk by the breasts.

**Lanugo.** The fine hair which covers a baby before birth.

**Laryngitis.** Inflammation of the vocal cords. This may be due to excessive use of the voice, inflammation by germs as in colds, or more serious conditions, such as tuberculosis, cancer, or syphilis. In some people excessive smoking causes laryngitis. Treatment is to rest the voice and treat the cause. Any patient who has hoarseness of the voice for more than two weeks should see a doctor, and if the symptom does not disappear after a week's treatment, he should demand to see a throat specialist.

**Leprosy.** A chronic disease caused by a germ similar to that of tuberculosis. It affects the skin and the nerves. The usual symptoms are pain and tingling in the affected areas, which later gives place to complete loss of feeling. Deformities arise, partly from ulceration of diseased areas, partly because the lack of feeling makes the patient unaware when his hands or body are being injured. Leprosy is very uncommon outside tropical countries and is not nearly so infectious as people in the past have been led to believe. It is, moreover, curable.

**Lesion.** Any wound or injury anywhere in the body.

**Leucocytosis.** An increase in the number of white cells in the blood. (See Inflammation.)

**Leucoplakia.** White, thickened patches which appear on the tongue following chronic irritation. It is caused by spirits, smoking, syphilis, or sepsis, and if untreated, may lead to cancer. It should be referred to a doctor.

**Leucorrh a.** A whitish discharge from the womb. A certain amount of discharge is normal, but, if it is foul-smelling or excessive in amount, a doctor should be consulted. In mild cases, douching with warm water is all that is necessary.

**Leucotomy.** A brain operation used in the treatment of certain mental disorders, and particularly the more serious and otherwise incurable ones such as schizophrenia, severe and prolonged states of depression, and occasionally severe obsessional neurosis. The operation consists in the severing of the nerve tracts between the higher controlling centres and the lower impulsive centres. This, in effect, means that the association between thought and emotion is to some extent removed. For example, a patient's delusions are only important in so far as they have strong emotional drives behind them; when the drive is removed they become of less significance. Depression and obsessional neuroses are essentially due to an excessive control of emotional expression by the "conscience"; this again is reduced by the operation.

Leucotomy is a serious procedure which should be considered only when all other methods have proved useless. To put the matter in another way, leucotomy does minor (but irreparable) damage to the brain in order to remove a greater disability. Many otherwise incurable cases have been able to return home after treatment, and sometimes to work at their original job. But there can be no doubt that their intellectual and emotional control are reduced.

It is most important to realise this. Leuco-

tomy is quite unjustifiable unless no other method will cure the patient, or if the patient is either only mildly disturbed or is likely to improve with time. The operation was devised by the Portuguese surgeon Moniz about fifteen years ago.

**Leukemia.** A disease in which there is a great increase in the number of white cells in the blood and swelling of the spleen and lymph glands. The red blood-cells break down, causing anaemia and hæmorrhages in various parts of the body. This is a very serious disease which has previously been treated without much success by X-rays. Recently, however, radio-active phosphorus has been used, but this treatment is still in the experimental stage.

**Libido.** In the psychology of Freud and Jung, the term *Libido* is used to mean the instinctual energy of life, usually sexual energy. Jung, however, uses it in the much wider sense of mental energy in general.

**Lice.** There are three kinds of lice: the head-lice found only in the hair, the body-lice found elsewhere on the body, and the crab-lice found only in the hair round the sexual organs. Lice do not develop of themselves, and can only be spread by contact with someone who already has them. For the head-lice a preparation known as lethane is now in use, which should be applied after washing the hair. Body-lice are dealt with by the use of D.D.T. powder, but it is also necessary to have the clothes disinfested as body-lice breed in the seams. If no other method is available this may be done by ironing the clothes with a hot iron. Crab-lice being found only in the genital area can more easily be dealt with, and all that need be done is to shave the hair off and wash. In towns, the best thing to do is to go to the local Cleansing Centre. When this is not possible, head-lice can be dealt with by rubbing a mixture of equal parts of paraffin and olive oil well into the hair, covering for at least two hours, and then washing. Body-lice are best dealt with by bathing and shaving off the body hair, especially under the arm-pits where body lice are most often found. The main danger of lice is that they spread typhus fever.

**Ligaments.** The fibrous bands that hold bones together in the region of a joint.

**Linctus.** A thick syrupy medicine, usually a cough mixture.

**Liniment.** Any oily substance rubbed into the skin to relieve pain.

**Lipoma.** A swelling made up of fat cells. It is harmless, but if it causes inconvenience, may be removed.

**Liver.** The liver lies in the upper right-hand side of the abdomen just under the margin of the rib. It has many different functions. For example, all the food which is not immediately required for use is stored in the liver. This particularly applies to sugar which is the main source of energy. It is kept in the liver in the form of glycogen and released to act as fuel whenever necessary. The liver also has the function of breaking-down poisons which are produced either inside or outside the body, and in the presence of liver disease the patient is much more susceptible to poisons. Finally, the liver produces bile which is stored in the gall-bladder. Bile is both a means of getting rid of the break-down materials of used-up blood cells and an important digestive agent.

The liver may suffer from inflammation caused by germs (infective hepatitis); from hardening or cirrhosis, which is caused by various poisons of which alcohol is the commonest, and also by lack of vitamin B<sub>1</sub>. Tumours are occasionally found in the liver, but they have usually spread from somewhere else in the body. Liver extract used in the treatment of pernicious anemia is a substance which stimulates the formation of red blood cells.

**Lock-jaw.** Properly called Tetanus, is a disease caused by the tetanus bacillus which is found in rich soil. Infection is produced by the germs entering the skin through a wound or cut. The disease affects the nervous system and produces contraction of all the muscles in the body—in particular of the jaw, so that the mouth is unable to open. Without treatment, death almost always occurs. Fortunately, people can be immunised against tetanus by inoculation, or, after infection, if there is time, the patient can be passively immunised (see *Immunity*). The

effectiveness of active immunisation can be seen in the fact that, while in earlier wars thousands of soldiers in France died of tetanus, the disease was almost unknown in the last war when everyone received injections of T.T. (tetanus toxoid).

**Locomotor Ataxia.** (See *Tabes*.)

**Lordosis.** An abnormal curvature of the spine with the convexity towards the front.

**Lungs.** The organs of breathing, two large spongy organs that fill most of the chest. They are made up of many small air cells which connect with the bronchioles or air tubes and finally with the wind-pipe. Air passing into the air sacs through these tubes carries oxygen to the blood-vessels which spread throughout the lungs. (For diseases of the lungs see *Bronchitis*, *Bronchiectasis*, *Emphysema*, *Empyema*, *Pleurisy*, *Pneumonia*, and *Tuberculosis*.)

**Lupus.** Tuberculosis of the skin, which takes the form of yellow or brown nodules that coalesce forming a continuous patch in which the tissues are gradually eaten away. Lupus can, however, be cured by ultra-violet irradiation.

**Lymph.** The liquid part of the blood which flows through special vessels on its own and passes through the filter of the lymph glands before entering once more into the blood stream.

**Lymphadenoma.** (See *Hodgkin's Disease*.)

**Lysol.** A proprietary name for Cresol which is mainly used in disinfecting drains, instruments, and so on. It is not so useful as a body antiseptic since it burns the skin and is extremely poisonous.

**Malaria.** Malaria is the most dangerous disease in the world, and millions of people die of it yearly. This is all the more tragic in that it is relatively easily treated by means of quinine or the new synthetic drugs Atebrin and Mepacrine. The problem of malaria in India and other countries is mainly an economic one, since the supply of quinine in the world is inadequate to the number of patients. At one time, it was thought that malaria was caused by breathing damp, foul air—hence the name which means "bad air." But it was discovered by the Scottish physician Ross to be caused by a parasite spread by the bite of mosquitoes. The practical problem in controlling malaria is therefore one of preventing mosquitoes from breeding and from biting human beings. Since the eggs of mosquitoes are hatched in water, the first thing to do is to dry up all areas of stagnant water or render them poisonous to the mosquito by the use of oil which forms a film over the surface. Mosquito nets and protective clothing are used to prevent people being bitten. There are several different types of malaria, benign, malignant, tertian, and so on, but the treatment of the actual disease can only be carried out by a doctor. Those who live in malarial climates can protect themselves by taking Atebrin tablets.

Finally, we must mention that those who have suffered from malaria are particularly prone to believe that every fever which develops when they return to England is malaria. This, in fact, is rarely the case, yet the doctor constantly sees people who, having been in India twenty years previously, still consider that every cold is a return of their malaria. This is usually mere boasting.

**Mania.** A type of insanity in which there is wild excitement, sometimes violence, and constant over-activity. It is one phase of the disease properly known as manic-depressive insanity, in which the patient has a tendency to alternate between the extreme emotions of elation and depression. Mania is now successfully treated by psychiatrists. It is not caused by any disease of the brain and is a purely psychological illness.

**Mammary Glands.** The breasts.

**Marsasmus.** Progressive wasting in infants without any obvious cause.

**Massage.** The treatment of diseases by manipulation of the tissues. It acts by increasing the blood flow and relaxing the muscles. While very useful in certain illnesses, such as fibrositis, there is a tendency on the part of its practitioners to over-estimate its importance in general medicine.

**Mastitis.** Inflammation of the breasts. This may be acute, when there is infection producing an abscess which may have to be opened—a type usually found in nursing mothers—or it may be chronic, a quite different condition found mostly in women at the change of life and caused by glandular upset. Acute mastitis is treated by

penicillin, sulphonamide, or surgical operation. Chronic mastitis is treated by ovarian extracts or other hormones (which see).

**Mastoid.** Mastoid is the name applied to the bone behind the ear. When infection from the ear reaches the inside of this bone, the condition is known as mastoiditis. This may be caused by measles, scarlet fever, and diphtheria, or by blowing the nose in such a way as to force infection from a cold up the Eustachian tube into the ear. When this happens, there is deafness, pain, and swelling behind the ear, which must be dealt with by a doctor. An operation may be necessary or the disease may settle down by the use of penicillin. Sometimes the infection becomes chronic and the ear may discharge for months or years. This is very common, but always potentially dangerous. It should always have specialised treatment.

**Measles.** An infectious disease marked by fever, a rash of pink spots, redness of the eyes, and mild bronchitis. It mainly affects children, and one attack seems to produce life-long immunity. Measles is caused by a virus and the most serious dangers of the disease are the result of complications, such as infections of the eyes, nose, or throat, and the bronchial tubes. The usual treatment is rest in bed and light diet. Sometimes patients are given injections of serum from the blood of those who have recently recovered.

Measles is not usually a serious disease, but its complications often are. Children should not be allowed to mix with those who have had measles for two weeks after recovery.

**Measles—German.** (Rubella.) An acute fever which is rather like a mild attack of measles. The patient has running nose, sore throat, and a slight rash. The glands of the neck and behind the ears are usually swollen. The temperature is only slightly raised, and the patient recovers in a few days. Prevention of infection is difficult because the disease is developing in the body for about three weeks before symptoms begin, and during all this time the patient can cause infection. Rubella, like measles, is caused by a virus.

**Medulla Oblongata.** A cone-shaped part of the nervous system which is the junction between the spinal cord and the brain. In it lie the vital centres which control breathing, heart-beat, and the movements of the intestines.

**Melancholia.** Depression; a mental disease which may be part of manic-depressive insanity (which see), or simply an attack of depression coming on at the change of life. The symptoms are anxiety and fear due to no obvious cause and more or less severe depression. In more severe cases, the patient may express strange ideas, such as the belief that he has committed some unforgivable sin, or that he is unworthy of the attention of others.

It is important to be able to recognise this condition, which is usually found in women between the ages of forty and fifty, and, less often, in men about ten years later. The most serious danger is that the patient may commit suicide, an event which is all the more tragic since nearly all cases of melancholia can be completely cured by modern methods.

**Memory.** Many people consider whenever they get run-down that their memory is failing. This is nearly always a wrong belief. Every act of remembering has three phases: (1) the taking-in of an impression; (2) the consolidation of a memory in the brain; (3) the retaining of a memory and the ability to recall it. Failure to remember may be caused by a defect in one or other of these processes: (1) when people are nervous or unhappy they fail to pay attention to what goes on round about them, and one cannot take in impressions unless interested in them. This is the explanation of the supposed bad memory of neurotics. It is not memory that is diseased, but interest which is lacking; (2) if someone is knocked unconscious in an accident their memory will be blank, not only for the time when they were unconscious, but also for a period of several minutes before the accident. This is because, as we have seen, a memory takes some time to be consolidated in the brain, and the accident has prevented this consolidation; (3) most other cases of failure to remember are due to a lack of desire to recollect particular facts (see *Amnesia*). Loss of memory of this type may range from the normal failure to remember un-

pleasant facts about ourselves, to the pathological loss of memory when, for instance, a soldier who is morally incapable of running away does so in a state of amnesia. The only time memories are ever really lost is when the cells of the brain containing them are destroyed by disease or old age. This is, however, much less common than the other types. To summarise, loss of memory is uncommon, lack of ability or desire to recall is frequent.

**Meniere's Disease.** A disease of the organs of balance in the inner ear in which there is deafness and sudden attacks of extreme giddiness, vomiting, and even collapse. It is not dangerous to life, but can only be treated by a specialist.

**Meninges.** A thin membrane which covers the brain and spinal cord. Inflammation of the meninges is called meningitis; a tumour in this area is called a meningioma.

**Meningitis.** An infection of the lining of the brain, caused by a germ called the meningococcus, when the disease is epidemic meningitis or "spotted fever." Other types, not occurring in epidemics, are caused by the germs of pneumonia, tuberculosis, and others. Epidemic meningitis is specially common under conditions of overcrowding. The disease begins like a cold with fever and sore throat which is followed by a rash of pin-point-sized red spots all over the body. Later, there is severe headache, vomiting, and sometimes delirium. The epidemic and streptococcal types are now curable with sulphonamide or penicillin, but tuberculous meningitis is a very grave disease which rarely recovers. The use of the new drugs streptomycin, however, holds out some hope. Meningitis may sometimes be followed, in children, by mental disorders or change of personality.

**Menopause.** (See *Change of Life*.)

**Menorrhagia.** Excessive bleeding during the monthly period—a condition which should always be referred to a doctor as it can usually be satisfactorily treated.

**Menstruation.** The monthly period. Beginning at puberty, the periods have the function of preparing the womb for pregnancy. Mid-way between two periods, an ovum is released from the ovary, which, if it is fertilised, carries on to pregnancy. If unfertilised, it passes out of the body. Each month, the lining of the womb is prepared for receiving the fertilised ovum and when fertilisation does not occur, the lining breaks down, and leaves the body in the form of blood and mucus. This is followed once more by the laying down of a new lining. Monthly bleeding should not be excessive or painful, and there should be no bleeding between periods. These symptoms are named respectively, *menorrhagia*, *dysmenorrhoea*, and *metrorrhagia*, and, if they occur, should be referred to a doctor. Brief accounts will be found under these headings. When the period stops at the change of life (which see) the stopping may be sudden or gradual, but, after it has taken place, there should be no further bleeding.

**Mental Disease.** (See *Hysteria*, *Neurosis*, *Psychosis*.)

**Metabolism.** The building-up and breaking-down processes of the body as a whole. The former are called anabolism, the latter katabolism. The rate of metabolism depends largely on the thyroid gland.

**Metritis.** Inflammation of the womb.

**Micturition.** The passing of urine.

**Migraine.** A disease, believed to be allergic, in which periodic attacks of headache are accompanied by spots or flashes in front of the eyes, and followed by gastric symptoms of nausea or vomiting. Between attacks the patient is quite normal. The disease can only be treated and diagnosed by a specialist. There are numerous modern drugs which are helpful; in mild cases aspirin may be sufficient, but in more severe cases a drug known as ergotamine (*Ergemex*) is useful.

**Miscarriage.** (See *Abortion*.)

**Mononucleosis.** (*Glandular Fever*.) A virus disease which sometimes occurs in epidemics, usually among young people. There is fever, sore throat, swelling of the lymph glands in the neck and elsewhere. The disease may be so mild as to pass unnoticed, and most cases recover in three or four weeks. There is no specific treatment.

**Mumps.** An infectious disease marked by swelling of the large salivary glands in front of the

ears, sometimes of other glands and even the breasts and testes. Mumps may be extremely painful, but the worst is over in a few days. Children and young adults should be kept away from patients. One attack usually gives lifelong immunity. The disease is caused by a virus. There is no specific treatment.

**Myocarditis.** Inflammation of the heart muscle. (See Heart.)

**Myxedema.** A disease due to failure of the thyroid gland. The symptoms are dry skin, increasing mental dullness, puffy face, and falling hair. The condition can be cured by giving tablets of thyroid extract, but this must be continued throughout life.

**Nevus.** (See Birth-mark.)

**Narcolepsy.** A nervous illness of unknown origin in which there are periodic attacks of sleep. Sometimes patients fall asleep while standing or talking, and these attacks may be associated with a condition in which all the muscles of the body seem suddenly to lose their strength and the patient collapses. These latter attacks are often brought on by strong emotions, such as laughter or anger. Narcolepsy is not dangerous to life and can be controlled by a drug known as Benzedrene. Obviously those who suffer from it should not follow occupations in which attacks of sleep may be a danger to themselves, or others. For instance, they should not drive.

**Narcotic Addiction.** People may become addicted to many different types of drug, such as opium or its derivatives (morphine or heroin), cocaine, hashish, or even chloroform. Much the commonest drug of addiction, of course, is alcohol (see Alcoholism). There is no space here to describe the treatment of these conditions, but it should be realised that, although there are many ways of making the breaking-off process less painful, the only method of curing the addiction is by treating the underlying psychological abnormality. No normal person ever becomes addicted to drugs.

**Nature Cure.** Any system of treatment which is based upon the belief that diseases may best be cured and health maintained by the use of "natural remedies," as opposed to artificial and man-made drugs. In practice, this usually means that only substances of vegetable origin are utilised and substances of mineral origin are avoided. Such methods of treatment as colonic lavage are also made use of.

While it is, of course, often possible to cure illness by such methods—at any rate in the case of certain diseases—the philosophy of nature cure (and of all other systems of medicine based upon a single idea) is a fallacious one. Although it sounds sensible on the face of it to say that "nature's way is best," this sort of statement is all too glib. For what is "nature's way," and what is "natural"? The fact is that to the type of individual referred to here "natural" things are the "nice" ones and "unnatural" things the "nasty" ones. Unfortunately, cancer is just as natural to the universe as a healthy tissue of cells, and iron, manganese, copper, and other metals are just as natural as vegetable substances. A "healthy" cancer makes an unhealthy human being, and a healthy tuberculosis germ makes an unhealthy lung; it all depends upon one's point of view what one considers natural and healthy.

Naturopaths tend to depict vegetable drugs as gentle, safe, and natural, although the most deadly poisons belong to this class, and the credulous client of the herbalist will buy a handful of dead leaves, take them home to be stewed, filtered, and what not, when he might have bought the same thing at a chemist's already purified and concentrated. Some of the things sold at the herbalist's have already been tested by chemists and found to have little or no effect, others which do work are used by all physicians. Going to a herbalist's, therefore, is, at the best, like going to Billingsgate to buy cod in order that one may eat its raw liver when the doctor has recommended cod-liver oil. At the worst, it is a waste of time and money.

Since 90 per cent. of all diseases get well of their own accord—that is to say, by virtue of the natural resistance of the body—most patients would be "cured" whatever treatment was, or was not, carried out. In such conditions "nature

cure" is harmless. There are other diseases which may well be benefited by "nature cure" in so far as it utilises sensible and common-sense remedies, such as dieting, fresh air, fresh uncooked food, and so on. But it must never be forgotten that in other instances the use of such methods may allow a serious or potentially serious disease to progress beyond help of more efficient treatment. Cancer, tuberculosis, and many other diseases come into this category, and the number of deaths which occur yearly in those who are given unorthodox treatment for these illnesses bears witness to the danger of all single-track systems of healing.

**Necrosis.** Gangrene. The death of a part of the body, such as the leg or foot. (See Gangrene.)

**Negativism.** A symptom in mental diseases, such as schizophrenia, in which the patient resists doing anything that others wish him to do, or even does the opposite.

**Neoplasm.** A tumour. It must be remembered, however, that the word "tumour" has a different meaning to doctors than it has for the layman. "Tumour" simply is the Latin word for swelling, and it does not necessarily mean cancer. To the doctor, a wart is a "tumour."

**Nephritis.** Inflammation of the kidneys (see Kidney). The inflammation may be acute, in which case it comes on fairly suddenly with swelling and puffiness of the face, hands, and feet, sometimes pain in the small of the back (although most pain here is not due to kidney disease), slight fever, and blood in the urine. In other cases the nephritis is chronic, the result of a long and more gradual process. In these cases, there may or may not be swelling or pain, but the blood-pressure is usually raised. Nephritis is often caused by the spread of germs of inflammation from elsewhere in the body, but it may also be caused by certain drugs or poisons which irritate the kidneys. Treatment can only be carried out by a doctor.

**Nerve.** (See Brain for a description of the nervous system.) The illness usually known as "nerves" has no relation to the physical nerves of the body. (See Neurosis.)

**Nettlerash.** (See Urticaria.)

**Neuralgia.** The word neuralgia simply means pain in a nerve—it is not, strictly speaking, a correct name for a disease due to a particular cause. Pain in a tooth may be called dental neuralgia, in the face, facial neuralgia, and so on. Sciatica and lumbago may also come under this heading, but will be described elsewhere, and the condition of pain in the chest may be due to a type of neuralgia known as pleurodynia or intercostal neuritis. Facial neuralgia, also known as tic douloureux or trigeminal neuralgia, is, however, the only proper disease entity in this group, since all the others may be caused by many different factors. In tic douloureux there are very severe attacks of pain in the face, often brought on by trifling stimuli, such as draughts of cold air or washing the face. The treatment here may be operation or injection of the nerve root with alcohol. In some cases, the inhalation of a drug known as Trichlorethylene may give relief.

**Neuritis.** Inflammation of a nerve. This may be caused by various poisons, such as lead, arsenic, alcohol, or those of germs or internal diseases, such as diabetes, gout, diphtheria, and malaria. The symptoms are pain, wasting of muscles, and defective sensation, whether loss of feeling, tingling, or "pins and needles." Treatment depends on the cause—rest, heat, and injections of vitamin B, are all helpful.

**Neurosis.** So-called "nerves" show themselves in many ways. The symptoms may be apparently those of physical disease (see Hysteria) or they may be obviously "mental," in the form of depression, worry, fear of the unknown, queer sensations inside, and so on. Whatever the symptoms, it may be taken as absolutely certain that there is no physical illness at the root of a neurosis, and that all neuroses are due to a wrong attitude to life. Generally speaking, neurotic people are suffering from a failure to face up to reality. This failure is the result of upbringing. Perhaps it will be simplest to show the meaning of neurosis by a few examples: (1) Before an examination, a student develops a "nervous breakdown." Reason: he has an unconscious

fear of failure and his breakdown is a means of evading this with honour. Overwork, for all practical purposes does not exist, and certainly never leads to mental upset, but the student attributes all his illness to exhaustion—a much more respectable excuse than the real one. (2) A woman looks after her widowed mother, and has a similar breakdown. Reason: she, perfectly naturally, wants to live her own life, but, thinking that this desire is immoral in the circumstances, refuses to admit it to herself. Her illness enables her to avoid doing what she does not want to do.

Nobody ever develops a neurosis unless they are, as these patients were, evading some issue—every neurosis is an excuse to avoid a difficulty. Terror, fright, horrible experiences, sexual indulgence or lack of it, alcohol, unhappiness—none of these things ever made anyone ill with mental illness (although they may sometimes be a sign of mental illness). Nobody with a neurosis ever goes mad, although many are afraid of doing so. No drugs will ever cure nervous breakdown (although some will make it more tolerable). The only treatment is to sit down and consider. "What is my illness keeping me from doing—for what am I using it as a cover?"

Neurosis causes much suffering, but it is nevertheless an evasion of responsibility (although, as in the case of so-called "shell-shock," there may be plenty of reason for the evasion). The only cure is to be honest with oneself. In simple cases this can be done by the patient himself, in more complicated ones, a psychiatrist may be necessary. Whenever the facts are admitted, the patient can be relieved at once. Nerve "tonics," it must be repeated, do not exist—there is no such thing. Rest is unnecessary because the neurotic is only tired from mental conflict.

**Night Terrors.** In children, night terrors are a form of "nerves." It must be remembered that babies are not born with specific fears, and all such fears are learned from the parents (whether the parents are aware of it or not). Children who have disturbed sleep should be seen by an expert at a Child Guidance Centre. Ordinary doctors are not qualified to deal with any but the simplest cases.

**Noma.** A form of gangrene of the mouth found in ill-nourished or weak children. It is a very serious disease. [children.]

**Nullipara.** A woman who has never had a child.  
**Nystagmus.** A jerking movement of the eyes which may be inborn or a sign of disease of the nervous system. It is found as an industrial disease among coal-miners, but the cause of this type of nystagmus is not definitely known.

**Obesity.** Excessive stoutness. It should be understood that the word only applies to pathological stoutness which is such as to interfere with the normal processes of the body. The fashionable definition of stoutness is something quite different, and, of course, many people who consider themselves too fat from the point of view of fashion are, in the medical sense, perfectly normal. Pathological obesity should always be looked on as indicating that something is wrong with the individual's mode of life, or with his body. In the first group whose mode of life is abnormal, we have cases which one might call psychological. For instance, people who are dissatisfied, especially in their love relations, tend to eat to excess—they are especially liable to eat sweet things or pastries, and this is quite a common cause of stoutness. Many individuals eat a great deal too much without realising it—or eat too much of the wrong sort of food: becoming used to this daily amount, they will quite genuinely state that they are "very small eaters." A rigid diet is necessary in such cases. Under-action of the thyroid gland or, more commonly, of the pituitary gland, produces particular types of stoutness which can be diagnosed by a doctor. The treatment is purely a medical matter and depends on diet and the use of drugs which should never be taken except under medical advice.

**Obstetrics.** The branch of medicine dealing with pregnancy.

**Œdema.** Dropsy (which see).

**Olfactory.** To do with the sense of smell.

**Omentum.** A large membrane which acts as a cover for the bowels.

**Oophoritis.** Inflammation of an ovary.

**Ophthalmia.** Inflammation of the eye. (See **Conjunctivitis**.)

**Orchitis.** Inflammation of the testicle. The symptoms are pain, swelling, and a feeling of weight. It is caused by germs, such as those of gonorrhoea, syphilis, tuberculosis, and is a complication of mumps and other illnesses.

**Orthopaedics.** A branch of medicine dealing with the surgery of bones and joints.

**Osteomalacia.** A disease of adults, mainly women, which is similar to rickets of children. There is bending and fracture of the bones due to lack of calcium and vitamin D. It is found mainly in Italy or Eastern countries where the diet of poor people is inadequate.

**Osteomyelitis.** An inflammatory disease of bone caused by infection with the streptococcus or staphylococcus. The germ is carried by the blood, but the part where it settles depends on local weakness or such factors as blows and injuries. The first sign is severe pain in the infected bone and fever. Usually the site affected is in the long bones of the arm or leg. Later, a chronic state may develop in which a small sinus, or hole in the limb, discharges large amounts of pus which comes from the inside of the bone. Operation may be necessary, but if caught in an early stage, the disease may be treated with penicillin or sulphonamide drugs. The main danger of osteomyelitis is that absorption of the bacterial poisons into the system leads to damage to the other organs of the body.

**Osteopathy.** A system of treatment based on the idea that diseases are caused by minor dislocations of the spine. They can therefore only be cured by manipulation. There is no scientific evidence for this belief and osteopathy is not accepted by orthodox physicians. In many cases osteopathy may be harmless or even useful but in our time when advances in orthodox medicine are taking place so rapidly and dramatically, it is foolish to take risks which might result in delayed treatment with serious results.

**Otosclerosis.** A type of deafness caused by hardening of the tissues in the inner ear. The symptoms are gradually increasing deafness and sometimes continuous ringing in the ears. The fundamental cause is not known. Treatment has not been satisfactory, but recently an operation has been devised which is helpful in some cases.

**Otitis.** Inflammation of the ear. (See **Deafness**, **Earache**, and **Mastoid**.)

**Otorrhoea.** (See the articles mentioned under **Otitis**.)

**Ovary.** The sex glands in women. Each is about the size of an almond, and is situated in the pelvis on either side of the womb. From the ovary a single sex cell or ovum is released each month into the womb. (See **Menstruation**.)

**Ozoma.** A disease of the inside of the nose which leads to the production of a foul-smelling discharge. It is now rather uncommon.

**Pædiatrics.** The branch of medicine dealing with the diseases of children and their cure.

**Palpitation.** Usually thought to be a sign of heart disease but is, in fact, hardly ever so. Palpitation is due in most cases to nervous upset, in some cases, to stomach trouble, and in a few cases to poisoning with tobacco. It is rarely of serious significance. The treatment depends on the cause. Sometimes palpitation is a symptom of exophthalmic goitre or severe anaemia.

**Palsy.** An old-fashioned word meaning paralysis, as in Bell's palsy (paralysis of the nerve of the face), or "creeping palsy" (a disease in which paralysis comes on gradually, properly known as disseminated sclerosis).

**Pancreas.** A large gland lying behind the stomach having the function of producing ferments which are passed into the stomach to help in the digestion of proteins. It is also the gland in which insulin is produced. (See **Diabetes** and **Glands**.)

**Pancreatitis.** Inflammation of the pancreas. This may be acute or chronic. Acute pancreatitis is a serious disease resembling in its symptoms a severe attack of appendicitis. Only an immediate operation can help the patient. In chronic pancreatitis, on the other hand, the symptoms are not easy to distinguish from chronic dyspepsia. Disease of the insulin-producing cells in the pancreas leads to diabetes.

**Pandemic.** A widely-spread epidemic, e.g., the

**Black Death in the Middle Ages or the influenza epidemic after the First World War.**

**Paralysis.** Loss of the power of movement in one or more parts of the body. This is usually due to interference with the nerves or the brain by injury, hemorrhage, or disease. When the damage is in the higher centres (see *Brain*), the result is a paralysis in which the limb affected becomes rigid and more stiff than normal—that is to say, the muscles are capable of movement, but cannot control the movement. When, on the other hand, the lower centres (the ordinary nerves of the body) are affected, the limb supplied by them is completely without power and lies flaccid and inert. Treatment of paralysis is always a matter for a specialist, but it should be remembered that even an apparently severe illness of this type may be entirely psychological. (See *Hysteria*.)

**Paraplegia.** The name given to any paralysis affecting the legs or lower part of the body. It is usually due to disease of the spine.

**Parasite.** Any animal or plant which lives inside or on the body of another animal or plant, e.g., the mistletoe is a parasite on the apple or oak-tree, the tape-worm is a parasite inside man and other animals.

**Parathyroid Glands.** (See *Glands*.) A group of six small glands situated around the thyroid gland. They are concerned with controlling the amount of calcium in the blood, and, if they are removed by accident in an operation on the thyroid gland, the result is a sudden fall in blood calcium which leads to cramps, tremors, and sometimes death. This condition is known as tetany, and can be controlled by injections of parathyroid extract or calcium.

**Paratyphoid Fever.** (See *Typhoid*.)

**Paresis.** Slight or incomplete paralysis.

**Paronychia.** Infection of the tissues at the base of a nail. This condition is not, in its cause, different from any other septic infection, but because of the situation within the nail bed, it may be more difficult to cure. Paronychia is often chronic and requires special treatment. It is not otherwise serious.

**Parotitis.** Inflammation of the parotid gland, a large salivary gland just in front of the ear. (See *Mumps*.)

**Parturition.** Childbirth.

**Pasteurisation.** A method of stopping liquid foods from going bad. This is done by heating under particular conditions. The process is named after Pasteur, the French scientist.

**Patch Test.** A test carried out by sticking a patch impregnated with a substance to which the person is thought to be sensitive on to the arm. A red area of inflammation on the spot shows hypersensitivity.

**Pathology.** The study of diseases for their own interest, rather than directly with a view to curing them.

**Pediatrics.** The study of the diseases of children.

**Pediculosis.** Infestation with lice (which see).

**Pellagra.** A disease found mainly in the southern States of America and southern Europe, due to malnutrition, and especially to lack of vitamin B. The symptoms are skin rashes, weakness, pain, and mental depression. It can be cured by giving a better diet.

**Pelvis.** The part of the body lying between the thighs and the abdomen. It contains the bladder, the large intestine, and the internal sex organs—the womb and ovaries in the female, the prostate gland in the male.

**Pemphigus.** A skin disease in which there are large blisters which are at first filled with fluid and later burst and leave behind pigmented spots. There are many types of pemphigus—one type is found in young infants.

**Penicillin.** A drug discovered in 1928 by Sir Alexander Fleming of St. Mary's Hospital, London. Sir Alexander, then Dr. Fleming, noticed that staphylococci growing on a culture plate near a window was being destroyed in the region of a small speck of mould. On investigating further, he found that this particular type of mould, known as *Penicillium notatum*, produced a substance which was deadly to many different types of bacteria. Unfortunately, it proved to be very unstable and far too easily destroyed to be, at that stage, of any use in the treatment of infectious diseases. It was not until 1939 that

Sir Howard Florey and Dr. E. Chain were able to produce a form of penicillin which was of service in medicine.

Penicillin has proved to be the most extraordinary drug known to science. It is practically non-poisonous to the human body, yet kills staphylococci in a dilution of one part of penicillin to one hundred million parts of water. It also destroys the bacteria causing pneumonia, gas-gangrene, anthrax, diphtheria, gonorrhoea, meningitis, syphilis, tetanus, infectious jaundice, and psittacosis. Staphylococcal blood-poisoning, once incurable, shows a recovery-rate of 80 to 90 per cent.; anthrax, once a very fatal disease, has a recovery-rate of 100 per cent.; pneumonia, 90 per cent.; gonorrhoea, 100 per cent.; syphilis in the early stages is cured in a week. It appears likely that new drugs will be produced in the near future from fungi and moulds, and already numerous such substances have been discovered. Most of them are, however, no more powerful than penicillin, and a good deal more toxic. One of these drugs is streptomycin which has proved useful in tuberculous meningitis, once uniformly deadly. During the 1939-1945 war, penicillin, either alone or in combination with sulphonamides (which see) was responsible for saving many lives.

**Penis.** The male sex organ.

**Pepsin.** A ferment found in the gastric juice which helps in the digestion of protein by breaking it down into simpler products.

**Pericarditis.** The pericardium is a sac surrounding the heart. Like the pleura, the corresponding membrane surrounding the lungs, it may become infected with germs causing the disease known as pericarditis. There is pain over the heart, fever, a rapid pulse, and other symptoms. Treatment can only be carried out by a doctor.

**Perineum.** The area between the sex organs and the anus.

**Periostitis.** Inflammation of the membrane lining a bone. The disease is caused by germs and may be acute or chronic. The symptoms are pain and swelling over the affected area, which, in the case of acute periostitis, may be very severe.

**Peristalsis.** The normal movements of the intestines which move the food along the digestive tract.

**Peritonitis.** Just as the heart, lungs, and other organs are covered by a thin membrane like cellophane, so also are the intestines and abdominal organs. The lining in this case is known as the peritoneum. Inflammation of the peritoneum is caused by infection by germs and is known as peritonitis. Anything which allows the contents of the intestines to enter the cavity of the abdomen may lead to the onset of peritonitis—for example, perforation of a gastric ulcer, rupture of an infected appendix, wounds, and so on, are common causes. Or the infection may come from the blood-stream. The usual infecting germs are streptococci, staphylococci, the germs of pneumonia, tuberculosis, or gonorrhoea. The symptoms of acute peritonitis are severe pain and tenderness, in the abdomen, fever, and vomiting. Treatment depends on the patient's condition and the cause of the illness. Chronic peritonitis, due usually to tuberculosis, is a less dramatic illness and may last for a considerable time.

**Pernicious Anæmia.** (See *Anæmia*.)

**Pertussis.** (See *Whooping Cough*.)

**Petit Mal.** A form of epilepsy in which the attacks are relatively slight. There may be a mere twitching of the eyelids or arm muscles, or the patient, while talking, may stare in a fixed manner for a few seconds and later be slightly confused. Treatment cannot be carried out until examination by an expert has made the diagnosis absolutely certain.

**Pharyngitis.** Inflammation of the pharynx, the area at the back of the nose and throat. Infection, usually caused by the streptococcus, often follows a cold in the nose. In minor cases, gargling with hot water in which two aspirin tablets have been dissolved will relieve the pain, but in more severe cases it may be necessary to visit a doctor and he will probably recommend sulphonamide tablets or penicillin lozenges.

**Phenolphthalein.** A drug used as a purgative. It is as safe to take as most purges (which are always best left alone), but some people are specially sensitive and may develop a rash on the skin after using it.

**Phimosis.** Excessive tightness of the foreskin.  
**Phlebitis.** Inflammation of a vein. This may occur in those with varicose veins, or from infection in a nearby area. It sometimes occurs as a complication of surgical operations or after childbirth. The vein becomes swollen, red, and painful, owing to the formation of a blood-clot inside. The most important point is to keep the limb at absolute rest as the main danger is that the clot may break loose and block a blood-vessel in a vital area, thus causing sudden death. Fortunately, this mishap is not very common. Treatment should be carried out by a doctor.

**Photophobia.** Abnormal sensitiveness to light.

**Phthisis.** Tuberculosis (which see).

**Physiology.** The science which deals with the working of the body.

**Pica.** An abnormal craving to eat dirt, not uncommonly found in children.

**Piles.** Piles are varicose veins in the rectum or around the anus. Some people are more liable to suffer from piles than others, but the immediate cause is pressure on the veins which prevents the free flow of blood. Constipation and pregnancy are therefore the conditions most liable to lead to hæmorrhoids. External piles are those which develop outside around the anus; they may lead to a good deal of itching, irritation, and pain. Internal piles form inside the rectum and, at first, lead to no symptoms. If they grow, the patient may suffer from pain and a feeling of fullness after the bowel has been emptied. Mild cases can be dealt with by removing the cause, *e.g.*, constipation, but more severe cases require treatment either by injection or operation. The ointments generally advertised are useless, except in relieving skin irritation. No such application can cure piles.

**Pineal Gland.** A small gland about the size of a pea in the lower part of the brain. Its function is unknown, but, in earlier days, it was believed to be the site of the soul.

**Pituitary Gland.** A small gland at the base of the brain which controls all the other glands of the body. (See Glands.) It is concerned with growth, and under-development leads to dwarfism while tumour or over-development leads to gigantism. Sexual development is also controlled from this centre. The pituitary gland is one of the commoner sites of brain tumour.

**Pityriasis.** A group of diseases in which the main symptom is a scaly skin. Treatment is a matter for a specialist.

**Placenta.** The organ by which the unborn infant is attached to the inside of the womb.

**Plague.** In the general sense, the word plague refers to any pestilence, but, more specifically, it refers to bubonic plague, a disease spread by fleas carried by rats. The fleas carry the germs from infected rats to human beings and the bite of the flea injects the germs into the blood-stream. Bubonic plague occurs in two forms depending on whether the lungs are mainly affected or the glands of the groin. The swelling which develops in the groin is known as a bubo. The outbreaks of plague ("The Black Death"), so common in the Middle Ages, are now rare in Europe, but still exist in Asia. People may now be inoculated against plague, and the treatment is now much more satisfactory than formerly.

**Plasma.** The practically colourless fluid part of the blood. By modern methods it is now possible to dry plasma and "reconstitute" it when necessary by adding water. Such dried plasma is used for emergency blood transfusions.

**Pleurisy.** The lining of the chest wall, which also forms a covering for the lungs, is known as the pleura. When this becomes inflamed, the illness is called pleurisy. Pleurisy is almost always due to infection with a germ and most often occurs in the course of another illness, such as measles, scarlet fever, tuberculosis, abscess, or sometimes following a blow to the chest. In the early stage, inflammation causes friction between the two layers of pleura and this causes pain, but later fluid is secreted and "pleurisy with effusion" results. Treatment in mild cases is mainly a matter of rest, but when fluid has formed it may be necessary to withdraw this with a needle or even by a surgical operation. Nowadays, penicillin or the sulphonamide drugs can be used. The commonest symptoms of pleurisy are pain in the chest, cough, and fever. When fluid has formed, the pain tends to disappear.

**Pneumonia.** Inflammation of the lungs which in the vast majority of cases is caused by a germ known as the pneumococcus. Other types are due to streptococci, influenza, plague, anthrax, and so on, but these are much less frequent. In pneumonia, the air cells of the lungs become filled with fluid and this causes breathing to be difficult. Since there is always a certain degree of pleurisy, there is also pain in the chest. Most types of pneumonia respond to penicillin or sulphonamide, and the death-rate from pneumonia has been reduced by the use of these drugs from about 20 per cent. to less than 1 per cent. Pneumococcal pneumonia is called lobar pneumonia since it occurs in one lobe of the lung; other types are usually found in the form of broncho-pneumonia in which the areas of inflammation are scattered throughout the lung instead of occurring in one part only.

**Pneumothorax.** The air pressure in the chest is lower than that of the outer air. When air or any other gas is permitted to enter the result is a collapse of the lungs. This may happen either by accident (for example, by a wound, or by rupture of some of the cells), or deliberately, as when air is injected in the treatment of tuberculosis in order to collapse the lung and permit rest and healing.

**Poisoning.** Almost any substance may act as a poison if given in sufficient quantities. In treatment it is usual to give a list of antidotes which counteract particular poisons, but these are more for the use of doctors than for first-aid use. The proper things to do when it is suspected that anyone has taken poison are as follows: (1) send for a doctor at once; (2) give drinks of milk, white of egg, or strong tea; (3) give afterwards as much as the patient can take of a mixture containing a heaped teaspoonful of ordinary salt to a cup of warm (not hot) water. This will make him sick.

The idea of this treatment is, first of all, to neutralise the poison, and then to get rid of it.

**Narcotic poisons** (those which make the patient sleepy) should be dealt with as above and cups of strong coffee should then be given.

**Poliomyelitis.** Infantile Paralysis. A disease of the nervous system in which the beginnings of the nerves of movement are affected—that is, before they leave the spinal column. The inflammation is caused by a virus (which see), and the condition is infectious, infection being spread by sewage, flies, and contaminated foodstuffs. In the earliest stage, infantile paralysis is no different from any other fever—the temperature is raised, the patient is flushed, and so on. Later, pains occur in the muscles and paralysis develops quite quickly. The full degree of paralysis develops in the first twenty-four hours. There is no specific treatment as yet, and the main effort is directed to resting and splinting the affected limbs in order to avoid deformities later. The Kenny treatment which has been so much advertised to the public is not considered by responsible doctors to be any better than more orthodox methods. Death in the acute stage, or deformities at a later stage, may occur. (See also p. 189.)

**Polycythæmia.** The opposite of anæmia. The red blood cells are greatly increased in number with the result that the blood is less able to flow through the veins and arteries. Symptoms are—dizziness, headache, nose bleeding, and sometimes a dark red or bluish coloration of the skin. Polycythæmia is not a common disease and the treatment is directed to reducing the amount of blood either by bleeding or by the use of drugs which destroy some of the excess cells.

**Polypus.** A wart-like growth found within certain organs, such as the nose, intestine, womb, and bladder. Polypi are usually harmless, but may cause trouble by bleeding. Occasionally, especially in the bladder, they may become malignant, and require operation.

**Polyuria.** An excessive secretion of urine found in certain diseases, such as diabetes and chronic kidney disease. Sometimes polyuria is caused by nervousness as, for example, just before an interview or an examination. Treatment depends on the cause.

**Pons.** A part of the brain which, as the name meaning a bridge implies, connects several other sections of the nervous system together. The parts thus connected are the cerebellum, the medulla, and the cerebrum.

**Post-encephalitic Parkinsonism.** A group of

symptoms found in two circumstances, (1) in old age, to a greater or less extent, (2) following encephalitis. The patient develops slurred speech, which makes it difficult to understand what he says, tremor of the hands combined with rigidity, which make it difficult for him to make any of the finer movements, a peculiar gait in which he moves forward, head down, with a sort of running step as if his feet were trying to keep up with his head and neck, and a tendency to salivate to excess. When the hands are at rest, the thumbs and the index fingers are often rubbed together in what is described as a "pill-rolling" movement.

Since these symptoms are produced by damage to the nervous system, and such damage is irreparable, it is not possible to cure this distressing complaint. On the other hand, by the use of certain drugs it is possible to greatly alleviate the symptoms. The main drugs used are hyoscine and drugs of the belladonna group, but recently a substance with the proprietary name of Artane has been shown to be most helpful. All these, however, can only be taken under medical supervision. Still more recently, in Germany, an operation has been devised which appears to be of service in alleviating the symptoms, but, in common with other treatments, this cannot be described as a "cure." Its sole function is to remove the symptoms, while leaving the underlying condition unchanged.

While the general tendency is for Parkinsonism to grow gradually more apparent, this may happen very slowly, and, with the help of the drugs described here, it may not get appreciably worse in the course of the patient's lifetime. There is no tendency to any apparent mental deterioration. Parkinson's disease is named after an English 18th-century physician.

**Pregnancy.** The state of being with child.

**Primipara.** A woman who has, or is about to have, a first child.

**Prognosis.** The medical name for the outlook of a disease.

**Prolapse.** The falling-down or sinking of an organ, such as the womb or the rectum. Prolapse of any organ is a matter for a specialist to deal with.

**Prophylactic.** The prevention of disease is called prophylaxis. Any process or drug which has this effect is said to be prophylactic.

**Prostate.** A small gland in the male situated at the base of the bladder and surrounding the urethra, the tube through which semen and urine pass to the outside. It may be the site of inflammation (prostatitis) or sometimes malignant tumours. These are more common in older men. The symptoms of both conditions are, pain in the bladder region and difficulty in passing urine. These symptoms require attention from a specialist, but the outlook is much improved with the recent discovery that they can sometimes be cured with female sex-hormones (see **Hormone**). Operation may help in other cases.

**Pruritis.** Itching (which see).

**Psittacosis.** A disease spread by parrots, love-birds, canaries, and other birds kept as pets. The germ is a virus which produces symptoms like influenza, and later pneumonia develops. Psittacosis may be a serious illness causing death or it may be so trivial as to pass almost unnoticed.

**Psoriasis.** A chronic skin disease in which red scaly patches develop on the back, chest, and abdomen, the back of the arms, and the front of the legs. It should only be treated by a specialist.

**Psychiatry.** The study of mental disorders.

**Psychosis.** The medical name for insanity, of which there are two main types. Organic psychoses are primarily caused by disease of the brain, for example, by infection with syphilis or by poisons circulating in the blood, as in the delirium resulting from certain fevers. Other poisons from outside may produce the same result, as in the types of insanity found in chronic alcoholism, in lead poisoning, or in gassing from carbon monoxide. In old age, senile changes in the brain cells may also lead to psychoses, and poor blood-supply to the brain caused by arteriosclerosis may produce mental symptoms.

The other type of psychosis is known as functional, and is due to a complete inability to face up to reality due, for the most part, to mental conflicts induced in childhood and to bad heredity.

Heredity in itself, however, is never the sole cause of insanity; nor is it true that horrifying experiences or worry in themselves cause mental illness. The commonest types of functional mental disorder are manic-depressive psychosis and schizophrenia.

The old outlook on mental disease as hopeless is no longer justified. Treatment must, of course, be by an expert; but the results of electric-shock treatment, insulin treatment, and such operative treatment as leucotomy are extremely good, even in the most severe cases.

**Psychosomatic Diseases.** Psychosomatic diseases are those physical ailments due to emotional causes. They include such complaints as high blood pressure, gastric ulcer, certain skin diseases, and certain glandular diseases (e.g., exophthalmic goitre). Most physicians nowadays believe that all diseases may show a greater or less degree of emotional causation; that physical and mental factors are both present in all illness. Even in psychosomatic illnesses, heredity and other factors play a large part. Briefly, the main cause of these diseases is worry. The importance of this lies in the fact that they cannot be completely cured without dealing with the fundamental cause. Individual illnesses will be found under their names.

**Ptomaine.** A word popularly used to refer to poisoning caused by putrified food. (See **Botulism**.)

**Ptosis.** Drooping of the upper eye-lid caused by paralysis of the nerve supplying the muscle.

**Puerperium.** The period immediately following childbirth. Puerperal fever is the name given to the form of blood-poisoning which may develop at this time if germs are allowed to infect the womb. Once all too common, puerperal sepsis has been very much reduced by the discovery of the sulphonamide drugs and, more recently, of penicillin.

**Pulmonary.** An adjective meaning to do with the lungs, e.g., pulmonary congestion (pneumonia).

**Pulse.** The movement of the arteries felt at any place where they are near the surface of the skin. It is caused by the beating of the heart.

**Purgative.** A drug to relieve constipation (which see).

**Purpura.** A disease caused by deficiency in the blood platelets (not the same as blood corpuscles), which are responsible for clotting. Purpura may be caused by certain drugs, allergy (which see) to certain proteins, certain germs, or disease of the spleen. The symptoms are areas of bleeding under the skin giving the appearance of bruising, bleeding without apparent cause in the mouth or nose, and sometimes internal bleeding. Treatment depends on the cause, but the use of vitamins C and P are often beneficial. In other cases removal of the spleen is necessary.

**Pyæmia.** A form of blood-poisoning in which the germs, usually staphylococci, are carried around in the blood and produce abscesses all over the body. Pyæmia is a very serious disease, but the outlook is greatly improved with the discovery of sulphonamides and penicillin.

**Pyelitis.** Inflammation of the pelvis of the kidney—that is, the area where the kidney is connected to the ureter, the tube leading down to the bladder. The inflammation may be caused by irritation from a stone or by a spread of inflammation from the bladder or elsewhere. In pregnancy, the pressure of a distended womb on the ureter may lead to stagnation of urine and pyelitis. The usual symptoms are pain in the small of the back, frequent passing of urine, sometimes with pain (see **Cystitis**); there may be blood or pus in the urine. Treatment depends on the cause and on the type of germ causing the infection. Various antiseptics, such as mandelic acid, have been used, but nowadays penicillin and sulphonamides are more satisfactory and easier to use. Occasionally surgery may be necessary.

**Pylorus.** The valve which lies at one end of the stomach and controls the entry of food into the intestine. It is a common site of stomach ulcer.

**Pyorrhæa.** An infection of the gums which causes the edges of the tooth sockets to bleed easily when the teeth are being brushed. There is a constant discharge of pus which causes the breath to smell and may lead to arthritis and

other diseases. Treatment should be carried out by a dentist. (See Gingivitis.)

**Pyrexia.** Fever.

**Pyuria.** Pus in the urine. (See Cystitis, Pyelitis.)

**Quarantine.** The enforced isolation of people suffering from, or considered to be likely to be suffering from, an infectious disease.

**Quinsy.** The formation of an abscess around one of the tonsils. Quinsy may develop as a complication of ordinary tonsillitis (which see). When this happens, the temperature rises higher, there is difficulty in swallowing, and swelling and pain in the neck. The abscess will burst of itself, but it may be advisable to open it. Treatment, apart from surgical, is the same as for tonsillitis.

**Rabbit Fever.** A virus disease found in America.

**Rabies.** (See Hydrophobia.)

**Rachitis.** (See Rickets.)

**Radium.** A rare metal discovered by Pierre and Marie Curie in 1899. It emits rays which have the power of affecting the growth of human tissues and has therefore been used in the treatment of cancer and certain other diseases.

**Ranula.** A small swelling under the tongue due to the blocking of a salivary gland.

**Rat-bite Fever.** An infectious disease passed to human beings by the bite of an infected rat. Rat-bite fever is found in most countries of the world and is not usually serious. It is treated by arsphenamine, an arsenic preparation. Rat bites should be cauterised by a doctor.

**Rectum.** The lowest six inches of the intestines, where they pass to the outside at the anus.

**Relapsing Fever.** A type of infectious disease in which periods of fever alternate with periods of normal temperature; it is found in tropical countries and is spread from one person to another by lice which carry the germs. Like rat-bite fever, it is cured by arsphenamine.

**Renal.** Concerned with the kidney, *e.g.*, renal calculus, a stone in the kidney.

**Resistance.** (See Immunity.)

**Respiration.** Breathing.

**Retinitis.** Inflammation of the retina, the innermost coat of the eye. It is caused by infection, hæmorrhage, diabetes, hardening of the arteries, or disease of the kidneys. The retina may also become detached, causing blindness.

**Rheumatism.** This word has come to refer to so many different illnesses that, in fact, it is almost meaningless. The disease known as rheumatic fever is a very definite condition in which there is fever, pain in the joints, and other symptoms, often followed by disease of the valves of the heart. Its cause is unknown; for, although it is associated with infection by the germ known as streptococcus, it is certainly not merely an infection. The other illnesses such as "muscular rheumatism," and the various aches and pains given this, or similar, names, are largely figments of the imagination. The idea that cold or damp, as such, are causes of rheumatism are also nonsense. It appears, however, that rheumatic fever, rheumatoid arthritis, and chorea, are all related to each other. Lumbago and other muscular pains, are either inflammatory or sometimes of psychological origin. Sciatica is a form of neuritis (which see) and not related to rheumatism. The main drug used in the treatment of rheumatism is sodium salicylate, but the treatment of this disease is a vast subject, and the word "rheumatism" should be banned (except in the three diseases mentioned above) for the next hundred years.

**Rhinitis.** Inflammation of the lining of the nose, as in a common cold.

**Rhinophyma.** A disease of the nose in which, owing to swelling in the glands of the skin, it becomes greatly enlarged (Potato Nose). The only treatment is plastic surgery.

**Rhubarb.** A drug formerly used as a purgative.

**Ribs.** The ribs may be fractured. When this happens, there is pain in the chest on taking a deep breath and pain when the chest is squeezed from side to side. An X-ray should be taken in suspicious cases, but usually the only treatment necessary is to strap the ribs affected tightly with sticking plaster.

**Rickets.** This is a disease caused by under nourishment, now, fortunately, much less common than formerly (at least, in this country). It is caused by lack of vitamin D, found in fats,

Symptoms, in bad cases, are bow legs, pot belly, bad teeth, and general poor health. Rickets is prevented by giving plenty of fat-containing foods, such as butter, margarine, milk, and, in a more concentrated form, cod-liver oil or vitamin capsules (Adexolin).

**Rigor.** The chill preceding a fever.

**Ringworm.** There are many different types of ringworm: Athlete's foot, which is found between the smaller toes; ringworm of the groin or "Dhobi Itch"; ringworm of the body, found in the form of round patches; finally, ringworm of the scalp.

Ringworm should be treated by a doctor; it is infectious, being caused by a fungus.

**Rodent Ulcer.** A form of curable cancer found as a small hard ulcer on the face in the region of the inner corner of the eye or round the nose. Any small ulcer in these areas which does not clear up very soon should be referred to a doctor. The results of treatment are excellent.

**Rosacea.** A skin disease of the face in which there is permanent redness over the nose and cheeks. The blood-vessels are distended. Rosacea is found in people who suffer from gastric symptoms, in those who eat unsuitable food and drink to excess (whether alcohol or tea!). At one time rosacea was known as "Grog Blossom," but it is more likely to affect the over-righteous than the *bon viveur*.

**Rubella.** German Measles. A mild fever the symptoms of which are similar to measles. There is slight fever for a few days, catarrh, sore throat, and muscle pains. A rash is present and the glands behind the ears are swollen.

**Rupture.** (See Hernia.)

**Sacroiliac Strain.** A type of backache (which see).

**St. Vitus's Dance.** (See Chorea.)

**Sadism.** A perversion in which sexual pleasure can only be obtained by inflicting pain on someone.

**Salpingitis.** Inflammation of the Fallopian tubes (which see).

**Sarcoma.** One of the two main types of cancer—the other being carcinoma. Carcinomata are formed from epithelial tissue (that is, skin of the tissues that cover or line the body); sarcomata are composed of connective tissues (*e.g.*, bone, cartilage, muscle, etc.).

**Scabies.** A very common disease of the skin caused by a mite which burrows under the surface and causes extreme discomfort and itching—hence its common name, "the itch." The areas most affected are the groin, the fronts of the elbows, the wrists, and between the fingers. The disease is caused by contact with someone else who has the disease. In treatment, it is usually best to go to the nearest Cleansing Centre, but treatment may also be carried out by the physician. Sulphur ointment, once the main drug used, is now given up in favour of benzyl benzoate and other more efficient methods. The exact details are given on the bottle. Scabies is unpleasant, but not dangerous.

**Scarlatina.** Scarlet Fever. The symptoms are shivering attacks, followed later by fever, sometimes vomiting, sore throat, and on the second day of illness, a rash of bright red spots which begins to fade on the third or fourth day. By the end of a week, under favourable conditions, the patient begins to feel better, and the period of convalescence begins in the third week. Complications of scarlet fever are—ear disease, kidney inflammation, and heart disease. Scarlet fever is a serious disease, but with adequate medical help all should go well. The cause is the germ known as streptococcus against which an antitoxin has been discovered; sulphonamide drugs are also used in treatment. The doctor will advise about methods of preventing spread of infection to others.

**Schizophrenia.** Schizophrenia was originally named dementia præcox, and is a serious mental disease due to psychological causes. That is to say, unlike certain other diseases, there is no sign of brain damage. As the original name implies, it is a form of mental deterioration (dementia), coming on usually in early life (præcox). In the popular Press schizophrenia is usually called "split mind," a misnomer, since we all have "split minds"—what we say or think and what we do are often at odds with each other. Many politicians, for example, show this trait to a

marked degree, but are not (necessarily) suffering from schizophrenia. Typically the schizophrenic has been a sensitive, retiring child and may have been above average intelligence, but in the early twenties peculiar behaviour starts to develop. There may be hallucinations (*i.e.*, hearing of imaginary voices) or delusions (*e.g.*, that he or she is being persecuted), and the patient tends to become more solitary, sitting alone and smiling to himself. On other occasions there may be violent outbursts. (It must be remembered that what is described here are the symptoms of schizophrenia in general. Every patient individually does not necessarily have all these symptoms; he may be violent a large part of the time, or no violence may ever occur.)

Schizophrenia may also develop in later life, usually in a less dramatic form; it is then called paraphrenia. Paranoia (persecution mania) is usually classified as a form of schizophrenia of later life.

The outlook of this condition is always serious, although modern treatment, for example with insulin, has greatly improved the outlook. It is a psychological disease due basically to the inability to face up to a hard reality. Heredity sometimes plays a part. Essentially progressive maladjustment in early life leads to an escape into a dream world. Such a state is not unhappy, and a great deal of distress and sympathy on the part of relatives might be spared if they realised this fact.

Sciatica. The name given to inflammation (neuritis) of the sciatic nerve in the back of the thigh. Although this is a quite definite disease, it must be remembered that there are many other illnesses which cause pain of a similar type. For example, disease in the pelvis, disease of the spine, fibrositis, psychological upsets, may all cause sciatica-like pain. The very first essential in "sciatica" which lasts for more than a few days is to find out from an expert whether it really is sciatica. All treatment depends on first of all discovering the cause, but it should only be carried out under medical advice. There is no "patent medicine" likely to have any effect whatsoever.

Scirrhus. A hard cancer.

Scleritis. Inflammation of the outer lining of the eyeball.

Scleroderma. A skin disease of unknown origin in which patches of skin become thickened, hard, and white or yellowish.

Sclerosis. The hardening of a tissue, as in disseminated sclerosis (hardening of areas in the spinal cord) and other diseases of the eye, breast, etc.

Scoliosis. A curvature of the spine in which the curve is to one side or the other. (In kyphosis the curve is forwards or backwards.)

Scurvy. A disease due to lack of vitamin C which is found in fresh fruit. It is now rare in this country, but was once common among sailors going on long voyages, until British scientists discovered that lime juice, which contained vitamin C, prevented scurvy. Hence the slang word "Limey" applied by Americans and others to Englishmen.

Scrofula. An out of date name for the condition of tuberculous glands of the neck.

Sea Sickness. This is a condition which is partly due to physical over-stimulation of the visceral nerves by the rolling of the ship, and partly due to psychological causes. In experiments carried out during the war, it was found that the most efficient drugs in preventing sickness were hyoscine and benzedrene. But these drugs can only be prescribed by a doctor and, in mild cases, they are unnecessary. The best common-sense remedies are—a mild sedative before sailing, a tight belt, an empty stomach, and holding a paper bag over the nose periodically and breathing in and out.

Sebaceous Cyst. A wen. A swelling, sometimes of considerable size, caused by the blocking of a duct of a sebaceous gland (the glands which supply the natural grease of the skin). They may occur anywhere on the body, but most commonly on the scalp or back. Treatment is a minor surgical operation. The condition is harmless, but unsightly.

Seborrhea. A condition of excessive oiliness of the skin caused by glandular upset. It is more common in some people than others, and more

common in adolescence than in later life. Those who have a tendency to seborrhea are more liable to certain other diseases, such as dandruff (which see), seborrheic dermatitis, an irritating skin eruption, and acne. A doctor should be consulted.

Septicæmia. Blood poisoning. Whenever germs invade the blood in large numbers the disease is known as septicæmia. Once a very fatal illness, septicæmia is now curable by the use of penicillin or sulphonamide drugs. The symptoms are fever, exhaustion, and sweating. The most acute type is caused by streptococci, but the more dangerous type and most difficult to cure is the more chronic staphylococcal septicæmia. The germs may enter the blood from an infected wound, an abscess, or boil, or following child-birth or abortion (puerperal sepsis).

Serum. The clear fluid which separates from blood when it clots; a serum is also the name given to the serum of animals after it has been made capable of antagonising germs of a particular disease.

Shingles. (See Herpes.)

Shock. A state of affairs which may develop after an injury. It is caused by nervous over-stimulation, loss of blood, and dilation of the blood-vessels which enables the fluid part of the blood to escape into the tissues. The symptoms are—pallor, weak rapid pulse, clammy cold skin, shallow rapid breathing. Treatment is a matter for the doctor, but as a first-aid measure the patient should be kept at rest with the head lower than the rest of the body, warmth should be applied in the form of blankets and hot-water bottles, and if the patient is conscious, he should be given hot, sweet tea to drink in as large amounts as he can take.

Silicosis. A disease of the lungs found in those who work amongst stone dust—such as miners, knife grinders, masons, etc. The small particles are absorbed into the lungs and produce symptoms of chronic bronchitis (which see). Patients are more liable to develop tuberculosis. Nowadays industrial legislation attempts to control silicosis. Similar diseases are asbestosis, found among workers of asbestos; byssinosis, found among cotton workers; anthracosis, among coal workers. Anthracosis is practically harmless, the others are serious.

Sinusitis. The sinuses are certain cavities naturally found in the bones of the skull. The chief ones are the frontal sinus between the eyes at the base of the nose; the maxillary sinuses beneath the cheek bones on either side; and the ethmoid sinuses within the nose. All these cavities communicate with the inside of the nose. When the lining of a sinus becomes infected with germs it becomes swollen and the exit into the nose may become blocked; this causes severe pain over the area of the sinus—*e.g.*, between the eyes, or in the upper jaw. Sinusitis may require operation, but, with the discovery of sulpha drugs, and penicillin, it is often possible to cure it without surgery. This, however, is a matter for the ear, nose, and throat specialist.

Sleep. (See Insomnia.)

Sleeping Sickness. Trypanosomiasis. A serious and chronic tropical disease common in certain areas of Africa. It is caused by a germ spread by the tse-tse fly. The symptoms are swelling of glands and excessive sleepiness. Unless treatment is applied the disease results in death.

Small-Pox. Variola. A serious infectious disease with fever, pains, vomiting, and an eruption of red spots which later become blisters and afterwards are filled with pus. This eruption leads to disfiguring scars if the patient lives. Small-pox occurs in epidemics, but is uncommon in this country since the use of vaccination. There is no specific treatment.

Social Medicine. Medicine has passed through many phases from the time when disease was regarded as a punishment from the gods or a sign of devil-possession to the present era, when more and more there is a tendency to regard society as the patient.

The early primitive stage came to an end when, in Greece, five centuries before the birth of Christ, Hippocrates began to teach that all diseases were due to natural causes. Even epilepsy, which, because of its mysterious symptoms, had been

named the "sacred disease," was described by Hippocrates as being no more sacred than any other sickness. But, in spite of these great advances, the later history of medicine was one of deterioration, and the Middle Ages saw a return to the theory of devil-possession. The 18th-century physician, although more enlightened, was too mechanistic and too individualistic; he saw disease as being a breakdown in a machine and, when confronted by great plagues and epidemics, was quite helpless. For many centuries it had been realised that leprosy, for example, was spread from one person to another, and some attempts had been made to segregate lepers from the community. In Boccaccio's *Decameron* we read about a group of men and women who had fled from the plague-ridden town to the country. But, for the most part, no state action was taken to deal with the problem of infectious diseases.

However, during the late 18th and early 19th centuries a series of discoveries began to change the picture so far as infectious diseases were concerned. Jenner's promotion of vaccination began to aid in the control of smallpox; Pasteur's discovery of the germs which caused such diseases enabled them to be traced; and, finally, the discovery of antiseptics provided a weapon with which to fight them. When the methods by which infectious diseases were spread became known by the work of many researchers—the part played by infected water supplies in the case of typhoid and dysentery and cholera, the role of the mosquito in malaria, the louse in typhus, and the rat flea in plague, it became necessary to take large-scale preventive measures in order to deal with such problems. One of the first instances of work in what we now call Public Health was that afforded by Chadwick and others, who, in the first quarter of the 19th century, took measures to purify the water supply of London, and thereby greatly reduced the deaths from typhoid fever, which had been one of the commonest diseases in this country. It is a basic principle of social medicine that many diseases are better dealt with by removing their causes in the social environment than by treating them in the individual once they have developed. Thus, while a patient with malaria may be cured with quinine, thousands of cases of malaria may be prevented by killing the carrier mosquitoes by the use of D.D.T. Dirt-borne diseases can be prevented by popularising the use of soap and water and educating the population in measures of hygiene, and venereal diseases by instruction in preventive techniques and the control of prostitution.

In more recent times it has begun to appear that the concept of social medicine will have to be enlarged; for, while the fight against the great epidemic diseases—tuberculosis, typhus, cholera, typhoid, smallpox, and the venereal diseases—is well on the way to being won, it now seems that we shall have to consider another group of disorders which are also largely social in origin. The neuroses, for example, and the psychosomatic disorders (which see) are definitely correlated with social stress. These forms of sickness are found predominantly in competitive and industrial societies. What steps may be taken to combat them will form another chapter in the history of medicine.

The modern tendency is to extend considerably the meaning of the term "social health"—for example, the suicide rate, birth-rate, and incidence of crime and neurosis are all regarded as indices, of social health. Crime, neurosis, suicide, and psychosomatic disorders are found most frequently in areas of social disintegration where established customs and habits have broken down, or amongst racial and religious minorities which are in conflict with the mass of the population. If, for example, it is found that crime and neurosis are more frequent amongst Poles in Britain than amongst the general population, this does not mean to say, as at one time might have been supposed, that Poles have inherently criminal or psychopathic tendencies. The reason is that, in a strange land, their native culture is breaking down, and nothing has as yet taken its place. Similarly, the fact that in South Africa a far higher rate of criminal behaviour and venereal disease rate is found amongst the Negro population than amongst the Whites does not indicate that Africans are criminally disposed, or

lazier or stupider than Whites. On the contrary, their behaviour is related to their social position. In the United States, Negroes have a higher incidence of high blood-pressure than the White population, while in their own country of origin the disease is almost unknown. The same is true of Chinese in America and in China.

The time is perhaps not far distant when the effectiveness of a government may be measured, not only by its ability to maintain the physical health of a community, but also by the use of statistics which measure the mental satisfaction of the population and its health in a more all-round sense.

**Sore Throat.** (See *Laryngitis*, *Pharyngitis*, and *Quinsy*.)

**Spasmophilia.** A tendency to spasms. Tetany. A disease found mainly in infants in which the child is abnormally sensitive to stimuli. Any minor upset is liable to lead to spasms and convulsions. The illness is caused by lack of calcium in the blood and is therefore related to rickets. The treatment is similar.

**Spinal Cord.** The part of the nervous system enclosed within the backbone. It is the part of the nervous system which transmits impulses to and from the brain. (See *Brain*.)

**Spleen.** An organ situated in the left upper part of the abdomen. Its function is to manufacture blood cells and destroy old ones. The spleen is not absolutely necessary for life and sometimes has to be removed by operation. It may be attacked by various diseases, such as malaria, typhoid, and many blood disorders.

**Sprain.** An injury of a joint caused by overstretching of the ligaments. The usual treatment, when it is quite certain that no bones are broken and there is no dislocation, is to apply heat, or hot and cold alternately, and bind firmly with a bandage.

**Sprue.** A tropical disease in which the patient becomes thin, anemic, and weak. He suffers from sickness and diarrhoea with large pale frothy motions; the tongue is swollen and sore. The cause of sprue is unknown, but it appears to be due to some dietary deficiency. Treatment is to give vitamins, reduce the amount of fats, and inject liver extract.

**Squint.** Cross-eyes; an affection of the eyes in which their axes are differently directed. Squint is usually caused by extreme near-sightedness of one eye in childhood. It is therefore of the first importance to take the child to an eye specialist immediately the defect is discovered; the results become less satisfactory when treated after the age of seven.

The doctor will probably recommend glasses, but sometimes an operation is necessary.

**Sterility.** Sterility, or the inability to have children, appears to be on the increase in this country. The reason for this is unknown, but there are certain clear-cut circumstances which may lead to sterility. In the woman inflammation in the pelvis which has blocked the tubes (the Fallopian tubes) which lead from the ovaries to the womb will lead to sterility, since the ova are unable to reach the womb. In some cases ova fail to be produced. In the man (who it is often forgotten is as often the cause of sterility as the woman) deficiency of spermatozoa may be an important factor. Some cases improve with a course of Vitamin E.

In most women the mid-period is the time when pregnancy is most likely to occur, and there exist various techniques to discover when ovulation is taking place—i.e., when the ovum is released from the ovary, and, therefore, the time when pregnancy is most likely to occur.

When all this has been said, the fact remains that in a large number of cases of sterility no cause whatever has been discovered. It appears that individuals who are quite fertile with others may be infertile with their husband or wife. Some cases are almost certainly of psychological origin, as can be seen from the frequency with which previously sterile parents suddenly start to become fertile and have children of their own following the adoption of a child in the home. It may be supposed that in such cases the woman has an unconscious fear of childbirth or motherhood which is relieved following the experience of mothering an adopted child. There is no evidence that the practice of contraception leads to

sterility. Under modern conditions the outlook of the sterile couple is good. Most large hospitals have Fertility Clinics, which deal with this problem, and the family doctor may refer the would-be parents to such a clinic.

**Stomach Ulcers.** (See *Dyspepsia*.)  
**Stomatitis.** Inflammation of the mouth. The symptoms are burning pain, excessive saliva, and bad breath. Treatment depends on the cause.

**Stone.** (See *Calculus*.)  
**Strabismus.** (See *Squint*.)

**Stricture.** Narrowing of any tube in the body by disease.

**Stroke.** (See *Apoplexy*.)

**Stuttering.** This is a psychological disorder and can only be treated by a child guidance expert, or, in an adult, by a psychiatrist.

**Stye.** A stye should be treated by hot bathing as frequently as possible. If styes are frequent, a doctor should be consulted.

**Sulphonamide.** A name referring to the group of new drugs used in the treatment of various bacterial diseases. Sulphonamide was created from coal-tar in 1903 by the Austrian chemist Gelmo, but was not used medically until, in 1932, Domagh, of the German firm of Bayer, discovered that a related product was capable of killing streptococci (the bacteria responsible for septic infections) in mice. Bayer patented this product, but the patent became useless when two French chemists re-discovered sulphonamide itself and found that it was simpler to make and just as potent as *Prontosil*, the Bayer product.

Sulphonamide was first tried out in this country at the Queen Charlotte Maternity Hospital in 1935. There, the death-rate of puerperal fever was reduced from 20 per cent. to less than 5 per cent. The British drug sulphapyridine (M. and B. 693) has reduced the death-rate of pneumonia from 25 per cent. to 6 per cent.; of cerebro-spinal meningitis from 30 per cent. to 3 per cent. In gonorrhoea, a venereal disease, the results are 90 per cent. of patients cured in ten days. Bacillary dysentery is treated by another sulphonamide drug, sulphaguanidine, with excellent results. In warfare, it has been found possible to reduce the number of cases of sepsis in wounds by the immediate use of a dusting powder of sulphonamide. Other diseases and bacteria are only slightly affected by the drug, or not at all. In particular, the bacillus known as the staphylococcus which is responsible for many cases of sepsis, boils, and blood-poisoning, has not been found treatable by sulphonamide. To a certain degree, the form of the drug known as sulphathiazol kills staphylococci, but it is not always satisfactory. However, this difficulty has largely been overcome by the discovery of penicillin which is very potent against the staphylococcus. (See *Penicillin*.)

**Sunstroke.** Until recently, it was usual to distinguish between sun-stroke and heat-stroke. It is now known that all so-called sun-stroke is produced by over-heating. The sun's rays, as such, have no effect on the head and the use of sun-helmets is quite unnecessary. So long as the body does not become over-heated, the sun can only produce sunburn of the skin. In the last war, soldiers went to tropical countries equipped with topees, but it was soon realised that these were uncomfortable and useless, and that, provided the heat was not too great, exposure to the sun had no effect in producing sun-stroke. In experiments it has been shown that the head can be exposed to the hottest sun without harm, so long as the body is kept cool. Symptoms of heat-stroke are headache, dizziness, high temperature, stomach cramps. The treatment is absolute rest, cold sponging, and cold drinks.

**Sycosis.** (See *Barber's Itch*.)  
**Syncope.** (See *Fainting*.)

**Syndrome.** Any group of symptoms, not yet recognised as a separate disease which commonly occur together.

**Synovitis.** Inflammation of the lining of a joint.  
**Syphilis.** The more serious of the two common venereal diseases. Syphilis is said to have been introduced into Europe towards the end of the 15th century by the sailors of Columbus, and there were serious epidemics throughout Western Europe during the whole of the 16th century. The disease is caused by a germ spread by sexual intercourse with an already infected person; it is

extremely unusual, although not unknown, for syphilis to occur in any other way. In a few cases it is spread by kissing but infection from a lavatory seat is most improbable, since the germ dies very soon after leaving the human body. This means that syphilis is very easily avoided and need not be considered as a danger by anyone who does not come into sexual contact with another who has the disease. The disease occurs in three stages: the *primary* stage comes on usually about three weeks after contact when a small, hard, sore appears on the spot where the germ has entered, generally on the sexual organs, but occasionally on the lips. This disappears in a few weeks and no further symptoms appear for several weeks more, when the *secondary* stage shows itself with the appearance of a rash all over the body and a slight fever. There may be a sore throat and sometimes the hair begins to fall out. This stage gradually disappears and there are no further symptoms for two or more years when the *tertiary* stage begins. This shows itself in various ways and usually strikes at the weakest point in each individual. Some patients develop large ulcers (*gummata*), others heart disease, or disease of the liver. At a late stage, up to twenty or more years after infection, the nervous system may be affected producing paralysis or insanity (*tabes dorsalis* or general paresis).

It is a tragedy to let the disease get beyond the primary stage since it is at this stage readily curable and, although it is still curable at later stages, the treatment takes much longer and is less certain of success. The disease can, of course, be passed on to a wife or husband, especially during the primary and secondary stages, and a child may be born with congenital syphilis (that is, it may be infected before birth). The treatment is injections of arsenic and bismuth carried out weekly for a period of eighteen months to two years or more, depending on how early the injections are begun. It appears that penicillin may prove more successful and, if it fulfils the promise of recent trials, it may be possible to cure syphilis in a week or ten days.

The consequent results of syphilis are very serious and nobody who becomes infected should hesitate for a moment before going to a doctor for treatment. He will be given efficient treatment and nobody will criticise him adversely; if necessary, injections will be given free. Syphilis never recovers by itself.

**Tabes Dorsalis.** A disease of the nervous system leading to paralysis and caused by syphilis.

**Tachycardia.** Rapid beating of the heart coming on in sudden attacks. Tachycardia is not usually due to physical disease of the heart, and in most cases is a symptom of a neurosis. Sometimes, however, it is caused by certain drugs, such as tobacco, and may be caused by internal poisoning, for example, by a septic tooth.

**Talipes.** Club-foot (which see).

**Tape-Worm.** A type of intestinal worm. Its presence can only be made known for certain by finding portions of the worm in the motions.

**Temperature.** The body temperature is regulated by a small area at the base of the brain. Normally it should be about 98.4°, with slight variations depending on which part of the body is selected. In infections the temperature usually rises as part of the body reactions against the invading bacteria, but the degree of fever is no indication of the seriousness of the disease. Thus in tonsillitis or colds, the temperature may be quite high (102-103°), whereas in diphtheria, a more serious illness, it is usually lower (99-100°). Young children react much more violently to infection than adults, and temperatures of 104° in quite trivial conditions are not uncommon. While the heat of the body is controlled centrally by the area in the brain already mentioned, the main accessory way in which it is regulated is through the skin. When we become heated after exercise the skin becomes flushed—that is, more blood passes through it in order to be cooled by the air. On the other hand, when we are cold, the skin becomes pale—less blood flows through it, in order to conserve the body warmth. The same mechanism occurs in fevers; when the temperature is rising the skin is pale, when it is going down the skin is flushed.

Drugs such as aspirin and phenacetin lower temperature by drugging the heat-regulating

centre in the brain; but since the fever is a reaction to infection, it is obviously inadvisable to do this unless the reaction is excessive. Tepid sponging is another way to lower temperature; this acts by increasing evaporation and therefore heat loss.

Temperature rarely rises above 110°, and patients in whom it reaches this height rarely survive; on the other hand, temperatures as low as 65° have been followed by recovery.

**Tennis Elbow.** Pain in the arm, particularly on twisting inwards, caused by excessive strain at tennis or similar exercise. Treatment is rest and application of heat.

**Tetanus.** (See Lockjaw.)

**Tetany.** (See Spasmophilia.)

**Thorax.** The chest.

**Thrombosis.** The formation of a clot within a blood vessel. The usual causes are sluggish action of the blood produced by weak heart action and, sometimes, mild infection in the neighbourhood. The main danger of a thrombosis is that it may become loose and pass along the vessel, blocking it. It is then known as an embolus. (See Embolism, Apoplexy.)

**Thrush.** A disease of the mouth, usually in infants, caused by a fungus. It results in white spots and ulcers on the gums and the inside of the cheeks. Since the child nearly always has digestive upsets, it is better to take it to a doctor. Thrush is not serious.

**Thyroid.** (See Goitre.)

**Tic.** The name given to spasm of the face, or other muscles, and due, in most cases, to psychological causes. Treatment should be referred to a psychiatrist. **Tic douloureux** is the name given to the very painful condition of trigeminal neuralgia, in which severe attacks of pain in the face occur. The treatment of this disease is usually surgical.

**Tinnitus.** Noises in the ear which may take the form of buzzing, clicking, or thudding. Tinnitus may be caused by disease of the ear or by neurosis. The different causes can only be distinguished by a specialist.

**Tobacco.** It has for long been known that tobacco-smoking, in constitutionally sensitised people, may lead to disease (see, for example, *Bürger's Disease*). Only recently, however, has smoking been connected with the serious disease of lung cancer. A number of researches have been done, but one of the most significant is that of Doll and Bradford Hill, who carried out a questionnaire upon the smoking habits of 40,000 British doctors in 1951. The certified causes of death of those doctors who have since died were then investigated, and their smoking habits compared with the causes of death. Thirty-six of the 789 deaths were due to lung cancer: the death-rate amongst non-smokers was nil; for heavy smokers (more than 25 cigarettes a day) 1.14 per thousand; for light smokers (1-14 cigarettes daily) 0.48 per thousand; and for moderate smokers (about 20 daily) 0.67 per thousand. In San Francisco Dr. Cuyler Hammond has surveyed nearly 200,000 men between 50 and 70 for the American Cancer Society. His conclusions are:

(1) That those who smoke more than 20 cigarettes a day have a death-rate more than twice as high, between the ages of 50 and 64, as that of non-smokers.

(2) That five moderate smokers die of lung cancer to every one non-smoker, and 15-16 heavy smokers to every one non-smoker.

These results may seem to the layman to be conclusive in proving that smoking is a basic cause of lung cancer (and, indeed, many doctors accept them as such). But three things must be borne in mind:

(1) That there is also a close correlation between lung cancer and life in cities—that is to say, there can be no doubt that atmospheric pollution plays an important part. Lung cancer is less common in the country, even in heavy smokers.

(2) No less an authority than Sir Thomas Price (who treated the late King George VI for this disease) believes that excessive smoking does not cause cancer, but only determines the site of origin. In short, that these people would have suffered from cancer in any case and

their smoking habits merely result in it developing in the lungs.

(3) It must be considered that those who smoke heavily are people of a certain type—i.e., those who are under stress. It is, therefore, not inconceivable that lung cancer may be a stress disease—that is to say, that both excessive smoking and lung cancer may be the result of some more fundamental process. It is interesting to note that pipe-smoking and cigar-smoking are not associated with a high incidence of lung cancer, and also that the incidence of lung cancer is not equally high in all countries where smoking is common.

It is certain that we must wait the results of further research before we fully understand this interesting and serious matter. In the meantime it would be foolish to prejudge the issue.

**Tonsillitis.** An infection of the tonsils, the lymphoid tissue at the back of the throat. Usually caused by streptococci. The symptoms are pain and discomfort on swallowing, foul breath, and a raised temperature. In mild cases gargles or penicillin lozenges may be sufficient, but more often it is necessary to give penicillin injections or one of the sulpha drugs. Frequent attacks may lead to chronic tonsillitis, with permanently enlarged tonsils, and as this condition has a harmful effect upon the general health, the best solution is operation.

**Torticollis.** Wryneck. An abnormal twisting of the neck caused by injury to the muscle or nerve. Other cases are neurotic—that is, they are not due to any physical disease.

**Toxæmia.** Any illness due to poisons absorbed from germs in the system.

**Trachea.** The windpipe. **Tracheitis** is inflammation of the trachea.

**Trachoma.** An infectious disease of the eyes found mainly in Egypt. There are scars underneath the eyelids which may later cause deformities. Only an eye specialist can treat trachoma.

**Tuberculosis.** Tuberculosis is an infectious disease which takes many forms. It may cause lung disease, meningitis, glandular disease, bone disease, peritonitis, and so on. There are two main forms—the human and the bovine; the latter being spread, mostly in children, by milk from infected cattle, the former by other human beings. The bovine type is less serious. The human type is most common among women of twenty to thirty, and men at all ages. It must be remembered, however, that 75-80 per cent. of the whole population of this country have been infected before the age of twenty-one. If disease develops later it may be either a fresh infection or a reactivation of the old condition. Practically speaking, tuberculosis is not a very infectious disease in adults; it is rather doubtful whether an otherwise healthy person is in much danger from a tuberculosis patient. Children, however, are a different matter.

When we speak of tuberculosis, we generally refer to the pulmonary type, the early signs of which are loss of weight, general debility, and night sweats. Cough is a later sign. The treatment may be medical or surgical. The former includes such measures as rest in bed, good food, and fresh air; the latter such treatments as pneumothorax, pneumoperitoneum, lobectomy, and so on. Pneumothorax is the collapse of the affected lung by the introduction of air into the chest through a needle, in the case of pneumoperitoneum the air is introduced into the abdominal cavity. Lobectomy is the cutting away of the affected area in the lung. Other measures include the use of antibiotic drugs such as streptomycin. (See Antibiotics.)

**Tumour.** A swelling. To a doctor, any swelling of the body is a tumour and the term does not necessarily apply to cancer.

**Typhoid Fever.** Enteric. An infectious fever caused by the typhoid bacillus. The course of the illness can be divided into three stages: in the first week, there are the usual signs of an infectious disease—fever, headache, and general malaise. In the second week, the fever is at its height, there is diarrhoea, and a rose-coloured rash on the chest and abdomen. The third week is the week of improvement if the patient is going to recover; if his condition is more serious, complications may set in, such as peritonitis,

pneumonia, perforation of the intestine, and so on. Typhoid fever is very infectious, and precautions must be taken against its spread. The vaccine known as T.A.B. protects against the disease. Treatment requires specialised medical attention; there is, so far, no specific treatment.

**Typhus.** A fever caused by a germ which, being carried by lice, is spread by their bite. It is uncommon in Britain, but common in Eastern Europe. Since dirt, and the presence of lice, favour its occurrence, it is frequent after wars or whenever large numbers of hungry, ill-clothed, refugees are crowded together. It was once common in prisons—hence the old name of "Jail Fever." The patient develops extreme weakness, fever, and has a coated tongue and crusts around the lips. Later, there is a rash, and delirium. Forty per cent. of patients die. There is no specific treatment yet. It is not possible to develop typhus fever unless bitten by lice; therefore the main preventive measures are directed against this.

**Ulcer.** Ulcers may be due to many causes: continual irritation, injury, bad blood supply, varicose veins, and various germs, including those of tuberculosis and syphilis. Treatment, of course, depends on the cause, and any ulcer which is long in healing should be referred to a doctor. The following are general observations: ulcers often fail to heal because of poor blood supply—in the leg, where the circulation may be poor, an ulcer may not heal unless the limb is kept at rest and raised on a stool. Patent ointments should never be used on ulcers—at the best, they contain mild drugs which any doctor can supply much cheaper; at the worst, they may be very dangerous. In any case, no moist surface should ever be treated with a greasy substance (except, perhaps, penicillin cream). Strong antiseptics should never be used, and boracic fomentations should be realised to be out of date a long time ago. A large number of the ulcers which refuse to heal have, in fact, been poisoned by the patient's use of strong antiseptics and wet soaks. It is always best to go to a doctor because the best treatments, such as penicillin and other drugs, can only be supplied by him.

**Uremia.** The last stage of kidney disease, when the kidneys fail to excrete all the waste products of the blood. Minor degrees may occur when the urine, in spite of the kidneys being normal, cannot escape, owing to blocking of the channel on the way out. This happens in prostatitis. Symptoms of serious degrees of uremia are—fits, high blood-pressure, defective vision, vomiting, and headaches.

**Ureter.** The tube leading from the kidneys to the bladder.

**Urethra.** The tube which carries the urine from the bladder to the outside.

**Urethritis.** Inflammation of the urethra, which may be caused by various germs, the only serious one of which is the germ of gonorrhoea (which see). The symptoms are burning pain on passing water and frequent desire to do so.

**Urticaria.** A skin disease in which small blisters occur as a result of hyper-sensitivity to some substance (see Allergy). Urticaria is also known as hives or nettle-rash. Treatment depends on finding the food or other substance which causes the disease, and avoiding it. A new drug (Benadryl) has been successful in many cases. During an attack of urticaria, the doctor may give an injection of adrenaline.

**Uterus.** The womb.

**Varicella.** (See Chicken-pox.)

**Varicocele.** Varicose veins in the scrotum—the bag beneath the penis containing the testicles, when these veins become enlarged, there may be pain and there is a swelling which feels like a bag of worms. The condition is not serious, but may be inconvenient. The treatment is surgical—a slight operation.

**Varicose Veins.** This usually applies to varicose veins in the legs, although piles and varicocele are also varicose veins. A firm elastic bandage may help to control the veins, but the only cure is surgical. Either the veins are injected with a substance which causes clotting or they are tied high up in the thigh in a minor operation. There is no need for treatment unless the veins cause disability.

**Varicella.** (See Smallpox.)

**Vertebra.** (See Backbone.)

**Vertigo.** Dizziness. This may be caused by many different conditions. Ear disease, gastritis, heart disease, anaemia, or merely wax in the ears, or neurosis may be causes. It is therefore necessary to see a doctor in order to discover the cause.

**Viruses.** Viruses are organisms which cause certain diseases, and, unlike bacteria, are too small to be seen with an ordinary microscope. They can, however, be photographed by an electron microscope, which uses a magnetic field instead of a glass lens. Viruses cause such diseases as measles, mumps, typhus, poliomyelitis, smallpox, and chicken-pox; they also cause various plant and animal diseases, such as tobacco mosaic disease and foot-and-mouth disease. Unlike bacteria which can live even in dead matter, viruses can live only within the living cell. An interesting fact about viruses is that they represent a half-way point between inorganic matter and living things. For example, it is possible to get viruses in crystalline form. Another peculiarity is that, so far, no specific treatment has been found for most virus diseases: the drugs which destroy bacteria have little effect on them. Smallpox, however, can be prevented by vaccination, and typhus by control of the lice which carry the virus.

**Vitamins.** Vitamins are substances found naturally in certain foods, the absence of which leads to one or other of the so-called "deficiency diseases." Thus lack of vitamin A leads to night-blindness; of vitamin B, to beri-beri and pellagra; of vitamin C, to scurvy; of vitamin D, to rickets and osteomalacia; and of vitamin E, to sterility. The early scientific work on vitamins was mainly carried out by Hopkins and Mellanby in this country early in the present century. At the present time more than twenty of these substances are known, and to the original A, B, C, and D have been added E (the fertility factor), K (the anti-bleeding factor), not to mention vitamins B<sub>1</sub>, B<sub>2</sub>, and so on, right up to B<sub>12</sub>. Many superstitions have arisen in the popular mind as to the need for vitamins. They have been taken in order to prevent colds, to give energy, as a "general tonic," and so on. But all informed medical opinion is agreed that this attitude is nonsense. Under ordinary circumstances vitamins are only of service in those who are undernourished and suffering from deficiency diseases. Deficiency diseases do not exist in this country except in those who live under unusual circumstances and are too lazy, too old, or too sick—or too ignorant—to buy the correct foods. There are, however, a few diseases not due to vitamin deficiency in which, under medical supervision, these substances may be taken for their curative effect. For example, vitamins B<sub>2</sub> (nicotinic acid) and vitamin K have proved successful in the cure of chilblains; it appears that in high concentrations they stimulate the circulation. Vitamin E, the fertility factor, has been used in certain organic nervous disorders, in certain heart diseases, and in the condition known as Dupuytren's contracture. Vitamin C is given, together with iron, in anaemia, since it is believed to aid the absorption of iron. Vitamin A seems to be effective in some skin rashes, and so on.

**Volvulus.** A twisting of the bowel causing obstruction.

**Wart.** Warts are caused by a virus or very small germ. Many treatments are successful—but usually caustic is applied. In severe cases, X-rays may be necessary. (See also p. 817.)

**White Leg.** Swelling of the leg produced by thrombosis (which see) of the veins. Usually it is a complication of child-birth or typhoid fever.

**Whitlow.** Septic finger. (See Paronychia.)

**Whooping Cough.** Pertussis. An infectious fever. There are three stages: the first, lasting about a week, is similar to an ordinary cold; in the second, the typical cough begins, and may last for a month or more. The third stage is that of gradual recovery. Treatment is a matter for the doctor.

**Wryneck.** (See Torticollis.)

**Yellow Fever.** An infectious fever found in tropical Africa and other tropical lands. The symptoms are jaundice, weakness, black vomit, and fever. It is spread by germs carried in a mosquito whose bite causes infection. Yellow fever is very deadly, but is less so with modern treatment.

# FIRST AID

THIS brief summary of First Aid is intended for the person with no medical knowledge or experience who is suddenly faced with an emergency. It is, of course, not intended for members of the St. John's Ambulance Association and other associations who not only have been trained in the use of First Aid but also have considerable knowledge of the anatomy and physiology of the body. All genuine training must be based on such knowledge, and without it only the merest general principles can be given. Nevertheless, situations may arise in which untrained people have to deal with emergencies, and an acquaintance with such general principles may become a matter of life and death. It is with such an end in view that the following notes have been written.

When the layman is faced with such an emergency, he should remember that there is as great a danger in doing too much as too little. For example, if a leg is fractured, an unskilled attempt to straighten it may easily cause the bone to break through the skin, thus transforming a simple fracture into a compound one, which is infinitely more serious for the patient. Another reason for caution (which in this case may apply even to the trained First Aider) is that modern medical treatment often uses methods not available to the most highly trained expert in First Aid, and may be hindered if other methods, at one time quite good in themselves, have been used previous to admission of the patient to hospital. For instance, the use of tannic acid for burns was a great advance in treatment, and is still valuable if no other methods are likely to be available, but it will seriously interfere with the most modern treatment used in the best hospitals. Similarly, the use of antiseptics on wounds, while good in itself, may prevent the effective use of penicillin when the patient has been admitted to hospital. The most important First Aid principle for the inexperienced is to make arrangements as quickly as possible for more skilled treatment or admission to hospital. On no account should more than the bare necessities be carried out, unless it is certain that skilled treatment will be delayed to a degree likely to endanger the patient's life.

For these reasons, no detailed information is given here as to the various types of bandages, splints, etc., since their use can be learned only by practical work and experience which cannot be taught by any book. Unskilled use is often worse than no treatment. For practical purposes, a bandage is something to cover and protect an injury. Provided it does this effectively, its appearance is a relatively unimportant matter; it must be so applied as to stay on, but not so tight as to interfere with the circulation. Similarly, a splint should maintain the broken bones in a safe position, prevent movement which might cause pain or damage, and not be so tight as to harm the limb or its blood supply.

The following general principles are important:—

1. Unless the injury is trivial, move the patient as little as possible. The patient may have to be removed from the cause of his injury (fire, electric cable, gas, smoke, etc.) or better still have the cause removed from him, but otherwise he should not be moved even from the middle of a busy street.
2. Never on your own initiative assume that the patient is dead or beyond help; always give him the benefit of the doubt.
3. Hæmorrhage, if severe, must be treated first, and shock second.
4. Shock is treated by wrapping the patient up, keeping him warm with hot-water bottles (not so hot as to burn), reassuring him as far as possible, and giving hot drinks (tea with plenty of sugar) if he is able to swallow. Never try to force drinks into an unconscious or semi-conscious patient. Unless bleeding is severe, the above measures come first.
5. The only exception to the above rule is when breathing has stopped, in which case artificial respiration (see in "Medical Dictionary") must be applied as described.
6. Once the above measures have been carried out, proceed, with as little fuss as possible, to see what else can be done. Finally, in case of legal complications, see that no evidence is destroyed.
7. To summarise: send someone for the nearest doctor; treat shock first, unless bleeding is severe or breathing has stopped; don't move the patient unless absolutely necessary; don't try to do too much.

## BLEEDING.

The only bleeding we can deal with directly in First Aid is that near or on the surface. Internal bleeding can be dealt with only by treating for shock. Slight bleeding is harmless and even helpful, as it tends to clean the wound. For severe hæmorrhage, have the patient lying down, treat as for shock (i.e., keep warm, wrap up, and give hot, sweet tea to drink), raise the bleeding part unless the limb is fractured, and stop the hæmorrhage either: (a) by direct pressure with a clean pad over the wound or (b) by the use of a tourniquet twisted around the limb above the wound and on the side of the injury nearest to the heart. It is most important not to have the tourniquet so tight as to harm the limb—it should be twisted just sufficiently to stop the bleeding. The easiest method is to tie a handkerchief loosely round the limb above the injury, place a pencil under it, and twist slowly until the bleeding stops. Every ten minutes or so, the tourniquet should be slowly loosened to see whether the bleeding has slowed down. It is also important to tell those who take charge of the patient that the tourniquet is in position, otherwise it may be forgotten and the stopping of the blood supply may lead to gangrene and the loss of the limb.

**Other Forms of Bleeding.** Internal bleeding is shown by the following symptoms: (a) pale cold and clammy skin; (b) weakness and a feeling of faintness; (c) weak, rapid pulse; (d) rapid, sighing breathing, frequently with yawning; (e) unconsciousness.

**Signs Due to Bleeding in Special Areas.** (a) Bleeding from the lungs results in bright-red frothy blood being coughed up. (b) In bleeding from the stomach the vomit usually has the

appearance of coffee grounds. (c) In bleeding from the kidney and bladder blood is passed in the urine. In all these cases treatment should be as for shock, but no liquid should be given by mouth.

**Bleeding from the Mouth.** (a) Wash the mouth out with cold water. (b) Place a thick pad of cotton-wool over the tooth socket and get the patient to bite on it.

**Bleeding from the Nose.** (a) The patient should sit with the head thrown back and breathe through the mouth. (b) Place a cold pad at the back of the neck and over the base of the nose.

## FRACTURES.

There are two main types of fractures—simple and compound. In the first case the skin over the fracture is not broken, in the second it is. Compound fractures are much more dangerous, as they are liable to become infected.

Without special training, the only way a fracture can be diagnosed is by seeing obvious deformity of the limb, or by feeling the deformity through the skin. Unnatural movement (e.g., in the middle of a limb) or grating may be noted. But no unskilled person should handle a limb with a view to discovering whether it is fractured or not; it is safest to treat all doubtful cases as fractures.

The only purpose of First Aid treatment of a broken limb is to ensure that it does not become worse by movement of the broken bones. The idea of splinting the limb is to avoid this movement and thus prevent further damage and pain to the patient.

1. The patient must not be moved until splints have been applied. If severe bleeding is present it must, as stated above, be treated first.

2. In order to splint the limb proceed as follows:—

Cover up all injuries and abrasions, as described below, with clean dressings and bandages. Then, using great care, place the limb in as natural a position as possible. The splint should be long enough to prevent movement in the joints both above and below the fracture; it may be improvised from walking-sticks, brush-handles, umbrellas, pieces of wood, or even tightly rolled-up newspaper. If none of these is available the arm may be bound firmly to the chest with bandages or, in the case of the leg, it may be bound firmly to the sound one. Bandages must not be too tight. If it is remembered that the function of a splint is to prevent the broken bones moving, it will be easier to ensure that the bandages are placed properly.

**Other Fractures.** Fractures may occur elsewhere than in the limbs, notably in the skull, the spine, the jaw, and the collar-bone.

1. Fractures, or suspected fractures, of the skull should be treated only for shock. Especial care must be taken in fractures of the base of the skull, which should be suspected when there is bleeding into the eye, or blood or clear fluid running from nose or ear. Immediate removal to hospital is necessary in these cases.

2. In fractures, or suspected fractures, of the spine keep the patient lying flat, treat for shock, and bind the legs together at the ankles, knees, and thighs. Immediate help must be sent for.

3. In fractures of the collar-bone, place a pad under the armpit and place the arm in an ordinary sling.

4. In suspected fractures of the ribs, take a strong towel, fold it to about a foot wide, bind tightly round the chest, and pin in position.

## SCALDS AND BURNS.

Burns may be caused by fire, heated metal, electric current, strong acids, or caustics. Scalds are caused by hot liquids, steam, and other forms of moist heat. All degrees of severity may be found from reddening of the skin and blistering to deep burning of the muscles. The greatest dangers are from infection and shock. Shock is by far the most important cause of death from burns.

1. Treatment when a doctor or hospital will soon be available. Treat for shock (i.e., keep warm with blankets and hot-water bottles, and give hot, sweetened tea to drink) and cover the burnt parts with dry cotton-wool. Bandage lightly (*not* firmly).

2. When expert treatment is likely to be delayed.

(a) Remove clothing, except where it sticks to the skin, when it should be cut around carefully with a pair of scissors. On no account attempt to pull the clothing from the skin if it sticks. Do not burst any blisters.

(b) While dressings are being prepared place the injured part in water at body temperature (e.g., in a bath), adding a dessert-spoonful of bicarbonate of soda to the pint.

(c) Prepare strips of linen, lint, or gauze soaked in a solution of baking-soda of the above strength, keeping them moist until the doctor arrives.

(d) Warm, strong tea may be used instead to soak the bandages in.

**Acid and Alkali Burns.** Before treating as above bathe with sodium bicarbonate in the case of acid burns, and vinegar or lemon juice in the case of alkaline burns.

## UNCONSCIOUSNESS, TREATMENT OF.

The layman need not trouble about the various causes of unconsciousness, but should apply the following general principles:—

(a) If breathing has stopped, use artificial respiration.

(b) Otherwise the patient should be kept lying flat on his back. If the face is flushed the head and shoulders should be raised; if pale the head and shoulders should be kept low and feet raised.

(c) Loosen all tight clothing and open the windows to allow fresh air into the room.

(d) Never give anything to drink until the patient is conscious.

(e) If there are convulsions keep the patient from hurting himself without restraining him more than necessary. Wrap a pencil in a handkerchief and put between the teeth at the back to prevent the tongue being bitten.

(f) It may help, especially if unconsciousness is due to a blow on the head, to use cold compresses on the brow.

## WOUNDS, TREATMENT OF.

1. If the blood from the wound has already begun to clot and bleeding has practically stopped, the wound is best left alone and simply covered with a clean piece of boracic lint.

2. Since an important part of treatment is to take care that no further germs get into the wound, care should be taken that everything touching the surface is absolutely clean. Thus the surface of the lint about to be applied to the wound should not be touched. If no absolutely clean dressing is available and skilled treatment is unobtainable for several hours, it is best to bathe gently with a solution of mild antiseptic, preferably Dettol or Milton (one teaspoonful to a cupful of warm water).

3. All bathing should be from the wound outwards so as not to carry further dirt from surrounding areas into the wound. Any pieces of dirt or grit deeply embedded into the wound should be left alone.

4. If hospital treatment is necessary and will soon be available it is much better not to use antiseptics at all but to pour over the wound water which has been boiled and allowed to cool. A teaspoonful of salt to each pint of water may be added.

5. No strong antiseptics should ever be used, and it is particularly important to avoid those containing alcohol, such as tincture of iodine, since this causes unnecessary shock and pain. Patent medicines, ointments of any sort, and sticking-plaster should be avoided. In fact, greasy or oily dressings should never be put on moist surfaces.

6. After the pad has been placed in position bandage the wound gently.

## FIRST AID FOR CHILDREN

The minor emergencies described here are such as are more likely to happen to children than to adults; it need hardly be said, however, that what is said is equally applicable to adults who find themselves in the situations described.

## BEE OR WASP STINGS.

When the sting is left behind, it should never be pulled out, but stroked out with the blade of a pocket knife. The area should then be dabbed with weak ammonia or baking-soda.

## CHOKING.

In the first place, it is most important to be as calm as possible and keep the child from being excited unduly. The reason for this is that emotional tension tends to keep the throat in a state of spasm, and bones that otherwise would be swallowed quite easily may remain stuck. Fish-bones may be softened by drinking diluted lemon juice or white of egg. If the bone is not too big, several glasses of water or other liquid should be drunk. If, however, the child is choking, it will be necessary to call a doctor, explaining the circumstances so that he may come prepared.

## SAND, DUST, OR GRIT IN THE EYES.

It is usually recommended to attempt to remove the piece of grit, if it is visible, with the corner of a clean handkerchief, but this should not be persevered with (a) in a very young or very upset child, or (b) if the grit does not come away immediately. The safest thing to do is to put a drop of warmed castor oil or liquid paraffin in the eye and leave it alone. If this is done, the grit will either come out of itself, in which case nothing further need be done; or at least the eye will be kept relatively comfortable and without more damage until skilled help is obtained.

# THE NATIONAL HEALTH SERVICE

THE interest of the State in the health of the people is not a new thing. As long ago as 1642 Parliament accepted the principle that those who fought in the service of the State and were sick or wounded must be cared for by the State. This principle was applied in the wars with the Dutch of 1653 and 1664. There was, however, no extension of this state care to civilians for a very long time, and it was not until the appalling living conditions resulting from the Industrial Revolution threatened to spread disease throughout the country that any further national action was taken. The first medical officers of health were appointed just over one hundred years ago, and their main task was to deal with the fearful epidemics, such as cholera and smallpox, which were then prevalent. For the remainder of the nineteenth century the control of infectious disease and the improvement of sanitation and water supplies were the main concern of Parliament and the local authorities, and much progress was made in the prevention of disease. The diagnosis and treatment of illness remained a personal matter between the patient and the doctor. It is true that the State made provision for destitute patients under the Poor Law and that the voluntary hospitals provided free treatment to those who could not afford to pay, but there was no general organisation of medical care. Many people subscribed to clubs and societies to provide medical treatment when they were ill, and it was not until the beginning of the present century that the State began to take an active interest in the medical care of the individual. The health of school children was protected by the formation of the school medical service in 1907, and about this time measures to protect the health of expectant mothers and young children were introduced. The National Health Insurance Act of 1911 provided for the first time a service whereby the bread-winner of a family when he was ill could receive treatment by his "Panel" doctor and obtain certain other benefits. These benefits were limited and the National Health Insurance Service did not cover the dependants of the insured persons, nor did it make provision for hospital care.

From the time of the Great War of 1914-1918 up to and during the last war remarkable advances were made in medical and surgical skill, and these advances are continually being added to. New aids to diagnosis and new forms of treatment, for example the sulphonamides and penicillin, were discovered, and the great advances in medical care and in surgery were aided by blood transfusion, improved X-ray diagnosis, physiotherapy, and many other new services. The range of treatment now available is wide. It is also very costly. Indeed, many hospitals found it difficult to carry on before the last war, and many patients were unable to afford the expensive investigations and treatment which modern science has made available. For these reasons alone some form of national health service was inevitable, but there were other equally important reasons. For a long time doctors and others who have studied the subject of medical care had felt that a national medical service was essential in order to make the best use of hospitals in each area and to bring the full range of modern medicine within the reach of everyone. Towards the end of the last war a number of social measures were introduced, such as the National Insurance Act and the National Assistance Act. These measures and all the other welfare measures introduced at that time depended on a national health service for their medical requirements. It was to meet these needs that the National Health Service Act was passed in 1946. The new Service came into operation on July 5th, 1948.

## THE NATIONAL HEALTH SERVICE ACT 1946.

This Act was intended to provide a comprehensive health service in England and Wales. A similar Act was passed for Scotland. The health services to be provided fell under three principal headings:—

- (1) Hospital and Specialist Services.
- (2) General medical and dental services outside the hospital.
- (3) Local Health Authority Services.

### HOSPITAL AND SPECIALIST SERVICES.

The Hospital and Specialist Services make provision for every kind of hospital care, including general hospitals, maternity hospitals, infectious disease, and special hospitals such as the mental hospitals and mental-deficiency institutions and sanatoria for tuberculosis. They also provide for convalescent treatment and rehabilitation. These hospitals are staffed by consultants and specialists, numbering approximately 6,000, employed on a full-time or part-time basis, who work in the wards, out-patients departments, and in special units, such as X-ray and pathology departments. At the request of the general practitioner domiciliary visits to the patient's home are made by consultants in cases of emergency. The hospital consultants are assisted by medical and surgical registrars, and by house surgeons and house physicians, many of whom reside in the hospitals.

The total number of available beds in hospitals in the National Health Service in England and Wales is about 500,000, of which nearly 50 per cent. are in mental hospitals and institutions. To nurse the patients in these hospitals there are more than 200,000 nurses and midwives, including student nurses, and a domestic staff of 175,000 is also employed. In addition, there are many special workers, such as almoners, records officers, radio-graphers, physiotherapists, speech therapists, teachers of occupational therapy, etc., so that it will readily be understood that the hospital service

is one of the greatest employers of labour, especially of women, in the country.

There are also many special activities within the hospital service, including the supply of surgical and other appliances. To give only one example, more than 400,000 hearing aids have been distributed from the special distribution centres since the service began.

A most important part of the hospital and specialist services is the National Blood Transfusion Service, which takes blood from a civilian Donor Panel of about half a million people and distributes this to the hospitals as required. In a recent year (1954) the total distributions of blood were 619,922 bottles, each containing about  $\frac{1}{2}$  pint and being the gift of one donor. An important part of the work of the Blood Transfusion Service is the testing of the blood of expectant mothers for the rhesus (Rh) factor. Many maternal and infant lives have been saved by detecting this incompatibility.

On July 5th, 1948, the Minister of Health became responsible to Parliament for the efficient administration of hospital services. To secure this he set up fourteen Regional Hospital Boards, four for London and the Home Counties, and ten for the remainder of England and Wales. The 36 great teaching hospitals in England and Wales have their own governing bodies responsible direct to the Minister. In Scotland the arrangement is that all hospitals are included in the Regional Hospital Board areas. The Regional Hospital Boards are responsible for planning and administering the hospital and specialist services of their areas. For day-to-day administration they are divided into small groups under the care of 388 local Hospital Management Committees. This arrangement also ensures that the best use is made of the hospital beds in each area and that the limited building and staff resources available are not wasted by competition between adjoining hospitals. At the same time it is the duty of the Regional Hospital Boards to arrange for the medical staffing of the hospitals and to see that special facilities are available for the treatment of

patients requiring chest surgery, plastic surgery, brain surgery, and other special forms of treatment which can best be provided on a regional, rather than a local, basis. The members of the various boards and committees serve entirely voluntarily and receive no payment for their work. They number between nine and ten thousand people. Were it not for these voluntary workers the permanent administrative staffs, secretaries, accountants, clerical officers, etc., would require to be much larger than is now the case.

Many patients stay in hospital only a short time, or receive all the care and investigation they need in the out-patient departments, and it is necessary to ensure that there is a close link between the hospital and home care services. This may be ensured in a variety of ways, notably by communication between the consultants and the general practitioners engaged in medical care in the home, and also by close liaison between the hospitals and the Local Health Authorities in the area.

#### GENERAL MEDICAL SERVICES OUTSIDE THE HOSPITAL.

The number of persons in England and Wales whose names were recorded as being on doctors' lists at the beginning of 1954 was 42,900,000, *i.e.*, over 90 per cent. of the population. The general medical services, which include medical and dental services, pharmaceutical services, and supplementary ophthalmic services, are administered locally by Executive Councils. The areas of the Councils coincide with those of the Local Health Authorities, except where two or more Executive Councils have been merged by agreement.

The members of the Executive Councils, who give their services voluntarily, include twelve lay and twelve professional people. The latter include doctors, dentists, and pharmacists. The work of the Councils is mainly executive, but they may deal with complaints and disagreements, and also with applications from doctors who wish to set up practice in their area or to succeed to a vacancy.

(a) **Medical.** Under the Service every person in the country is entitled to advice and treatment from a doctor. This care includes the prescription of medicine and appliances and arrangements for specialist advice and hospital treatment where necessary. There are approximately 19,500 general medical practitioners in the Service.

(b) **Dental.** Every person is entitled to dental treatment, including emergency treatment as well as the provision of dentures and the preservation of existing teeth.\* There are about 9,600 dentists in the Service, and they have treated between 8 and 10 million people each year since the National Health Service came into operation. In view of the importance of doing all that is possible to preserve teeth (rather than wait until they are so bad that the only remedy is to remove them), priority is given to expectant and nursing mothers and to children. The school dental service, operated by the Local Health Authorities, plays a vital part in securing the dental fitness of children, including education in the care of the teeth.

(c) **Care of the Eyes.** The Service provides for sight testing and supply of spectacles, either at hospital or by means of the supplementary eye service whereby patients may get their eyes tested by general practitioners with special knowledge of the diseases of the eye, or by sight-testing opticians. Opticians undertake the supply of spectacles.\* Approximately 4 million spectacles were supplied in 1954.

(d) **Pharmaceutical Services.** The prescriptions given by the doctors under the National Health Service are dispensed by chemists and pharmacists. The 15,764 chemists in the Service deal with about 219 million prescriptions each year.

#### LOCAL HEALTH AUTHORITY SERVICES.

The Act has placed important new duties on the County Councils and County Borough Councils. There are 146 of these Local Health Authorities in England and Wales, and they administer their health work by means of a Health Committee and the medical officer of health and his staff. These local authorities provide services which help both the hospitals and the general medical services out-

side the hospital. For example, they provide a midwifery service in the home, and arrange for home nursing, domestic help, ambulance services, and a number of other facilities. It will be best to describe these services one by one.

(i) **Midwifery.** The County Council or County Borough Council arranges for trained midwives to care for the expectant mother in her own home either by employing the midwives directly or by arrangement with the district nursing associations. There are approximately 7,500 domiciliary midwives in England and Wales. Arrangements are also made for care before and after the confinement. The midwives must be able to call for medical aid when they are in difficulty. General practitioners skilled in midwifery are available in each area, and they may in turn call on the obstetric consultants of the hospital service. Thus these home services are linked with the maternity departments of the hospitals. Many women nowadays prefer to have their babies in hospital because the home conditions are not suitable or because of other young children in the house. In such a case the expectant mother may make arrangements direct with the hospital and may have her ante-natal care done in the hospital clinic. If on examination everything is found to be normal the mother may be referred back to her own doctor or to the local maternity and child welfare clinic for regular ante-natal examination. Obviously it is not possible or desirable for every mother to have her baby in hospital, and where home conditions are suitable she may prefer to stay at home. The provision of home helps will assist with the domestic work, and many women also prefer to have the care of their own doctor. Some mothers, particularly those who have already had children, may not go in the first instance to the hospital or to their doctor but will go to the midwife whom they know. The midwife, in addition to arranging for the confinement, will advise the mother to be examined regularly at the welfare clinic or by her own doctor. It is also important that every mother, after confinement, should be examined before resuming work and again a few weeks later. Only by this means can any minor defects resulting from the confinement be found and corrected before they give rise to permanent disability. This post-natal examination can be carried out by the general practitioner, or at the clinic or hospital out-patient department. It is one of the essential features of a comprehensive midwifery service.

(ii) **Child Welfare.** For the first year of life, the health of the mother and the infant are so closely bound up that they may be considered as one person. There are, however, a number of conditions affecting the child which may require specialist knowledge, and indeed disorders and diseases of childhood have for a number of years been a separate branch of medicine under the title of Paediatrics. The physicians specialising in diseases of children are therefore known as paediatricians, and it is one of the duties of the hospital service to provide a paediatric service with children's beds, out-patient and clinic facilities, and trained staff. It is, however, necessary to go farther than this. The study of diseases of children has shown that many of these can be prevented or diagnosed at an early stage. It was to detect such departures from the normal that the maternity and child welfare clinics were first set up, and the work they have done has been invaluable. It is clearly most important to see that the young child is examined regularly by the family doctor or at the Welfare Clinic.

(iii) **Vaccination against Smallpox.** It is advisable to consider at this stage another provision of the National Health Service, which deals with vaccination against smallpox and immunisation against diphtheria. Compulsory vaccination against smallpox has been abolished by the National Health Service Act, but every Local Health Authority must arrange for anyone who wishes to be vaccinated free of charge. This can be done either by the patient's own doctor or at the local authority clinics. Although compulsory vaccination is abolished it is nevertheless still advisable that every person should be vaccinated in infancy. Smallpox is now rare

\* The National Health Service Act, 1951, imposed certain charges on dentures and spectacles, and these have been continued by subsequent amending Acts.

in this country, but when it does occur it is just as serious as ever it was and can quickly prove fatal. Only by vaccination can its epidemic spread be prevented.

(iv) **Diphtheria immunisation** has produced the most remarkable results in reducing the number of deaths from diphtheria in the British Isles. Local Health Authorities now arrange for free immunisation against diphtheria to be available to everyone, either by the patient's own doctor or through the local health clinics. It is, of course, essential that every infant should be immunised against diphtheria. The child may also be immunised against whooping cough, where the family doctor or the doctor at the Welfare Clinic considers this to be advisable.

(v) **Home Nursing.** The responsible duty has been laid on the Local Health Authorities of ensuring that trained nurses are provided for people who require nursing in their own homes. The Local Health Authority does this either directly or by entering into arrangements with district nursing associations. District nurses in some areas act also as the district midwives and health visitors. The need for an efficient home nursing service becomes obvious when it is remembered how many people have to be cared for in their own homes, and in particular those suffering from chronic diseases and the aged and infirm. There is, however, another reason. An efficient home nursing service means that patients who now go to hospital for relatively minor conditions can be nursed at home, and other patients can be discharged from hospital earlier to be nursed at home. By this means valuable hospital beds can be saved for serious cases. The home nursing service is organised so that the district nurse is in the closest possible touch with the general practitioners whose cases it is her responsibility to nurse. Normally it is for the doctor in charge of the patient to arrange for the services of the district nurse, but in an emergency she can be called in direct. In 1954 home nurses in England and Wales, numbering about 9,000, paid nearly 24 million visits.

(vi) **Home Help.** If sick or aged persons are to be cared for at home the provision of home help is often necessary, and it is also important that a mother who has her baby at home should not be burdened by domestic care. Local Health Authorities now have the power to provide domestic help for these mothers and for any household where there is a sick person, a mentally defective, or an aged person, or where there are young children. Clearly this is a most important service. It is useless to provide home midwifery and home nursing services without someone to do the general work. At the present time there is a serious shortage of woman-power, but this home help service offers a new field of work, whole-time or part-time, for the middle-aged and elderly woman. The Local Health Authority may make a charge for the services of home helpers. In 1954 home help was provided in 215,784 cases.

(vii) **Health Visitors.** Local Health Authorities have for a long time employed specially trained nurses to act as health visitors to give advice at home or at clinics to expectant mothers and mothers with young children. These health visitors have proved so successful that under the National Health Service their duties were extended to the giving of advice on the welfare of the family. They also advise, in conjunction with the family doctor, on the prevention of the spread of illness within the home. This advice is particularly necessary in such diseases as tuberculosis. There are approximately 7,000 health visitors, whole or part-time, in England and Wales.

(viii) **Ambulance Services.** A most important duty laid on the Local Health Authority is the provision of ambulance services. Every Local Health Authority must arrange for ambulances and, when necessary, sitting-case cars to convey sick or injured persons or expectant mothers or nursing mothers or other types of patients to and from hospital as required. These ambulances and cars travel about 92 million miles in a year. The ambulances are also available to take cases of infectious diseases to and from hospital, but special precautions are taken to prevent the spread of such diseases.

(ix) **Care and After-care of the Sick.** It is not enough to make provision for efficient hospital

treatment unless some arrangements are made whereby patients can also receive proper care and attention in their own homes. The National Health Service Act gives the Local Health Authorities power to make arrangements for the prevention of illness and the care and after-care of persons suffering from illness, including mental illness, and the care of the mentally defective. This care and after-care of the sick may include such things as the provision of special foods, blankets, and extra comforts required by the sick person. Equipment for home nursing may be provided so that district nurses and midwives can obtain such items as water-beds, bed-rests, bed-blocks, crutches, and wheel-chairs for their patients. Local Health Authorities can make grants to voluntary organisations for doing work of this kind, but they cannot make any cash payments to the patient, as this is provided for under other Acts of Parliament, such as the National Assistance Act.

(x) **Tuberculosis.** The extent of care and after-care provided will be governed very largely by the needs of a particular area and the resources of the local authority concerned, but the Minister of Health has given specific directions that every Local Health Authority must make arrangements for the prevention of tuberculosis and the care and after-care of persons suffering from this disease. By this means any person suffering from tuberculosis may be helped before entering and after discharge from the sanatorium or hospital, and the health of his family is also safeguarded. Local Health Authorities must not make any charge for the care of the tuberculous patient.

(xi) **Health Centres.** Under the National Health Service Act provision was made for the building and equipment of health centres. These are intended to be places where general medical practitioners and dental surgeons may see their patients, and specialists from the hospital may attend if necessary. There may also be other clinic facilities. It will take a long time before the ideal type of health centre has been devised, and the restriction on building may also hinder the general development of health centres. Meanwhile there is scope for experiment, and a number of different kinds of health centres are coming into use in various parts of the country, particularly in the new towns and housing estates.

### MENTAL HEALTH SERVICES.

The importance of safeguarding mental health, in addition to providing treatment for mental illness, has come increasingly to be recognised in recent years. In this connection it is necessary to distinguish between mental disease, which affects the developed mind, and mental deficiency due to failure, or partial failure, of the mind to develop fully. In the one treatment and cure may be, and very often are, possible. For the other, i.e., mental defectiveness, true cure is usually impossible, but much may be done to help and teach the mentally defective to become useful and happy members of society.

In addition to disease of the mind, and the existence of mental deficiency, it must also be remembered that mind and body are so closely associated that disability of the one may affect the other. Thus the simplest of bodily ailments, such as a cold in the head, or a bilious attack, may cause temporary mental depression. The pace of modern life is also a factor of importance in the production of mental stress and anxiety.

The care of the mentally ill has in the past been handicapped by the fear which many people had of this type of illness, and also because it was believed to be incurable. Modern experience has shown that illness of the mind is often as amenable to treatment as bodily illness, particularly when treated early, and both mental and general hospitals now have many patients receiving out-patient care in the same way as those with physical disabilities.

It has also been demonstrated that prevention is better than cure, and the subject of preventive psychiatry is now an important one, particularly in the early years of life.

The National Health Service makes special provision for mental illness. The mental hospital usually provides both in-patient and out-patient accommodation, and psychiatric clinics are also

held at many general hospitals. Long-stay annexes are provided for old people who are mentally infirm, and day hospitals are being developed whereby patients may spend the nights in their own homes, and attend the hospital during the day. Increasing attention is also being paid to rehabilitation of the mentally ill. Mental defectives may be retained in special hospitals or colonies, or they may remain in the community under the care and supervision of the Local Health Authorities.

Mental hospitals and mental-deficiency colonies now form part of the hospital and specialist services. The care and supervision of mental patients and mentally defective people in their own homes is carried out by officers of the Local Health Authority. These officers have special experience in dealing with this type of patient, and the hospital specialists are also available to help. They are assisted by trained psychiatric social workers, one of whose functions is to investigate the social background of the patient and to assist him to return to his place in society when treatment has been completed.

### THE AGED AND THE INFIRM.

The introduction of a comprehensive health service has revealed many groups of people in the community who were, in the past, ill cared for, including those suffering from permanent disablement as a result of injury or disease, and also those who by reason of age and infirmity required prolonged care. The old Poor Law infirmaries provided accommodation for many of these people, and once admitted there, they usually stayed for life. Today it is realised that many disabilities can, if treated early, be prevented from becoming serious, and that the best way to prevent the aged and infirm from becoming a burden to themselves and to others is to keep them actively interested within the community. Rehabilitation after accidents, injury, or disease, is therefore an important part of the health service, and many different ways of ensuring this are employed. Convalescent homes, a short stay in hospital, and home-care schemes are some examples. So important has the care of the older members of the community become that special Geriatric Units have been established at many hospitals under the care of a physician sometimes known as a geriatrician. The preservation of the link between the hospital and the home is particularly important with these cases, for unless there is a reasonable prospect of return to their home after hospital care they will remain in hospital, and thereby block the beds required for others. In doing so, their own return to full usefulness in the community may also be delayed.

### COST.

The cost of the National Health Service is met from three sources. The major contribution comes from the taxes; a small part comes from insurance contributions under The National Insurance Act, and about half of the Local Health Authority costs are borne by the local ratepayers.

The estimated gross cost of The National Health Service in England and Wales for 1954-55 was £453,805,035, of which approximately £278 million was for hospital services.

The increase in cost of the service as compared with the estimates when it was first planned is due in part to the great advances in medical care, and also to the rise in cost of salaries, wages, and materials.

### HOW TO OBTAIN THE SERVICES.

The detailed arrangements inevitably vary from district to district. It is therefore necessary to enquire locally for the precise arrangements, but the following general guide may help:—

1. **Hospital and Specialist Services.** Through the family doctor.

In case of accident or grave emergency go direct to the hospital if a doctor is not available.

2. **Medical Advice and Treatment.** If you have not already done so, or when you move to a new area, you should choose your family doctor immediately. The simplest way is to ask him to accept you, and if he agrees to do this give him

the official application form when you have filled it in. A separate form must be filled in for each member of the family. If you do not know a doctor you will find a list of those practising in the area at the Post Office.

In emergency apply to any doctor practising in the area who has joined the Service.

The names of doctors specialising in midwifery are kept on a special list. Your own doctor will advise you on this.

3. **Medicines and Appliances.** Take your doctor's prescription to any chemist. In country districts your doctor will advise you where to go. He may dispense the medicines himself.

4. **Dental Treatment.** Expectant mothers and children get priority care. Apart from these priority classes you may choose any dentist who provides dental treatment in the Service. The procedure is simple. You call on him by appointment, and he will begin treatment immediately after you and he have signed the appropriate form.

5. **Eye Services.** Your family doctor will recommend you to an eye specialist or ophthalmic optician. If your spectacles need repair you can go direct to the optician.

6. **Supplementary Services.**

(1) *Ambulances* through your own doctor. In emergency an ambulance may be summoned through the police or by dialling 999 on the telephone.

(2) *Home Nursing* through the family doctor or directly to the nurse in an emergency.

(3) *Midwifery Service* through the family doctor or the district midwife or the local welfare clinic or the hospital.

(4) *Health Visitor* through the family doctor or the local welfare clinic or local health department.

(5) *Home Helps* through your doctor or the district nurse, midwife or health visitor, or the local health department.

(6) *Vaccination against smallpox and immunisation against diphtheria* through your own doctor or through the welfare clinic or local health department.

7. **Care and After-care of the Sick, including Equipment.** Arrangements may vary from one district to another. Your own doctor and the district nurse will be able to advise you.

For care in cases of tuberculosis ask at the hospital or chest clinic or the local health department.

On the home care of mental patients or mental defectives consult your own doctor in the first instance. In case of doubt enquire at the local health department.

### THE FUTURE.

The British National Health Service is one of the greatest experiments in health care ever undertaken, and is being watched critically by countries all over the world. For the first time in our history every man, woman, and child in the country is entitled to free medical care. It is, therefore, very important to see that this new Service is not abused. If doctors are consulted for trivial conditions they cannot get on with their proper work. Hospital care is now very costly, and should be reserved for those who are going to benefit by their treatment or who cannot be cared for at home. At present the energies of those employed in the National Health Service are devoted mainly to curing the sick, but it must not be forgotten that the main purpose of this Service is to improve the health of the people. To be, and remain, healthy requires many things such as a healthy environment, good food, and healthy working and home conditions. Above all it depends on the intelligence and common sense of the individual concerned. Many of the conditions treated to-day by the doctors in their surgeries or at hospital could have been prevented altogether or cut short. The spread of such a disease as tuberculosis, for example, is preventable. Again, many people fear cancer and will not go to a doctor until it is too late. The ideal for everyone is a happy, healthy, well-balanced life. The National Health Service is a step towards this, but it remains for the individual to ensure that by common-sense application of the simple rules of health, and the avoidance of excesses, he makes the most of his life. State services can help a man, but they cannot live his life for him. That remains his responsibility.

## BABY CARE

### THE HEALTH OF THE MOTHER.

The health of a baby during its early years of life is so bound up with the health of the mother that the two must be considered together. Indeed the intimate relationship which exists between the two before birth is, in normal circumstances, continued after birth and throughout the whole of the first year. It is therefore necessary to consider first the health of the mother before the birth of the child.

It has now been established beyond doubt that the health of the expectant and nursing mother affects profoundly the health and well-being of her infant. It is not merely a question of good bodily health. Mental contentment and freedom from anxiety are also important. It is necessary, therefore, to encourage a placid state of mind from the outset. This can best be done by making the arrangements for adequate care and supervision as early as possible. As soon, therefore, as pregnancy is suspected the mother should seek the advice of her family doctor.

When the pregnancy is confirmed the question whether to have the baby at home or in hospital must be decided. Much will depend on the opinion of the doctor, who may consider confinement in hospital advisable on medical grounds. Other considerations will also enter into this decision, such as the suitability of home conditions, the care of other children in the family, the availability of domestic help and so on. If it is decided to have the baby at home, arrangements must be made for securing the services of a midwife or, if the doctor is going to attend the confinement, of a maternity nurse. The sooner these arrangements are made, and other matters such as the provision of home help and care for the other children decided, the sooner will the mother be able to settle contentedly to prepare for the baby. Subject to the advice given by the doctor and midwife the more natural the life the expectant mother lives the better.

Experience in a number of countries, including Great Britain, in the Second World War confirmed the view that the nutrition of the expectant mother is of vital importance, both to her own health and to that of the baby. That is so throughout pregnancy, and especially in the earlier months. From the moment that pregnancy is diagnosed, therefore, it is essential that the mother should have a good and varied diet, with plenty of fruit, salads, and vegetables, in addition to fresh meat and fish, milk, butter, eggs, and cheese, for it is from these materials that the essential proteins, the fats, carbohydrates, and mineral salts required by the developing infant are drawn. Adequate supplies of vitamins are also required, especially when the baby is growing rapidly in the later months of pregnancy, and these are usually supplied in the form of cod-liver oil or halibut-liver oil which contains vitamins A and D, and fresh orange or tomato juice or concentrated orange juice, rose-hip syrup, blackcurrant syrup, etc., which contain vitamin C. Multi-vitamin preparations containing a number of vitamins may be taken on the recommendation of the doctor or welfare centre.

Mineral salts, and especially calcium and iron, are essential for both the mother and the child, especially during lactation. Calcium is supplied naturally by means of milk, cheese, and vegetables, and iron by way of green vegetables, egg yolk, liver, peas, beans and lentils, oatmeal, wholemeal flour, and green vegetables.

The old tradition that the expectant mother should attempt to eat enough for two people is, of course, a fallacy. A good, well-nourishing diet taken at regular meal-times is all that is required. Similarly, the other elementary principles of healthy living should be followed, with adequate fresh air, exercise and sleep, and a rest during the day. Before attempting anything exceptional, such as hard exercise or swimming, medical advice should be taken.

### MEDICAL SERVICES.

It is no part of these notes to describe the arrangements for the confinement, but it is obvious that this will be made much easier if adequate preparation has been made. The expectant mother should therefore make sure that she is

getting all the help which the health and welfare services can give. These services are now very extensive, and they are available to everyone. Under the National Health Service, for example, the help and advice of a doctor and midwife are freely available, and so also are the welfare clinics of the local authority and the expert care of the hospitals. These services are described in detail in the notes on the National Health Service on p. 806.

The Local Health Authorities now provide a free ambulance service for those who may need it, and also a home help service whereby a helper experienced in the running of a home can come to assist the family during the time of confinement, and also if necessary during the nursing period. Local Health Authorities may make a charge for this home-help service.

If there are other young children in the family it may be possible to make use of day or residential nurseries where these are provided by the Local Health Authority, and old people in the house may be encouraged to go to an old people's club during the day, or be found temporary residential accommodation elsewhere. In making these arrangements the advice of the health visitor will be valuable. Local Health Authorities are empowered, under the National Health Service Act, to provide nursing equipment and additional comforts in the home. These may take the form of bedding and blankets, and nursing equipment may include such items as bed-pans, macintosh sheeting, air-rings, and bed cradles. Local authorities can make a charge for lending this equipment. Another helpful provision is that of a recuperative holiday after confinement.

It goes without saying that regular examinations of the expectant mother's health should be made, and these ante-natal examinations may be carried out by the general practitioner, at the welfare centre, or at hospital. Similarly, an examination to detect that no minor disability remains as a result of the confinement is also essential to prevent subsequent ill-health. This post-natal examination, which is usually made about six weeks after the confinement, may be undertaken by the family doctor or at the welfare clinic or the hospital.

### GENERAL PREPARATION.

Two of the important things to prepare in advance are the baby's clothing, and equipment and furniture.

*Clothes* have undergone revolutionary changes in the past thirty years. Whereas it was formerly the fashion to provide elaborate sets of clothing, often in three or four layers, the objective to-day is to provide the simplest and lightest clothes which will keep the baby warm and comfortable and at the same time allow free movement and exercise. It is essential to remember when buying or making baby's clothes, and also later on when washing them, that a baby's skin is very sensitive and liable to chafe easily. The under-garments must be of soft and fine material that will wash and wear well, and the layer next to the baby's skin should be the same in summer and in winter and night as well as day. A common mistake is to put too many clothes on the body. A baby loses heat quickly from the whole skin, including the legs, and in cold weather the legs should be covered. The old tradition of wearing bonnets is now nearly dead. Provided that the baby is not directly exposed to draughts and keen winds, there is no need to wear any head covering except in very cold weather, when a woollen bonnet which covers the ears should be worn out of doors.

*Vests* should be of soft, fine wool, silk or silk merino, and long enough in the body to ensure that there is no gap between vest and napkin. A wide piece of tape can be sewn to the bottom of the front of the vest so that the napkin can be pinned to the vest without tearing it. The neck of the vest should be wide enough to go over the baby's head without force.

*Napkins* are usually of two kinds; soft muslin squares to be worn next to the skin, and turkish towelling worn over these as an added protection. The various ways of putting on and changing napkins are best learnt by demonstration by the midwife or at the clinic.

In cold weather the baby will need, in addition to vest and napkin, a woollen jersey and knickers and good woollen socks long enough to reach almost to the knee. As woollen socks are easily kicked off they should be drawn in by a ribbon and tied above the ankle. In really cold weather a long-sleeved double-breasted matinee coat of wool should be worn.

In hot weather the baby may need only vest and napkin, but care must be taken to add clothes as soon as it turns cooler. Incidentally it is wiser not to speak of summer and winter clothes when dealing with young children. In the British Isles, at any rate, a winter day can be warm, and cold spells occur in the summer. If the system is adopted of adding warm garments to the foundation of vest and napkin according to the temperature indoors or outdoors, the child will be most comfortable. In this, as in all other matters relating to the care of the baby, common sense plays a very large part.

Bibs are needed to save the clothes when the child dribbles or regurgitates its food after feeding. They should be of soft, absorbent material, such as drill or cotton, with tapes to tie round the neck and the waist. Bibs made of plastic material are not recommended, as they may cover the child's face if he falls asleep, and a young baby was stifled in this manner not long ago.

Binders are not necessary after the first ten days of the baby's life. Once the stump of the umbilical cord has separated and the scar at the navel has healed the binder should be discarded.

The equipment and furniture required are simple and will vary with the type of home and financial circumstances, but the underlying principles are the same for all homes. The first essential is cleanliness. This means not only provision for bathing the baby, but also facilities for washing the baby's clothes and napkins, and for the clean preparation of the baby's food and clean surroundings generally. It is essential also that the mother should be able to see to her own cleanliness and in particular the care of her clothes and hands.

A low chair on which the mother can sit to nurse and bath the baby is useful, and this can be improvised by cutting down an ordinary wooden chair. It can be painted a bright colour and it should be scrubbed at regular intervals—for example, once a month.

The cot for the young baby can, if necessary, be improvised from such things as a wicker basket. During the late war, cots were even improvised from orange boxes! It is, however, worth while to buy a wicker cradle and later a large dropside cot, as this will last well into infancy. A point to be remembered about cots and also about play-pens is that the bars should not be more than 3 inches apart, so that the baby cannot get his head through. Also there should be no collapsible parts which can suddenly give way and trap the fingers.

Bedding for the cot will include a blanket to go under the mattress. Next comes the under-blanket on top of the mattress. Over this comes the macintosh or other waterproof material with the flannelette drawsheet over it. The baby is wrapped in a shawl or soft blanket and covered with a top blanket. An extra blanket may be needed in cold weather. Many leading authorities on baby care recommend that a pillow should never be used, and certainly not a soft pillow, for babies have been known to be suffocated by these. When discussing later on the preparation of food, the washing of the baby and the washing of baby's clothes, reference will be made to some other items of equipment required.

With quiet and orderly preparation for the coming of the baby, pregnancy can be a very happy time. Indeed, that is what Nature intended it to be, and most women are never so well as during the months of pregnancy.

### **THE HEALTH OF THE BABY.**

So far these notes have dealt primarily with the health of the mother. Independent life begins for the baby from the moment he is born. The stimulus of the external air makes him draw his first breath, and immediately his own circulation replaces that of the mother on which he has been dependent for the past nine months. But a new association begins. It is the baby's birth-right that he should be nursed and fed by his mother,

and the intimate relations which exist between mother and baby render them, in effect, one person for nearly the whole of the first year of life. The more the mother knows about babies in general, and her own baby in particular, the better, and it will be helpful to give some facts about the normal baby before describing such matters as general management and breast feeding.

### **Care of the Newly Born Baby.**

This is, of course, the province of the midwife, who, in addition to cleaning the eyes and freeing the mouth from mucus, will bath the baby and wrap up carefully to prevent chilling. After weighing, the baby is put into his cot while the midwife looks after the mother.

*The Cord.* Before birth the baby gets his nourishment from the mother through a cord which enters his body at the navel and at the other end is fixed to a large sponge-like structure (the placenta) attached to the inner wall of the mother's womb. The baby is therefore really a part of the mother and shares her blood supply. That is one reason why the expectant mother should not over-indulge in tobacco or alcohol!

Directly after birth the midwife or doctor ties off the cord and the stump falls off in about seven days. The scar at the navel heals about the tenth day. If strict cleanliness is not observed in handling the baby during that time the cord stump may become septic and the baby's life be endangered. The directions of the doctor and midwife must therefore be followed carefully.

*Weight and Length.* The weight at birth varies usually between 6½ and 8 lb. It is sometimes as high as 10 lb. or as low as 5 lb. Boys usually weigh more than girls; the length of a baby at birth is usually 19 to 20 in.

*The premature baby* is not necessarily one which is born before the end of the normal pregnancy, and often babies born three weeks before they are expected are normal in size and do not require special care. The newly born baby weighing less than 5½ lb. is usually regarded as premature and treated accordingly. Premature babies have not got the natural resistance of the normal baby and require special care. For example, the results of a cold or influenza, or any septic infection, are more serious in these babies, and it is therefore necessary to exercise strict watch over them and keep them apart from other children and adults. Again, the body temperature of these babies is often low and requires to be kept up to normal by artificial means, such as hot bottles and extra clothing or electric blankets. Some babies are so small and delicate that they have to be nursed in an incubator. Premature babies are difficult to feed and they do not suck so vigorously as a normal infant. On the other hand, it is even more important that they should be breast-fed, if possible, than with normal infants. Extra care is therefore necessary with the premature infant, and many Local Health Authorities have arrangements for nursing these babies either at hospital or at home with a specially experienced nurse. It is important to remember that premature babies need special attention throughout the first year of life, for if neglected they are especially liable to bronchitis and pneumonia. The care taken by health and hospital authorities to save such babies is well worth while, for once they pass the critical early months they develop fully, both in mind and body, into normal healthy people.

*The Skin.* At birth the skin of a baby is red and covered with a protective fatty substance which comes off with the first bath; the redness persists for a few days. The skin of a baby is extremely delicate and needs very careful attention. This will be emphasised later when the question of washing and bathing is considered.

*The Head* of the new-born baby may look a little out of shape. This is because of the pressure during birth and it rapidly becomes normal. The bones of the skull are separated from each other in the new-born baby, and on the middle of the top of the head there are two diamond-shaped soft spaces where the skull bones meet. The space towards the front of the top of the head is known as the anterior fontanelle, and the doctor and midwife often gain useful information on the child's condition from the bulging or depression of this area. The other opening towards the back of the skull is smaller and is known as the posterior

fontanelle. This closes in six or eight weeks, but the anterior fontanelle remains open for about eleven to eighteen months.

*Chest and Abdomen.* No special comment is needed concerning the chest of the baby, but the abdomen is normally more prominent than in older children. This is due partly to the very large liver of the young baby and also to the fact that the stomach stretches to take in as much as 3 or 4 oz. of milk at one feed.

*Nervous system.* Even a newly born baby can grasp an object and hold it. It can also suck and swallow from birth, but the special senses are not well developed. Loud noises will startle the baby, but he cannot at first recognise where a particular noise comes from. Babies are particularly sensitive to bright lights, but for some time cannot properly control the movements of the eyes and head so as to be able to gaze steadily at anything. The sense of smell and taste develop in a few days. Movements of arms and legs are not co-ordinated at first, but at the end of the third or fourth month of life the child can usually hold up his head. At the end of five or six months the baby makes an attempt to sit up, although this may be delayed until the seventh or eighth month. By the ninth month the child begins to crawl and can usually stand at the end of ten months. At twelve or fourteen months he walks. The young baby is very sensitive to his surroundings. If these are unfamiliar he may, for example, refuse to feed. Also if the mother or a relative is nervous in handling him he will immediately become frightened. It is therefore very important to learn how to handle a baby properly and firmly so as to gain and hold the child's confidence.

*Speech.* Sounds are made a few weeks after birth, but single words are only said towards the end of the first year. Real talk does not occur until about twenty months or two years.

*The Teeth.* One of the reasons why it is important to ensure the adequate nutrition of the mother during pregnancy is that the infant's first, or milk teeth, are developing at this time, so that they are already present within the gums at birth. They appear through the gums in the following order:—

Lower central incisors	5th to 6th month
Upper central and outer incisors	7th to 8th month
Lower outer incisors	10th to 12th month
First molars	14th to 16th month
Canine teeth (eye teeth)	17th to 18th month
Second molars.	24th to 30th month

Although there are wide variations in the time of appearance of teeth, eight teeth should be present by the end of the first year, and all twenty of the milk teeth by the end of the second year.

The prevention of dental decay depends, therefore, partly on the good nutrition of the mother, but also on freedom from illness of the infant, especially one which affects the intake of food for any length of time. The preservation of the teeth depends on the presence of an adequate supply of mineral salts, and especially calcium, and also of vitamin D. Exercise for the jaws by the gnawing of hard crusts, or rusks, is also necessary.

#### GENERAL MANAGEMENT.

It is important to have a clear idea of the needs of the young baby, in order that a regular routine may be worked out which will place the least strain on the mother and give the baby the maximum degree of comfort and security. It is also necessary to know where to turn for guidance and advice in a difficulty. The family doctor is, of course, the stand-by in emergency and if illness is suspected. He is, however, a very busy man, and the young mother may not want to worry him with enquiries which, although important to her, are relatively trivial to him. The midwife, the health visitor, the district nurse and the Welfare Centre are all available to advise. When in doubt do not hesitate to ask for advice. The mere sharing of an anxiety with another is helpful.

The baby's material requirements are simple. They are food, cleanliness, warmth and sleep and, above all, an orderly routine.

#### The Daily Routine.

Opinion varies as to the frequency of baths for the newly-born infants, but it is now a common

practice to bath the baby immediately after birth, and then to leave him until the stump of the cord has separated, at the seventh to the tenth day, the skin being cleaned, when necessary, with olive oil.

After this time the baby will take a bath each day. The decision whether this should be in the morning or evening is a matter of choice, depending on the feeding times, but the evening is usually chosen, as the infant settles down more quickly after an evening bath, and thus develops a habit which is carried on into childhood.

After the early morning feed the baby will sleep until it is time for the morning "wash and brush up" but, before this, all the preparations for washing will have been made so that he is not kept waiting. Warm water tested with the elbow or thermometer to see that it is not too hot (not more than 100° F.); two basins, one for the face and the other for the body; soap, olive oil, cotton wool swabs, towels and clean napkins, a pot, and a bucket for the dirty napkins and used swabs. The mother will not forget to wash her own hands thoroughly before making these preparations. Obviously the room should be comfortably warm. First, the napkin is removed and the baby held out on his pot. It is most important to train the baby into clean habits from the earliest days, and he should always be held out at the same time even if wet. The midwife or nurse will have shown the mother the best way to do this, but, in essence, it consists of holding the baby firmly with the mother's arms so that he sits comfortably with his back resting against her chest.

*The Daily Bath.* Like the morning wash, the daily bath should take place half an hour before a feed. Everything should be prepared before the baby is disturbed. After washing her own hands the mother will arrange the bath, swabs, soap, olive oil, towels, pot and "dirty" bucket as for the morning wash. The child's night clothes will be laid near at hand. The routine of the baby's bath is best learnt by example from midwife and nurse, but the basic rules are, first, to remove the napkin and hold out the child. Then to wash the face, next the head, then the body and lastly the buttocks.

*The Care of the Skin.* A baby's skin is very sensitive and will quickly chafe and get sore if roughly handled. It is therefore necessary to exercise the greatest care in the choice of materials used for washing and in the handling and drying of the skin. Great care should be taken to select the finest soap and the softest of washing flannels or sponges. Towels must be soft, dry and clean, so that the skin can be dried thoroughly by gentle rubbing. Gentle handling is particularly necessary for the creases of the skin and behind the ears. Some experts say that powder is unnecessary after bathing, but there is little doubt that a good dusting powder helps to preserve and soothe the baby's skin and to keep it dry.

If the skin becomes inflamed and sore expert advice should be sought, as the baby is very susceptible to septic infections which can enter through small abrasions or cracks in the skin.

#### Sun and Air.

Many skin conditions in infancy, and indeed other illnesses, are predisposed to either by neglect or excessive care. Leaving the baby to lie in wet and dirty napkins is one example, and at the other extreme is the failure to allow free access of air and sunlight to the skin by over clothing. The human skin has many important functions, including the maintenance of the temperature of the body, and it is also concerned with the manufacture of vitamin D by the action of sunlight on the skin. It is therefore essential that the body should obtain a reasonable amount of fresh air and sunlight.

*Sore Buttocks.* The best way to prevent a baby from developing soreness of the skin of the buttocks is early training in clean habits, as in many instances the inflammation of the skin is due to irritation set up by the child's urine or motions. Obviously a clean dry napkin will not cause this soreness, and the well-trained child soon learns to keep clean and dry. Accidents will, of course, happen and some little upset in the diet may cause frequent stools. It is therefore essential to change the napkins regularly and to clean the buttocks thoroughly after a motion.

All fecal matter should be removed with cotton wool swabs (which are put immediately into the "dirty" bucket), and the buttocks are then cleaned gently with warm water, dried and powdered. If the skin is red and sore, olive oil may be used for cleaning instead of water, and zinc and castor oil ointment or cold cream instead of powder. If the soreness is marked the daily bath can be stopped for a day or two, but expert advice should be sought if it does not clear up quickly.

### CARE OF THE CLOTHES.

Apart from the fact that every mother likes her baby to look clean and neat it is essential to keep the clothes clean because of the sensitiveness of the young infant to infection of all kinds. Cracks or abrasions of the skin may turn septic if dirt comes in contact with them, and dirty clothes or towels are particularly liable to cause infections of this kind. Apart from this, badly washed clothes may also set up inflammation of the skin by being hard, and thereby chafing the skin, or because irritating fatty acids from the wrong kind of soap have not been completely rinsed out. The first essential is therefore to wash all articles which may come into contact with the baby regularly and frequently.

The mother must see that her own clothes and body are clean and in particular that her hands are washed thoroughly before the baby is handled. Her aprons and overalls should be washed frequently and discarded at once if soiled. This is particularly important if soiling takes place when the baby's napkins are changed.

Towels must be clean, soft, and thoroughly dry, before they are used.

Flannels and sponges should be washed frequently in hot water and thoroughly rinsed free of soap. Face flannels should be boiled once a week.

Napkins require special care. They should first be sluiced under running water to wash out all solid matter, and then left in a bucket of cold water until ready for washing. Washing should be done in warm water with a good soap lather with thorough rubbing, and rinsed in several lots of water until all the soap is rinsed out. After wringing they are hung up to dry. Drying should not take place too quickly, as the napkins will then be hard. For this reason it is best to dry them out of doors. Mangling will help to make the napkins soft after drying.

*Baby's Clothes.* Different materials require different methods of washing, but the principles set out above hold good for all clothes. The washing must be thorough, in water which is hot enough to enable dirt to be removed but not so hot that the clothes cannot be well cleaned by hand. It is particularly necessary to see that neck and cuffs are cleaned properly, and the same comment applies to the lower edge of the vest which may be soiled from the napkin.

Bibs should be boiled at regular intervals, as they are liable to get smelly from regurgitated milk.

### SLEEP.

If a baby is warm and comfortable and well fed its natural reaction is to sleep. The newborn infant sleeps for eighteen to twenty hours each day, waking only to be fed, and even at twelve months he will require fourteen or fifteen hours sleep each day. Sound sleep is essential to good health, and bad management of the young baby may result in faulty habits which last throughout life. Thus undue excitement before being put down to sleep, or irregular hours, may sow the seeds of insomnia. Ideally the baby should be made so comfortable that he will sleep from ten o'clock at night until six o'clock the next morning, but hunger may prevent this, and feeds may require to be re-arranged accordingly.

Restless sleep, with sudden nervous starts, is not a normal condition, and expert advice should be sought if this persists. A common cause is some digestive upset, such as colic or constipation, and coughs and colds also disturb the normal sleep rhythm, especially if there is a rise of temperature. It may then take a few days for the normal regular sleep habit to return.

### CRYING.

It is normal for the young baby to cry, and a lusty yell is a good way to expand the lungs.

Attacks of crying and screaming do not always signify pain or colic. Although it is a mistake to pick up a baby every time he cries, it is necessary to exclude sources of discomfort, such as hunger, a wet napkin, colic, constipation, and pain. Apart from these, the child may quite easily get into the habit of crying, or the baby, even the very young baby, may realise that he can readily attract attention by a display of tears or temper and thus be spoilt. It is advisable to seek expert advice if the fits of crying persist without apparent cause.

### CARE OF THE MOUTH, NOSE AND EARS.

Common sense applies in the cleanliness of the mouth, nose and ears, just as in all other matters relating to the care of the baby. The lining of the mouth is very delicate and easily scratched. It should not, therefore, be cleaned. Indeed, any attempt to clean the mouth may result in an infection which will result in difficulty in feeding and fretfulness. As mentioned earlier, the nostrils must be cleaned regularly, but this only means the entrance to the nostrils. Sneezing and discomfort are caused if the cotton wool is pushed up too far. The cotton wool swabs used to clean the nose should be moistened in warm water and twisted to a point. The ears may also be cleaned gently in the same manner as the nostrils, but no attempt to remove dirt or wax with a solid instrument, like a match-stick or hair-pin, must be made. Permanent injury to the ear-drum and hearing may easily result.

### BREAST-FEEDING.

Every baby has the right to expect that his mother will feed him herself. That is the natural way and has advantages to both mother and baby. The baby gets the best possible food without any of the risks of contamination that may occur with the preparation of artificial food. The temperature of breast milk is that of the infant's body and it contains various protective substances which help to shield the baby from infection.

The mother, for her part, has the satisfaction of knowing that she is "mothering" her baby in the fullest sense. Incidentally, breast-feeding costs nothing, whereas artificial feeding can be quite an expensive matter. There are certain medical conditions where a mother should not feed her baby herself, but they are very few in number.

As in everything else in life confidence arises from the knowledge of the right way to do a thing. Breast-feeding is no exception to this rule, but it is particularly important that the mother should have full confidence in her ability to feed the baby, as any nervousness and anxiety on her part are soon transmitted to the child. This is one of the reasons why regular visits should be made during pregnancy to the doctor or clinic, in order that the mother's general health may be investigated and such important details as the care of the nipples attended to. The midwife will see that a regular routine is taught during the first fortnight of the baby's life, so that by the time the mother assumes full responsibility for the baby she will have had quite a lot of experience.

The general rules are, of course, quite simple. Regularity is the cardinal rule both for the sake of mother and baby. The latter must be able to have his food at the same times each day, and the regular routine helps the mother to lead her normal life. The mother will already have had instruction on the care of the breasts, and in particular the preparation of the nipples so that they will not become tender when the baby starts feeding. The next essential is, of course, cleanliness. The nipples must be carefully washed before and after feeding and particular care should be taken in drying after feeding, as a little crack or fissure in the skin of the nipple, in addition to causing pain and discomfort, may let organisms enter to cause a breast abscess.

The third essential is to persevere. Many young mothers get discouraged at what proves to be in fact only a temporary upset. For example, the baby with a cold in the nose has difficulty in breathing and feeding at the same time, but a little patience will soon ensure that he does not suffer, by taking a little longer at each feed.

The last great requisite is calmness. Breast-feeding is a natural process, and countless millions of women have successfully fed their babies since the world began. It is not therefore a matter for

nervous speculation and anticipation. Any nervousness or sense of strain on the part of the mother is quickly felt by the infant, who will in turn be restless and irritable. A comfortable position in quiet surroundings, and a regular routine, will ensure that the baby can give his entire attention to feeding, and the supply of milk almost invariably keeps pace with the demand. If any little anxiety or doubt arises in the mother's mind she should seek competent advice and not listen to "old wives' tales". The doctor, midwife, or health visitor, are the best people to advise.

### WEANING.

No sensible grown-up person would contemplate changing suddenly from a normal diet to one entirely different. In the same way, weaning should be a gradual process. Between the sixth and twelfth month of life the baby will be changing from four-hourly feeds to the "three good meals a day" routine which he will hope to continue for the rest of his life. To begin with, therefore, it will be natural to change his diet by altering *one* of his feeds, for example that at 2 p.m. This may be at first one of the recognised proprietary milk foods, and later such items as milk pudding, potato and gravy, and green vegetables, may be given. From the sixth month onwards, the baby will want to nibble a rusk or hard-baked crust, which may be smeared with butter, egg, honey, etc. It is not necessary to continue breast-feeding beyond the ninth month and many mothers stop earlier. Much depends on the health and energy of the mother. Generally speaking she should try and continue breast-feeding during the hot weather and not wean until the autumn. By this means the anxiety of protecting the baby's food from contamination during the summer months is avoided. It is also inadvisable to wean if the baby is suffering from illness. It is much better to continue with breast-feeding until he is well. It is sometimes necessary suddenly to wean a baby. For example, the illness of the mother may make this imperative. In that event expert advice should be taken, as the sudden transfer to an unsuitable food may upset the baby's digestion. Again, the amounts of food taken by different babies vary very much, and one may take several ounces more than another in the course of twenty-four hours. It may therefore be necessary to try different kinds and amounts of artificial food before the right one is found, and expert advice on this is most helpful.

### ARTIFICIAL FEEDING.

It would be unwise in these notes to attempt to describe the various kinds of artificial food for a baby. Babies vary in their likes and dislikes from one to another just as grown up people do. The basis of artificial food is cow's milk modified in various ways. Very few infants will tolerate whole cow's milk as the amounts and nature of the fat, sugar, and protein, are different from human milk. Expert advice should be sought on the best type of artificial food for the baby, but there are certain fundamental rules which must be followed in all cases. In addition to the essentials already set out for breast-feeding, namely, a regular routine, quiet surroundings, and personal care all the time the baby is being fed, particular attention must be paid to cleanliness. It is very easy to contaminate the baby's food in the course of artificial feeding and infections caused in this way may prove to be serious.

First, the mother must make sure that her own hands are clean by scrubbing with soap and water and drying on a clean towel before each feed is prepared. This precaution is particularly necessary if the mother or one of the other members of the family has an intestinal upset, such as diarrhoea. Next, the room in which the food is prepared must be scrupulously clean and free from dust and dirt. The outside of tins and containers must be cleaned before they are opened and so must the table or tray on which the food is kept. Much time is saved by neat and methodical preparation. If everything required is kept always in the same place, and used articles are cleaned and replaced immediately, the risk of contamination by constant handling of unnecessary articles is thereby reduced. Saucepans and bowls and basins must also be absolutely clean, but the most frequent source of infection is in the feeding-bottles

and teats. If these are not cleaned properly after each feed the film of milk left behind makes an ideal breeding-ground for bacteria. Feeding-bottles should be washed after each feed, rinsed, and kept in cold boiled water until required again. They should also be boiled for two or three minutes every twenty-four hours. Teats should be turned inside out and cleaned thoroughly after each feed, and boiled once a day for a minute in water to which a little salt has been added; the salt helps to preserve the rubber. Between feeds they also should be kept in cold boiled water.

It is advisable to boil all milk for babies, especially in hot weather. Indeed, where there are no proper facilities for keeping fresh milk, it may be wiser to use dried milk in very hot weather. It is also essential to see that jugs and bottles containing milk are securely covered to keep out dust and flies.

The actual feeding of the infant should follow the same routine as for breast-feeding. The baby feeds best when he is quiet and comfortable, and the napkin should therefore be changed before feeding. In no circumstances must the baby be given a bottle and left to his own devices. The mother should stay during the whole feed and hold the bottle herself. Only by this means can the little encouragement and attention which mean so much to the health of the infant be given.

### Vitamins.

Milk, fruit, and vegetables make the basis of the baby's diet, but by the age of nine months he is able to digest tender and finely divided meat, and also fish. At this age all fruits can be eaten, but fruit with pips and skins, e.g., black and red currants and gooseberries, require to be strained and given in the form of gooseberry fool, etc.

Similarly, all vegetables can be taken, provided that they are young and tender and well cooked, and small amounts of lettuce, carrot, and other salads can be given, provided that they are finely divided.

It is essential to ensure that the infant receives an adequate supply of vitamins, especially in the winter. This may be done by adding fresh or concentrated orange juice or rose-hip syrup, and cod-liver oil or halibut-liver oil, to the diet, or by means of vitamin concentrates. It is advisable to take expert advice on the most suitable way of supplementing the vitamin content of the diet especially following an infection, for coughs, colds, and other infections, tend rapidly to lower the reserves of vitamins in the body.

Foods containing iron include green vegetables, and bone and vegetable broths. Calcium, so important for bone formation, is supplied with the milk in the diet.

### THE SYMPTOMS AND SIGNS OF ILL-HEALTH.

It is, of course, essential to seek advice immediately illness is suspected. The signs and symptoms of illness in the baby are not so clearly defined as in grown-ups, nor can the baby tell where he has pain or discomfort. Again, anxiety or doubt in the mother's mind is best shared with an expert as soon as possible. The following notes may, however, serve as a guide in interpreting some early departures from the normal.

**Temperature.** A young child will often develop a rise of temperature for no apparent reason, as the mechanism for controlling the heat of the body is not so well regulated as in older people. A slight temporary rise in temperature may not therefore be so significant as in older children, but if at the same time the child is restless, irritable and "off his food", it should not be neglected. The thermometer should be placed under the arm-pit with the arm held closely to the side, or in the fold of the groin with the legs held closely together. As the skin temperature is a little lower than the body temperature it should be kept in position for five minutes before reading the result. The normal temperature is 98.4° F.

**General Appearance.** The mother will be able to tell when a child is ailing, as she sees the baby constantly. Restlessness, irritability, pallor or undue flush, sweating, crying and unusual movements or positions, may all give an indication that the child is unwell. Colic, or vomiting and diarrhoea or constipation, may also help to show abnormalities.

*Restlessness and disturbed sleep in a baby who*

had previously been sleeping and eating well are obviously indications that there is something not quite right. This is especially the case if at the same time there are other symptoms, such as sweating and a rise in temperature. Lying in an abnormal position, or the development of rigidity in the back or neck, should be enough to seek expert advice at once.

**The Air Passages.** The common cold may be quite a serious matter in the young baby. In addition to making him feverish and fretful it interferes with his feeding because the nose is stuffed up. A cold in the head should not be treated lightly, and every effort should be made to keep away people who have a cold so that the baby does not catch it. When nursing a child with a simple cold make sure that he has plenty of fresh air. A stuffy atmosphere delays recovery, and the child will come to no harm if he is warmly clad. Patience in feeding is required, as he will need frequent rests to get his breath. Plenty of warm, sweetened, boiled water will help to relieve thirst. The nostrils should be kept clean and soreness prevented by lightly rubbing vaseline round the nose and upper lip.

**Cough and Shortness of Breath.** If the baby develops cough, and shortness of breath, expert advice should be sought at once. There is, of course, no need to assume that the child has some serious condition such as pneumonia. Probably he has some simple condition which will get better in a few days with expert treatment. On the other hand, it would be sheer stupidity not to take advice, as even a simple bronchitis can cause the baby distress and interfere considerably with his feeding.

**Refusal of Food.** A young child refuses food either because he does not want it, or he is "full up," or because he is not feeling well, or because he is feeling cantankerous and is "playing up" in consequence. The first and last reasons are soon cured by hunger, but the onset of illness, and especially the early stages of infection, are not easy to detect, and it is inadvisable to delay too long before seeking advice.

**Vomiting and Diarrhoea** occurring together should lead the mother to seek advice at once, particularly if this happens during the hot weather and other cases are known to have occurred in the neighbourhood.

**Vomiting without Diarrhoea.** It is normal for the child to regurgitate a little food after feeding particularly if he has had too much. Again he may bring up a little milk with the wind, but the vomiting of sour curdled milk is not a normal event. Persistent vomiting, particularly if "explosive," or not related to food, will need expert advice, as it may be the first symptom of illness.

**Diarrhoea.** Slight changes from the normal, righting themselves in a few hours, are only to be expected from time to time. If diarrhoea persists, and particularly if the child is also out of sorts, expert advice must be taken. A change of colour of the motions from orange-yellow to a green and slimy stool is an indication for seeking advice at once. In any attack of diarrhoea, however slight, particular attention should be paid to the skin of the buttocks, as this readily becomes inflamed and sore. The treatment for sore buttocks is described earlier in this article.

**Constipation** is not a cause for anxiety unless it is persistent, or the child is ill in other respects. In fact most babies tend to be constipated. Drastic measures are not called for. It is, of course, essential to persevere with the regular routine each day in order that regular habits may be acquired. The first essential in treatment is to see that the baby is getting enough food, and adequate exercise, together with plenty of sweetened water, or fruit juice and water to drink. Constipation is more frequent in the older infant who is taking mixed or artificial food, and he can be given such simple (and usually effective) remedies as a teaspoonful of prune juice or a teaspoonful of honey in warm water. Persistent constipation requires expert advice, and remedies such as glycerin suppositories or enemas should not be given without that advice.

**Feeding Troubles.** In addition to the above indications of ill-health there are other signs and symptoms which help to show when the baby is not feeding properly. Distension and discomfort

may be indications that all is not normal. Some distension after a feed is not abnormal, but it should subside before the next feed. Persistent distension, especially if it is increasing, should lead the mother to seek expert advice.

Discomfort after feeding is not normal. It may vary from mild restlessness and fretfulness to attacks of colic with screaming and the legs drawn up. Examination of the motions may show that they are loose and green or contain white undigested lumps, in which case expert advice should be sought.

**Failure to Gain Weight and Wasting.** It is essential to remember that babies are not machine made. Therefore they vary from one to another. One may be big and sturdy with a loud cry and a lusty appetite. Another may be small and quiet with only slow gain in weight. Too much attention must not be paid, therefore, to the weighing machine. If the baby is placid, healthy, and sleeping well, the fact that he is not gaining rapidly in weight does not matter. If, on the other hand, the child looks tired and thin with sunken eyes and the fontanelle on top of the head drawn in, expert advice must be sought. If he also has diarrhoea and is irritable or apathetic, then expert advice should be sought immediately.

**Teething.** There is no doubt that teething causes temporary disturbances in most babies, but it is important that illness due to other causes should not be dismissed as teething trouble. It is safer, therefore, to assume that any illness is not due to teething and to seek advice. The kinds of disturbance that may occur in teething are local and general. The local symptoms are pain in the mouth with sore and inflamed gums. The child resents any attempt to see the teeth. There may also be dribbling and enlargement of the glands in the neck. The general symptoms may include a tendency to eczema, and bronchitis, and nervous symptoms, such as fretfulness, irritability, sleeplessness and convulsions. Expert advice should be sought for such conditions as eczema, bronchitis or convulsions. Beyond this no treatment is required except patience and watchful care. Common sense will show the wisdom of studying the child's needs for soft and easily digested food, and avoiding hard crusts and rusks until the tooth is through.

**Convulsions.** The occurrence of convulsions is a danger signal indicating the need for immediate medical advice. In many instances the cause, and the remedy, is simple, such as faulty feeding with insufficient vitamins in the diet. On the other hand, they may be an indication of the onset of an acute infection, or some other condition requiring careful investigation. Fortunately convulsions are rarely fatal, and the first-aid treatment, pending the arrival of the doctor, is to put the baby into a tepid bath and to sponge the head with cold water.

**Head Injuries.** Babies and young children can fall in the most alarming manner without sustaining anything more serious than a bruise. If, however, following a head injury, the baby is pale and drowsy, with vomiting, then expert advice must be sought.

### PREVENTION OF ACCIDENTS.

Each year about 6,000 people die, in England and Wales alone, as the result of accidents in the home. More than one-quarter of these are children under the age of fifteen, and between the ages of one and five years a fatal accident in the home is the third most frequent cause of death. Many of these are either due to accidental suffocation or to burns and scalds.

Down pillows for small babies were formerly a common cause of suffocation. Burns and scalds may result from an unguarded fire, or one in which the fire-guard is faulty. Electric flex with worn insulation is a particular danger to the toddler, for he may fall over it, or get an electric shock if he plays with it. A saucepan handle put within easy reach of the child, or an over-hanging table-cloth with a tea-pot on the edge of the table, may result in a bad scald if the child can reach to pull it down.

Medicines or garden chemicals, etc., left lying about may tempt the child to eat them, and in this connection it should be remembered that young children are more susceptible to poisons than adults.

Finally, a very young child, like an old person, falls readily, and care should be taken not to put

obstacles in its path, such as a loose mat on a slippery floor, or a worn carpet with loose strands.

The young baby should be so well protected that accidents do not happen, but they do sometimes occur, even in the best regulated families! The first essential is, of course, prevention, and the wise parent will look carefully round the rooms in which the baby lives to see that all fires are protected by guards, electric light and power flexes and switches are not exposed, and that hot kettles and taps are out of reach. The table must be so laid that sharp knives cannot be touched and table-cloths cannot be pulled, and teapots, and other vessels containing hot liquids, thereby spilled over the infant.

#### *Protection against Smallpox, Diphtheria and Whooping Cough.*

Smallpox is now rare in the British Isles because of the care taken at the sea and airports to keep it out of the country, and because vaccination prevents it from spreading if it is introduced. It is a very serious disease with a high mortality, particularly in young children.

Although compulsory vaccination has been abolished it is still essential that every baby should be vaccinated. This can be done either by the family doctor or at the Welfare Centre.

*Diphtheria and Whooping Cough.* During the late war the diphtheria immunisation campaign was so successful that the number of cases and the deaths from diphtheria were reduced beyond all expectation. Diphtheria remains, however, a very serious disease and the baby must be protected against it. Immunisation is a simple procedure and does not leave any after-effects. It can be done by the family doctor or at the Welfare Centre. It is now possible to immunise also against whooping cough, and the injections may be combined with those for diphtheria immunisation.

### MATERNAL AND CHILD CARE IN THE SO-CALLED BACKWARD AREAS OF THE WORLD

People living in wealthy countries, with highly developed medical services, soon come to take those services for granted. In many parts of the world, and particularly in tropical and sub-tropical regions, the combination of poverty, the great killing diseases such as malaria, and malnutrition, make the problems of care of mothers and children peculiarly difficult to solve.

Fresh milk and feeding-bottles for infants may be unknown, and the scarcity or pollution of water supplies may render the preparation of infant food a hazardous undertaking. The simple nature of the houses renders elaborate provision impossible, and there may not be storage space for food. There is often a shortage of fuel, and few cooking-utensils are available. In many areas the food for the infant is prepared in the same pot and at the same time as that of the adults. The result is that breast feeding is prolonged, often for two years or more, with a sudden change to the diet of adults. As this may consist largely of carbohydrates, and because first-class proteins in the shape of meat and fish are only rarely available, children tend to be kept on starchy food. They are thus deprived of the balanced diet of fats, carbohydrates, and proteins, and of the essential vitamins which are required for healthy development. As their mothers may also be undernourished, they start life with a double handicap. The result is then only too clearly seen, in the form of anaemia due to deficiency of iron, and various conditions due to lack of proteins and vitamins. Avitaminosis, as it is called, may take a number of forms, including the onset of blindness or rickets. Indeed, rickets is now more common in such countries as India, tropical Africa, the Middle East, and some areas in South America than it is in temperate climates, in spite of the adequate amount of sunshine.

A condition which is receiving much attention at the present time is the disease known as kwashiorkor, due to deficiency of first-class protein, and seen in many tropical and sub-tropical countries. The child victims of this disease not only fail to grow but also show marked mental changes, manifested by lack of

interest in their surroundings and a general appearance of misery. Other symptoms include widespread skin lesions, changes in the colour of the hair, loss of appetite, and vomiting. In more extreme cases the infant may display the wizened, shrunken appearance of extreme starvation, a condition then known as marasmus.

It will readily be appreciated that such infants are particularly susceptible to infections of all kinds, in addition to those peculiar to the region in which they may live. Besides the common infectious diseases of childhood, these undernourished children are at risk from tuberculosis, malaria, yaws, worm infestations, and dysentery. It is not surprising, therefore, that as many as 40 per cent. of children born in such areas may fail to survive the early years of life. Poverty, a low standard of health, and a general shortage of medical and nursing services, combine to produce high infant and maternal death-rates, and these are usually associated with high birth-rates.

After the Second World War two international agencies were established which have a special interest in maternal and child care. They are the United Nations Children's Fund (UNICEF), and the World Health Organisation (WHO). (See also p. 138.) UNICEF is particularly concerned with the feeding of undernourished children, but also deals with the provision of medical supplies and education in child welfare.

One of the first tasks of WHO was to survey health problems on a world basis, and this it did by means of its regional organisation. The work of WHO showed that in many areas environmental sanitation required to be improved, and the purity of water supplies safeguarded, and that the general health of the adult population must also be cared for, for they may convey malaria, tuberculosis, worm infestations, and other diseases to children. The first and most urgent need, however, was for trained staff.

The World Health Organisation works in close association with UNICEF, with WHO responsible for the technical aspects of the work and for providing international personnel, while UNICEF furnishes supplies and equipment. It is a basic principle of both WHO and UNICEF to help governments only in their own efforts to improve their health services. By this means it is possible to integrate the work for mothers and children with the general projects of environmental sanitation, the control of communicable diseases, the improvement of nutrition, and health education.

Many countries have now created a central maternal and child health organisation to supervise and co-ordinate the development of services throughout the country, and also to provide facilities for training staff.

The first essential is, of course, to improve the health of the expectant mother, and particularly her diet. In addition, it is necessary to consider supplementing the infant's diet from about the age of six months, and here, also, the problem is very different from that in temperate climates, for milk can be a dangerous fluid in tropical areas. The experience of WHO and UNICEF teams has been that the wholesale distribution of condensed and dried milk has disadvantages, particularly in those areas where children are usually reared without animal milk being used at all.

It is clear that any programme for the protection of maternal and child health in the so-called backward countries must be based on adequate knowledge of the area concerned, including its climate and culture, the standard of health of the population, the economic circumstances of the country, the level of education, and the efficiency of the government organisations. Shortage of trained personnel and administrators is one of the main handicaps in the development of adequate services for mothers and children in the areas under discussion, and the World Health Organisation, in collaboration with UNICEF, has therefore been concentrating recently on the development of training programmes for doctors, nurses, and midwives.

There is no short cut towards the "attainment by all peoples of the highest possible level of health," as laid down in Article I of the Constitution of the World Health Organisation, but much progress has been made.

# Hygiene and Cosmetics

## INTRODUCTION.

THE history of modern beauty culture and cosmetics really begins in the early years of the present century, which saw the first application of scientific principles to the formulation, manufacture, and application of cosmetic preparations. The result of such study is seen in the amazing growth of the cosmetic industry and the tremendous increase in the standard of personal hygiene that has taken place over the past 50 or 60 years.

Certainly, the woman of to-day believes, and rightly so, that it is a matter of importance to look as charming as she can to the end of her life. Man, too, subtle and gradual though his approach may be, has benefited from the development of the modern cosmetic industry: hair preparations, shaving-soaps, creams and lotions have all reached a degree of refinement and efficiency that makes them indispensable. Even so, research and manufacturing developments continue to produce new and often exciting forms of the various toilet preparations to keep pace with the demands of fashion and the gradual increase in standards of living, both here and in other countries.

The basis of good looks is cleanliness and good health. Then comes the finding of the right cosmetics to suit the skin and personality. With good looks come confidence, poise, and achievement.

The aim of this section is to give basic information on the structure and working of the skin, teeth, hair, and nails, and broad guidance upon the use of cosmetics. The skill and ingenuity of cosmetic chemists, perfumers, and manufacturers have made available a bewildering variety of attractive products to suit all tastes and pockets. This section can do no more, therefore, than offer general advice on the principles to be observed in choosing cosmetics and toilet preparations; the final choice must obviously depend upon personal preferences as regards price, perfume, packaging, and the like. For quick reference a glossary of cosmetic terms is given at the end of this section.

## THE HUMAN SKIN.

The skin is one of the most important parts of the body. It is, in fact, one of the largest organs, with an area of about 20-25 square feet and a total weight of 8 or 9 lb. It serves as a sense organ, by means of which the body is made aware of changes in environment, and for this reason it is plentifully supplied with nerves.

In warm-blooded animals, including man, the skin also serves to regulate the body temperature. This is of great importance, as health is preserved only when the temperature is kept between certain limits. The human skin varies in thickness from about  $\frac{1}{8}$  inch on the eyelids to  $\frac{1}{4}$  inch or more on the palms of the hands and soles of the feet, surfaces which have to withstand a good deal of friction.

The structure of the skin itself varies considerably in different types of animals; for example, in the crocodile it has been developed in the form of horny plates; in snakes in the form of scales, and in many varieties of fishes as mucous glands. The

FIG. 1.—Diagrammatic Section through the Skin.

development of hair is a feature peculiar to warm-blooded animals, and it is one which serves to retard the loss of heat from the body. The hairs also act as organs of sensation (touch), and in fact, in human beings, where the hair is rudimentary except in certain areas of the body, this is its most obvious function.

The fundamental structure of the skin is shown in diagrammatic form in Fig. 1. It can be conveniently divided into three main layers: (a) the epidermis or cuticle; (b) the dermis or "true skin," more accurately described as the corium; and (c) the sub-cutaneous or underlying tissue, known as the hypoderm—this is just a mass of fibrous tissue containing many fat cells. The corium and the epidermis, which rests upon it, are themselves divided into other layers, but in the latter the separation of the layers is not distinct. The epidermis, with which the subject of hygiene and beauty culture is most concerned, grows by a multiplication of the deepest layers of cells. These are formed in the corium, to which nourish-

ment is brought by the blood, and push towards the surface those previously formed; in the process the cells undergo a change, becoming horny and "dead," and they are finally shed from the surface of the skin as minute scales. This outward progression of skin cells is continuous, and literally billions are manufactured and billions are shed each day.

**The Excretions of the Skin.** The main excretion of the skin is perspiration or sweat, which is produced by glands in the form of coiled tubes and discharged through ducts which open on to the surface of the skin (see Fig. 1). The openings are termed sweat pores, and they are most abundant on the forehead, palms of the hands, and soles of the feet, where there may be as many as 3,000 to the square inch. It has been estimated that the average human body contains about 2 million sweat glands, which in normal conditions discharge nearly a quart of perspiration each day, but under the influence of heat or exercise this quantity can be greatly increased. The secretion of perspiration helps to regulate the body temperature; when one becomes hot, more perspiration is produced, which, by evaporating, absorbs heat from the skin surface. Perspiration when fresh has a peculiar, though not unpleasant odour, but it quickly ferments, or is changed by skin bacteria, thereby producing what is commonly known as body odour.

In addition to sweat glands and ducts the skin is provided with sebaceous glands, which produce a fatty substance called sebum. These glands discharge their sebum into the sockets or follicles in which the hairs are set, where it is picked up by the hairs, imparting sheen and softness, and it also spreads over the skin surface, helping to keep it soft and supple. The presence on the skin of both sebum and perspiration residue causes dust and dirt to stick to it, so that regular bathing and washing is necessary to keep it clean and healthy.

This applies particularly to the skin of the face when cosmetics are to be applied; a clean skin is essential not only for ensuring an even and artistic result but also to avoid the possibility of those skin blemishes which are caused or encouraged by neglected or dirty skin.

## NATURAL SKIN BLEMISHES.

Very few people are fortunate enough to have a skin which is completely free from every kind of blemish, though many of these are not unsightly, and some may even add to the attractiveness of the features.

**Freckles.** One of the underlayers of the skin contains a colourless chemical substance to protect the skin against sunburn. It does this by changing into a brown or black pigment, which screens the skin against further attack. In most people this protective chemical is evenly distributed throughout the skin, but in others (chiefly

blonds and red-heads of both sexes) it is unevenly spread, and under the influence of sunshine changes into pigment to form the markings known as freckles. At the same time the unfreckled parts of the skin are less well protected, and hence reddened and blister more easily than normal skins. Freckles cannot be "cured," but can be made less obvious by shading the face from strong sunshine and by masking with dark shades of make-up.

**Moles.** Most people have moles on some part of the body, but it is only when they appear in large numbers on the face that they are objectionable. One or two moles appropriately situated on the cheeks or chin, however, may add to the attractiveness of the features, and of course in former times moles on the face were imitated by means of "beauty spots."

On no account must moles be treated except under medical advice. Indeed, unless they are positively unsightly they should be left severely alone. They are caused by changes in the outer layers of the skin, and if interfered with are capable of becoming malignant. They can be at least partly disguised by dabbing with calamine lotion, allowing it to dry, and then dusting off the excess powder.

**Warts.** A wart is caused by a localised increase in cell growth in one of the upper layers of the skin. It is due to irritation resulting from infection by a virus, and hence warts can be transmitted from one part of the body to another or to other persons. Warts are harmless, though sometimes unsightly, and there is no universally successful method of treatment. Very often warts (especially in children and adolescents) disappear spontaneously without special treatment. They yield readily to treatment with strong acid or caustic pencils.

### THE HAIR AND SCALP.

The human hair is complex in structure; but it is useful to know something of its formation and development in order to understand the effects on it of various cleansing preparations and hair cosmetics.

Each hair projects from a follicle, which is a long, narrow pocket in the skin. The hair grows from a small group of cells (the papilla) at the base of the follicle, and the part of the hair lying within the follicle is known as the root.

FIG. 2.—Diagram of a Section of a Hair Set in its Follicle.

The diagram (Fig. 2) shows the principle features of a hair. The stem or shaft consists of three parts: (a) the outer layer or cuticle; (b) the middle part or cortex; and (c) the central canal or medulla.

The hair grows upwards from the root, but has a limited life, at the end of which it falls out and is replaced, in a normal healthy head, by a new hair. The part of the hair which shows above the skin is dead, and can therefore be cut and manipulated without discomfort or harm. Cutting and shaving have no effect whatever on the rate of growth of the hair or upon its thickness and texture. The practice of singeing the hair seems to have arisen from a belief that hairs are hollow with open ends

that are best sealed up to "keep the cold out" or to "prevent the juices running out." This is a complete fallacy, and singeing does more harm than good.

Human hair can be straight or curly, but the basic reason why it should grow in one form or another is not known, though it has been noticed that straight hairs often have a round cross-section, whereas curly hairs are commonly oval or flattened.

It has been calculated that the average scalp has about 1,000 hairs per square inch, so that there are some 120,000 hairs on the whole head. The finer the hairs, the more numerous they are, and one authority states that blond heads contain about 140,000 hairs, red heads about 90,000, brown heads about 109,000, and black heads about 108,000. The thickness or diameter of the hair varies considerably. Children's hair is finer than that of adults, and blond or flaxen hair is usually finer than brunette or black hair. The finest hairs are about  $\frac{1}{100}$  inch in thickness, and the coarsest about  $\frac{1}{16}$  inch.

The rate at which hair grows is also subject to much variation; growth is quicker in summer than in winter, and short new hairs grow more rapidly than longer and older ones. When the hair is just above the level of the skin, it grows at the rate of about  $\frac{1}{2}$  inch each month, but when it is, say, 10 inches long, the rate of growth is only half as rapid.

It is just as important to keep the hair clean as it is to have a clean skin, and it is a mistake to suppose that frequent washing weakens or damages the hair, provided, of course, that a suitable soap or shampoo is used. Generally, the hair should be washed at least once weekly, but should be kept clean and free from dust by regular daily brushing and combing. The correct way to brush and comb the hair is described later (p. 821), together with the value of scalp massage in maintaining hair health.

Neglect of the hair and scalp quickly causes it to become lank and greasy, with very often the development of dandruff or scurf. Furthermore, a dirty head is an ideal breeding ground for micro-organisms, such as fungi, and for insects like the common louse. Details of the common disorders and diseases of the scalp are given in the Medical Section (q.v.).

### THE TEETH.

Teeth start to grow in the unborn infant, but do not break through the gums until the age of about six months. They then appear fairly regularly, until at about 2-2½ years of age the child should have all its "baby" or "milk" teeth. There is no need to worry if the teeth do not appear exactly at the expected times, since the rate of growth varies a good deal in different children.

When the child is about six or seven years old the baby teeth begin to be pushed out by the permanent teeth, which have been growing underneath them, until all have been shed. The age at which the last baby tooth is shed may be as early as nine years or as late as twelve years.

Some parents think that, because the baby teeth are only temporary and will eventually be replaced by others, there is no need to pay much attention to their cleanliness. This, however, is a great mistake. Baby teeth require just as much care as the later permanent teeth, because the dangers associated with decay and neglect in a child's mouth are just as serious, if not more so, than they are in the case of an adult. One of the most common results of neglecting baby teeth is that the permanent teeth which follow are crooked and badly shaped. This is because if one or more of the baby teeth are lost prematurely, the positions of nearby teeth may be altered, and so there may not be adequate space for the permanent teeth to grow through the gum.

The diagram below (Fig. 3) shows the essential structure of the tooth.

The portion of the tooth which is seen above the gum is known as the crown. Below this is the neck of the tooth, which is surrounded by the gum while the roots of the teeth are embedded in sockets of the jawbone and are held in place by millions of tiny fibres which act as shock absorbers.

The crown of the tooth is covered with enamel which is the hardest substance in the whole body

while the neck and roots of the tooth are covered with a less hard, bony substance, called cementum.

Immediately underneath the enamel and the cementum is the dentine, which is a kind of ivory which is threaded with small tubes carrying nourishment from the blood. At the centre of the tooth there is a mass of dental pulp which contains a sensitive system of blood vessels and nerves.

If properly cared for, permanent teeth should last a lifetime, but dental decay is probably the

When the skin which surrounds the nails sheds its outer cells they collect around the edges of the nail and form what is usually referred to as the cuticle. Because this is irregular in shape, it is not very slightly, and is therefore usually removed by special preparations sold for the purpose.

The nail itself, unlike the rest of the skin, contains practically no oil or fatty substances, but it does contain about 10 or 12 per cent. of moisture. It is believed that the brittleness which sometimes

FIG. 3.—Details of the Structure of the Teeth.

commonest ailment that affects the human body. The chief cause of decay is the lodging of food particles in crevices, between the teeth, along the margins of the gums, and on the rough surfaces of the crowns.

Starchy foods, such as bread, cakes, biscuits, porridge, and sweets, are the worst offenders in this respect, because they form an ideal breeding ground for the bacteria which are normally present in the mouth, which latter can produce from these food particles an acid which gradually eats away the tooth enamel. Once a hole has been pierced in the enamel, the germs rapidly spread through the dentine and eventually reach the dental pulp, while in severe cases the infection spreads right down to the roots of the teeth, where abscesses may be formed. The best safeguard against premature decay is the removal of adherent food particles after each meal. This may be achieved by brushing or, according to some authorities, a simple rinsing of the mouth with warm water or an antiseptic mouth wash is effective. Hints on the correct and the most effective way of brushing the teeth are given later in this section (pp. 826-27).

To make sure that the teeth and gums are kept in a healthy condition, it is advisable to have them examined by a dentist at regular intervals, say twice a year. If this is done, the beginnings of attack on the tooth enamel and any disorder of the gums can be detected and checked before they become serious. Good oral hygiene and correct brushing are just as important for keeping the gums hard and healthy as for keeping the teeth sound. Many teeth are needlessly sacrificed because of failure to keep the gums healthy.

### THE NAILS.

Nails consist of projecting semi-transparent plates which cover the top surfaces of the last bone joint of each finger and toe.

They are made up of the same substance as the hair and skin, but whereas in the case of skin the dead cells are constantly shed from the surface, in the nails these cells are built up into a protective structure. The nails are dead in the sense that they contain neither blood vessels nor nerves, and they can therefore be cut and filed without any sensation of pain. The nail rests upon a bed of cells which cover a mass of sensitive nerves, and it is for this reason that finger- and toe-nails show extreme sensitivity to shock or pressure.

Nails continue to grow indefinitely unless they are kept short by frictional wear or by cutting, and the average rate of growth is about 1 inch every eight or nine months. At the base of the nail is the Lunula or half-moon, and this occurs at the point where the nail bed is separated from the reproductive part of the nail plate. The characteristic appearance of the half-moon is believed to be due to the way in which light is bent when it passes through this space.

results from the continual use of nail lacquers and varnishes may be due to the abstraction of moisture from the nail. There may, however, be other causes of brittle nails, connected with diet and bodily characteristics. In general, however, it can be said that the moderate use of lacquers will have no adverse effect on the nails, especially if a nail cream which contains oils emulsified in water is applied when the nails are not varnished.

To keep the nails in good condition they should be cut or filed regularly so that they are always of moderate length, and it is generally easier to keep the nails of the right length and of attractive shape by regular filing than by cutting at longer intervals. If, however, the nails are cut with scissors they should first be soaked in warm, soapy water, and this may conveniently be done while taking a bath. After soaking and trimming, a suitable cream should be applied if there is any tendency towards brittleness. This can be either a cream specially made for the purpose, or one of the so-called skin foods or lubricating creams can be used instead.

Well-kept nails can enhance the beauty of the hands very considerably. Dirt should not be allowed to accumulate behind the nail, but should be removed when necessary with a blunt-ended manicure tool, such as an orange stick, and the nail subsequently scrubbed with a not too hard brush.

### GENERAL HYGIENE.

Personal cleanliness and hygiene involve not only regular care of the body surface but also of the clothes that cover the body. Cleanliness, both of body and of clothes, is essential to a feeling of comfort and well-being.

By washing the body frequently and regularly, the skin is kept free from the deposits which result from the excretion of perspiration and sebum, and which, if neglected, readily give rise to unpleasant odours. The ideal is a warm bath each day, but this is not always possible, and in such cases, as much of the body surface as possible should be washed daily, paying particular attention to those places where there are folds in the skin—the armpits, between the toes, the groin, and between the buttocks.

The hands should always be washed before meals and after each visit to the toilet, and at all times the nails should be kept free from dirt, which often harbours disease-producing germs.

The nose and ears should not be neglected in the daily routine, though both must be treated very gently. Dirt which has been filtered out of the inhaled air should be removed periodically by gentle blowing of the nose, aided if necessary by a clean handkerchief wrapped round the little finger. Similarly, dust and dirt should be wiped from the crevices of the outer ear, but on no account should the inner ear be touched; if wax has accumulated and has to be removed, the assistance of a doctor must be sought.

A clean body necessarily demands clean clothing, especially underclothes which are worn next to the skin.

These should be changed frequently, at least once a week in winter and more often in summer, while the practice which exists among some people of sleeping in their underwear is to be deplored; the garments become quickly and excessively soiled, and are usually not changed very frequently.

The type of clothing worn is of considerable importance in connection with bodily comfort and the maintenance of skin health. The skin needs to be kept warm in all parts of the world except the tropics, and some form of clothing is necessary for this purpose, apart from considerations of modesty and personal adornment. To conserve the warmth of the body, the material of which clothing is made must be a relatively poor conductor of heat, or since air is a very bad heat conductor, the clothing should hold a layer of air between itself and the skin.

Fabrics made wholly or mainly of wool help to keep the body warm, because this fibre is a poor conductor of heat. Woollen fabrics are also so constructed that a considerable amount of air is contained in the meshes of the fabric, whereas materials made of cotton and linen, which are tightly woven, do not contain much air, and hence are not so useful as wool in keeping the body warm. A further advantage of wool is that it is able to absorb a considerable quantity of moisture before it actually feels wet, but in spite of all these advantages, many people do not wear wool next to the skin because of its comparatively rough feel. Woollen garments are also more expensive than others and, because of their tendency to shrink when washed, do not have such a long life; hence it is common practice to mix wool with other materials, such as cotton, rayon, or nylon, and to construct underwear fabrics so that they contain a number of air-holding spaces. In recent years nylon and similar synthetic fabrics have become very popular for clothing, especially underwear, but they are not capable of absorbing very much moisture, and if worn next to the skin, fabrics of these materials should be open-meshed, so as to allow a free circulation of air to carry away evaporated moisture.

The colour of clothing is of some significance in connection with general bodily comfort, because dark fabrics can absorb heat from the sun more readily than light-coloured ones. It is therefore usually better to wear dark-coloured clothes in winter and lighter ones in the summer.

### BEAUTY CULTURE AND COSMETIC PREPARATIONS.

**Application of Cosmetics ("Make-up").** Apart from specific skin disorders, most people's skins are classified as "normal," "dry," or "greasy." Those who possess "normal" skins may count themselves fortunate because of the ease with which their skin can be kept clean and healthy and because they have little or no difficulty in choosing cosmetics to suit them. On the other hand, women with "dry" or "greasy" skins are restricted in their choice of cosmetics, and must exercise more care in the methods and materials

they use for cleansing and preparing the skin for the application of make-up. In the case of cosmetic preparations which impart colour to the skin, the natural colouring of the user's complexion and hair must also, of course, be taken into account.

**Preparation of the Skin for the Application of Cosmetics.** Those with "normal" skin can best provide a good foundation for make-up by simply washing in soap and water, using a good-quality toilet soap. The ordinary type of foundation or "vanishing" cream generally provides a satisfactory basis for the make-up, since all that is required is a film of cream that will keep the powder sticking to the surface of the skin. The best way of applying vanishing cream is to dot small portions of it on the forehead, tip of the nose, chin, and each cheek, and then to spread it evenly over the face with the finger-tips. As little as possible of the cream should be used. Vanishing or foundation creams can be either white or pale pink, or flesh colour, but the coloured ones do not influence the final appearance of the make-up.

In the case of "dry" skins there is often some degree of sensitivity to some of the cosmetic preparations, because a "dry" skin is deficient in the natural sebum or grease which plays so big a part in protecting the skin against external influences. People with "dry" skins may, in fact, find washing with soap and water an uncomfortable procedure, and in such cases the skin is best cleansed and prepared for make-up by the use of a cleansing milk. These preparations are very mild, and usually contain emollient oils in emulsified form. The conventional vanishing cream may not be suitable as a foundation on "dry" skin because it tends merely to increase the dryness, and in that case it is preferable to use one of the special foundation creams sold for "dry" skins, because these contain a proportion of oily material which helps to make up the skin's natural deficiency. Alternatively, a sparing application of one of the so-called "all-purpose" creams may be used as a foundation on "dry" skin. Make-up preparations to be avoided by the possessor of a "dry" skin include astringent lotions and tonics, liquid powder-base preparations, and face packs.

"Greasy" skins require altogether different treatment. In these cases special cleansing lotions and milks which contain oil should be avoided and the skin prepared for make-up by a thorough washing in soap and water. This can be followed by the application of a mild astringent lotion, while in cases of severe greasiness, hot face packs may be employed with advantage.

Quite often "greasy" skin requires no special foundation cream or lotion, because there is sufficient natural grease present to act as a powder base. If desired, however, one of the liquid powder preparations can be used before face powder is applied.

**Colour Harmony.** The application of make-up can change considerably the general appearance and apparent contours of the face, according to the shades of cosmetics that are applied and their relative dispositions on the face. This applies particularly to the application of rouge, and to a lesser extent of face powder and lipstick.

Due attention must also be paid to the natural

Hair.	Dress Colour.	Shoes and Handbag.	Toning Lipstick.	Face Powder.
Dark Brown	All Browns—Lemon—Grey—Rust—Bright Green	Nigger Brown Tan Green	Deep Red	Dark Rachel Apricot Suntan
Blonde	Pastel Blues—Pinks—Lime Green—Oatmeal—Grey	Black Grey	Delicate Rose Pink	Light Rachel Pastel Pink
Silver Grey	All Blues—Grey—Deep Pink—Mauve—Black	Black Wine	Rich Pink	Light Peach Dusty Pink
Blonde or Raven Black	Pale Blue—Pinks—Black—Off-White	Blue Black	Cyclamen	Dusty Pink
Red	Greens—Tan—Yellow—Beige—Tangerine	Nigger Brown Tan	Orange	Apricot Suntan
Mid-Brown	Royal Blue—Pillar Box Red—Navy—Black—White—Dark Grey	Black Grey Red	Clear Red	Peach Dark Rachel

hair and complexion colouring and the colours and styles of dress which are worn. Women with fuller figures usually look their best in dark-coloured clothing, while the lighter and gayer colours are better reserved for those of slighter build. Usually, too, the older woman should dress in either dark or plain pastel shades. The chart on p. 819 may be taken as a general guide to dress and make-up shade harmony.

**Application of Rouge.** The discreet use of rouge can contribute considerably to the attractiveness of make-up, but it should always be applied sparingly and in such a way that it merges imperceptibly into the surrounding skin. There should never be a hard line of demarcation between the rouged part of the skin and its surroundings.

Rouge is normally supplied in the form of a cream or as a compressed block of powder. On "normal" skins either type can be used effectively, but on "dry" skins cream rouge should be used in preference to the powder, while on "greasy" skins the reverse procedure should be adopted. The correct shade of rouge which should be applied is the one that is the closest match to the natural colour of the cheeks when the skin is flushed from heat, exercise, or blushing.
